"Give me an optimist in charge of sales. If he is lacking in other qualifications this attribute is more likely to strengthen them; his sunshine will make others do their work better than any other known stimulant."

o o o

"If ever a person requires a knowledge of diplomacy and tact it is the sales manager, as an untactful letter or spoken word can undo years of careful handling of a profitable customer.

o o o

"Equally important qualifications are firmness and strength. When a firm settles on the prices of its goods there is no earthly reason why the price should be cut. If the quality is off, then the firm should take the article off the market. It is the sales manager's duty to see that standard prices are maintained, as it is standard prices from which the firm can make its profits."

o o o

After the goods have passed the making end it is up to the firmness of the sales manager to see that the firm maintains its standard prices, which have been sanctioned and approved by the principals.

o o o

"It is the road (*i.e.*, travelling) experience that will qualify a man for sales management, providing he will utilise those experiences. The cordiality shown by some houses, and the rebuffs given by others, and the experience of dealing with honest buyers and with dishonest buyers, give a traveller varied episodes in the study of human nature, and . . . the traveller develops an analytical mind. It is this contact that . . . makes it possible for him to hire men of the right material to be trained as good salesmen."

o o o

"I know a firm who firmly believe that everybody they deal with is dishonest, including their travellers. Their policy is reflected in their letter writing and actions. Selfishness and jealousy do more harm to the progress of sales than any other pair of negatives."

o o o

Speaking of the creation of a new demand Mr. Sherwin told of a big tobacco house in a large city in the North, who found that their sales had stood about even for three years running.

o o o

The principals had given their sales manager very little scope previously.

o o o

In despair they turned the problem over to him. It was an unwritten law among the tobacco men in the town that no premiums would be given, but the energetic sales getter made a revolutionary departure from the previous methods, and sold an old tobacco under a new name, placing coupons in each packet. The sales of the new brand quadrupled over the old after this man had studied conditions and employed constructive imaginations."

o o o

Another passage told how "It requires a high order of tact, diplomacy and understanding to handle men of sensitive temperaments, and the men must derive an endless supply of cheerfulness, optimism, sympathy and enthusiasm from the sales manager. His firmness, strength and confidence in his own power are elements than can be kept under the surface, and very rarely have to be emphasised by the sales manager who has won the confidence of his men.

o o o

"The good sales manager looks out for his men, encourages them, and helps them, but never brags about it. He never writes and says, 'I am doing this for you,' but just does it. He understands human nature.

o o o

"I am convinced," Mr. Sherwin added, "that a house should not be represented by a man earning less than £5 per week above his expenses. There is too much tendency amongst firms to send out twenty cheap 'order takers' rather than ten salesmen.

o o o

"For the last fifteen years the calibre of the average travelling salesman has been on the slump, except where the firm has had the foresight to pay adequate wages coupled with the right sales management."

o o o

There were other points; perhaps I may have some other opportunity to allude to them, So much, at any rate, by way of welcoming Mr. Sherwin into the company of those successful large-minded men in our craft who have something valuable to tell us, and the friendly disposition to tell it.

o o o

We want "not so much sharp men as broad men sharpened to a point," and in Mr. Sherwin I think we have one of these. And most certainly we have in him one of the world's encouragers.

FRANK COLEBROOK.

FOLLOWING upon the King's letter announcing the change of toast from "The King" to the "Duke of Lancaster" for purposes in the County Palatine only, Mr. James Hartley, editor of the *Preston Herald*, issued as a supplement a song entitled "A Health to his Majesty," with the new prefix title "The Duke of Lancaster." It was issued in detached song folio form with a panel containing an appropriate quotation from the King's letter, and given gratuitously with every copy of the paper. The front and back pages and panels around the song were taken up with advertisements. Mr. Hartley also published six volumes ranging from 60 to 90 pages of a "Royal Visit Souvenir" for the towns of Preston, Blackburn, Darwen, Burnley, Blackpool and Chorley, which had a tremendous vogue. Each volume contained a specially written sketch of the life and times of King George, and in addition contained portraits of mayors, Members of Parliament and other well-known people in the localities selected.

PAPER and manufactures of paper (dutiable) were imported from Germany, Norway and Sweden into Baltimore, U.S.A., during 1912 of the value of £30,523, compared with £35,619 in 1911.

THE Netherlands imported 182,137 tons of paper, principally from Germany, in 1912, compared with 171,941 tons in 1911, and 160,508 tons in 1910. The export trade of the Netherlands is given as follows by the British Consul at Rotterdam:—1912, 335,581 tons (5,206 tons to Ireland and 189,543 to Great Britain); 1911, 313,243 tons (4,112 tons to Ireland and 175,412 tons to Great Britain); 1910, 304,703 tons (4,980 tons to Ireland and 178,436 tons to Great Britain).

An Improved Expanding Core.

An English patent has been granted to Mr. Samuel Milne, engineer, of Edinburgh, relating to expanding reel bars or cores, for use in winding or unwinding paper, wherein clutch devices are designed on being expanded to fractionally engage the interior of the reel or shell. The improved bar or core consists of a spindle or shaft formed along its entire working length, or at intervals, with one or more facets or clutch surfaces. It also consists of one or more rods or rollers which on the bar or core being slipped into the reel

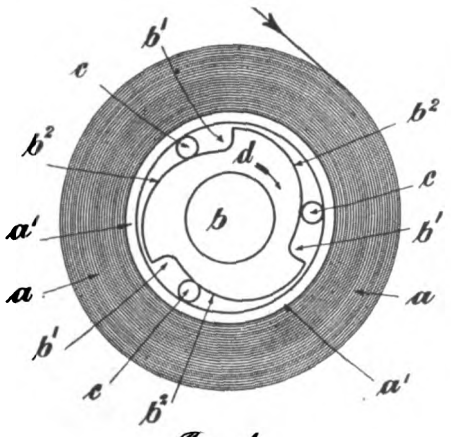

Fig. 1.

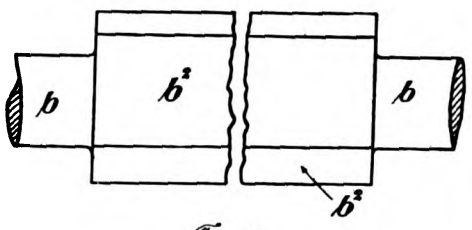

Fig. 2.

or reel shell lie between the facets or clutch surfaces and the reel or shell. With the reel or shell held stationary and the spindle given a partial rotation, the rollers bind against the spindle and the inner face of the reel or shell, and thus clutch the spindle to the shell, or *vice versa*. On giving the

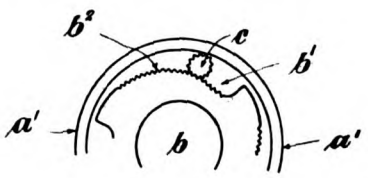

Fig. 3.

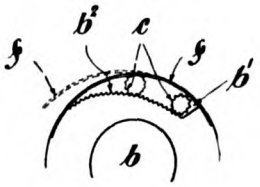

Fig. 4.

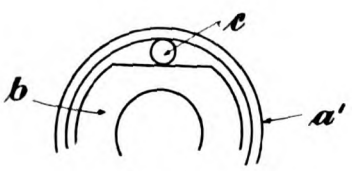

Fig. 5.

spindle a partial rotation in the reverse direction, and with the reel held stationary, the rollers free the spindle and allow it to be withdrawn.

Fig. 1 illustrates an end view showing the application of the invention to a reel. Fig. 2 illustrates a side view (partly broken away) of the core or spindle. Figs. 3 to 7 illustrate modifications.

a is the reel within which, or its shell a^1, the expandible bar or core is placed when requiring to wind or unwind paper or other material on to and off the reel. The expandible core, as shown, consists of a shaft or spindle *b* formed with longitudinal recesses b^1, one part of each of which is deeper than the other parts, and each recess thus producing a clutch surface b^2 excentric to the axis of the spindle and tangential to a circle common to all. The recesses will preferably extend the full working length of the spindle *b* as shown in Fig. 2.

With the shaft or spindle inserted in the reel or reel shell, a series of round rods or rollers *c* are placed one in each recess b^1, the rods or rollers which are preferably of metal, normally lying within the deepest part of each recess.

It should now be seen that on rotating the spindle *b* in the direction of the arrow *d*, and with the reel offering a resistance to rotation, the rods or rollers *c* will become wedged between the inclined faces b^1 and the inner surface of the reel *a* or shell a^1, and thus lock or clutch the spindle *b* to the reel, which will then rotate with the spindle so long as it is rotated in the same direction. With the parts arranged, as shown, and rotating in the direction of the arrow *d* the spindle is adapted for winding purposes.

On the reel being held stationary and the spindle given a slight rotation in a direction opposite to that of the arrow *d*, the rods or rollers *c* become freed or released from the reel, or reel shell, and move into the deeper parts of the recesses b^1, the spindle *b* and rods or rollers *c* being then ready to be removed if required.

When the core is required for unwinding purposes and the unwinding has to be done positively, the spindle *b* will be withdrawn and inserted the reverse way. Of course,

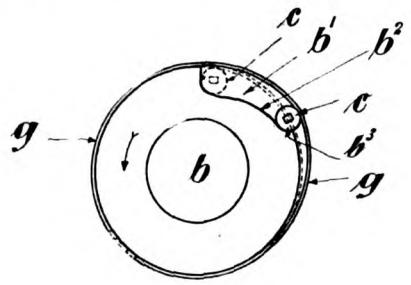

Fig. 6.

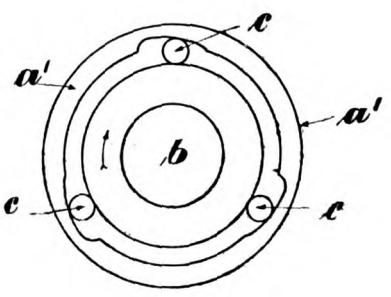

Fig. 7.

when the reel has to be unwound by merely pulling the material off, the spindle need not be reversed.

The spindle may be provided with a gear wheel and be formed with a "squared" end for the reception of a handle or the like for turning purposes. In addition to serving to clutch the spindle to the reel or reel shell, the invention allows of the same bar or core being used with reels or shells of different internal diameters.

Whilst showing three recesses and three rods or rollers, it will be understood that there may be less or more according to the size of the spindle. Further the inclined faces b^1 may extend only part of the way along the shaft *b* from one or both ends, and the rods or rollers *c* be of corresponding length, but usually they will be made as described and shown. Also, there may be end plates on the shaft with inclined slots corresponding to the inclined faces by which the rods or rollers formed with reduced ends to fit the slots would always be kept intact with the shaft.

In Fig. 3 the recesses *b* and rods or rollers *c* are shown with flutings or teeth, whereby the rods or rollers may be rotated to engage or disengage the shell, and whereby the rods or rollers have a better grip when coacting with the inclined faces. Each roller may be formed with a "squared" end for receiving a turning handle.

In Fig. 4 the rod or roller is shown held in its recess by a spring blade *f*, consisting say of a very thin piece of brass or steel preferably extending the whole length of the body of the bar or core. In this example the rods or rollers will lie below the blades *f*, and serve to raise the latter when rotated outwards, and thus cause the bar or core to grip the reel or shell.

This type of bar will be especially applicable for winding paper and the like without any strawboard or other shell, the winding-on being commenced when the rods or rollers and blades are in the position shown by dotted lines in Fig. 4. With the reel wound the rods or rollers could be rotated by means of a wrench or other suitable means to the inner position, as shown by the full lines in Fig. 4, and the blades will then collapse or retract and permit of the bar or spindle being removed.

A shown in Fig. 6, there may be one rod only, and such rod may be held to the spindle by a thin flexible covering or sleeve *g* loosely encircling the spindle. The clutch surface and rod may be plain or fluted. In this as in the other arrangements the clutch surfaces may end in a small shoulder at b^3 by which the roller will be prevented leaving the clutch when moved to the extreme position.

When the reel shell will allow of it the recesses may be in the shell, and the shaft be circular, see Fig. 7. In lieu of the recesses b^1, the spindle may be formed with flats, see Fig. 5, and thus be adapted to operate (become clutched or unclutched) in either direction of rotation.

BRITISH IMPORTS OF

Printed or Coated Paper.

Paper Hangings.

The imports of paper-hangings during the last five years were as follows:—

1912	63,624 cwts.	£144,831
1911	63,371 ,,	142,402
1910	69,160 ,,	152,219
1909	63,794 ,,	139,820
1908	71,624 ,,	173,819

The countries of supply were as under, the comparative values being given for the years 1908 and 1912:—

	1908.	1912.
Germany	£83,796	£85,602
Netherlands	3,039	590
Belgium	52,632	35,025
France	15,816	9,509
Switzerland	1,416	2,057
United States	8,700	7,702
Other Foreign Countries	7,982	4,340
British Possessions ...	438	6

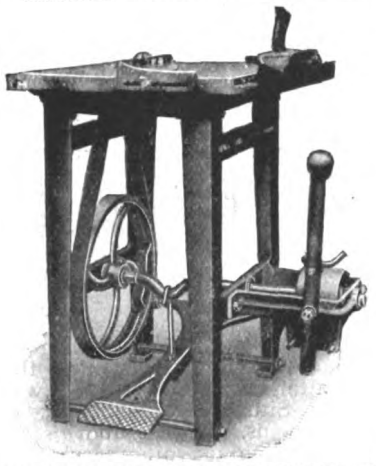
Other Printed of Coated Paper.

The total values of the imports for 1912 and four preceding years were:—

1912	110,342 cwts.	£273,962
1911	115,286 ,,	292,960
1910	114,766 ,,	314,037
1909	151,368 ,,	417,484
1908	152,383 ,,	416,483

The receipts from the following countries were as under:—

	1908.	1912.
Germany	£164,931	£152,751
Netherlands	31,691	6,756
Belgium	75,099	60,392
France...	49,458	25,666
Switzerland	2,706	955
United States ...	76,966	21,421
Other Foreign Countries	13,669	4,402
British Possessions ...	1,963	1,619



THE *Theosophical Path* for July, printed in its customary first-class manner, contains a number of articles appealing to a variety of interests. There is a series of five articles on the Râga Yoga system of education, which makes character the foundation stone, and whose success is awakening widespread interest. An article on Velásquez is illustrated with finely printed reproductions of his greatest masterpieces. Another deals with recent archæological researches. There is a delightfully written and interesting article on New Zealand, splendidly illustrated, and an eloquent appreciation of Emerson from an entirely new standpoint. This instructive monthly is edited by Katherine Tingley, and published at Point Loma, California, U.S.A.

"LLOYD'S" Penny Bee Book, which will be shortly published, is a new departure in bee books. Its appeal is not only to the bee-keeper, or the intending bee-keeper; it will interest and instruct also the gardener and fruit grower, the nature student, whether botanist or entomologist, the school teacher, the wood worker, amateur or professional, and the ordinary reader, who can enjoy a romance of insect life more wonderful than any fiction.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the **NEWS** come to **YOU** every week. Europe **$5.00** per year; Canada **$3.00**. 64 pages weekly.

Raphael Tuck and Sons, Ltd.

Annual Meeting.

The twelfth annual general meeting of Messrs. Raphael Tuck and Sons, Ltd., was held last week, Sir Adolph Tuck, Bart. (chairman of the company), presiding. In the course of a long address the chairman said: Our departments, one and all, are in a most healthy condition. With regard to our leading department, the record has again been beaten, and handsomely beaten, during the past year, and Tuck's Christmas cards may fully claim to hold the field throughout the world more firmly than ever before. Tuck's postcards, too, continue their acknowledged position as the standard postcards of the day, our famous "Oilette" postcards fully maintaining the lead among the number of lesser shining lights we are constantly kindling. Picture postcards, while they shed their boom some years back, have settled down into a steady regular trade, and this department may always be looked upon as one of our reliable sources of income. Our engraving and picture department continues to yield no less satisfactory results, while our showcard department is steadily growing, and has some gratifying successes to its credit during the past year. The art novelty and sundry departments, if not of the same importance, are none the less useful and promising adjuncts to the business. Dealing with the balance sheet Sir Adolf said: The leasehold property is taken at £76,742 0s. 2d., as against £76,922 2s. 2d. last year. Originals unpublished and in course of publication, lithographs, steel plates, etc., are valued at £8,356 11s. 9d., as against £8,948 3s. 4d. last year. Plant, fixtures, vans, horses, furniture, etc., stand at £7,875 12s. 3d. as against £8,158 12s. 6d. the previous year. Stock at cost or under stands at £52,056 15s. 11d., against last year's figure of £53,522 7s. The total of these fixed stock assets is £145,031 0s. 1d., as against £147,581 5s. last year, showing a decrease of £2,550 4s. 11d. Dealing with the more liquid assets, we find that accounts owing to the company, after making ample provision for discounts, bad and doubtful debts, etc., show £66,945 6s., as against last year's figure of £62,140 2s. 11d. Investments in Government, Colonial, Corporation and other gilt-edged stocks stand at £63,348 15s. 8d., as against £38,696 4s. 8d., an increase this of no less than £24,652 11s., all purchased at the low prices ruling during the past twelve months. Investments in printing and publishing companies, including Raphael Tuck and Sons, Ltd., Berlin, amount to £16,916 19s. 1d., against last year's total of £17,416 19s. 1d. Investment of special dividend reserve fund totals £36,495 10s. 6d., against last year's total of £35,497 10s. 1d. We have cash at bank and in hand, £65,424 1s. 1d., as compared with £79,440 7s. 9d. last year, a decrease of £14,016 6s. 8d., which, deducted from the increase in the amount of gilt-edged securities held by us, still leaves us £10,636 4s. 4d. to the good. These five groups of assets together give us a total of £249,130 12s. 4d., against £233,191 4s. 6d. last year, an increase of £15,939 7s. 10d. Deduct from this the increase in the amount owing by your company, £19,719 3s. 7d., as against £17,320 12s. 3d., or a difference of £2,398 11s. 4d., we arrive at a surplus of liquid assets of £13,540 16s. 6d. Allowing on this total the decrease in our fixed assets, amounting to £2,550 4s. 11d., you are left with a net surplus in your total assets of £10,990 11s. 7d. over the previous year. Our copyrights, goodwill, etc., are taken at the same figure as in past years, although these in reality become more valuable year by year in a progressive publishing business such as ours. The final result of the year's trading is shown by the net profits, amounting to £41,992 1s. 5d., as against £36,488 14s. 9d. last year, an advance of £5,503 6s. 8d. Add to this the amount brought forward from last year, £5,509 19s. 10d., and we have a total of £47,502 1s. 3d., as against last year's total of £42,259 19s. 10d. Preference dividends, amounting to £13,750, and the ordinary interim dividend to the extent of £6,250 have already been paid, and, after providing for the directors' fees, £3,250, we are left to deal with a net sum of £24,252 1s. 3d. It is in the allocation of this sum that the Board asks you to uphold the conservative policy of the past years and to sanction the declaration of a dividend of 7 per cent. for the past half-year, making 6 per cent. for the year; to transfer the sum of £8,000 to general reserve; to transfer to special dividend reserve fund, £2,000; and to carry forward to next year the sum of £5,502 1s. 3d. Your reserves will then stand as follows: Capital reserve, £8,845 5s. 2d.; special dividend reserve fund, £39,494 0s. 8d.; general reserve, £48,000—a combined total of £96,339 5s. 10d., or less than £4,000 short of our first £100,000 reserve. Dealing with the acquisition of the American company, Sir Adolph said that the opportunity of acquiring the shares in the American company of Raphael Tuck and Sons, and thereby completing the direct control of the Raphael Tuck and Sons' publications over the markets of the entire world is, of course, a position of infinitely greater value to us, and there can be little doubt that, with the policy of the American and Canadian business controlled by London, the entire English Board going on the directorate of the American company, of which I have accepted the post of president and my brother Gustave that of vice-president, with four practical American men, three of whom have been connected with the business, joining the American Board, the American shares we have acquired for this company should within a reasonable period yield a handsome revenue. This is altogether apart from the undeniable benefits accruing to us from a now entirely unhindered outlet for the London publications throughout this gigantic American and Canadian territory, which teems with an English-speaking population of upwards of a hundred million inhabitants, increasing yearly by leaps and bounds.

Mr. Gustave Tuck spoke of the success of the firm's book and calendar department, and said:—"Father Tuck's Annual" has again been improved by the addition of thirty-two coloured pages, the series of children's gift books to retail at 3s. 6d. each forms in itself a beautiful illustrated juvenile library of twelve distinct books, absolutely unrivalled. "Children's Stories from the Arabian Nights," richly illustrated by Harry Theaker; "Children's Stories from English History," with illustrations by John H. Bacon, A.R.A., and others; a most charming "Anderson's Fairy Tales," illustrated by Mabel Lucy Attwell; and a typical illustrated book by Hilda Cowham are its additions, each embodying distinct features which will be welcomed by the young folks, who are, after all, the best judges. Our remarkable output in calendars comprises this season no less than 400 different designs, suited to the requirements of all classes of purchasers. Our daily tear-off block calendars, of which no less than forty designs are placed upon the market by us this year, will probably, like their predecessors last year, be mostly out of print before the season is far advanced.

Sir Arthur Conan Doyle, Mr. Alfred Parsons, and other gentlemen also addressed the meeting in congratulatory speeches.

TRADE PRINTING—Book, Magazine, etc. Monotype and Linotype Setting. Best work. Est. 1881. BIRDSALL & Co., Electric Printeries, Stanningley, Leeds. Half-tone and Tri-colour Printing a speciality.

The Haddon Safety Platen.

Among the newer printing machines of the platen type the "Haddon Safety Platen," which is meeting with much appreciation by those printers who have installed it, takes a high place, which its various points of excellence entitle it to, while a strong recommendation is that it is accepted by H.M. factory inspectors as free from risks to the feeder. Among the features of the "Safety" we note that it is of rigid construction, with stationary platen, and massive base frame combined with platen—not a rocking platen. A large fountain roller, together with a full width sweeping vibrator, easily and effectively break up the ink on the slab. The vibrator may be washed up without being removed from its bearings. All three inkers cover a full-size form. Making ready on the "Safety" is easily accomplished. The platen is fitted with a removable plate which enables the minder to do his cutting out, etc., in a good light whilst the machine is being washed up, thereby effecting a considerable saving in time. It may be fed at high speeds with ease. Its sloping feed-board is practically in line with the platen itself, thereby preventing the creasing of stock, and thick cards can be printed without bending. At the highest speed there is no danger to the feeder. It will work perfectly with margins as narrow as $\frac{3}{16}$ of an inch, and the whole of the gripper motion is actuated by positive cams. The sheet is gripper controlled, from the time it is fed until it is delivered. For colour and register work it is thoroughly reliable and certain in its results. The sheets on their travel from the platen to delivery board are constantly under the eye of the feeder, thus reducing the risk of spoilt work to a minimum. The impression throw-off is operated by treadle, thereby leaving both hands free, and the sheets are delivered in a neat pile ready for the warehouse. The output is on an average of 3,000 demy-folio sheets per hour. An illustrated circular is issued by the firm in which a full description of the features of the machine is given, and this should be seen by printers who desire to investigate its points, copies may be had from Messrs. John Haddon and Co., Salisbury-square, E.C.

The Caxton Convalescent Home.

That excellent institution, the Caxton Convalescent Home, Limpsfield, Surrey, should be popularised in the trade by the issue of a handsome booklet that has been got up to advertise the advantages it offers to those whose health, from any cause, may require recruiting. Situated on the crest of the Northern Downs, 530 feet above sea level, and commanding magnificent views, while being protected from the north and east winds, it stands in an ideal position for such an institution. The booklet is illustrated with many views of the exterior and interior of the Home, well printed in a photo-tint and enclosed in ornamental borders worked in colours, the letterpress giving a history of its foundation and points out its advantages.

The Home is supported by donations and subscriptions from printing trade employers and employees. A donation of £100 entitles the giver to name a bed and to nominate a patient annually for life. £50 donated by any firm, society, committee or other body provides for life representation, with privilege of sending a patient annually. A donation of two guineas entitles the donor to nominate a patient entirely free, including travelling expenses. Two shillings and sixpence constitutes an annual subscription, and the committee are at all times ready to consider the claims of such annual subscribers to the benefits of the Institution. That the Home meets a much-needed want, and has the confidence of the printing trades, is evidenced by the fact of the steadily increasing financial support received year by year, and the increasing number of patients. The secretary, Mr. S. T. White, is always pleased to wait upon employers by appointment, or to attend chapel or workshop meetings, and any information with regard to the Home and its work will be readily given on application to Mr. White, at the London office, 3, Cursitor-street, E.C.

It is interesting to note that the booklet has been printed, free of cost, by Mr. A. Chris. Fowler; the paper for the text supplied, gratuitously, by Messrs. Harold Spalding and Co. (per Mr. W. Sommerville); the cover paper, gratuitously, by Messrs. T. W. Hastings and Co. (per Mr. T. W. Hastings); and the blocks, also made without charge, by Messrs. John Swain and Son, Ltd. (per Mr. Wm. Brett Plummer).

Bamboo Supplies in India.

Government Concessions to Induce Establishment of Paper Mills.

There is an immense possibility, remarks the *Beharee*, for the paper manufacturing industry in the State of Cochin, as bamboos grow in abundance. The Durbar are prepared to grant free of assessment for a period of 12 years a tract of land necessary for the erection of the factory buildings. Other concessions offered are a supply of bamboo required for the manufacture of pulp for a period of five years at the actual felling and transport charges, and a supply of fuel at actual collection charges for the first five years and at a profit of eight annas a ton during the remaining seven years. During the first five years the pulp manufactured from bamboo will be altogether exempt from royalty, while thereafter a royalty of one rupee per ton will be charged. It is also stated that the Durbar will consider any other alternative proposals for leasing out bamboo-producing lands for a long period for the purpose of extracting bamboo required for the manufacture of paper and for growing bamboos in selected areas.

THE Alberta and Eastern British Columbia Press Association will meet in Edmonton on September 11th and 12th. One session will be in the nature of a cost congress conducted by representatives of the Interprovincial Master Printers' Association, who will give an exposition of the Standard and Uniform Cost Finding System and demonstrate its importance in printing and publishing plants.

Australian Paper Mills Co., Ltd.

Presentations to Mr. Robert N. Corney, General Manager.

A Six Months' Trip to Europe and the United States.

Mr. Robert N. Corney, the general manager of the Australian Paper Mills Co., Ltd., left Melbourne on June 5th, on the P. and O. steamer "Morea," for a six months' holiday, during which period he will make a study of the latest improvements in papermaking machinery in both Europe and the United States. Mr. Corney is held in the highest esteem and regard by the officers and staff of the Australian Paper Mills Co., Ltd., and he also enjoys the respect and confidence of the Australian paper trade. It is with pleasure, therefore, that we record two very pleasing presentations to Mr. Corney that took place just prior to his departure.

The officers and staff of the Australian Paper Mills Co., Ltd., entertained Mr. Corney at a dinner held at the Café Francaise, Melbourne, on Friday evening (May 30th). Mr.

MR. ROBERT N. CORNEY.

R. Mayston, the secretary of the company, occupied the chair, and in proposing the toast of the guest of the evening, referred to the agreeable relations which had always existed between Mr. Corney and the staff, and on their behalf presented him with a pair of field glasses suitably inscribed. Mr. R. M. McHattie, on behalf of the employes of the company, at Fyansford, and Mr. H. O. Corney, for those at Broadford, also spoke of the esteem in which Mr. Corney is held at their Mills. Mr. Corney, in acknowledging the good wishes and presentation, made kindly reference to the loyal assistance rendered by all associated with each mill to himself and the company. An adjournment was subsequently made to Her Majesty's theatre, where a very pleasant evening was spent.

In the afternoon of the same day the Melbourne Wholesale Paper Trade entertained Mr. Corney. At a representative meeting he was presented with a gold set, suitably inscribed, comprising an albert chain, sovereign case, and cigarette case. Mr. J. G. Gates, manager in Australia for Messrs. James Spicer and Sons, Ltd., was in the chair, and made the presentation, which was supported by Mr. John Dyson, of Messrs. A. J. Dyson and Co., Ppy., Ltd.

The Grumbling Evil.

Continuous disparagement of the work of others by the fault-finding grumbler has a most discouraging effect upon those who do the work. This is particularly true and particularly noticeable in the trade unions. When men of high ideals, honest of purpose and imbued with an earnest desire to make things better and people happier—who work year in and year out with no hope or thought of a higher reward than a fair share of the improved conditions which they hope will come to all through their efforts—receive no encouragement except the sneer of the fault-finder, it is apt to chill their ardour and make them less enthusiastic in the work they have set out to accomplish. When fault is found with everything that is done, whether it deserves it or not; when no effort has been made by direction or suggestion that it might have been done otherwise and thus bring better results, it is very hard for the average man to listen with indifference to the adverse criticism of the fault-finder, when he knows that he has done his very best, and that his critics had an opportunity beforehand of saying what should be done and how it should be done. Instead of lending aid and encouragement at the proper time and in the proper place to those who desire to do the work, the growling critic and fault-finding grumbler delights in throwing a chilly blanket of disparagement over everything and everybody. Instead of standing up in the trade union meeting and honestly reasoning with his fellows, and searching for the better way, he either does not attend the meetings, or waits until they are over before he voices his venom of criticism. When real good has been accomplished and conditions have been improved he participates with a thankless snarl, but if a mistake has been made he modifies his grumbling to a sneering "I told you so." When mistakes are actually made—for unions, like other institutions, have made many blunders—the fault ought not to be laid upon the shoulders of those who are endeavouring toward higher things, but upon the shoulders of those who, by their pernicious inactivity, have permitted the making of mistakes. They had both power and opportunity, but failed to exert the one and neglected the other.

Grumbling can never improve the economic conditions. We must be up and doing before we can hope for advancement. What has been gained has been by hard work and steady application of purpose, and the gains of the future can only come in the same way. If we wish to be helped we must help ourselves, and all the grumbling in the world, because we are not assisted by others, will not accomplish anything. The Lord helps those who help themselves.—*American Pressman.*

SAID a pressman in Fleet-street, speaking to a friend:—"Well, money talks." "Maybe it does," answered the other, "but all it ever said to me was 'good-bye.'"

Device for printing value and date impressions on envelopes on the like—Baum; 6,055.

Trimming Curved Stereos.

An invention by the Münchever Zeitungs-Verlay Ges. relates to machines for trimming curved stereotype plates of the kind wherein the plate is placed on a saddle which carries it past rotary cutters to machine its curved edges, and deposits it in a trough where it is shaved by a knife fast to the saddle shaft. The saddle 1 for supporting the plate is carried by a cylinder 1*a* fast on a shaft 83. This shaft is driven intermittently from a worm wheel 48 loose thereon, which has on one side a ratchet wheel 61, with which a pawl mounted on a crank on the shaft 83 engages when a starting lever 2 is operated. The wheel 48 is driven from a worm 49 on a cross shaft 54*a*, driven by worm gearing from the main shaft 79. As the saddle 1 commences to rotate, the plate is supported and forced round past the milling cutters 10*a* into the trough 13 by ledges 7*a*, 7*b*, normally drawn inward by spring 7*c*, but intermittently projected outward by cams 8*a*, 8*b*, rotated through a quadrant at each half-revolution of the saddle by star wheels 8*f*. The plate is held during rotation by a roller held against the plate by a cam. When the curved plate is in the trough 13, the ledge 7*b* which has been driving it, is withdrawn and a stop is projected over the edge of the trough to hold the plate against further rotation, by a cam on the shaft 76. A knife 19*b* then shaves out the inside of the plate, and a brush 73 sweeps out the metal. The stop holding the plate in the trough is then withdrawn and the ledge 7*b* projected, whereupon the continued motion

of the saddle 1 raises the plate to its original position. At the end of two complete revolutions the starting lever 2, which has been held in position by a catch 6, is allowed to return, and the shaft 83 comes to rest. The partly finished plate is then moved longitudinally over milling cutters 41*b* for trimming the straight edges by a conveyer 22, which is reciprocated in guides 25 by a right and left handed screw 20. This screw is rotated during the first part of the cycle by free-wheel gearing 30, 32, 34 from a wheel 27 on the shaft 83. Before the shaft 83 comes to rest a cam 77, by means of a rod 57, throws a clutch 56 into enagement, connecting the shaft 76 through worm gearing 49, 50 with the main driving shaft 79. The shaft 76 thus continues rotating to drive the conveyer, the free wheel gearing 30 over-running. The cutters 41*b* for trimming the straight edges, which are actuated by gearing 43*b* from a shaft 43*c* driven continuously from the main shaft 79 by helical gearing, are carried on arms 44*b* loosely mounted on the shaft 43*c*. These arms have lugs 46*b* engaging screws 46*a*, which can be operated by hand wheels 46 to adjust the cutters to any variation in the width of the plate. At the conclusion of this operation the cam 77 permits the spring 58 to uncouple the clutch 56, and the apparatus comes to rest ready to receive the next plate.

E & S "NICKELOID" QUALITY

WHAT IS "NICKELOID"?

"NICKELOID" specifies the hardest and most durable printing plate yet produced; an electro having a non-corrosive nickel-steel alloy shell, deposited direct upon the mould, which is reinforced by a further deposit of hard tough copper and backed up with a metal of first quality, the whole combining to make up an electro of perfect quality, unsurpassed for durability.

"NICKELOIDS" must not be confused with Nickel-faced electros. They are as wide apart as the poles.

The process is equally applicable to type, line blocks, half-tones, and colour work. In fact, for half-tone and colour work, we combine all the now well-known distinctive qualities of our "Albert-Galvano" (Lead Moulding) Process with the foregoing, and all such work carries our absolute guarantee to give results equal, in every respect, to the originals.

"NICKELOIDS" are suitable for all grades of work, but especially so where long runs and hard work are required. These plates have printed, and will print, runs of exceeding one million from one plate or one set of plates, thus showing a great economy, both in the initial cost (as compared with several sets of ordinary electros), and also in the saving of time changing plates and making ready.

Note our address now, and send us your next job that runs into anything like half a million or more impressions.

The Use of India Paper.

Some Hints to Printers, Binders, and Publishers.

The durability as well as utility of India paper is not yet thoroughly appreciated by printers and publishers. The former property is best demonstrated by the fact that, owing to the very careful and thorough treatment in manufacture, it is possible to crumple up a large sheet, tie it in knots, pull it through a small aperture such as a wedding ring, and after ironing it out with a warm iron, no apparent damage has been done to the sheet. This test is only possible with a very few finely felted papers.

The utility of India paper is self-evident these days when compactness is becoming an increasing necessity, but the treatment of this thin paper requires some knowledge and experience on the part of the printer and binder.

The importance of storage of paper, so often overlooked by printers, is doubly essential in the case of India paper, owing to its hygroscopic qualities. It *must* be kept at the humidity and temperature of the machine-room, preferably in the machine-room itself, for two or three days before use, so as to ensure absence of "cockling" or "curling." Far too seldom do we see thermometers in printers' paper warehouses and machine-rooms.

It is very important for those buying India paper to understand the condition as regards the stretch and its effect on printing and correct register, so that when the two sides of the sheet are printed the lines of type lie one over the other. If this is not the case the paper, if not very opaque, becomes illegible or difficult to read, nullifying the object of its use.

Users should understand that, common to all machine-made papers, the greatest stretch or elasticity in paper is in the "cross" direction, *i.e.*, the fibres lying parallel (owing to the flow of water on to the machine causing the fibres to travel point foremost), pull apart more easily one from the other on account of the "felting" being weaker than in the "machine" or direction of flow of the pulp. Not only is the stretch greater in the cross direction, but the stretch is more regular, and this is the more important point to the printer. India paper must be fed into the printing machine in the cross direction, *i.e.*, with the fibres running parallel to the printing cylinder, so as to ensure correct register. If fed into the machine in the "machine" direction, the effect is somewhat similar to that of a roll of cloth being fed into a mangle—the warp threads under slight tension run to the middle. India paper, having no lateral resistance, the fibres tend to run to the centre, and if the sheet be large, will cause creases in the middle of the tail end of the sheet, owing to the stretch in the machine direction being irregular, being in fact at first straight and then running in a curve to the two corners. Hence, if a book is printed in this way, the lines of type on either side of the sheet, even if the two register at the front end of the sheet, will not do so at the other end, due entirely to the stretch being irregular and not parallel to the printing cylinder.

Satisfactory register on India paper is not possible unless these points are closely followed, and the paper fed into the printing machine in the cross direction.

Further, if the book is bound in this way, the expansion and contraction of the pages, owing to the varying atmospheric conditions (and India paper being soft sized is specially susceptible) is parallel to the binding and natural. If bound the reverse way, *i.e.*, with fibres running parallel to type, the expansion and contraction is not natural, as the paper is held firm by the stitches and diagonal creases running from the stitches are the result, which spoils the appearance of the book.

Again, when the fibre runs parallel to the type, the damping of the paper, when the bookbinder glues the back to put the case on, causes "cockles" to run across the pages of the book, which after the glue sets, become permanent. On the other hand if the fibres run parallel to binding, the cockling runs the length of the binding, which is permanently covered by the case, and not out into the page.

The difficulties of gilding the edges are overcome by the careful use of French chalk to prevent the size from penetrating the India paper and causing the edges to stick together.

Another advantage India paper offers is that books made of it open flat, and still flatter when bound with fibre running parallel to binding.

With the ever-increasing necessity of handy reference books, not to mention the necessity for the economy of storage of books, India paper must come more and more to the front, and it behoves printers and publishers to take an interest in it and attack its difficulties, for difficulties there are, in handling, feeding, counting, sorting and printing, etc. Curiously in handling India paper, rough usage, which with ordinary paper would render it useless for its purpose, makes very little difference to it when smoothened out, provided it is not actually torn or dirty.

As regards hand-feeding printing machines, the usual method of fanning out the sheets close into the grippers assists the speed, as well as causing less waste, due to corners folding back on account of the draught of air.

In actual printing too heavy impression causes the ink to penetrate too far into the surface of the paper, to the detriment of legibility, and for the same reason it should not be stacked in high piles after printing until perfectly dry, owing to the risk of set-off or the ink being pressed into the sheet. Again, it should on no account be passed on to the binder until dry, as in the folding, stitching, cutting and binding processes it is subjected to pressure.

The counting difficulties may be overcome by automatic counters on the machines, and if performed by hand will give some indication of the quality of the paper.

"Quality" in India paper is represented by the extent of "tinniness," as Mr. Clayton Beadle calls it, opacity, and bulk, and not so much on the usual gauge of colour, tensile strength, tear percentage of loading, etc. Printers should be warned against too white a colour for India paper, as not only does the higher bleaching reduce strength of fibres, but the all-important wearing properties are affected, and the paper made more transparent. A slightly creamy shade is preferable, although the high percentage of mineral loading added to assist opacity naturally raises the colour.

An important feature also is that the paper shall be equal in surface on both sides, as owing to the dry inks used and the necessity to avoid heavy impression the under or wire side must print equally black to the top side, otherwise two pages coming side by side in a book look odd, besides a grey sheet is not so legible. Owing to the surprisingly high percentage of necessary loading to obtain opacity—18 to 25 per cent. being permissible—occasionally trouble is caused by the dry ink "picking" the top side of the sheet where the fine loading lies on the surface. This is easily overcome by slightly softening the ink used.

India paper has an astonishing resistance to tear for so thin a paper, and even large-sized books do not tear with continuous handling. The thin paper being supple, appears to "give" to shock. Resistance would mean a tear.

The beautifully artistic matt surface of India paper appeals to the good public taste, and with the advent of the offset litho and photogravure processes (India paper is almost ideal for the latter, if not too thin), and with recent British Association and educational authorities, resolutions against the use of coated "art" papers on account of the injurious effect on the eyes, there is a big future for book illustration, etc.

The following information may prove useful to those interested in the printing of India paper, especially to those who have not up to the present printed this kind of paper:—

(1.) STORAGE OF THE PAPER.—It is absolutely necessary that the paper, before it is used, be placed in the printing-room for some time, say three or four days, without any covering, that is to say, free from any wrapping paper. This is done in order that the paper may be of the same temperature and humidity as the printing-room. Paper brought direct from the store-room to the printing machine never gives good results, as it becomes easily cockled and curls up, owing to the unequal absorption of the atmospheric moisture.

(2.) PRINTING INK.—The printing ink should not be greasy. If you put a stick in the ink and take it out again, greasy ink will run like honey. The ink must be dry, and from a stick put in it it must drop down in pieces like dough.

(3.) INK DUCTS ON THE MACHINES.—Generally the ducts on the machines containing the ink (which is usually oily and thick flowing) are in quite a horizontal position, so the ink runs easily of its own accord to the transfer rolls. The dry ink, however, does not run at all, or only very slowly, and therefore it is advisable to give the ducts a slight incline to the transfer roll, so that the dry ink can flow better.

(4.) PRESSURE ON THE MACHINE.—In machining thicker paper as a rule the pressure is heavy. This should not be the case with thin India paper, as under the heavy pressure of the type, the impression shows on the other side of the paper, as this thin paper cannot resist the pressure. Furthermore, the ink is pressed right into the paper. One therefore runs the risk of pressing it right through, so that the letters appear on the other side, especially as India paper is not hard sized. Therefore, the machine must be adjusted to the correct pressure before the printing of the paper, so that, using dry ink, the printing does not appear embossed, but in a nice black colour on the surface. It is quite easy to get this right pressure.

Digitized by Google

(5.) PAPER AFTER PRINTING.—After printing, the paper should not be stacked in very high piles, so as to avoid undue pressure on the printed sheets before the ink is thoroughly dry, which might cause same to "set-off" or to permeate through the paper. For the same reason the paper should not be given to the bookbinder straight away from the machine, or before the ink is quite dry, as the paper is subjected to pressure in the cutting machine, etc. It is very easy to make red and gilt-edged books with the paper, as this point is taken into consideration in the manufacturing, but nevertheless, in this work, specially, careful attention is necessary, and also some experience.

Many printers feed the paper into the machine by hand, viz., girls take each sheet and lay it into the required position for the grippers. This method usually takes more time than is the case with mechanically-fed paper, but in many printing houses, the dexterity (or skill) of the girls has reached such a high degree that they can feed the same quantity of sheets per hour as the machines, but the latter saves the wages of the girls. The firm of Klein and Ungerer, in Leipsic, have recently constructed a machine with pneumatic feed which automatically lays on the thin paper to the weight of 30 grammes (double crown 12½ lbs.). The number of sheets inserted per hour is not much higher by this method, but the wages of a girl are saved.

Machine-Room Costs.

At the July meeting of the Newcastle and District Printers' Managers and Overseers Association, the following paper, entitled "A Machine-Room Talk and Costs," was read by the president, Mr. A. Phillips:—

In this machine-room talk, I do not wish to disguise the fact that it is a talk to experts, and that there is bound to be a difference of opinion on points touched upon. Now in the first place, I contend that in all cases, whether the office be large or small, this department should always be in charge of a practical man, instead of as in many instances, supervised by the overseer of the composing-room. This fact is at last recognised by employers, and you will find that the Costing Committee at their meetings in London, and also in their reports, strongly advocate separate and distinct departmental working. I feel sure that letterpress overseers will welcome the news that master printers have at last woke up to the fact that, each department must have its own overseer if work is to be carried through with economy and dispatch. The old order of a composing-room overseer running the two departments will have to go, as it must when one takes into account the high pressure at which all work has to be got through.

The Machine Department

to-day is more intricate than ever it was, for a good man must not only know mechanics, but something about chemistry and photography as well, if he is to successfully cope with the difficulties which beset his path, and however good an overseer may be of a composing-room, still he is a square peg in a round hole when he comes to the machine department, and in saying this, I do so without the slightest disrespect to the composing-room overseer. All I contend is that he is asked to do too much, from which in the long run his firm suffers.

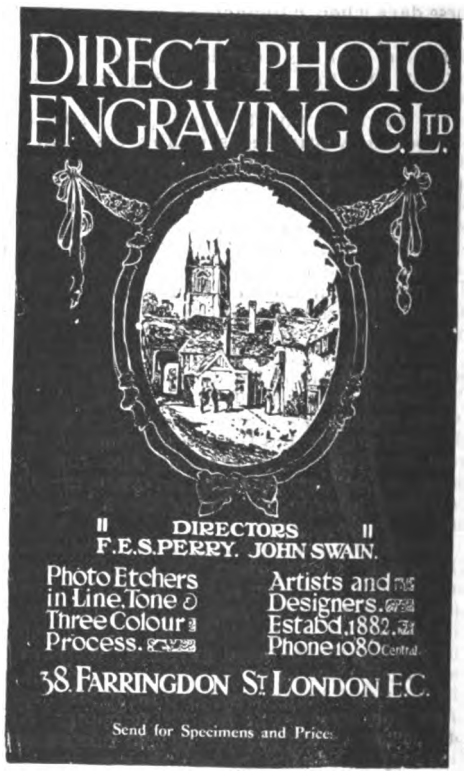
The Printing of To-Day.

The quality of printing as expected now is not the printing of twenty or even ten years ago. There was a time when the art of the compositor was reckoned pre-eminent, and the poor minder was looked upon as an inferior individual, in fact he was not even recognised by the trade unions, so low was he in their estimation, but what a change has come over the scene! Gentlemen, you can put your finest comp, with all his artistic abilities and the best material that can be bought to set up a job, send it down to the machine-room, and get it badly machined, and the job in the customers' and public's eyes is damned. But you can reverse the order, and if the composing has been inferior or slipshod, machine it well, and the job will pass through.

Employers, and often overseers too, lose sight of the fact that there are many mechanical and other difficulties for a man to contend with before he can start a job. Elaborate machinery with its gearing and self-feeders, paper with its varying surfaces of china clay, atmospheric conditions affecting ink and rollers, the two latter I am afraid never sufficiently taken into account, yet on them often depends whether the job is turned out in a satisfactory manner, or not. All these things tend to put time on work, and if you compare a great many of your jobs which are turned out to-day, with those that have only been done a few years back, it will be an education in itself even with work which is illustrated.

Process Blocks.

Some time back half-tone and three-colour blocks were little known, and the wood-cut and electro, with damped paper, reigned supreme. These latter have had their day and will never return, so if you pause and think of the past and the present, one and all will honestly admit that more brains are now wanted in the machine department than ever before, yet in face of these facts there are firms still who expect their overseers to do two men's work.



Ascertaining Costs.

We will now get a step further on and think of the many things that go to make up cost of production in the machine department, and as our basis we will take a double-demy machine, say the ordinary stop-cylinder, but fitted with gearing and necessary appliances for turning out a job with half-tone blocks. First, you have interest on capital outlay, and afterwards depreciation of machine and interest, then comes wages of minder and feeder, portion overseer's wages, rent of floor space, rates, taxes and lighting, and finally power to drive the machines. All these items must be calculated before you can possibly make a start as to what constitutes cost for machine hours, and it is advisable also to extend it over a period. After finding out up to this point, what it costs to work the machine, say for a year, week, or hour, still the question to answer is, what rate must I charge per hour to get back all those expenses I have been put to in producing the work? Some might say, well, just divide by the number of working hours in the year or week, and there you are. No, this will not do; what you have next to find out is, what hours the machine is working on jobs. And I will admit that if you have no system whereby you know what each individual machine does in a week, month, or year, you have something to ponder over.

We all know that there are many times in a month in which machines have to be kept open, or

Waiting for Work,

and that expenses are running on exactly the same, and it is marvellous how these non-chargeable machine hours mount up. Still the difficulty has to be got over, and perhaps you will then begin to think of how many hours were machines actually working on jobs that have been charged up during this last week or so; you will find perhaps there are seven or eight hours per week per machine gone astray somewhere or other, which cannot be accounted for at all. Yet they have been paid for as labour, etc. Now that has to be got back from the customer, so it will be advisable to divide your costs per week not by 51, as one thought, but somewhere in the region of 43 or 44, or even to come down to 40 per week, taking a period of 12 months. Your costs per week divided by these hours will then give you the hour cost of actual production. But please bear this in mind, that you have arrived at this cost per hour for the machine, whether it is working on a small or full sized job, and that, compelled often as one is, to put small jobs on large machines, yet you cannot charge your customer with a rate which the job would not bear. As an instance, you could not charge the same rate for a 4to as a demy job. The customer cannot help it if your other machines are all blocked, so that although you have now worked out your cost for this size of machine, still, knowing as you know, that 50 to 75 per cent. of your work done will be under demy, the only thing to do is to fix your hour cost in excess of the actual cost for a full form. By so doing you will be enabled to put smaller jobs on the machine than you otherwise would do. As an illustration of what I mean we will take various sizes from double demy downwards, and will first look at what it costs to run a double demy machine, this being a size used practically by every office. Now the figures I intend giving are not taken from any text book, but are based on works cost in Newcastle today of 51 hours, with wages of minder at 36s., and a good qualified feeder at 12s. per week. And here let me say that it is the height of folly in my opinion to have a good machine and minder and an indifferent feeder. Far better pay a shilling or two more per week in this latter direction, for it is money well spent. You now have the commencement of costs—wages £2 8s. per week—then you begin to put down the other items, depreciation, interest on capital, floor space rental, rates and taxes, lighting, power, and percentage for overseer's wages. These you will find total up to about £1 2s. 7d. per week, making a total cost of £3 10s. 7d. per week for a double demy machine, independently driven by motor. These are works costs pure and simple, and do not take notice of counting house expenses; we will now divide this by, say, 44, being the number of hours you know your machine actually works per week throughout the year, result is 1s. 7¼d. per

MEGILL'S GAUGES
The Handy and Sure Lays.

You need them on your Platen Machines to get the sheets all true and square and in perfect register with the form. Adjustable.

This is Megill's ECCENTRIC STUD GAUGE. Head turned from solid metal. Binds on Tympan.

From your Furnishers or Headquarters:
EDWARD L. MEGILL, 60, Duane St., New York, U.S.A.
The Original Inventor and Manufacturer.

Many styles. His Signature and Trade Mark on packets denote genuineness. ESTABLISHED 1870. Ref.—National Park Bank, of New York, having Foreign Correspondents.

Notice to Employees

The BRITISH and COLONIAL PRINTER and STATIONER is supplied at **HALF-PRICE** (FIVE SHILLINGS PER ANNUM, or **2/6** FOR SIX MONTHS, payable in Advance), to BONA FIDE EMPLOYEES ONLY, in the Printing, Stationery and Allied Trades. Persons desirous of taking advantage of this arrangement must state in their application where, and in what capacity, they are employed. This arrangement also applies to Printing and Allied Trade Operatives in the Colonies and foreign countries, but in this case the extra postage has to be paid in addition to the five shillings per annum rate.

Digitized by Google

hour as your machine hour cost for this size of machine. Now, as I have previously said, your machine is running probably 50 to 75 per cent. of its time on smaller sizes, double crown downwards, and that as you must have a double demy size you will have to fix your rate at at least 2s. 3d. per hour to cover hours your machine is working on smaller forms, so as not to have a loss in this department, double crown you would then charge, say, 2s., royal, demy foolscap, large post at 1s. 9d., you then have very few sizes left on which you would have a loss when working this size of machine, for most folio sizes can be honestly charged 1s. 6d. or 1s. 7d. per hour.

Some Will Say

that they think the actual hour cost can be reduced; so it can, and of course there are two ways of doing it, one by reducing your feeders' wages to 9s. or 10s. per week, or by one man working two machines. Now taking the case of the first saving, this can be done in a good many instances without impairing in any way efficiency, especially if you have trained your feeder yourself, and that the class of work is just ordinary commercial. This would then reduce your hour cost to about 1s. 5½d. or 1s. 6d. The second way, one man to two machines, is not going to be such a gold mine as one would imagine. If you just think for a moment you will have to acknowledge that on ordinary jobbing work, with its runs of only half, one, or even two or three hours, it is utterly impossible for any minder to keep both running. Still, if you are fortunate enough to have jobs with long runs, then it is not so bad, and a man is glad to have a machine whereby he can run off small runs. So we will see how costs come out here. Rent, rates, taxes, etc., £1 2s. 7d. each machine equals £2 5s. 2d; £1 16s. wage of minder and say £1 for two feeders, total cost equals £5 1s. 2d. per week. Now your hours of running were 44 hours per week for one machine, but you cannot double that and make it 88 when a man is looking after two machines; it will not be more than 70 hours. So we will divide £5 1s. 2d. by 70, which equals within a few coppers 1s. 5½d. per hour, so that after all you are not making a fortune by adopting this method.

Cost of Materials.

We will now take the other portion of machine-room costs, namely, materials, and here I fancy very often the customer gets what he does not pay for. Ink alone is only one of many things, for you have oil, rags, benzolene, petroleum, lye, pick and other brushes, emery cloth, varnishes and chemicals, composition, and a small host of other things, and if you keep a careful account of all your materials bought in the course of the year, keeping inks apart from extras wanted, you will find, I feel sure, that at least another third can safely be added to cost of inks, all of which you must get back again from your customer if you do not want to have a loss so far as this portion of costs is concerned. I have come across more than one or two, in my life, who in charging up material have charged for the ink alone. Gentlemen, what folly, think of all the other items I have mentioned, how many of these can you honestly dispense with at all? Why, practically none; and here is where a foreman is always wanted in the department, he knows what extras have had to be used in the various jobs passing through, for it would be manifestly unfair to charge a customer in the material cost for a job which run through smoothly and well, as against one, who through faulty paper or blocks have had to have a lot of extras and doctoring to turn out the job as it should be. As an instance, let us take say two jobs in bronze blue, both the same size, one worked on a good printing paper, the other on a coated stock, and although the ink given out is exactly the same in both cases, yet in one you run through without any trouble whatever, but the other, well your troubles begin at once, and only by doctoring of inks with various things can you get a satisfactory result, so although both jobs, we will say, took the same amount of ink, yet you must charge for one more than the other and so cover your additional costs.

In conclusion, I hope this little talk will set you thinking, and by so doing to ask yourself the question, have I in the past been charging too little for labour and material? and I feel pretty confident that in a good many cases you will admit that charges have been too low in the past even in the machine department.

Works costs do not include the counting-house, so that if these were added your figures should be about—

Works Cost.		Per hour.	Counting-House Costs.
Platens	—Light	1s. 0d.	3½d. and 4d.

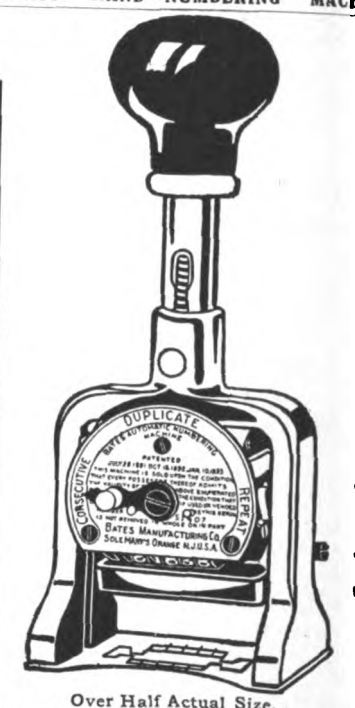
At the close of Mr. Phillips' address, an interesting discussion took place on several points connected with costs of running the machine-room. Several different methods were discussed, but the lecturer said the chief point was that the whole of the expenses of the department should be recovered in the hourly rate, and that materials should not be overlooked but charged direct to jobs.

A vote of thanks was passed to Mr. Phillips for his paper, and it was decided not to hold the usual August meeting on account of members being on holiday.

On September 1st a lecture will be given by Mr. Philipson, of Messrs Philipson and Sons, process engravers, on "The Making of a Half-Tone Block."

THE new Norwegian "scale," the adoption of which by both sides, put an end to the recent compositors' strike in that country, is a considerable improvement on the old one. The weekly hours of labour are reduced from 54 to 51½, and night work is limited to a maximum of 6½ hours, a day's work for a composing machine operator is 7 hours (net) by day or 6 hours by night. Composition is to be paid for at the rate of 6¾d. per 1,000, to men and women alike. Composing machine operators have their scale increased by 33 per cent. for day and 20 per cent for night work, the weekly minimum being raised from £2 2s. to £2 13s. 6d. Rotary machine minders have received an increase of 25 per cent. for night work, which brings up the minimum to £2 10s. 9d. The new scale is to remain in force for six years, and the Government has pledged itself that before the expiration of that period it will bring in a Bill to make the eight-hour day compulsory in all branches of the printing and allied trades.



A WISE old Chinese merchant noted for his ability in bargaining as well as his honesty, on being asked why the Chinese merchant is so successful in selling, said: "You see it is this way," he said, softly rubbing his fat palms together and settling back comfortably in his seat. "The only question in bargaining is whether you want my goods more than I want your money. The one who knows that first is in control of the situation. The Chinese merchant is an honest man, but he is a close and intelligent observer."

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

I hardly know why but I find myself musing at the moment on the art of saying the polite thing and yet "getting there." Lord Beaconsfield was an adept. "I have *lost no time* in reading the book you have so kindly sent me," he would say to the budding author or to the crank who had shot his immortal work unread straight into the great man's waste paper basket.

o o o

That at least is the story. If it's not true it ought to be. The italics of course are mine.

o o o

Walpole got there, when one of the Georgian queens asked if it would cost much supposing the king were to enclose St. James' Park. "Only a crown."

o o o

When I meet a man who feels he is too honest and good for business, who blames everything and everyone but himself for any troubles, while I blame him for a lot of them, I again try to be polite; and I gently suggest that not every man who burns his cakes is a King Alfred.

o o o

Perhaps it was the *Daily News* that started me on this train. Just now it is treating us to a lot of letters as to whether there is a hell. Whereupon the *Herald* neatly and perhaps not altogether unjustly chips in with the suggestion that the *News* is talking about hell because it can find "nothing on earth" that it can make interesting.

o o o

For a champion instance of saying something with freedom and frankness, and at the same time in a way to give no valid excuse for offence, turn to the August 2nd issue of the new *Advertisers' Weekly*, and see how George Edgar treats his character study. He heads the sketch simply "Higham," meaning Charles F. Higham the advertising consultant, and the founder and editor of the *Optimist*, his own house journal. As you read the appreciation you wonder for a time if it is not a depreciation.

o o o

It dawns upon you at about the third column that it simply means that Mr. Higham is an advertising Cromwell who is being "painted, warts and all," and that undoubtedly he is a man who prefers to be pourtrayed thus or to be left unpictured altogether.

o o o

Birrell has shrewdly suggested how vastly less entertaining Boswell's "Johnson" would be if the doctor's faults and odd little ways were not so faithfully dealt with.

o o o

Hannah More begged Boswell to tone down "our revered friend's" little excesses and eccentricities, but Boswell was too true an artist and too really true a friend to make that blunder. Instead of burying his man politely he gave him centuries of life.

o o o

We have all the old man's strangenesses, even to the piety which could ask a friend visiting him on his death-bed to frankly tell him his chief faults, and the furious onslaught which the old bear, reviving on the provocation, straightway made upon his rash father confessor.

o o o

How Joshua Reynolds did laugh, to be sure, as he was told of and could realise the scene. Dear old Hannah would have left it at the penitent request.

o o o

Mr. Edgar says that Mr. Higham and his strong individuality seem always to be impressing themselves somewhere or other and in most unlikely ways and places. He is always breaking out unexpectedly.

o o o

And in that connection it certainly is odd to read that when Mr. Higham put forward his suggestion that the great political parties should advertise their appeals and their arguments, he did not really believe that he could persuade the Liberal or Conservative party to entrust him with a big advertising campaign.

But let Mr. Higham speak. He was tackled as to whether he did seriously expect or imagine this:—

o o o

"I said, I believe nothing of the sort. But I do believe that in this country there are hundreds of men in charge of big businesses who have thought over the advertising problem without taking any steps further than preliminary consideration.

o o o

"These big men of affairs may be interested in business, but they are interested in politics more. They certainly would not read any advertisement put out by an advertising consultant in the ordinary way, but they would read my address to the Party leaders.

o o o

"I think that the money I spent in addressing the Party leaders really produced its return by the impression it made on many big business men.

o o o

"They were shrewd enough to see that if I could impress the public with the value of my services to political advertising, I might possibly impress"—men in the business world. "And I got ample proof that my view of the situation was right."

o o o

I've never met Mr. Higham. He has interested me for some years because he is no pessimist. And my dear fellow, reading this column, if you must be a fool, do be every kind of a fool but that.

o o o

Out of the over fullness of the stomach the pessimist speaketh. Don't talk of your sad heart. It's your sorry stomach. The stomach is deceitful above all things, and desperately wicked.

o o o

I like Mr. Higham's enthusiasm. Says Edgar, "He will put as much enthusiasm into describing a label as a poet will put into describing a sunset."

o o o

Yes, but hang it all, if he will do that, and if a printer can and does show as much real enthusiasm about some printing job as a poet shows about a sunset, why the simple reason is that the man really is a poet. As we say of honour and fame that they "from no condition rise; act well your part, there all the honour lies." so we may say of poetry—"act well your part, there all the poetry lies."

o o o

There was huckstering, but there was no business worthy that great and comprehensive name in the output of the degenerated litho work twenty years ago. It so disgusted some London journeymen who were condemned to be working upon it that since their employers could not or would not give them good litho work to do, they must needs start classes in litho, and do good work of an evening for themselves.

o o o

That was the movement, you know, which has resulted in the L.C.C. Litho and Engraving School of Bolt-court. Those men had the root of the matter of poetry in them. The magnificent school they've brought into being is a "Paradise Regained."

o o o

It seems to be considered by some men to be very fine to have a power of contemplating this thing and that thing, and this man and that man, and seeing nothing to stir one's admiration.

o o o

Someone was one day quoting a familiar tag. He was reminding a friend that no one is a hero to his valet.

o o o

"No," said the friend; "and that's because the valet is a valet."

o o o

If I were you I'd look at a copy or two of the *Optimist*. You can get it from 2, Norfolk House, Strand. If its contagious spirit makes you a bit of a spell-binder too, what of that? The printer should cash his personality a great deal more and a great better than he does.

o o o

Use your personality a bit; and then you'll get one.

o o o

I'm thinking, you see, of Pat, who had a present of too small boots. "Begorra, I'll have to wear them a day or two before I can get them on me feet!" Wear personality a bit; it'll come on then all right.

o o o

As between men who are echoes and men who are egos, as between echo-tists and egotists, give me the egotist. He'll want putting right at times. That'll be fun. And there'll be something to learn from him and probably something to like him for. But whoever loved a ditto?

FRANK COLEBROOK.

Packings and Wrappings.

Five Years' Imports.

Of the total imports of paper, etc., into the United Kingdom nearly 36 per cent. of the value represents packings and wrappings, which show a heavy increase during the last five years:—

1912	3,725,506 cwts.	£2,586,027
1911	3,201,884 ,,	2,232,488
1910	2,831,793 ,,	1,927,395
1909	2,319,460 ,,	1,563,999
1908	2,411,518 ,,	1,648,479

The following comparative values, for years 1908 and 1912, show the receipts from the various countries competing in the British market:—

	1908.	1912.
Russia	£163,697	£150,493
Sweden	483,845	801,543
Norway	446,118	551,498

Trade Notes.

MESSRS. STANLEY PAUL AND CO. have added to their "Clear Type" Sixpenny Series "The Laird o' Cockpen," by "Rita."

THE death is announced of Mr. J. Stephen Jeans, for many years editor-in-chief and one of the principal proprietors of the *Iron and Coal Trades Review*.

THE British Consul at Newchwang, China, says that the farmhouses of the settlers are papered with copies of the *Sunday Chronicle*, some dated December, 1910.

AT a sale of books and MSS. at Sotheby's a copy of the original edition of "Waltz," an apostrophic hymn written by Lord Byron in the name of "Horace Hornew," and published in London in 1813, realised £125.

ACCORDING to *Kemp's Mercantile Gazette* there were two failures in the printing and stationery trades of England and Wales for the week ending Friday, August 1st; the corresponding week in 1912 showed one.

THE death is announced of Mr. Edward J. Broadfield, who was associated at one time with the management of the old *Manchester Examiner and Times*, and he was also for some years on the staff of the *Manchester Guardian*.

MESSRS. HOLLAND AND CO., Albert Works, Marlborough-road, Old Kent-road, S.E., have issued No. 1 of a bright little 4 pp. booklet in which they set forth the merits of their lino, mono, type and stereo metals. It is nicely printed in red and black, on good paper, and will serve well to keep the firm's special lines before customers.

WE regret to record the death of Mr. Joseph Watson, Reuter's correspondent in Paris. Mr. Watson was a native of Scotland, and served for a number of years on the Parliamentary staff of the *Scotsman*. He was a vice-president of the Institute of Journalists from 1899 to 1902, and chairman of the London district in 1899.

AT the seventeenth annual meeting of the Western Canada Press Association it was decided to merge that organisation into the Canadian Press Association, which has been in existence for fifty-five years. The merging is the first step towards the solidifying of the various provincial and inter-provincial press associations throughout Canada in one strong national body.

IN a cause that came before Mr. Justice Neville, in the Chancery Division, last Thursday, the Amalgamated Press applied for an injunction to restrain Messrs. Hatton Morris and Co. and another from inserting advertisements in the form of leaflets in copies of *Answers*, *Home Chat*, and other periodicals issued by the plaintiffs without their authority. Counsel for plaintiffs said that a leaflet headed "Build up your Fortune from Oil" had been inserted without their authority. Counsel for the defendants said that the leaflets had been inserted by newsvendors, and gave undertakings not to do what was complained of until the trial of the action.

THE report from the Select Committee of the House of Commons on Publications and Debates' Reports suggests that there should be improvement effected in the method of preparation of periodical publications of the Government Departments and that the Departments should consult the Stationery Office before the reports are prepared for the printers. It is suggested that the prices of publication should be low and have some relation to the cost of production. The Committee give one instance of the need for reform; the Report on Buildings for Small Holdings was sold at a price of about four times the cost of production. The duplication of records leads apparently to much cost and inconvenience, and the Committee desire to further consider this matter. The printed answers to questions are duplicated in "Votes and Proceedings" and in the "Official Daily Report." The cost involved in printing the answers with the "Votes" is not less than £1,000 a session and sometimes costs £20 in a single day. The division lists are also duplicated. Amendment of the Standing Orders would be required to stop this duplication, and the Committee recommend that this should be done.

TRADE PRINTING—Book, Magazine, etc. Monotype and Linotype Setting. Best work. Est. 1881. BIRDSALL & Co., Electric Printeries, Stanningley, Leeds. Half-tone and Tri-colour Printing a speciality.

THE late Mr. George Healey, of Clontarf, Dublin, printer, has left estate of the value of £59,698.

THE late Mr. George Grandison Millar, of Glasgow, managing director of Millar and Lang, Ltd., art publishers, has left estate of the value of £12,904.

BY an order of the Moscow Court of Justice the first three volumes of the work of Leo Tolstoi in the "Gorbunoff Edition," containing a translation of the four Gospels, with notes by Tolstoi, have been destroyed.

FIRE.—Hollerday Hill House, at Lynton, the summer residence of the late Sir George Newnes, and the property of Sir Frank Newnes, was completely destroyed on Monday night, the damage being estimated at £10,000. Suspicion points to the fire having been caused by suffragettes.

CANADA.—Montreal is shortly to have another daily newspaper, to be called the *Daily Mail*. It will be issued as a morning sheet and will be independent in politics. The president of the company is Mr. M. E. Nicholls, who was for some years managing director and president of the *Winnipeg Telegram*.

FOR the supply of printing and stationery for the Metropolitan Water Board the following tenders are recommended for acceptance:—C. Straker and Sons, Ltd., printing No. 1 for three years from September 1st, 1913; Charles and Dible, printing No. 2; J. Truscott and Sons, Ltd., stationery; McCorquodale and Co., binding.

THE next work from the pen of Mr. Rafael Sabatini is to be a history of Friar Thomas de Torquemada, the first Grand Inquisitor of the Holy Office. In this book, "Torquemada and the Spanish Inquisition," which is to be published in the second week of August by Stanley Paul and Co., Mr. Sabatini describes the Dominican Friar as a genius presiding over a gigantic and cruel engine of his own perfecting. Of the facts of his life the records are short, but from the laws which he drew up for the Inquisition, and from his decrees made through the mouthpiece of the Holy Office, much may be gleaned concerning the awful intelligence of the architect who set in motion the most diabolical schemes of persecution, and enforced his commands in the torture chamber.

THE *Investors' Guardian* in its usual half-yearly review of the new company registrations for the first half of 1913, says that it may be taken as an axiom in the science of company promotion that the long continuance of a high Bank rate is fatal to that general buoyancy without which nothing worthy of the name of a "boom" is possible. It is no surprise, therefore, to find that the capitalisation of the new companies registered during the half-year ended June 30th last is only £73,554,437, a decline of over 18 millions as compared with the same period last year, and of 57 millions when compared with the rubber-boom-six-months of 1910. Plantation registrations, including rubber, were £1,951,200, as compared with £36,627,740 in 1910. Oil registrations amounted to £6,425,799 against £24,880,390. Notwithstanding the general depression, there were some notable increases, of which electrical, chemical and medical, textile, railways and coal registrations were the most notable instances.

THE best of good company, alike for travel or the leisured intervals of the holiday season, is to be found between the covers of the August number of the *Windsor Magazine*, which is fuller than ever of features remarkable for their interest, importance and variety. The stories include an instalment of Gertrude Page's new story of the Rhodesian life of to-day, "The Pathway," and another feature is a further complete episode in Halliwell Sutcliffe's romantic series. The number also contains important articles on sundry subjects by writers of special authority and distinction. The art and personality of the most famous pianists of the day are studied in an interesting survey, and a number of valuable portraits accompany this article. A theme of literary interest is a survey of the parts of the Lake District more especially associated with the life and poems of Wordsworth, and the many photographs reproduced with this article will appeal to lovers of English scenery at its finest. Many other interests are represented in this attractive issue.

THE French Minister of the Interior recently nominated a committee to enquire whether, in the interests of the public service, it would be desirable to substitute mechanical composition for the hand-setting at present used in the production of the *Journal Officiel*. The Committee have just reported that the circumstances under which the *Journal* is published being somewhat peculiar, and not comparable to those that obtain in ordinary printing establishments, it is not prepared to definitely recommend such a change. They suggest, however, that a few Linotypes be put in by way of experiment. The report goes on to state that the stereotyping printing plant is quite inadequate and that its total replacement is a matter of urgency. Further, that the power at present in use is not capable of driving any Linotypes that may be put in. It is understood that the Government intends to give prompt effect to the proposals of the Committee.

"Newcastle Daily Journal" WAYZGOOSE.

On Saturday last, under ideal weather conditions, the annual wayzgoose of the *Journal* took place at Southill, near Durham, by kind invitation of Mr. "Sam" Storey, when upwards of 90 enjoyed the hospitality of the host of Southill. On arrival the party was welcomed by Mr. and Mrs. Fred. Storey and Master and Miss Storey. Mr. S. Storey was also present and witnessed the various sports, of which a lengthy programme was carried out during the afternoon.

The beautiful gardens on this pleasant demesne were a special treat to those interested, and a small party spent a delightful time there under the ciceroneship of Mr. S. Storey's daughter, who kindly took them round. The roses of Southill, for quantity, variety, and beauty were something to be remembered. The Ghyll Wood, which affords a special study to lovers of nature untrammelled by art, and in a blazing hot day like Saturday last (provided a beautifully shaded retreat), was also taken advantage of for a pleasant stroll through its shaded environments, wherein were seen all the wild progeny of Dame Nature in profusion—and fine old trees in great variety:

> The oak, the ash, and the bonny ivy tree,
> They flourish so well in the North Countrie,

also beech, sycamore, birch, etc.

At the conclusion of the sports, the prizes were presented to the successful contestants by Mrs. F. Storey, the prizes being given by the directors.

Mr. S. Storey, in introducing his daughter to present the prizes, said that it was many years since he had been present at any of the wayzgooses held by their newspapers, owing to ill-health, and it had been a great pleasure to him to be present amongst them that day, and was very glad that the weather had been so propitious, and that they had all enjoyed themselves. Just as the sun had shone upon them and made a pleasant time for them, so the financial sun had shone upon the *Newcastle Journal* during the past year. He might fairly say that the past year had been the best, financially, that the *Journal* had had for many long years. Let them hope that that state of things might long continue.

Mr. J. Mills (Father of the Chapel) proposed a vote of thanks to the proprietors of the *Journal*, Mr. S. Storey, and Mr. and Mrs. F. Storey, for their kindness in entertaining them so generously, and to the directors for the handsome prizes they had presented for the various competitions, which was responded to with hearty cheers.

The following were the successful contestants:—

Eighty Yards Flat Race.—G. Carmichael, 1; W. W. Tagg, 2.

Fifty Yards Sack Race.—J. Brunskill, 1; J. M. Pringle, 2.

Egg-and-Spoon Race.—G. Hunter, 1; W. W. Tagg, 2.

Three-Legged Race.—H. Turner and W. W. Tagg, 1; T. Reed and J. Pringle, 2.

Quoits.—W. Smith, 1; R. A. Patterson, 2; W. Brown, 3.

Bowls Tournament.—N. Cummins, 1; H. Moore, 2.

Golf.—F. G. Storey, 1; T. C. Grant, 2; R. C. Donaldson, 3.

The cricket match, Mr. F. G. Storey's XI. v. Mr. W. H. Musgrave's XI., was won by Mr. Musgrave's team. Mr. Sam Storey, jun., was top scorer.

During the course of the day tea and supper were provided in a marquee in the grounds, when the house party honoured the party with their presence.

Altogether this was one of the most enjoyable outings the *Journal* staff have ever had.

New Syllabus of Typography.

Technical Instructors and Costing Committee to Confer.

The programme of the City and Guilds of London Institute Department of Technology has been issued this week.

The syllabus dealing with typography has been re-drafted and evidently subjected to very careful scrutiny. It is certainly of a comprehensive character, and to comply with its requirements technical instructors will need to be thoroughly up-to-date in their reading and experience.

Under the heading of "General Management" instruction is to be given on "Principles of Estimating," "Methods of Cost-finding," and from the terms used—"Hour Costs of Labour, including all Expenses"—it will be seen that the Council of the City and Guilds of London Institute are endorsing the Costs System devised by the Costing Committee of the Master Printers' Federation, and teaching along the lines recommended by them, which is certainly of a more scientific character than that hitherto in vogue, will now be adopted at all technical institutes.

Arrangements are being made for a meeting of the technical instructors in London on September 3rd, when the system will be fully explained by Mr. Howard Hazell and Mr. Austen Leigh, and every opportunity will be given for teachers to discuss the best method of impressing on their classes the value of this system of cost-finding.

Mr. W. Howard Hazell may depend upon a rousing reception at the American Printers' Costs Congress, which he intends attending at New Orleans next October. To do so means spending some time in travelling, but he will certainly return with such a fresh stock of enthusiasm and new ideas for the furtherance of the costing campaign in Great Britain, that it will be well worth while.

The Japanese Paper Industry.

A Good Year for Japan's Mills Despite Increased Imports.

In his annual report on the trade of Japan for 1912, Mr. E. F. Crowe, British Commercial Attaché at Tokio, states that perhaps what has been one of the most profitable items of import during the year has been paper, and British makers have fortunately enjoyed their fair share.

The Japanese mills have all been busy throughout the year, and the Fuji paper mill amongst others, is contemplating an extension of its plant. Their chief production is printing paper of a low grade, which is used for the local newspapers; it may not be out of place to mention that the recent increased interest which is being shown by the general public in political affairs is leading to an extension of newspaper circulation, and thus to an increased consumption of paper.

The supplies of pulp from the more accessible districts of the Hokkaido are now gradually getting exhausted, and the imports of pulp in 1912 show a very considerable increase of £164,000, or 50 per cent. over those for 1911. The price, however, went up so considerably that the leading Japanese mills were all compelled to put up the price of their paper.

The large fire which took place in Tokio in the early part of 1913 may perhaps have some effect on the paper market, as the district destroyed was what might be called "Booksellers' Row," consisting, as it did, very largely of publishers and book shops, whose whole stocks were destroyed.

It is in printing paper and writing paper that the United Kingdom has the largest share, while as regards match paper, simili, etc., Germany and Austria-Hungary are the chief suppliers.

An interesting point occurred in connection with the importation of a special kind of packing paper, which was classed for duty purposes at Yokohama as tissue paper and at Kobe as packing paper. Large quantities were ordered with a view to passing them at Yokohama, where a lower rate was being imposed, but a change was made and a uniform duty subsequently imposed. In conclusion it should be mentioned that in the matter of foreign paper the Japanese purchasers attach relatively far more importance to price than to quality.

The imports of Japan during 1910-12 were as follows:—Pulp: 1912, 45,777 tons, £447,100; 1911, 31,958 tons, £281,000; 1910, 35,875 tons, £323,000. Drawing paper: 1912, £25,200; 1911, £36,500; 1910, £28,700. Imitation Japanese: 1912, £132,800; 1911, £132,400; 1910, £150,700. Pasteboard and cardboard: 1912, £42,200; 1911, £32,900; 1910, £30,600. Photographic paper: 1912, £26,700; 1911, £29,300; 1910, £27,600. Printing paper: 1912, £302,000; 1911, £244,700; 1910, £351,900. Writings: 1912, £47,400; 1911, £37,500; 1910, £40,700. Other paper: 1912, £199,200; 1911, £227,500; 1910, £210,100. Total for pulp and paper manufactures: 1912, £1,290,600; 1911, £1,083,300; 1910, £1,219,300.

The imports of paper, according to the report, were of the following values from the countries mentioned:—

	1911.	1912.
United Kingdom ...	£141,000	£209,800
Germany	188,500	275,600
Austria-Hungary ...	90,700	48,300
Belgium	116,700	57,100
United States	33,300	27,400
Sweden	75,700	65,300
Other countries	46,600	42,700
Total	£692,500	£726,200

The exports of "paper and paper manufactures" from Japan were as follows:—1912 £484,700; 1911, £406,100; 1910, £513,000.

Paper and Pulp Makers' Directory

OF

SWEDEN, NORWAY, DENMARK, and FINLAND.

ENGLISH EDITION.

Edited by HUGO BRUSEWITZ
(Thirteenth Annual Issue.)

COMPLETE. RELIABLE. UP-TO-DATE.

Contains an Alphabetical List of all of the Scandinavian Paper and Pulp Mills, with full particulars of class of pulp or paper made, trade marks, and other details of interest to all who have business relations with these industries. A map showing the locality of the mills is included in the Directory.

8vo., 150 pp., cloth, price 7s. 6d. net. Postage, 4d. extra.

TO ADVERTISERS

The Fourteenth Edition (1913) of this well-known work will shortly be put in hand, and orders for advertisements may now be sent to the British Agents, as under. The scale of charges, which includes a free copy of the Directory and Map, is:—

The Control of Trade Disputes.

JUST over a year ago the President of the Board of Trade desired the Industrial Council to inquire and report on the following questions:—"What is the best method of securing the due fulfilment of industrial agreements?" and "How far, and in what manner, industrial agreements which are made between representative bodies of employers and workmen should be enforced throughout a particular trade or district." This report has now been issued, and shows a considerable difference of opinion among the members of the council. Six members make a reservation to the report that there should be an inquiry into the effects of the Trade Disputes Act, 1906, and the provision of protection. Both subjects, they say, are misunderstood, and may be germaine to the fulfilment of industrial agreement. Six others object to compulsion on those who are not parties to agreements. They think it might lead to intolerable tyranny. They also ask for immediate inquiry into the working of the Trade Disputes Act. One member has a separate memorandum, in which he asks for legislation and not mere expressions of opinion on the part of the Council, and Mr. Alexander Siemens does not sign the report at all, but submits recommendations of his own. Dealing with the first question the opinion is expressed that the general adoption of a system of monetary guarantees, in the form of a deposit of money, cannot be regarded as constituting a practicable and efficient means of ensuring the fulfilment of agreements. "At the same time, where monetary guarantees are voluntarily offered we see no objection to their adoption." The suggestion is made that agreements should, in general, be limited to a period of three years. As to the second question a good deal is said, but the general conclusion is that:—"Means should be provided whereby, at the request of the parties to an agreement, and after suitable inquiry, its operation should be extended to include the minority, and its terms made applicable to them." The Board of Trade should appoint the body to decide this question, and "should it be considered that the services of a body similar to the Industrial Council are necessary to deal with a particular case that has arisen, the Council would readily be available for the purpose." Taking the report as a whole it does not suggest any definite machinery for the regulation of trade disputes, beyond what is in force at present, the Council being against compulsory arbitration as a rule. The right to strike or lock-out is admitted, but it is suggested that previously to these extreme methods being put in force the matter in dispute should come before some independent individual or body.

* * *

Don't Forget the Material.

IN the ordinary printing office it often happens that jobs of a very varied character are sometimes handled and many of these require material to be specially cut up for the purpose. In making price for a job of an elaborate character this should be taken into consideration, and the full value of the material charged to the customer. Only the other day a printer of our acquaintance took a small job, in the form of a circular, in which there was much rule twisting, cutting of leads and sawing up of furniture, and on comparing the actual cost of composition with the estimate found he had a loss of a few shillings owing to the wasted material that had been cut up in such a manner to suit the intricacies of the job in question that it was of no further use and only fit for the hell-box. In this particular case the price had been given and the job taken by an office assistant with no practical knowledge of that class of work, a point that goes to prove the contention that estimating clerks should have a certain amount of practical training before being allowed to estimate on work.

* * *

The Merchandise Marks Act, 1891.

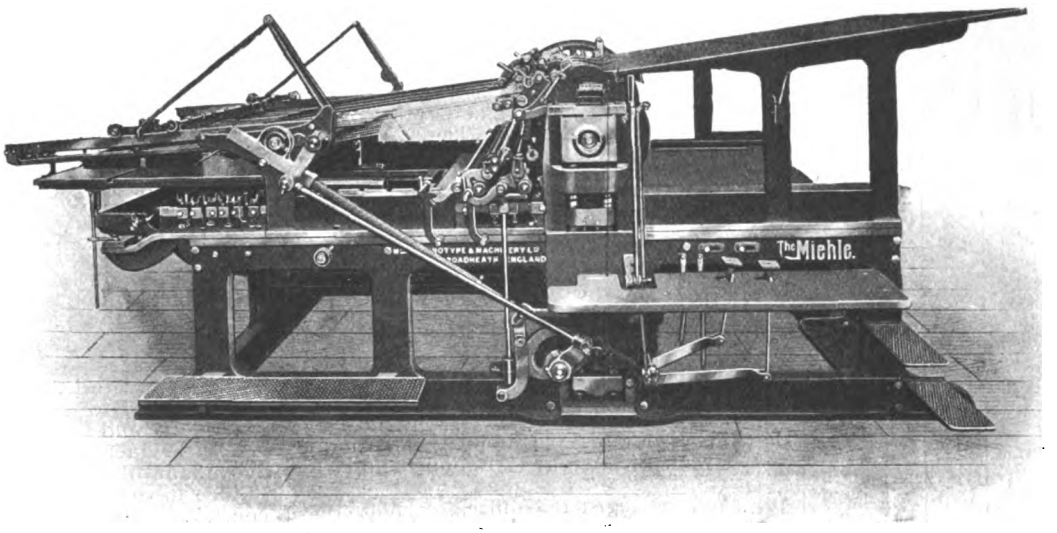
IT seems very strange that if a man in the street tries to obtain money by false pretences the police can immediately apprehend him without incurring costs on the person victimised; but if a similar offence is committed under the Merchandise Marks Act, 1891, it will take all the ingenuity of the victim to put the Board of Trade in motion for the purpose of gaining some retaliation. However, the Board is at last becoming alive to its sense of duty, and the new regulations issued recently with the concurrence of the Lord Chancellor, under Section 2 of the Act, is a step in the right direction, but we would like to see something more definitely stated as to the liability of costs incurred should the Board take upon themselves the task of a prosecution. The Board, as a public body, existing solely for the protection of the public, should not hesitate in instituting proceedings when all flagrant cases of misdescription of goods are reported, and the question of costs should be based on the same principle as that adopted in criminal cases—provided of course the defendants were good for the amount at stake, when they should be recoverable. In the past the Board moved slowly and was slow to move, and we are now glad to observe that the new regulations will make it more alert. The *Times* says, "The trading community will find the evidence and help with the preparation of a case, but where an offence is committed which is injurious to the general interests of the community or of a trade *it is understood* [the italics are our's] that the Board of Trade will themselves defray the cost of the prosecution. Such a prosecution may

Digitized by Google

involve an expenditure of thousands of pounds, and in many cases it would not repay the private trader to institute proceedings." It is the word "understood" we do not like in the *Times*' comment, and besides it takes a great deal to satisfy the Board of Trade before a case is taken up—and we know from experience they have often "fell through" when they have been taken up. Therefore, all costs should be borne by the Board and the question of liability for them settled for ever.

* * *

The Foreign and Colonial Demand for British Printings.



The British export trade in printings shows a substantial advance. The figures issued by the Board of Trade indicate a growing demand on the part of foreign countries, as well as British Possessions. In 1912 printings were exported to the total value of £1,746,141 as compared with £1,053,973 in 1908. Foreign countries purchased to the extent of £630,589 in 1912, as against £384,325 in 1908, whilst supplies to British Possessions increased from £669,648 in 1908 to £1,115,552 in 1912. The latter figures are most gratifying, and, given fair freight rates, the British manufacturer is well able to meet the competition of other countries. Australia is the best patron of British printings, and consequently the export trade from English and Scottish sources reached £423,499 in 1912, an increase of £165,565 since 1908. Canada has also become an important purchaser, the increase in five years rising from £63,467 to £147,018, and the same can be said of New Zealand—£82,829 to £120,900. India is also an excellent market for British printings. Our trade with foreign countries in printings is steadily advancing all round, the purchases of Japan, France, Germany, Belgium, U.S.A., and South America showing substantial increases in 1912, when compared with 1908.

After examining all the authorities and reading what the historians—both ancient and modern—have had to say upon the subject, I have been forced to the conclusion that from the beginning the printing business has been builded upon that trinity of principles—Faith, Hope and Charity. The faith of the printer is the belief that he could produce his work at a less cost than any of his competitors; the Hope that some day he might get out of debt and have enough money ahead to meet his next pay-roll and that his customers might be charitable towards him when they fix the price at which he is to do their work. —Earl R. Britt.

Flax Straw Paper.—Mr. L. N. Austin, of Winnipeg, Man., Canada, who has been experimenting with flax fibre for some years, has completed his experiments, and claims now to have a new process whereby he can make bond and ledger papers and, in fact, almost any kind of paper from flax straw with a loss of only 25 per cent. of the straw. Mr. Austin is negotiating for the necessary capital to make his process commercially successful.

The Miehle
TRADE MARK

IS PRODUCING THE FINEST COLOUR, BOOK, AND JOBBING PRINTING THROUGHOUT THE UNITED KINGDOM AND COLONIES.

In half-tone work, the Miehle reproduces every gradation of tone contained in the blocks—from soft high-lights to heavy solids.

Its reputation for perfect colour printing (which includes efficient rolling power and the features which make for dead register) is embraced by the standard phrase "Miehle Quality," which means essentially Miehle printing.

The Miehle is fitted with two deliveries, which at will deliver the product printed side up or printed side down.

The inking equipment provided on this press consists of sixteen rollers and a large ink table; of these, four are forme rollers with reciprocating riders and rollers over them (nine in all, arranged in pyramid form). The other seven rollers distribute the ink on the table before it reaches the forme rollers.

This press is built in six sizes; the smallest size takes a sheet up to 26-in. by 39½-in. and the largest size 46-in. by 66-in.

Miehle presses are also supplied in tandem, so arranged that the units may be disconnected and used as single machines.

The Miehle is Manufactured and Sold by

LINOTYPE AND MACHINERY LIMITED

who have the sole and exclusive right to manufacture and sell The Miehle in the United Kingdom and Colonies (except Canada).

WEDNESDAY, August 6th, 1913.

WITH the Bank Holiday in view business last week-end had but little activity, but the actual business done was of a solid character, and wild-cat stocks seemed to be severely let alone, the good tone even extending to Consols, which gained $\frac{1}{16}$, both for money and the account. The influx of gold in the Bank weekly return showed an increase of £557,589 in coin and bullion, £238,000 in bar gold being bought on Thursday. Business in the industrial section was almost at a standstill, very few transactions being recorded. The holidays on Saturday and Monday caused a break in the continuity of business, and yesterday and to-day the market has not recovered from the holiday feeling. Although the demand for credit was fairly active, supplies were plentiful, and discount rates ruled low. Consols stand at $73\frac{1}{8}$ for money and $73\frac{3}{8}$ for the account.

Quietness reigns in the industrial market, and the business done has been but little. A fall in Associated Newspapers has been recorded, $\frac{1}{2}$ to $\frac{5}{16}-1\frac{1}{16}$; and in *Standard* Newspapers $4\frac{1}{2}$ per cent. First Debentures of 5 to 68—78. Business has been done in Amalgamated Press Pref. at 21s., 21s. 3d., and 21s. 3d.; in Associated Newspapers at 19s. 6d.; in Edward Lloyd Pref. at 22s.; in George Newnes Pref. at 15s. 9d.,16s. 3d.; in A. M. Peebles and Son Pref. at 65s.; in Raphael Tuck and Sons Ord. at 19s. 3d. xd., and in the Pref. at 96s. 3d.; while Waterlow and Sons Non-Cum. Pref. changed hands at $12\frac{1}{8}$; and Weldon's Ord. at 18s. 9d.

DIVIDENDS AND REPORTS.

A. M. PEEBLES AND SON.—The accounts for the year to June 30th, after providing for debenture interest and interim dividend on the preference shares, show a credit balance of £1,159, which the directors propose to carry forward.

WELDON'S LTD.—Presiding at the annual meeting, Mr. A. T. Hollingworth said that he was able to report another most successful year's trading. The business, both as to circulation, advertisements, patterns, and other departments had continued to expand. However, there was fierce competition, and the eminently satisfactory results had been achieved by much constant care on the part of the management. A shareholder put in a plea for a higher dividend than the 10 per cent., if it were possible, and another shareholder suggested that a bonus dividend might now and again be paid.

NEW COMPANIES.

CHANCE SYNDICATE, LTD.—Registered on July 25th, with a capital of £2,500, in 5s. shares, to carry on the business of theatre proprietors and managers, box office keepers, dramatic, musical and general publishers, etc. The subscribers are F. Carl, Wm. Ewert Berry, and J. J. Gomer Berry. Private company. The first directors are F. Carl, Wm. Ewert Berry and J. Gomer Berry. Qualification 500 shares.

CLARKE AND SHERWELL, LTD.—Registered on July 19th, with a capital of £35,000, in £1 shares (17,500 7 per cent. cum. pref.), to take over the business of printers, carried on at Kettering-road, Northampton, as "Clarke and Sherwell," and to adopt agreements with J. S. Clarke, G. H. Sherwell, H. R. Smith, and A. P. Martin. The subscribers are J. S. Clarke and G H. Sherwell. Private company. The number of directors is not to be less than three nor more than nine. The first are J. S. Clarke, G. H. Sherwell, H. R. Smith, and W. G. Meredith ("working directors.") Qualification (except "working directors") 2,500 shares. Registered office, 28-36, Kettering-road, Northampton.

WATKINS (CARDIFF) PRINTING CO., LTD.—Registered on July 18th with, a capital of £1,000, in £1 shares, to take over all or part of the printing and stationery business, carried on at Kingsway, Cardiff, as Watkins (Cardiff) Printing and Paper Co. The subscribers are S. Watkins and S. P. Watkins. Private Co. The number of directors is not to be less than two nor more than four; the subscribers are to appoint the first. Qualification 100 shares. Remuneration as fixed by the company.

BOROUGH PRESS (MOSSLEY), LTD.—Registered on July 18th, with a capital of £500, in £5 shares, to carry on the business of printers, publishers, bookbinders, booksellers, stationers, lithographers, etc. The subscribers are Mrs. B. Maxey and J. Fisher. Private company. The first directors are Mrs. B. Maxey and J. Fisher. Solicitor, J. H. Lawton, 48, Stamford-road, Mossley, Lancs. Registered office, Wellington House, Manchester-road, Mossley.

L. REEVE AND CO., LTD.—Registered on July 18th, with a capital of £6,000, in £1 shares, to carry on the business of publishers, booksellers and printsellers, and to adopt an agreement with Lovell, Reeve and Co., Ltd. The subscribers are A. L. Soper and H. E. Soper. Private company. The number of directors is not to be less than two nor more than seven; the first are A. L. Soper and H. E. Soper (provisional directors). Qualification 100 shares. Registered office, 6, Henrietta-street, Covent Garden, W.C.

ENRIGHT AND CO., LTD.—Registered on July 28th, with a capital of £1,000, in £1 shares, to take over the business of land and estate agents and dealers, builders, furniture dealers, private enquiry agents, coal merchants, printers, publishers, etc. The subscribers are R. A. Enright, F. Gardener, and A. E. Cossor. Private company. The first directors are R. A. Enright, jun., F. Gardener, and A. E. Cossor. Registered office, 20, Newington-green, N.

LIGHTING PRESS SYNDICATE, LTD.—Registered on July 25th, with a capital of £400, in £1 shares, to establish, print, and publish the *Lighting Journal and Engineer*. The subscribers are A. N. Robinson and A. J. Greenby. Private company. The number of directors is not to be less than two nor more than three. The first are A. W. Robinson, A. J. Greenby and W. Riggs.

R. MACGUIRE AND CO., LTD.—Registered on July 26th, with a capital of £1,000, in 900 "A" shares of £1 each, and 2,000 "B" shares of 1s. each, to carry on the business of advertising agents and contractors, etc. The subscribers are R. MacGuire, J. S. Baines, and E. Davies. Private company. The number of directors is not to be more than seven; the subscribers are to appoint the first. J. S. Baines is first secretary. Registered office, 14, Tithebarn-street, Liverpool.

COMMERCIAL INTELLIGENCE.

Re GEORGE FREDERICK WALL,
Sealing Wax Manufacturer.

The first meeting of creditors was held last week at the London Bankruptcy Court, under the failure of this debtor, who carried on business at 2 and 4, Warburton-road, and previously at 6, Chalgrove-road, Mare-street, Hackney, N.E., under the style of George Wall and Co. A statement of affairs had been lodged showing unsecured debts, £404 9s. 9d.; a partly secured debt £590 (securities valued at £100); preferential claims, £8 6s. 4d.; assets valued at £163 2s. 5d.; and a deficiency estimated at £739 13s. 8d. The assets consist of the following items:—Cash, £6 5s. 10d.; stock in trade, £20 (estimated cost £40); machinery, tools, trade fixtures, fittings, etc., £35; good book debts, £101 16s. 7d.; and bills of exchange, etc., lodged with bank, £41. According to the observations of Mr. Egerton S. Grey, official receiver, the debtor, who filed his own petition on July 15th, and has been adjudged bankrupt, states that he was for many years employed by his father, a sealing wax manufacturer; the latter died in December, 1905, and he carried on the business for his brother (the trustee of his father's estate) until about 1909, when he entered into an arrangement with another person, who commenced a similar business at 6, Chalgrove-road, Mare-street, Hackney, N.E., of which he (the bankrupt) became manager at £3 a week. As his name was well known in the trade he gave his employer permission to use it, and the business was, therefore, carried on under the style of "Geo. Wall and Co." On March 14th last he entered into an agreement to purchase the business as a going concern for £600, payable in instalments of £10 a month; he had no capital to start with, but borrowed a sum of £37. With the business (which he then removed to 2 and 4, Warburton-road, Hackney, N.E,), he took over liabilities amounting to about £280: but he has paid one instalment only of the purchase money. Shortly after he acquired the business creditors began to press him, and as the pressure became more severe and he had no means of meetihg it, he filed his petition. He attributes his failure and insolvency to want of capital, to the expenses of the removal of the business, and to the "exceedingly high price" which he agreed to give for it. The following deficiency account, dating from March 14th last, has been filed:—

Excess of liabilities over assets at above date	£600	0	0
Net loss arising from carrying on business	72	3	8
Household expenses	42	10	0
Law costs	15	0	0
Doctor's bills	10	0	0
Deficiency as per statement of affairs...	£739	13	8

The bankrupt states that his books of account consist of bought and sold ledgers and day books. The unsecured indebtedness is mainly for trade goods, and to the extent of about £160 is in respect of liabilities which the bankrupt took over from the former proprietor of the business who holds a mortgage over the lease, goodwill and book debts, and a hiring agreement in respect of the tools and utensils, against his claim for the balance of the purchase money of the business. The household furniture is claimed by the bankrupt's wife. Appended is a list of the principal creditors:—

UNSECURED.

George Atkinson, 31, St. Andrew's-hill, E.C.	£12
Horace Cory and Co., Trustin-street, Old Kent-road, S.E.	32
E. Child, 16, Mincing-lane, E.C.	80
Hannans, Ltd., Peninsular House, E.C. ...	33
H. A. Hughes, 20, St. Dunstan's-hill, E.C. ...	37
J. Harlin, Cambridge Heath-road, E.	20
Paul Jantzen, 133, Fenchurch-street, E.C. ...	37
Gas Light and Coke Co., Westminster	15

May and Baker, Battersea	16
Rose, McCanna and Co., Broad-street House, E.C.	11
Taylor Bros. and Co., 51, Fenchurch-street, E.C.	27
S. A. Thew, 16, Mincing-lane, E.C.	17

PARTLY SECURED.

A. C. Ward, St. Luke's, E.C. ... ... (Security valued at £100).	590

No offer was submitted on behalf of the debtor, and the chairman intimated that the case would remain in his hands of official receiver to be administered in the ordinary course of bankruptcy. Mr. McCanna, on behalf of Mr. A. C. Ward, the partly secured creditor from whom the debtor purchased the business last March, said he might advise his client not to prove his debt against the estate, but in satisfaction of the debt to take over the business as it stood, and let the other creditors have the book debts, wnich should realise sufficient to pay 10s. in the £ on the amount of their claims. It was a good business with sufficient capital, and had Mr. Ward known that the debtor was in financial straits, he would possibly have helped him with money. Mr. Clarke, for the debtor, asserted that his client had not properly understood the onerous terms under which he took over the business last March. Mr. McCanna retorted that the terms of purchase were contained in an agreement properly prepared and signed. The chairman suggested that Mr. Ward should take over the business and pay all the other creditors the full amount of their claims, especially having regard to the fact that a majority of the debts were incurred prior to the purchase of the business by the debtor last March. A creditor complained that he had no notification of the transfer of the business, and was of opinion throughout that the debtor was merely the manager thereof. Mr. McCanna promised to communicate with his client with a view to placing a satisfactory arrangement before the creditors, and the meeting then separated. The public examination of the debtor is fixed for September 9th.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

TARLO, D., J. and M., trading as Morris and Co., at 2, Old Post Office-place, Liverpool, wholesale stationers and publishers. Debts by D. Tarlo, who will in future carry on the business on his own account under the same style. May 4th.

The German Paper Industry.

Some Notes on its Development in the Eighteenth Century.

(From the "Papier-Fabrikant.")

During the eighteenth century the German paper industry underwent a very rapid transformation. The country had gradually recovered from the terrible damage done by the 30 years' war, arts and sciences were awakening to new life with the natural result that the demand for writing paper and printing paper constantly increased. Newspapers shot up like mushrooms and a greater number of books were written in larger editions than formerly. This also explains the report that at the end of the eighteenth century about 400 paper mills are said to have existed in Germany. In the first half of the eighteenth century the well-known beating engine was introduced from the Netherlands, by means of which the pulp was turned out in much finer qualities and much more uniformly than was possible by stamping; these so-called Hollander engines at the same time also washed the rags. The beating engine was originally invented in Germany for manual operation, whereas the Dutch adapted it to mechanical operation. Towards the end of the eighteenth century, the foreman Nicolas Louis Robert, of Essonnes, invented the first paper machine. The greatly increased value of endless paper was not fully recognised until new methods of printing the paper in rolls was invented. The German paper industry was also somewhat handicapped in its development in the eighteenth century by the authorities controlling the price at which the paper was supplied to the printers and publishers. The quality of German paper naturally deteriorated, for the best rags gathered in Germany were sent abroad, especially to the Netherlands, from where they returned in the form of the finest qualities of paper. Dutch paper also entered into sharp competition with the native makes in France. This is all the more remarkable when we consider that Holland was not in a specially advantageous position, either as a result of its water conditions or the quality of the rags collected in the country. Holland's superiority consisted in buying the best rags from the surrounding countries, sorting the same into five various qualities (the other countries had only three qualities), and further by improving and giving the paper a much better appearance by the addition of starch and blue colouring matter. The German authorities tried to influence the quality of the home manufactures by prohibiting the export of rags, but without success. The rags were no longer openly exported, but were simply smuggled into foreign countries, especially Holland. One fact which doubtless aggravated the shortage of rags was the deficient conditions of transport and the partially unfair distribution into districts in which the individual papermakers were allowed to collect rags. All who were caught smuggling rags were severely punished; in Austria the horses and wagons of the rag smugglers, as well as the rags, were confiscated. Towards the end of the eighteenth century the privilege of collecting rags was granted to certain people at high licence fees. The town of Bremen in 1759 supplied such a licence for one ducat, but the fees rapidly increased to 10 Talers, then 65 Talers, until in 1773 a licence of 200 Talers per annum was charged.

In 1773 twenty-six Saxon papermakers demanded that the export of rags and the importation of foreign paper should be forbidden, and succeeded in having a very high import duty placed upon Bohemian paper. This duty was subsequently cancelled, as a result of the agitation of the Leipzig printers and booksellers. The latter even tried in 1790 to have a high export duty put upon paper. Their petition was, however, refused by the authorities for the reason that it would be better to facilitate the export of home goods rather than hinder it, in order to bring capital into the country.

The paper mills of that time were often very expensive concerns. In 1746 a paper mill was sold near Nurnberg for 6,200 guldens, and after enlargements had taken place, so that the total equipment consisted of eight stamping mills and one pulping engine, its value rose in 1776 to 9,900 guldens. In the Netherlands at the end of the eighteenth century one paper mill was valued at 30,000 to 36,000 guldens and gave employment to 60 to 70 persons, so that it will be seen that the plants had already assumed considerable dimensions.

(To be continued.)

FRANCE.—In order to stop the growing practice of erecting enormous advertising signs, which in many parts of the country are spoiling the views, especially along the railway lines, a law was passed in France last July placing a progressive tax per square metre on all large advertisements on hoardings (whether painted or printed) when erected at a distance from buildings or walls according to the increasing size. The rates are fixed at £2 for a hoarding of 6 square metres, at £4 for one of 6 to 10 square metres, at £8 for one of from 10 to 20 square metres, and at £16 for all advertisements over 20 square metres in size.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

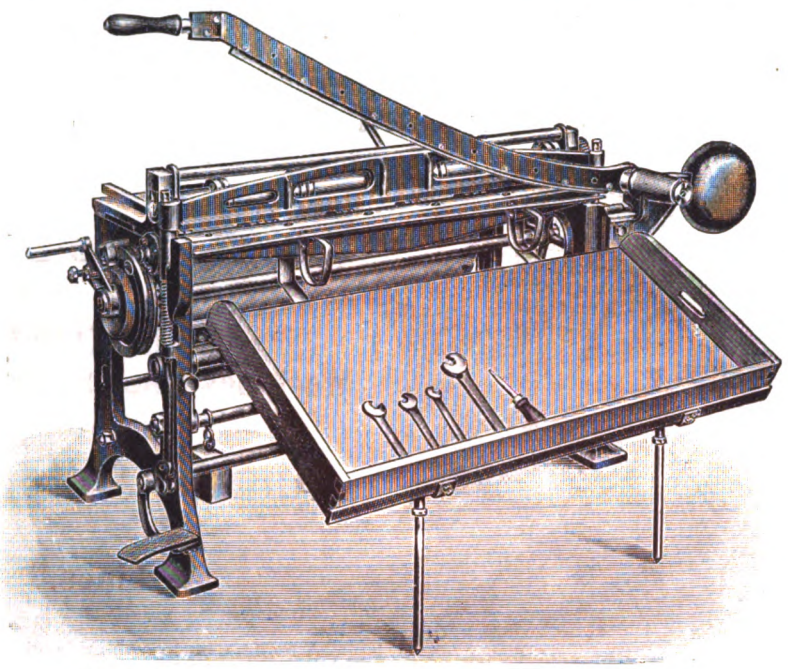
In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe **$5.00** per year; Canada **$3.00**. 64 pages weekly.



PRINTING TRADE NEWS.

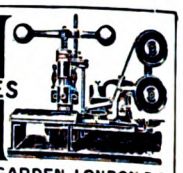
A ROTARY
Cutting and Cross-Cutting Machine.

A useful and up-to-date type of cutting machine has been introduced by Messrs. Kendell and Sons, of Shoreditch, and 17, Whitefriars-street, E.C., of which we herewith show an illustration. It does both straight and cross-cutting and is intended to enable small and medium works to do cutting of any kind in one operation, thus saving material and labour, at the same time ensuring the utmost possible exactitude in obtaining the correct sizes of the pieces cut. This new machine is most carefully constructed, and offers the great advantage that any kind of material, as cardboard up to a given thickness, ivory boards, paper, bookbinder's cloth, etc., can be cut, it being immaterial whether the material to be cut is wound up in rolls or whether it consists of flat sheets.

Kendell's Rotary Cutting and Cross Cutting Machine.

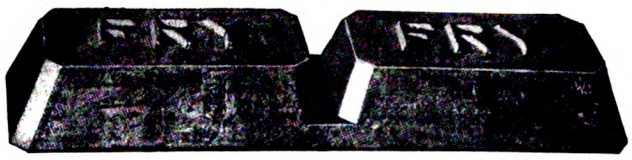


In order to guarantee exact feeding of the material, the machine is fitted with a special apparatus, which is connected with a feeding mechanism by carefully machined cog wheels, which is worked in conjunction with an adjustable front feeding gauge. The material is pushed along the desired distance by a turn of the hand crank, and can then be cut across by the hand cutter. In order to obtain a succession of absolutely equal cuttings the machine is provided with a fixed and an adjustable gauge which determine the distance to be travelled by the feeding crank. To obtain exact cuttings it is only necessary to swing the hand crank between these two gauges forwards and backwards, and the exact feeding of the material to be cut follows as a matter of course.

When cutting rolls of material they are attached to a shaft at the back of the machine between two pointed screws with the assistance of two centering cones. The material is then conducted over a round and over a square lath, from which it is brought across the table of the machine to the cutting knives and feeding rollers. In order to insure exact parallel feeding even of narrow material small adjustable gauges are provided at suitable places in front and behind the rotary knives.

Whereas the strips are cut in the well-known manner by rotary adjustable pairs of knives running on two parallel shafts, cross-cutting is performed by horizontally ground knives working in the manner of scissors, in conjunction with a presser bar. Underneath the cutters the machine is provided with an automatic re-winding attachment, which allows of some or the whole width of material to be rewound in front of the cross cutter, so that only the strip required will be cut by the cross cutter, whereas the remaining part of the material re-winds itself automatically. This arrangement enables the machine to be used for cutting rolls only, the feeding crank being simply turned in one direction only.

The material is fed by means of feeding rollers, which are attached to the knives shafts. The whole is arranged in such a way that cutting lengthwise of the material takes place in the same plane as feeding. The construction of the machine is thereby much simplified, as special carrying rollers are dispensed with. The feeding rollers push the material to be cut underneath the presser bar to the front gauge. The front gauge can be carefully adjusted by means of a hand wheel and its distance from the cross cutter can be easily read off a scale provided.



When adjusting the machine the rotary knives on their shafts must first be put into their proper position, then push the front gauge as far forward till its distance from the cross cutter corresponds with the desired length of the cutting. Then by actuating the hand crank the material to be cut must be moved forward till it touches the front gauge and then adjust the movable gauge to this position of the crank. When introducing the cutting material first, the upper knife shaft can be raised so far by means of an eccentric that the rotary knives admit of the convenient passage of the cutting material right up to the front gauge. When cutting ivory or cardboard the gauge at the crank is not required, as the stiff material to be cut finds sufficient resistance at the front gauge to prevent its being moved further. In these cases it will only be necessary to push the cutting material to the front gauge by means of the feeding

crank, when it will be ready for cutting off by the cross cutter. When cutting cloth or paper which offers no resistance whatever both gauges on the feeding attachment must be used, as these ensure the correct stroke of the feeding crank. The size of the material to be cut can be arranged for as required; the maximum range can be up to 41 inches, and the smallest width 1¼ inches, and as regards length from ⅛-inch onwards. The cuttings fall into a collecting box which can be taken away bodily. The machine can be driven by power if required. Further information about this new cutter may be had from Messrs Kendell and Son at the address given.

A Voice Typewriter.

John B. Flowers, a young engineer of 1,323, Pacific-street, Brooklyn, is the inventor of the voice-operated typewriter, which has arrived at the stage where the *Scientific American* has devoted a page to its description, and many practical men have reduced the proposition to a strictly scientific basis and found it sound. Closely following the talking movies, Mr. Flowers' invention promises to do for the business world what Edison's latest has done for the amusement seekers.

Mr. Flowers impresses one from the first as being a real inventor. He makes no extravagant claims for his invention. He merely explains it—logically, constructively, admitting the limitations of his machine, while pointing out the possibilities.

"My first experiments along this line," said the inventor, "were directed toward a device that would operate a piano by means of the voice. In this way it was possible for a singer to have a piano accompany the voice automatically, the voice tones being reproduced by the instrument. The tones of the piano would follow the voice all right, but without variation, and the result was not musical.

"I have been working on the voice-operated typewriter for less than a year. There is a lot of work yet to be done, but the principle is well established. What I am trying to get is a mechanical analyser of sound. It is not so preposterous as it seems. The selecting device is modelled after the human ear. It has been claimed that there is no relation between the spoken word and the written word, but this has been disproved.

"As a simple illustration, take the word 'cat.' The spoken word reaches the ear-drum and causes distinct vibrations which register the word. The last two letters, 'at' would not do that. By no psychological process can 'cat' be heard, without the letter sounds produced by the vibration of c-a-t.

"The ear-drum of the typist is set vibrating as it receives the sound-waves from the dictator. Super-imposed upon the main sound-waves are overtones of different frequency, one characteristic overtone for each letter of the word. These waves are communicated to a set of fibres in the cichlea or internal ear. There are many thousands of these fibres, each tuned to vibrate to its own individual frequency.

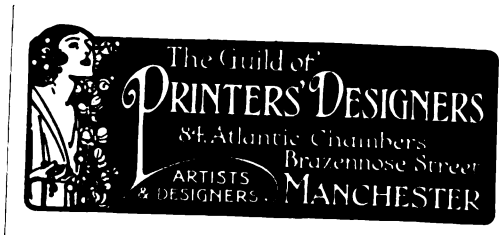
"When the word 'm-e-t' is spoken, for instance, three of these fibres are vibrated more strongly than the rest, one after the other, to correspond to the 'm-e-t' sounds, and the excitation of these fibres is communicated to the brain, which in turn controls the muscles of the typist's fingers, causing them to strike the corresponding keys on the typewriter.

"No complicated mental processes need be involved in the operation. It is quite mechanical. The typist may have been, and probably was, thinking of something quite foreign to the subject. If the process is mechanical why not make a machine that can be controlled by the voice? That is the principle on which I am working."

In his first experiment, Mr. Flowers has used a telephone diaphragm to take the place of the human ear-drum; instead of fibres, he employs a set of steel reeds, respectively tuned to the different overtone frequencies of the alphabet; for nerves he uses electric currents, and for human hands a bank of solenoids. Later, however, he expects to use electrical resonators in place of reeds. So far the electric resonator system has not been put to a practical test, but it is said that it should be capable of catching the overtone characteristic of the consonants.

This mechanical wonder has begun its self-expression like a child; Mr. Flowers says that the first word written from sound was "Papa." It is now on all fours, and crawling rapidly, and before long it is expected to stand on its own feet and reach its full height. Then it will be possible to dictate to the machine and have the words written out in type.

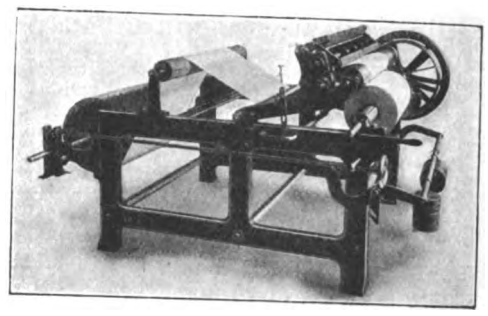
There are many limitations at present, but the inventor is overcoming them. The making-up of sentences, starting a sentence with a capital, punctuating it properly, and spelling the words according to the dictionary and, in short, educating the machine, is yet to be accomplished, but the inventor is optimistic.



In the first place he proposes a special form of typewriter in which unlimited speed can be obtained by arranging the type-bars in a circle and placing the paper on a vertical cylinder, revolving at constant speed. In place of occasional capitals it is proposed to use all capitals, as used by the news ticker. However, if it were necessary to have both capitals and small letters, it would be possible at the beginning of the sentence to use a certain little-used sound which would operate a shift-key. The same means could be employed for operating the period and comma keys.

The principal drawback is that the machine would spell phonetically. In the English and French languages this would be a great difficulty, but the first experiment will be made in German, in which language almost all words are phonetic. It is quite possible that if the machine were introduced into commercial work, it would do much to cause the general use, in business, of simplified spelling.

Another possibility of the machine, and one that would be of great convenience in many cases, is that it may be connected to a telephone to take down messages automatically and print them on an electrical typewriter. In the future, when you call up a certain number and the person is not in, instead of hanging up the receiver, you may tell your message to the talkwriter, and the other person will find it when he comes in.



It has also been suggested that the machine could be used to great advantage in schools for deaf mutes, as it would afford the pupils a means of determining visually the character of the sounds they are uttering in learning to speak.

POROSITY OF PAPER.—Herr Colditz, in the *Wochenblatt für Papierfabrikation*, remarks that the testing of sizing with ordinary ink does not signify anything for printing ink. The conclusive test would consist in estimating the penetration of the paper by oil and varnish. In the absence of a direct method the porosity of the paper gives an idea of its penetrable qualities. The more interstices there are between the fibres the more easily do the oils and varnishes in the ink penetrate. To ascertain the degree of porosity the apparent density of the paper is determined by knowing on the one hand the weight of a sheet and its volume, length, width and thickness, and on the other hand the real density. The latter point is obtained by a special method, which shows the degree in which the paper absorbs printing ink.

TO TRADE BOOKBINDERS, BOOKBINDERS' PLANT AND MATERIAL MANUFACTURERS AND DEALERS, PUBLISHERS, LIBRARIANS, AND OTHERS INTERESTED IN THE BOOKBINDING INDUSTRY.

THE Publishers of the *BRITISH AND COLONIAL PRINTER AND STATIONER* have pleasure in announcing that an ILLUSTRATED MONTHLY SECTION of that journal is now devoted to matter concerning the BOOKBINDING TRADES.

All branches of bookbinding are dealt with, from practical and technical standpoints, and the historical and artistic aspects of the industry also receive attention. Illustrations of hand-tooled bookbindings and publishers' cases which are remarkable for their artistic design, their historic interest, or their novel character are presented from time to time.

The BOOKBINDING SECTION appeals to all those who are interested in bookbinding, whether as a trade or as an art, as all phases of the subject receive their due share of attention in its columns.

The Editor will welcome any news of trade interest that may be sent him, and is prepared to consider original articles of a technical and practical character, with a view to their publication. Information concerning the working of the technical classes in bookbinding, and notices of meetings of trade unions and other bodies associated with the bookbinding industry, are also invited; arrangements can usually be made, if desired, to report the latter, as well as lectures, etc., for the BOOKBINDING SECTION. Illustrations and particulars of new machinery and appliances, and information concerning new materials and methods for use in the trade, are likewise of interest. The publishers having no end to serve save the presentation of matter of value to the various branches of the trade, the pages of the BOOKBINDING SECTION are open to all, employers and employed, unionists and non-unionists, for the free discussion of trade matters.

As far as READERS are concerned, copies of those issues of the *British and Colonial Printer and Stationer* that contain the BOOKBINDING SECTION will be sent regularly on application, at special rates.

With regard to ADVERTISEMENTS, the bookbinding trade announcements are placed in a POSITION NEXT TO OR FACING READING MATTER in the BOOKBINDING SECTION. ADVERTISING RATES sent on application. Arrangements have been made to circulate the journal in quarters likely to be most productive to advertisers of a return for their outlay, and no effort is spared to study the interests of advertisers and readers alike.

Orders for advertisements in and subscriptions to the BOOKBINDING NUMBERS of the *British and Colonial Printer and Stationer* should be addressed to the publishers:—

RAPID Photogravure Printing in France.

By THEODORE BIRCH.

Our French confrerès are ever ready to adopt new and improved methods in the crafts provided their practical utility is clearly demonstrated. In spite of the costly installation, for the first outlay may vary from £6 to £8,000 for a complete plant, the process of printing from intaglio plates on self-fed, fast rotary machines has already been definitely taken up by one of the largest printing establishments in France, the Imprimerie Crété, at Corbeil, close to Paris. .

On October 26th last a company was formed called "La Photogravure Rotative," with a capital of 200,000 francs (about £8,000). It is a combination of the Société Alsacienne de Constructions Mécaniques, the famous engineering firm of Marinoni, and the powerful publishing house of Hachette et Cie, who own several periodical publications suitable for printing by the new method. The object of the new company is to exploit a licence to make and sell in Latin countries three patents relating to the photogravure rotary press and to important appliances therewith.

The managing director is Monsieur Jacques Simon, and Baron Thenard is also a member of the board. Both these gentlemen already control, from the sames offices, 96, rue d'Assas, Paris, the great Marinoni concern.

A few months back a couple of machines were erected at the Imprimerie Crété, and the new departure in magazine production was eventually revealed to the public on April 15th, when Messrs. Hachette's illustrated fortnightly, *Lecture Pour Tous*, made its appearance on that date. *Lecture Pour Tous* is the oldest magazine of its kind in France, the *Strand Magazine* of that country, and, naturally, the notable change in the printing created no little interest. Then followed *La Vie Herueuse*, a monthly publication profusely illustrated, and it was seen at once that the future possibilities of photogravure printing were beyond estimate, since the initial tests have proved so successful.

The cylinders of the two presses already working each have a diameter of 331 millimetres, or about 12½ inches, and the speed of the machines vary from 6,000 to 8,000 impressions per hour, according to the class of work. To judge by the specimens of the two abovementioned papers before me, it must be admitted that the new method, applied to illustrations, is a distinct advance on printing from half-tone blocks at high speed. The pictures by the photogravure process have the "life," which effect has been hitherto only obtainable by lithography. Then the colouring, too, enhances the picture to a point not to be compared with letterpress printing.

In a country where the artistic taste is educated to such a high standard the new process has therefore its *raison d'être*, and there is no telling to what a degree of popularity photogravure printing will reach, and what useful results will be achieved at no distant date.

A complete plant is already on its way down south to the University town of Montpellier. Here the leading newspaper, *l'Eclair*, will appear daily with pictures printed on one side of the paper on a single cylinder photogravure rotary. This is, indeed, a commendable piece of enterprise on the part of the proprietors of *l'Eclair*, which will be very likely followed by other progressive and wealthy dailies. There are certainly at least half a dozen who could afford such an expenditure.

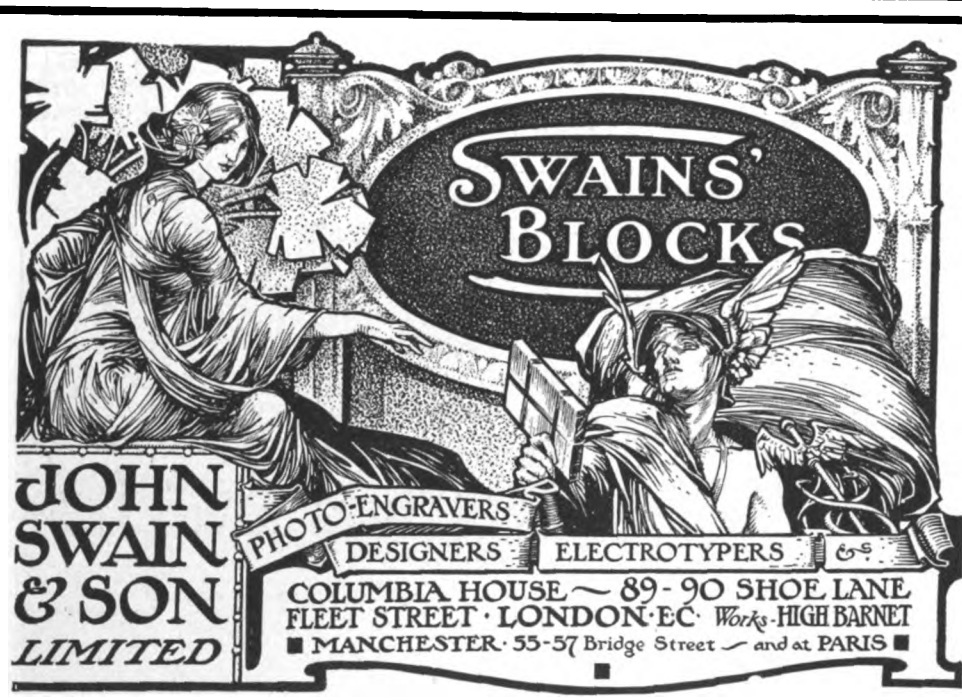
In Paris we are so accustomed to the princely orders given for new machinery and to the enormous amounts paid cash down by the proprietors of the *Petit Parisien*—the daily newspaper with the largest circulation in the world, its average daily issue being over a million and a half—that it was without any suprise that I learned that a machine was ordered from La Photogravure Rotative by that remarkable personality, Monsieur Depuy, who, I believe, was the first French newspaper proprietor to install a Goss Straight Line Octuple Press, which has become an indispensable unit to the huge productive plant possessed by *Le Petit Parisien*. The new machine will be used to produce a three-halfpenny illustrated weekly for the million, called *Le Miroir*, which was launched last year from the *Petit Parisien* offices, the headquarters of extraordinary activity.

The Annual Congress.

Whilst I am writing of France I must mention that the fifteenth annual congress of l'Union Syndicale des Maitres Imprimeurs de France, which is the prototype of our Federation of Master Printers, took place recently at the historic town of Toulouse. A goodly number of printers from all parts of the country attended, and much interesting and useful subjects were discussed and a number of resolutions passed. Monsieur Henri Sirven was unanimously elected president for the ensuing year, and the indefatigable general secretary Monsieur J. Bourdel was re-elected.

The new president is in the prime of life, and one of the most prominent figures in French printerdom, besides being a large employer. He is the head of the immense establishment known as B. Sirven, of Toulouse, who make a speciality of colour printing and their fine art chromo calendars and advertising specialities have long been favourably known on the British market. The importance of the firm may be gathered from the fact that over 1,000 hands are employed in the various departments of the works in the Rue de la Colombette, not far from the station. Mr. Sirven has often visited London, and regularly attends our Printing Exhibitions at the Agricultural Hall. Mr. Sirven is a complete master of his trade and a gentleman in every sense of the word, and possesses admirable tact. It is a happy coincidence that the period of his presidentship of the French Master Printers Union fits in with the date of next year's Printing Exhibition, in which Mr. Sirven will doubtless take a special interest, and thus forge a further link in the "Entente Cordiale."

The question of costs occupied the attention of the Congress, and a paper on this point was read by Mr. G. Delmas, of Bordeaux, who has done so much to make the trade realise the evils of low prices.



Type-Setting and Distributing MACHINES.

Mr. Heinrich Borchers has patented improvements in type-setting and distributing machines which are set forth in his specification as follows:—To the hitherto known type-setting machines drawbacks occur, which prevent an undisturbed setting and distribution. Said drawbacks are mainly as follows:—(*a*) The perception of faults, when setting and distributing, was a matter of sensibility and thus an immediate correction casual and then very cumbrous, in default of mechanical resources; (*b*) The arresting means of the type magazine become disengaged when unintentionally touched, so that types could fall out; (*c*) The setting was effected in intermediate bars, from which the types were taken out in order to be put in the printing bed.

The present invention has for its object to overcome these drawbacks, whereby the following improvements are created; (1) the type magazines are closed by an endless arresting band, which can be opened at the point of delivery only, so that at this point only types can be taken out; (2) the set or distributed types are stopped when falling down into the printing bar, so that any faults can be at once remedied by correction devices; (3) the types to be set are supplied directly to the printing line, which is held by clamps, and hence again directly into the magazine, so that types cannot be lost and mixed up. The clamps mentioned are also used in order to fix the printing line on the press. During the setting, the printing line is closed by wedges in order to prevent types from falling out.

The above described details, which are dependent on each other, allow a faultless setting and distribution of the type set and result at the same time in a considerable saving of time.

A goodly number of printers from all parts of the country attended, and much interesting and useful subjects were discussed and a number of resolutions passed. Monsieur Henri Sirven was unanimously elected president for the ensuing year, and the indefatigable general secretary Monsieur J. Bourdel was re-elected.

The new president is in the prime of life, and one of the most prominent figures in French printerdom, besides being a large employer. He is the head of the immense establishment known as B. Sirven, of Toulouse, who make a speciality of colour printing and their fine art chromo calendars and advertising specialities have long been favourably known on the British market. The importance of the firm may be gathered from the fact that over 1,000 hands are employed in the various departments of the works in the Rue de la Colombette, not far from the station. Mr. Sirven has often visited London, and regularly attends our Printing Exhibitions at the Agricultural Hall. Mr. Sirven is a complete master of his trade and a gentleman in every sense of the word, and possesses admirable tact. It is a happy coincidence that the period of his presidentship of the French Master Printers Union fits in with the date of next year's Printing Exhibition, in which Mr. Sirven will doubtless take a special interest, and thus forge a further link in the "Entente Cordiale."

The question of costs occupied the attention of the Congress, and a paper on this point was read by Mr. G. Delmas, of Bordeaux, who has done so much to make the trade realise the evils of low prices.

Type-Setting and Distributing MACHINES.

Mr. Heinrich Borchers has patented improvements in type-setting and distributing machines which are set forth in his specification as follows:—To the hitherto known type-setting machines drawbacks occur, which prevent an undisturbed setting and distribution. Said drawbacks are mainly as follows:—(*a*) The perception of faults, when setting and distributing, was a matter of sensibility and thus an immediate correction casual and then very cumbrous, in default of mechanical resources; (*b*) The arresting means of the type magazine become disengaged when unintentionally touched, so that types could fall out; (*c*) The setting was effected in intermediate bars, from which the types were taken out in order to be put in the printing bed.

The present invention has for its object to overcome these drawbacks, whereby the following improvements are created; (1) the type magazines are closed by an endless arresting band, which can be opened at the point of delivery only, so that at this point only types can be taken out; (2) the set or distributed types are stopped when falling down into the printing bar, so that any faults can be at once remedied by correction devices; (3) the types to be set are supplied directly to the printing line, which is held by clamps, and hence again directly into the magazine, so that types cannot be lost and mixed up. The clamps mentioned are also used in order to fix the printing line on the press. During the setting, the printing line is closed by wedges in order to prevent types from falling out.

The above described details, which are dependent on each other, allow a faultless setting and distribution of the type set and result at the same time in a considerable saving of time.

In the accompanying drawings, Fig. 1 shows part of a two-rowed register (scale) with the superposed window. Fig. 2 is a diagrammatical plan view of the machine. Fig. 3 is a perspective view of the magazine, setting car, window, scale and type lever. Fig. 4 shows an arresting wedge such as used for

FIG 1.

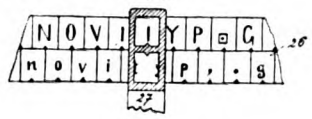

FIG.2.

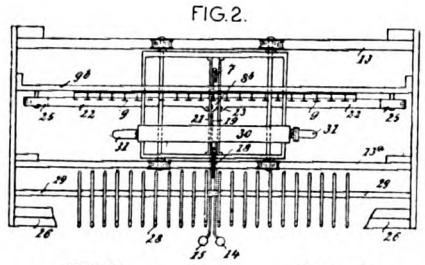

FIG.3.

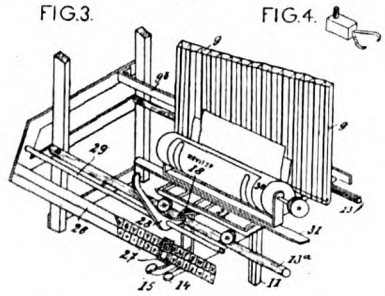

FIG.4.

closing the lines to be set. Fig. 5 is a perspective view of part of the machine, showing at the lower end the mechanism of the setting car and at the upper end that of the distributing car, and between both the type magazine which below is closed by the arresting band, all parts impairing the clearness of illustration being omitted. Figs. 6, 7 and 8 illustrate different phases during the setting and distribution, in diagrammatical views. Fig. 9 is a perspective view of a modification of the setting mechanism, such as used for machines with a key-system, but also applicable to other machines. Figs. 10 and 11 show, for this construction, the position of the movable parts during the setting, in diagrammatical representations. Fig. 12 illustrates a particular construction of the fork tooth. Figs. 13 and 14 show different designs of types. Fig. 15 is a diagrammatical side view of the setting machine, with the writing mechanism at the upper part. Fig. 16 shows a particular construction of that spindle, which, driven by the lateral movement of the car, by its narrow threads the type carrier into the proper position for printing. Fig. 17 is a side view, and Fig. 18 a perspective view of the lower part of the setting bar, showing clearly how the same is secured.

In a machine frame (Fig. 2) race-ledges 13, 13^a are arranged, on which the setting car is adapted to move. On the setting car the hereinafter described setting mechanism is mounted on planes 21, the same carrying also the race-ledge 31 and the paper carriage, with roller 30, which are adapted to run on the latter. The running contrivance for the paper carriage can also be mounted on the frame of the apparatus.

In the machine frame, further, the type magazine with the channels 9 is located on connection rods 9^a and 9^b (Figs. 3 and 5) which channels are at their lower ends provided with a slot, in which runs the common arresting band 22 and moves on wheels 25. The parts 7, 8^b, 9 and 23 shown in Fig. 2 are explained below. Beside the indicated parts, a bearing shaft 29 is mounted, on which move type levers 28, which are operated by depressions of the keys 14 and 15 by means of levers 18. Part 26 on the machine frame corresponds to the register represented in Fig. 1, which is here shown in two rows and over which slides the window 27.

Fig. 3 is a perspective view of the setting car, showing the position of the single parts. For sake of clearness, only the paper roller is shown with the paper sheet, on which by the word "novityp" the abutment point of the types can be recognised. Below the car part of the printing bar 11 can be seen, which when setting is filled with types, the latter being prevented from falling out by a wedge (Fig. 4). The latter consists of a square piece of metal, which at the top has a small projection by which it is shifted in the type grooves, while the rear fork-shaped spring has the object to clamp the wedge in the line. For sake of clearness, the arresting band, of which the position is shown in Fig. 5, as well as inking devices are omitted, as the latter are sufficiently known in the art.

Fig. 5 is a perspective view of the setting device below and distributing device above. In the latter the distributing lever 1 is shown, which by its extension 1^a, engaging a pin of

FIG.5.

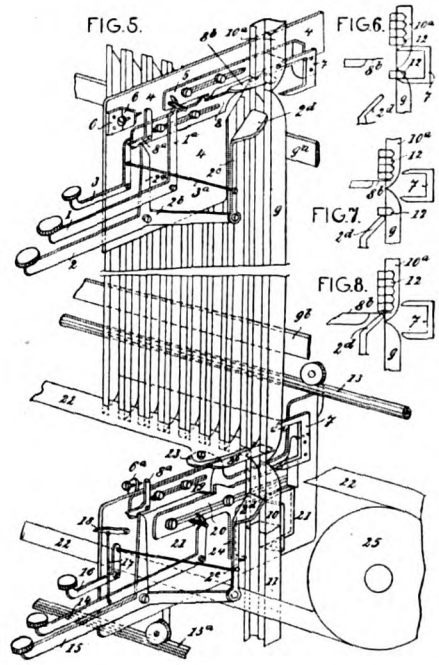

FIG.6.

FIG.7.

FIG.8.

the sliding member 5, drives the fork 7 between the letters. At the lower end of sliding member 5 a tooth is arranged, which engages another tooth of the sliding member 8, so that the latter is also operated by the lever 1. Upon the fork 7 entering between the types, sliding member 8 opens the type channel by withdrawal of the arresting plane 8^b. Sliding member 8 abuts with its left side against the arm of lever 3, which by the rod 3^a reverses the lever 2^c. Lever 2 carries on arm 2^b the mentioned lever 2^c with plane 2^d; the arm 2^a catches behind tooth lever 8^a of the sliding member 8. By operation of lever 2, sliding member 8 is moved until the screw on member 6 releases the tooth lever 8^a, by raising same when abutting thereon, from the lever 2^a, while arm 2^b raises the lever 2^c. Parts 1, 2, 3, 5, 6, 8 and 10^a are mounted on planes 4. 10^a represents part of the printing bar. It is noted that springs, which bring the parts into the position of rest, are omitted, as well as registers, etc.

From Fig. 5 it can be seen that the upper setting car—wheels, rails, etc., are omitted—runs on top of the type magazine. The position of the omitted parts is shown in Fig. 3.

The type magazine with wheels 25 is by rails 9^a and 9^b held in the machine frame. The lower setting car, indicated by the plane 21 carrying the mechanism, runs over rails 13 and 13^a (Fig. 3).

Lever 14 catches by an extension behind a pin of the sliding member 20, on which fork 7 is fixed. Sliding member 20 catches with a tooth behind a similar tooth on sliding member 19, which carries the arresting plane 8^b (like sliding member 8 above). Sliding member 20 has below a lever projection 24, which with its bent end catches behind lever 2^c of the correction lever 15. The latter carries on one arm the above-mentioned lever 2^c with plane 2^d, while its other arm catches behind tooth lever 8^a on part 19, which finds its abutment on the adjusting screw of angle-piece 6^a. Lever 2^c is connected by a rod with lever 16, and lever 14 by a rod 17 with lever 18.

Key-levers 3 and 16 respectively have both the object to lift the lever 2^c and thus also the plane 2^d and to remove both from the bar 9 or 10 respectively. Thereby the type, which rests thereupon (Fig. 7), is released and allowed to fall into the lower bar. This happens especially when setting or distributing is finished, and in any case the lever 16 must be operated last when setting, because otherwise the type lying on plane 2^d would be missing from the line.

On the planes 21 angle-pieces 23 are provided, on which arresting band 22 is fixed. Bars 10 and 11 are also mounted thereon. The construction of said printing bars is as follows: A square pipe is so slotted that it can receive the types shown in Figs. 13 and 14. Thereby, a bar of **U**-shaped cross section is produced, of which the free ends are somewhat bent inwards.

The setting is now effected as follows:—After the car has been shifted to the desired type by reading off on scale 26 through window 27 (Figs. 1 and 3), the arresting devices are operated. Thereupon, when striking the key 14, sliding member 20 slides to the left and moves sliding member 19 in same direction. Projection 24 reverses thereby plane 2^d. Upon

holding the lever 14 down, the parts 7, 8^b and 2^d assume the position shown in Fig. 6. The reference letters therein are the same as on the distributing car. In the setting car, 10^a corresponds to bar 9 and 9 to bar 10–11. Fig.

6 shows how the upper types 12, which may have any shape, for instance as shown in Figs. 13 and 14, are arrested by the upper fork tooth, while the lower one falls upon the next fork tooth, as plane 8^b has interrupted the arresting. Plane 2^d is thereby turned back. The same process is obtained by operation of lever 1 of the distributing arrangement, in which however plane 2^d is reversed by the arm of lever 3. Upon lever 14 being released, the parts return to their position of rest, the magazine is closed, fork 7 returns, and the liberated type is placed on plane 2^d (Fig. 7). Key 14 has by lever 18 (Fig. 3) caused the type lever 28 to jump forward, whereby an impression is produced on roller 30.

There can be used various means for printing or writing the set or distributed letters, for instance such as used in typewriting, calculating or telegraphic machines, or types on plates, bands, levers, ribbons or the like. These writing or printing means can be inked as known on above-mentioned machines, or by means of cushions or the like. The paper on which the impression has to be made to be of the size used on above machines.

Upon perception of a fault, key 15 (on the distributing car, key 2) is struck, plane 2^d is raised, and plane 8^b on sliding member 19 is pulled back by tooth lever 8^a, so that plane 2^d returns the wrong type to the place of delivery. Upon the screw on angle-piece 6_a being properly adjusted, sliding member 19 is disengaged and plane 8^b slides over plane 2^d below the raised type, thus completing the correction. This moment is represented in Fig. 8. As without lever operation no type can be taken out and an impression is produced upon each taking, it is obvious that faults are immediately found out and corrected.

Fig. 9 shows a constructural form of the setting mechanism, such as suggested for machines with key-system, but which can also be employed for other machines. On the plate Y are movably mounted lever 63, on 64, lever 60 on 65, lever 61 on 66.

Sliding member 50 slides in slots over screws, so that tooth 51 is placed between the types. Projection 52 drives hook 55 with plane 56 by a pin back, whereby types lying in the magazine are liberated. Sliding member 50 is moved by lever 63 by the arm 62 striking behind wing 54. Sliding member 50 catches with extension 53 by a pin behind lever 60, which stops the disengaged type, while a pin on the extension 59 strikes behind lever 57 in order to turn same back. Fig. 10 shows the position of rest of said parts. On head piece 58 of lever 57 a type is left. Compared with the previously described mechanism the correction lever (Fig. 9) accomplishes here another movement, in that head piece 58 on lever 57, raised by lever 61, abuts from below against plane 56 on lever 55 and causes the same to give way owing to its shape. The shape of head piece 58 prevents the types from being damaged. Upon head piece 58 being sufficiently raised, lever 55 jumps again forwards below 58 and closes the type channel. Now, part 58 must slide over plane 56 in backward direction and jumps then again below towards bar 10. The last described correction process can be seen from Fig. 11.

Figs. 13 and 14 show different type shapes. The types consist of any appropriate material, carry above the type characters and are provided with a guide in order to be prevented from falling out. The oblique portion 12, 12_a on the foot serves for an easy engagement of the types by the setting mechanism.

Fig. 12 shows how the tooth 51 is modified if types of different shapes are used, so that the plane, indicated by section lines of said tooth 51^a can bear against the types from the rear or from the front, instead of entering between the same.

Figs. 17 and 18 represent the holding clamp, below for the printing bar, R being a plane connected with the setting car (see also Fig. 15 below), which below catches beneath the printing bar and which has a rearward projection, with one hole of which engages one bent end of the clamp, in order to maintain its position, while through a second hole projects a rod, around which a spring F is wound, which raises the free end of the clamp, so that the printing bar placed between wings of part R cannot more give way. K is the clamp.

Fig. 15 shows the arrangement of a writing mechanism in a diagrammatical representation, 9 designating the magazine which is mounted on the apparatus by rods 66^a. Bearing 67, fixed on the apparatus, carries screw threads 69 which are operated by a ratchet and pawl mechanism 68, 71 and 72. Over said screw threads a sleeve 70 is mounted and connected with the car 73 which carries the paper roller 74 and which runs on rails fixed on the part 75 which is located in the apparatus. Extension 96 holds an axle 81, which below carries a toothed wheel 82, which gears with a worm 95 (Fig. 16) on axle 88, while at the top toothed wheel 80 is arranged, which gears with 79 and which is in connection with a disc 77 carrying types and being flexible to enable the types to strike the platen. The ratchet and pawl mechanism on the screw threads 69 is connected by rod 84 with lever 89 and the latter by rod 85 with the hammer lever 78 which is fulcrumed at 81. The setting car, which is represented by plane 16, catches with sleeve 87 partly around the screw-threaded axle 88 and carries at the front the registering window 91 reaching over scale 92.

Upon the setting car being moved, sleeve 87 turns the axle 88 by a pin lying in the screw threads 94, said axle turning then by screw threads 95 the axle 81 and thus disc 77, which is inked by cushion 76. Thereby the type to be set is led opposite to the printing place. Upon depression of lever 93, it sets the type and presses at the same time on lever 89 by means of rod 90 lying beneath the whole apparatus, and moves then by rod 84 and ratchet and pawl mechanism 68, 71 and 72 the paper carriage, and by rod 85 the printing hammer 78, whereby impressions are produced on the paper. The correction arrangement is provided with oppositely acting clutch in order to return the paper carriage for one letter-space. The inking cushion 76 is about semi-circular, and so arranged that the type disc 77 can slide thereon.

Fig. 16 shows a constructional form of the axle 88 with the two screw threads 94 and 95. For the reception of the type impressions narrow paper webs may be used, which are led from rolls at equal distances from each other in any direction along the printing place, for instance, in a similar way to the inking ribbons of typewriting machines.

The inventor's claims are as under:—

1. In a type-setting machine, a type magazine closed by an endless arresting band, and fitted with dissengaging devices at its point of delivery.

2. In a type-setting and distributing machine, in combination, setting and distributing cars, and printing bars fixed thereon.

3. In a type-setting and distributing machine, in combination, setting and distributing cars, and correction devices thereon.

4. The combination of a setting and distributing machine, with a correction device, consisting partly of a lever by which the type can be removed to or from the type magazine.

5. In a type-setting and distributing machine, a setting and distributing device consisting of a fork with one or more prongs which can be formed as planes.

6. The combination of a setting and distributing machine, with alternately acting, separating and stopping devices.

7. In a type-setting and distributing machine, in combination, a stopping correction device, and means to disengage same.

8. In a type-setting and distributing machine, in combination, writing or printing devices, as well as means for inking same, such as used in typewriters, calculating machines, and telegraphic apparatus.

9. The combination of a setting and distributing machine, with a device for guiding paper webs from rolls at equal distances from each other in any direction along the printing place.

10. In a type-setting and distributing machine, in combination, an axle and screw-threads thereon to drive the paper carriage by means of levers, as well as an axle with screw threads of different pitch thereon, and means to drive same and the type-wheel by moving the setting carriage.

11. In a type-setting and distributing machine, in combination, a printing line, and springy plates or clamps for holding same, which are adapted to be used also on a printing machine.

12. In a type-setting and distributing machine, in combination, a printing bar, and arresting wedges with forked spring to close said bar.

A NOVEL MEMORIAL.—A unique gravestone has been placed in the cemetery in Jefferson, O., at the head of the grave of J. A. Howells, veteran editor of the *Ashtabula Sentinel*, who died recently. It consists of the "make-up" stone used by Mr. Howells for fifty years. On it is inscribed a verse written by William Dean Howells, novelist, a brother of the dead man. The boyhood of William Dean Howell was passed in the office of the *Sentinel*. The father of William Dean and J. A. Howells was editor of the paper.

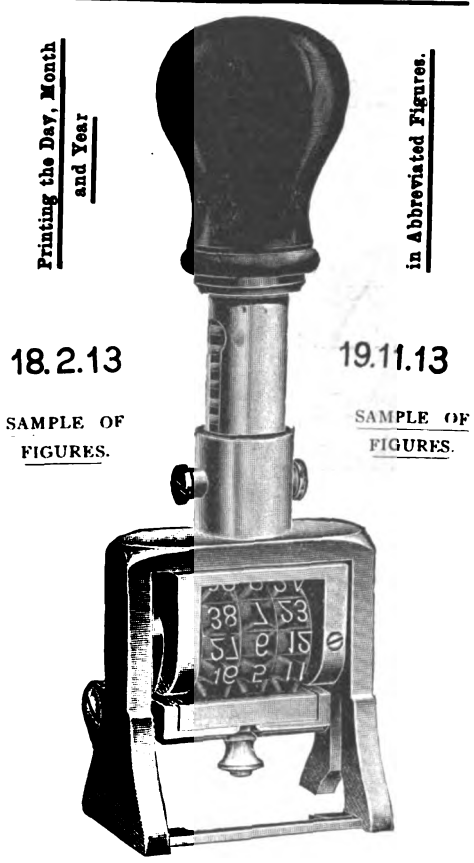
TRADE PRINTING—Book, Magazine, etc. Monotype and Linotype Setting. Best work. Est. 1881. BIRDSALL & Co., Electric Printeries, Stanningley, Leeds. Half-tone and Tri-colour Printing a speciality.

The National Insurance Act

A

GREAT SUCCESS.

"Number of Insurance Stamps sold in England from June 21, 1912, to March 31st, 1913,



342,848,351

Value £10,451,569 11s. 7d."

THE "UNIQUE" DATING MACHINE

"The Right Machine for Cancelling Insurance Stamps."

RELIABLE. ACCURATE. EFFICIENT.

ACTUAL SIZE.

Self-Inking, Clean, Clear Impressions from METAL ENGRAVED WHEELS.

Fitted with gauge to place the date across the Stamp and cancel it, according to the requirements of the Act.

The Quickest Method of cancelling Revenue Stamps on Insurance Contribution Cards.

Price 14/6 each

The Price includes small Bottle of Ink, and Stylo, packed in Box complete.

Black Indelible Ink, No. 1 Size, 1/- per bottle.
No. 2 Size, 2/- per bottle. Pads 2/6 per dozen.

The above MACHINE is made by the "Bates Manufacturing Company," of Orange, N.J., U.S.A., who for twenty years have enjoyed an enviable reputation in the sale of the "Original Bates Automatic Hand-Numbering Machines."

"The figures are easily set for use, one only having to press the plunger down, push the head of the locking pin through the opening in the top, pull out the fork pin at the right hand side of figure wheels and turn the wheels to the date or dates required. The pad is inked with a small camel hair brush, and the wheels and figures may be kept clean with equal parts of benzine and paraffin. Indelible ink for use with this dating stamp is also supplied. . . . . The 'Unique' dating machine gives the quickest method of cancelling the stamps on the employees' contribution cards, while at the same time it may be found useful in many other ways."—Extract from "*The British and Colonial Printer and Stationer.*"

Similar commendatory notices appeared in "Sales and Wants Advertiser," "The Caxton Magazine," "The Stationery Trades Journal," "The Stationery World," "The Irish Printer," and the "Home and Colonial Stationer and Printers' Review."

Liberal Discounts upon orders for the above Machines in lots of half-a-dozen.

High Grade made Automatic Hand and Type-High Numbering Machines kept in Stock.

Estimates given for large quantities.

For further particulars of the above Machines write to—

Monsieur Henri Sirven.

The new President of the Union Syndicale des Maitres Imprimeurs de France, is principal proprietor of the famous litho printing house of B. Sirven, at Toulouse, and Vice-President of the Chamber of Commerce of that city.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Beaconsfield used to say that Parliament was a dull place, but there were moments of emotion.

o o o

There must have been moments of emotion in the life of late years of Mr. Clark Miller, who is now unhappily no more with us, and in the life of his partner and intimate associate, Mr. A. H. Motley, junior. The final emotion is one of triumph, and a triumph which should be the presage of greater triumphs yet.

o o o

A few years ago they were officers and large stockholders in a certain Print Weave Company of New York. I think one may say that company was formed substantially for the exploitation of certain processes deemed to be available either for textile or for paper printing.

o o o

A second company was formed to acquire a license to use the inventions, patents, processes and machinery of the Print Weave Co. This second concern was called the Continental Patents Co.

o o o

Enter then on the scene Mr. William Ottmann, Mr. John Omwake, and Mr. James M. Hutton, and to them a sale was made of half interest in Continental Patents Co. Through them in some way the United States Lithographic Co. became interested. The sequel was that after a certain substantial payment was made to Messrs. Miller and Motley, other payments became in arrears. The arrears were not pressed for at all vigorously until a public notification was made regarding the taking up of debentures or some charge corresponding to debentures, which made Messrs. Miller and Motley think they must protect their interests.

Accordingly they took action to recover the payment in arrear. At the same time they came over to this country to introduce the new process here, intending, as I understand, to set things on foot here and return, if a return were necessary, to pursue the litigation on which they had embarked.

o o o

Suddenly in April of last year, their extradition from England was applied for, the American Embassy in London being called upon to make the application to the London magistrate, and it was alleged that they had obtained £20,000 by representing certain processes and inventions to be capable of doing what they could not really accomplish.

o o o

I had just casually met these gentlemen for a minute on the introduction of the late Mr. F. W. Sears, (a practical lithographer, and the inventor of the Sears high light process), and thinking that they really had a process of great importance, and might be the subject of an injustice if its technical value for the trade were not appreciated, I spontaneously decided to go down to Bow-street and to watch the case. The magistrate queried as to whether there was a sufficient reason for the defendants being on this side of the Atlantic when they had actually started a suit across the water, and thereupon I offered evidence as to the process they were operating being one of undoubted importance, such as might well call for a special trans-Atlantic journey and a prompt inauguration of the British business.

o o o

As it happened this was not wanted; for a merchant offered "readily," as he said, to enter into very substantial bail, and Messrs. Miller and Motley were released on their and his recognisances.

o o o

The extradition application proceedings were not followed up, and the London magistrate after allowing the proper time dismissed the matter altogether.

o o o

Messrs. Miller and Motley, however, did not let it rest at that.

o o o

They went promptly to New York, issuing there a virtual challenge to anyone who genuinely felt aggrieved, to raise the matter in regular form without any trouble of extradition application.

o o o

I am not quite clear as to the precise issue that was then raised or perhaps I should say was forced to the front; but what will interest the trade is that the matter was finally submitted to the judgment of a Court.

o o o

In the course of the proceedings now brought about, Messrs. Miller and Motley's counsel on their behalf had a complete plant installed in New York for the making of lithographic plates under the patents and processes in question, and gave a demonstration for the benefit of the Court and its experts, in order to establish conclusively that these inventions were of great commercial value, and capable of producing lithographic plates and various other work, and that in fact "all representations made by defendants in connection therewith were true."

o o o

The Court accepted the offer, and demonstrations were made which were attended not only by the District Attorney, and Mr. W. H. L. Edwards, the assistant in charge, but by various experts representing the Court, by representatives of lithographic journals, and others interested in the lithographic business.

o o o

As a result of these demonstrations and of a careful impartial investigation made by the Court of all the facts, Judge Mulqueen, of New York, "at Part 5 General Sessions," dismissed the case and exonerated Mr. Alfred H. Motley, jun., and Mr. Clark A. Miller.

o o o

Our congratulations are due to Mr. Motley upon this final result. A full statement of the facts was also due to him, and I am glad to be able to make it. For myself, as will be gathered, I never formed an adverse opinion, even at the time of the sensational extradition application.

o o o

Well, there have been certain moments of emotion, and perhaps some element of comedy has mingled with what has also had its very sombre side. One is tired of both: particularly of everything which has looked like unreality in litigation. One recalls a certain exclamation by a distinguished Briton: "Enough of this fooling. . . . Let us get to business."

o o o

There was business to be sure in a display which the Printex Company, whose managing director Mr. Motley now is, were able to make at the recent Philatelic Exhibition in Paris.

o o o

Sheets of fifteen different denominations of British Government Insurance Stamps, all designed by Printex Company and put down on plates by their special process, were there shown.

o o o

There was also shown the Official Congress Stamp, specially designed by them, and for which they secured gold medal honours. This stamp was rapidly put down on plates in the number required. The plates were made for letterpress printing. Within twenty-four hours, however, of the exhibition opening in Paris, Printex Company were suddenly asked to prepare in London another plate bearing so many copies of the stamp for intaglio printing, for it was desired that printing of the stamp by intaglio should be a feature of the exhibition.

o o o

It is all fish that comes to the Printex net. The request was complied with, and the plate was in Paris in time for the opening.

o o o

If any firm has been genuinely interested in the Printex "Stop and Repeat" machine and process, but has held its hand partly because of this talk of litigation, perhaps this short statement may interest them. Messrs. Miller and Motley will only see these notes when others see them, but they are, I feel sure, an accurate record of a strange series of happenings.

FRANK COLEBROOK.

Fire at Willesden.

A serious fire that completely destroyed the works of Messrs. Grant, Legros and Co., Ltd., occurred on the night of August 1st, just after the works had closed down for the annual holidays.

The firm realising their obligations to the many printers who have installed Davis Typecasters, and in order that there should be no delay in regard to the large number of orders on hand and daily coming in, promptly took measures through the friendly assistance of several engineering firms to install their different departments in suitable establishments in London, and they are thereby enabled to carry on their manufacturing operations without interruption.

Plans for larger and more extensive works were commenced the morning after the fire, and upon the site of the ruins the foundations for the new building will be laid within the next few weeks. The new establishment will, when finished, be reconstructed and equipped in the most up-to-date manner with all that modern constructive engineering can do to meet the ever-increasing demand for Davis Typecasters.

The firm's library of matrices for hire was fortunately secured from harm in their strong room, and consequently there will be no interference whatever in the service of matrices.

The firm have been working night and day to bring order out of chaos, and they have had the satisfaction of giving the majority of their workpeople employment on Monday, August 11th, the date fixed upon for resumption of work after the holidays before the fire took place. Messrs. Grant, Legros and Co., Ltd., informs us that the works offices with all records and customers' orders have been saved, and their business will continue to be conducted from there with the same orderly routine as if no fire had occurred.

Trade Notes.

PRESS telegrams between the United Kingdom and Holland may in future be sent for 1d. per word between 6 p.m. and 9 a.m., with a minimum of 10d.

AT a meeting of Messrs. Bass, Ratcliff and Gretton, Mr. John Gretton, M.P., stated that during the past year the number of labels printed for the firm for beer bottles numbered 307 million.

THE business of Smiths' Advertising Agency, 100, Fleet-street, E.C., has been, for family reasons, converted into a private limited company. The personnel of the business will continue as hitherto.

THE partnership subsisting between Messrs. Berisford and Morris, trading as Berisford, Morris and Co., paper agents and merchants, Woodley, near Stockport, has been dissolved as from July 31st last.

THE death is announced of Mr. James P. Morison, who was up till recently the sports editor of the *Glasgow Herald* and the *Evening Times*. Mr. Morison began his career on the *Falkirk Herald* and joined the staff of the *Glasgow Herald* about 30 years ago.

TENDERS WANTED.—For printing copies of the register of parliamentary and county electors for various districts in Essex; particulars from Mr. J. H. Goold, clerk, Shire Hall, Chelmsford. For the printing of the burgess roll and parliamentary and parochial registers for year 1913-14, for the Corporation of Rochdale; particulars from the Town Clerk's office, Town Hall, Rochdale.

THE death took place at Preston, on Tuesday, of Mr. Joseph Foster, head of the firm of Messrs. Joseph Foster and Sons, printers' engineers, of Preston. Mr. Foster, who was 83 years of age, commenced work as an apprentice, and at the age of 29 began manufacturing on his own account, specialising in machines for rapidly printing and folding newspapers. He started in business with the help of a man and a boy, and to-day the firm employs over 600 workpeople.

ACCORDING to a recent consular report, there are two newspapers in German East Africa, the *D.O.A. Zeitung* and the *Usambara Post*. Both voice the views of the white settlers, the latter usually with more particular emphasis. The inspired paper, the *D.O.A. Rundschau*, ceased to exist at the end of 1912, and the issue of the official gazette has been taken over again by the *Zeitung*. The official colonial pamphlet, the *Pflanzer*, is now published by the Government in Dar-es-Salaam.

ON the occasion of the annual outing of the staff of Mr. A. Chris. Fowler's printing works, Shoreditch, a handsome booklet to serve as programme and a souvenir of the occasion was got up, consisting of eight pages in an ornamental cover, the letterpress being printed in black and red. Interesting and appropriate articles and notes were included, and a coloured plate was given away in each booklet. The whole production was extremely creditable to all concerned in its get up.

MR. HENRY WICKS, who had an interest in several newspapers, among others the *Newcastle Daily Journal*, and who was staying with Mr. S. Storey, at Southill, near Durham, passed away suddenly at that gentleman's residence, of heart failure. Mr. Wicks was present at the wayzgoose of the *Journal* on the Saturday, and also that of the *Sunderland Echo* and *Northern Daily Mail*, Hartlepool, on Bank Holiday. He was an intimate and valued friend of Mr. S. Storey. The interment took place at Chester-le-Street on Friday last.

THE Derby Printers, Ltd., a co-operative printing society, has purchased some land from the Corporation for the erection of new works. In its eighth half-yearly report just issued the Bristol Printers, Ltd., record a trade of £591, as compared with £462, in a corresponding period of last year. After making due depreciation on plant, fixtures, etc., as well as interest on loans, a net profit of £42 has been declared, from which £13 will be given to the employees as bonus, 5 per cent. to capital, and various other payments made for special departments. The committee have agreed to allow each employee a week's holiday during the year, and the 48 hour week has also been established.

THE eighth annual exhibition of the Cleveland Guild of Printers, Lithographers, Bookbinders, and Kindred Arts and Crafts, will be held on Friday and Saturday, April 19th and 20th, 1914. Prizes will be offered for work done by Guild members for designing, letterpress printing, photo-engraving, bookbinding, lithography and stereotyping. Entry forms, etc., may be had from the secretary, Mr. S. H. Walker, c/o Jordison and Co., Ltd., Middlesborough-on-Tees.

THE late Mr. Michael Watts Grogan, of Ealing, late of Torquay, a retired newspaper proprietor, has left estate of the value of £11,135.

ACCORDING to *Kemp's Mercantile Gazette*, there were six failures in the printing and stationery trades of England and Wales for the week ending Friday, August 8th; the corresponding week in 1912 showed five.

A NICELY got-up booklet entitled, "Who Should Make My Stereos," has been issued by Carl Hentschel, Ltd., Fleet-street, E.C. It is well printed on toned linen-surface paper and will be an effective advertisement for the firm's foundry, the five reasons given being effectively set forth.

AN exhibition of rare and valuable books is being held this week at the Free Library, Plymouth, and an excellent collection has been made that is of an interesting character and has been visited by a large number of people. Local residents have contributed many volumes, and there is an capital collection of bindings.

MR. G. W. SKELTON has recently purchased the old-established printing, stationery and bookselling business carried on for many years by the late Mr. J. W. Bocking, Bridge-street, Godalming. The valuation was carried through by Mr. W. Scotcher (representing Messrs. Walker Bros.). He has also recently valued the extensive printing plant belonging to Mr. G. Parnell, Reading, for the purpose of fire insurance, etc.

MESSRS. STANLEY PAUL AND CO. are publishing shortly Mr. Hamilton Drummond's new novel, "Winds of God," a story of adventure and romance in which the heroine to fulfil her father's wish, goes a-sailing to the South Seas to search for treasure. Her yeoman lover goes too, and others make up a party strong enough to go through villainy and mutiny, and, although threatened by every kind of discomfort and disaster that a treasure hunt can bring, cheerful enough to follow out the adventure till it brings them success.

IF an ardent collector of any kind of article, from pewter spoons to the proof sheets of famous authors is to keep his collection free from "fakes," he had better procure a volume of really practical advice on how to secure the genuine and reject the spurious. Such a book is to be published next month by Stanley Paul and Co. under the title "More About Collecting," by Sir James Yoxall, M.P., the author of "The A B C About Collecting." His new book which is very thoroughly illustrated, gives many practical hints about books, glass, pictures, porcelain, lace, clocks, and furniture, among other subjects, and is written "for the help of amateurs smitten with the passion for picking up things which are odd, pretty or rare."

THE August issue of the *Theosophical Path* (Katherine Tingley, editor, Point Loma, California) is an exceptionally attractive one. A mere glance at the contents: "Peace and War," "The Modern Platonists and Theosophy," "Brighter Britain," "Symbolism of Indian Basketry," "The Ruined Abbeys of England," "Personality in Art," etc., is sufficient to arouse wide interest, while its splendid illustrations are at once a delight and an education in themselves. These include authorised reproductions of four of the most celebrated pictures in the Walker Art Gallery, Liverpool: "Faithful Unto Death," "Dante and Beatrice," "Ruth and Naomi," and "The Goose Girl." There are also fine views from Colorado, and from Munich, Germany.

WAGES INCREASED AT OTLEY.—With this week the workmen engaged in the manufacture of printing machines at Otley (Yorks) will receive another substantial increase in their wages. The change has been brought about as the result of a series of conferences that have been taking place during the past few weeks between the masters and their employees, and the increase has been granted without any disturbance of trade. The masters have acted very generously in the matter, and it is not improbable that the new arrangements may hold good for some time. The minimum wage for fitters has been increased from 30s. to 32s. per week, moulders wages have been advanced from 31s. 2d. to 34s., joiners from 30s. to 33s., and general labourers from 20s. to 21s. The minimum wages of pattern makers is to be 34s. and 28s. for machine moulders and crane men. In addition to these advances, all the men, with the exception of a few elderly employees, who are are present in receipt of 32s. per week or over, are to have increases of from 1s. to 2s. per week. When an apprentice completes his indentures he is to have at once a minimum wage of 25s., and he will be placed on a scale of periodical advances so that at the age of 23 he will be in receipt of the minimum paid to the skilled mechanics.

The Paper Trade in Egypt.

The *Board of Trade Journal* extracts the following particulars from an article published by the British Chamber of Commerce for Egypt:—

The paper trade in Egypt has shown a remarkable development during the past few years, the total value of the imports in 1912, excluding printed matter, being £E.344,000, as compared with £E.224,000 in 1904. This trade is in a very satisfactory condition, and the principal buyers and agents are of good standing. A few special firms doing a good business pay either cash on delivery or 30 days after, but the general terms of payment are somewhat extended, viz., from four to six months.

The United Kingdom supplied writing and printing paper during 1912 to the value of £E.34,000, or 27·4 per cent. of the total, and account books to the extent of £E.7,000, or 29 per cent. of the total. The total value of cigarette paper imported during 1912 was £E.42,000, of which the United Kingdom's share was only £E.700. Imports of cardboard and packing paper amounted during the same period to £E.151,000, of which the United Kingdom only secured orders to the extent of £E.9,000, or 6 per cent. of the total. The United Kingdom, generally speaking, supplies the better qualities of paper, such as are manufactured for home markets, but little attempt is made to study local conditions and to offer the cheap low qualities so much in demand in Egypt. Austria-Hungary secures the bulk of Egypt's paper orders, her total for the past year being £E.113,000, followed by France £E.52,000, United Kingdom £E.51,000, Italy £E.37,000, Germany £E.33,000, the Netherlands £E.17,000, and Norway and Sweden £E.15,000.

The paper trade in Egypt, excluding printed matter, is classified by the Customs Authorities into the following main categories:—(a) writing and printing paper; (b) cigarette paper; (c) paper and cardboard for packing and other purposes; (d) account books, etc.

Writing and Printing Paper.—Under this heading is included ordinary non-glazed paper both for ordinary printing and for newspapers, glazed wood paper for printing and lithography, and writing paper for commercial, scholastic and private use. The total value of the imports in this section has increased from £E.79,000 in 1904 to £E.124,000 in 1912, the United Kingdom's proportion of the whole for the two years being 18 per cent. and 27 per cent. respectively. The inferior and medium qualities of letter paper and paper for scholastic purposes are supplied largely by Austria, but Italy and France participate to a lesser extent, the prices ranging from 80—100 frs. per 100 kilogs. Superior qualities of writing paper, a large proportion of which is for Government use, are supplied by the United Kingdom. Norway and Sweden are the principal suppliers of paper for newspapers, and to a lesser extent Austria and Germany. The prices vary from 25—30 frs. per 100 kilogs., less 3 per cent. Very little English news paper is imported, the price being too high. Glazed wood pulp printing paper is furnished principally by Austria at prices which offer no opportunity to competitors to introduce their goods. Quotations, which have remained constant during the past few years, vary according to quality from 32 to 54 frs. per 100 kilogs., while German paper sells at from 42.50 to 65 frs. per 100 kilogs.

Cigarette Papers.—The United Kingdom unfortunately has no share worth mentioning in this branch of the paper trade, the imports of which rose in value from £E.32,000 in 1904 to £E.42,000 in 1912. Austria is again the principal supplier, being directly responsible for £E.23,400 of last year's total, followed by Turkey £E.11,500 (largely made up of paper of Austrian origin), France £E.3,500 and Italy £E.3,000. The paper may be divided into three sections:—(1) inferior at 8.40 frs. per ream of 1,000 sheets (about 8 kilogs. in weight); (2) medium quality at 1.24 frs. per kilog. (a ream of 500 sheets weighing 4.5 kilogs.); (3) superior quality largely imported from Italy and France at from 1·60 to 1·90 frs. per kilog., or 4.85 frs. per ream of 500 sheets weighing approximately 3 kilogs.

Cigarette paper in the form of booklets is imported from Italy and Austria in cases of 200 boxes, each containing 60 booklets, at from 135 to 162 frs. the case, and a finer paper in boxes of 60 booklets at 1.15 frs. the box. French cigarette paper in boxes of 60 booklets is quoted at 3.20 frs. the box. The cigarette paper shown in the Customs returns as emanating from Turkey is in reality Austrian paper, which is imported into Turkey in sheets and re-exported in the form of booklets.

Paper and Cardboard for Packing and Wrapping.—In this category are included straw board and straw paper, the greater part of

Digitized by Google

which is supplied by Austria; France, Italy and Holland participate to a small degree. There was recently a boom in this description of paper and prices reached a high level, but a slump has since set in. The present quotations are as follows:—Austrian straw paper, 17 frs. per 100 kilogs.; Italian straw paper, 14·75 per 100 kilogs.; Italian straw paper (a finer quality known as "imitation de Francais"), 18 frs per 100 kilogs.; Dutch straw paper, 15.50 frs. per 100 kilogs. The finer qualities from France, weighing 100–110 grammes the square metre, are sold at 18 frs., and a lower quality at 17 frs. per 100 kilogs A very light straw paper is imported from Austria at 21.87 frs., and another quality known as "Corona" at 22 frs. per 100 kilogs.

Cellulose wrapping paper, generally glazed on both sides, but sometimes on one side only, is imported coloured "natural," white, and various colours, the greater part being of Hungarian or Dutch manufacture, but the United Kingdom also participates to a limited extent. Prices for white vary from 33.38 frs. per 100 kilogs., an extra charge averaging 1.50 frs. being made for colours.

Spice paper and paper used for packing tobacco is chiefly imported from France, Austria and Germany, the French article, white in colour, being sold at 25 frs. per 100 kilogs., and blue and brown from Germany and Austria at from 26 to 28.75 frs. per 100 kilogs.

Straw board is imported from Holland at from 15 to 17.20 frs. per 100 kilogs. Brown cardboard used by local bootmakers was formerly also imported from Holland, but Austria has captured the market by cutting prices. The price ruling at present is 18 frs. per 100 kilogs., a finer quality marked with a star selling at 20 frs. per 100 kilogs. White cardboard for cigarette boxes and other packing purposes is also supplied by Austria at 19—20 frs. per 100 kilogs. The bulk of the ready-made cardboard cigarette boxes is supplied by Germany, but the United Kingdom, Greece and Turkey also participate.

Account Books.—The United Kingdom furnishes the best quality of accounts books, but Italy secures the greater part of the trade with inferior lines retailing approximately at half the price. France and Germany also supply a medium quality at lower prices than the United Kingdom article. Copy letter books are almost entirely imported from Italy. A certain quantity of commercial books are manufactured locally, and an English firm in Alexandria turns out the best class of English work.

(Prices quoted are c.i.f. Alexandria, less 5 per cent. for cash. Franc = 9·6d. Kilog. = 2·2046 lbs.)

British Imports of Boards.

Strawboards.

During the last five years the imports of strawboards into the United Kingdom were as under:—

1912	3,285,011 cwts.	£898,259
1911	2,907,442 ,,	799,334
1910	2,851,968 ,,	761,506
1909	2,676,366 ,,	705,589
1908	2,350,299 ,,	651,802

The countries of supply are as follows, the comparative values being given for the years 1908 and 1912:—

	1908.	1912.
Germany	£13,138	£11,738
Netherlands	630,714	878,035
Belgium	3,053	5,799
United States	1,144	345
Other Foreign Countries	2,560	542
British Possessions ...	1,193	1,800

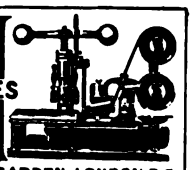
Millboard and Wood Pulp Board.

The imports under this classification during 1912 and the four preceding years were:—

1912	1,312,682 cwts.	£634,047
1911	1,279,206 ,,	618,648
1910	1,338,264 ,,	656,502
1909	1,097,955 ,,	535,614
1908	1,059,677 ,,	509,216

The receipts from the following countries last year as compared with 1908 were of the undermentioned values:—

	1908.	1912.
Russia	£136,415	£158,529
Sweden	123,239	169,446
Norway...	24,844	27,852
Germany	57,086	94,570
Netherlands	75,688	32,571
France	8,127	7,460
Austria-Hungary ...	4,441	8,062
United States	22,614	33,273
Other Foreign Countries...	4,957	7,428
Canada...	51,805	94,480
British Possessions ...	—	376



Brazil in 1912. By J. C. Oakenfull. Fourth annual edition (12,000 copies). 498 pages, illustrated, with map. London: Robert Atkinson (London), Ltd., St. Paul's-chambers, Ludgate-hill, E.C.

This useful and interesting little annual that contains so much in a small compass, and all conveniently classified, has made some improvements since we reviewed the last edition. Most noteworthy are the numerous and excellent illustrations, treating of the native races, the anthropology and ethnography, the towns, the scenery, the fauna, the industries, etc., alone conveying a good idea of the general life and conditions of this great Republic. Included among the illustrations is a capital coloured plate of precious stones which were lent for reproduction by a number of firms. We note also in the Appendices that appear at the end of the volume the addition of a list of periodicals published in Brazil. There are fourteen dailies published in Rio de Janeiro, and a list of twenty-four other periodicals is given. In 1906 the capital possessed fifty-five periodicals, Campinas nine, and Santos five. In the State 250 journals are printed in Portuguese, six in the Italian, and others in Polish, Syrian, Spanish, German, and French. The *Correio Paulistano* has been established 61 years. A list is also given of the annuals published in Rio Janeiro, as well as the periodicals relating to Brazil that are published in Europe. The periodical press of each Brazilian town or State can be found in a useful tabulated Gazetteer. Brazil has a total estimated population of 24 millions, including less than 500,000 Indians, and the area in round figures is 8½ million square kilometres. Whilst this area is only a quarter-of-a-million more than that of either Canada or Australasia, the population of Brazil is double that of those two other British possessions combined. This useful little compilation of Mr. Oakenfull's—for which, he tells us in a concluding note, he has been obliged to consult no fewer than 150 different works—should be in the hands of all who are interested in this huge country, with its rich and varied products. It should provide an expanding field for the exporter of materials connected with paper and print. The edition of 12,000 copies of this book is intended for free distribution, but duplicate and trade copies may be had at a charge of 5s. each.

George Newnes, Ltd.

The sixteenth annual ordinary general meeting of George Newnes, Ltd., was held last week, Sir Frank Newnes, Bart. (chairman of the company), presiding. In the course of his remarks the chairman said that the past year had been the most successful in the company's history. The profits amounted to £80,056, being £32,777 in excess of the previous year, and £11,756 in excess of the profits for 1904, the company's previous record. All departments had contributed to that happy state of affairs. They had been well supported by readers and advertisers, booksellers and agents. Both their circulation and advertising returns showed marked and gratifying increases. During the year their publications had increased in popularity with the reading public. *Tit-Bits* had had a record year, and the circulation had been larger than at any previous period in its history. The *Strand Magazine* had also been most successful. Referring to the series of articles and photographs now being published in reference to the Scott Expedition, he said that the exclusive rights for the British Empire were purchased by the editor from the late Captain Scott before he left England. Their other publications were also doing well, and the general publishing business had been brisk and prosperous. A final dividend of 10 per cent. on the ordinary shares, making 15 per cent. for the year, was declared, and £25,000 was placed to dividend equalisation account. A resolution was passed, sanctioning an increase in the directorate from five to seven; the retiring directors (Messrs. Edward Hudson, Alfred H. Johnson, Walter Grierson and Hedley F. Le Bas) were re-elected, and a bonus of £1,500 was voted to the Board.

A Drastic Measure.

A BILL has just been introduced in the United States Senate to put an end to press agentism. Under its provisions any person, firm or syndicate furnishing newspapers or periodicals articles, matrices, pages or sections containing matter for which they have received or are to receive pay from persons interested in their publication, without indicating that it is advertising, will be liable to a fine of from $50 to $1,000. The object of the Bill is to protect the publications and their readers from imposition. Commenting on this the *Editor and Publisher* correctly says:—"It seems to us that such a law will be impossible of enforcement. How is an editor going to know whether or not the person sending him an article has already received pay from the corporation or firm in whose interest it was written? Must every syndicate or writer furnish a sworn affidavit with each contribution on this point? Who is to decide whether the article contains advertising matter? Nearly every news article published contains more or less publicity for some one or some thing. Editors at present have great difficulty in keeping out of their columns articles that should be paid for and printed as advertisements. If everything of a publicity nature should be cut out of the articles printed in newspapers and periodicals they would be robbed of their value as news. Louis Wiley, of the *Times*, once said that no article should be printed in the news columns merely for the purpose of advertising a person or thing, but that all articles possessing an important news value should be published even if they incidentally had a certain advertising value. The newspapers themselves must be the court of last resort as to the availability of matter submitted for publication. The press of the country, for its own protection and the maintenance of its authority with its readers, must keep careful watch over its columns. The day of misrepresentation, of lying, fraudulent advertisements or news matter is passing. No newspaper can afford to allow itself to be used for ignoble or base purposes. Neither can it afford to allow its influence to become a commodity that is sold to the highest bidder."

* * *

Convict Competition.

THE British printer suffers considerably from competition, but it is the competition of his fellows, not that of unpaid—or at all events, very much underpaid—prison labour, which his brethren in trade who are located in Bombay and surrounding towns have to put up with. The *English Mail*, a Bombay newspaper, has just called attention to this matter, and points out that according to the latest Bombay Prisons' Report a printing office carried on in the Yerrowda Jail has done work during last year that has yielded a profit of Rs.1,61,749. The *Mail* points out that in addition to supplying the requirements of the prison's department, the Press printed great numbers of forms, envelopes and books required for the different Government departments, and goes on to say:—"We are staggered to think what a contrast this shows with the gains of any private Press of the same size which must accept the rate of work that paid workmen agree to. If pressure be not used to exact the hardest work, whence comes a measure of profits so much above what private Presses can realise? In the prisons of the United Kingdom convicts are only employed at picking oakum, breaking stones, earthwork, and other kinds of unskilled labour. When, therefore, in India long-term prisoners are eagerly seized on to be taught composing and printing, there can be no reason for it except that this skilled labour is made abnormally profitable." The paper points out the unfairness of such competition, and criticises the policy of the authorities in allowing such skilled labour to be carried on by convicts to the detriment of honest and hard-working printers, and it certainly does seem hard that a convict institution should pile up profits by competing with private enterprise.

* * *

Five Years' Exports of Writings.

IT is now possible for the first time to glance back into the past and survey the extent of the export trade of the United Kingdom with our Possessions and Foreign Countries for five years. In 1908 writings were first classified separately, and the trade done in that year reached £455,846 with oversea markets, whilst the figures for 1912 were £469,504—an increase of £13,658 during half the decade. Amongst the British possessions Australia and India are our best patrons of British writings. There is a falling-off noticeable in New Zealand, Canada, B.W. India Islands, Hong Kong, Natal, and the Cape of Good Hope, but in the case of other colonies and possessions the increases cover the losses. The total, therefore, for our possessions and colonies reached £327,036 in 1912—an increase of £10,804 since 1908. Our trade in writings with foreign countries was valued at £142,468 in 1912, compared with £139,614 in 1908. France and Japan are our best purchasers. Belgium has also considerably increased her purchases, and the same may be said of South America.

* * *

Paper Imports into Egypt.

THE British Chamber in Alexandria calls attention to the remarkable development during the past few years in the imports of paper to Egypt. For the past year these im-

Digitized by Google

ports amounted to £E344,000. The principal buyers and agents in this trade are stated to be of good standing, and generally expect liberal time to pay accounts, but a few of them pay cash on delivery or 30 days after. Of writing and printing paper last year Great Britain is credited with £E34,000, or 27·4 per cent. of the total, and she is also credited with £E7,000 for account books, which is equal to 20 per cent of the total imports of this class of goods. The trade in cigarette paper amounted to £E42,000, but in this class Great Britain's share was only $E700. In respect of cardboard and packing paper she is credited with £E9,000, or 6 per cent. of the total. Our manufacturers generally supply the better classes of paper, but it is for cheap stuff that a demand could be most readily developed in Egypt. There appears to be considerable fraudulent imitation of British trade marks by our foreign competitors in the paper trade department of the Egyptian market.

The Printers' Cost Finding System.

The second edition of the booklet written by Mr. Howard Hazell to explain the Cost Finding System recommended by the Costing Committee of the Master Printers' Federation has now made its appearance, and it is interesting evidence of the demand for information on this topic that several thousand copies have already been supplied to printers in all parts of the kingdom.

The text of the book has not been altered much, only a few points being explained more fully, and we note that the rate of percentage which overhead expenses bears to wages is shown at a higher figure, no doubt as a result of the experience gained in observing the figures of a number of plants where the system has been installed.

Several useful additions have been made to the specimen forms attached to the booklet, the daily dockets have been revised, and are now excellent models to follow. The table showing how to ascertain the cost of running the machines in the binding department will also be found very useful.

The simple forms of profit and loss account and balance-sheet which are also included, serve to complete the sequence of figures, and may also be helpful in indicating to the printers who do not take out yearly statements the value of doing so, and that this is not really a very difficult matter.

The wide circulation of this publication cannot fail to benefit the whole printing industry, and any who have not yet seen a copy should certainly send along half-a-crown to the Secretary, Costing Committee, 24, Holborn, before this second edition is exhausted.

News-print for Australia.—The Newfoundland correspondent of the *Pulp and Paper Magazine of Canada*, states that the Anglo-Newfoundland Development Company, operating at Grand Falls, has received an order for the delivery of 40,000 tons of "news" print paper in Melbourne.

THE LINOTYPE FOR BOOK WORK.

Faces of Type, etc.	**Linotype Users have the choice of over 400 faces of type; new faces are being added continually. Many of these faces have been specially cut for Book Houses. (Every Linotype User has also the choice of 84 complete borders, 73 varieties of rules, dashes, etc., and over 600 figure faces.)**
Alignment.	**Face alignment on the Linotype is quite automatic; no adjustment whatever is necessary. Type matter set twenty years ago would align with that set to-day on any Linotype machine.**
Justification.	**Line justification on the Linotype is perfect; this applies to corrected lines as well as the initial product.**
Quality of Product.	**The Linotype line is cast in one complete piece. This permits of slow and deliberate movement in alignment and casting, which obviously is the best way of obtaining a perfect printing surface. Incidentally it may be mentioned here that, owing to the comparatively slow movements made by the machine, the cost of upkeep is only a few pence per week.**
Ease of Make-up.	**The superiority of the Linotype unit of composed matter is apparent immediately the operator empties his machine galley; whether the slugs are put on a random or on a galley there is no danger of pie. Linotype matter is so easily handled that a saving of fifty per cent. is effected in makeup alone.**
Electrotypes and Stereotypes.	**The Linotype shoulder height and depth of strike are ideal for wax, lead, or flong moulding, with the result that the finest possible plates are made from Linotype-set matter.**

A Booklet containing specimens of Linotype Faces specially suitable for Book work will be sent to anybody interested in the production of high-class printing.

Offices of the *British and Colonial Printer and Stationer*,

58, SHOE LANE, LONDON, E.C.

WEDNESDAY, August 13th, 1913.

INDICATIONS of returning confidence have been noticeable in Lombard-street this week, and throughout the past seven days conditions have been easy, credit supplies being very abundant, and will possibly become more so, despite the activity of trade. Gold is flowing rapidly into the Bank of England, and conditions in the money market are all in favour of borrowers. Discounts show a weaker tendency. Bullion movements for the week show a net influx to date of £1,636,000. The general tone of stock markets continues satisfactory, and there is every promise of markets steadily recuperating. The general carry-over was comfortably arranged yesterday. Consols are improving, the quotations now being 73⅝ to 73¾ for money and 73 1/16 to 73 1/8 for the September account.

Firmness has been maintained in the miscellaneous industrial market during the past week, and conditions are distinctly cheerful. In the section relating to paper and print George Newnes Pref. have risen 1/8 to ¾—⅞, and Amalgamated Press Ord. fell 1/16 on Friday to 6⅝—6⅞. Business has been done during the past seven days in Amalgamated Press Pref. at 20s., 9d.; in Associated Newspapers Pref. at 19s. 4½d.; in International Linotype at 73½ and 75; in *Lady's Pictorial* and *Sporting and Dramatic* Publishing Pref. at 52s. 6d. and 47s. 6d.; in Linotype and Machinery A Deb. at 53, 54, 55, 53½, 53 and 54; in Edward Lloyd Pref. at 21s. 9d.; in George Newnes Pref. at 16s. 3d., and 17s. 6d.; in Spicer Bros. Pref. at 8¾; in *Standard* Newspapers Pref. at 18s. 9d.; in Waterlow and Sons Pref. Ord. at 11⅜, and in the Def Ord. at 25¼ and acc. 26½; and in Weldon's Ord. at 31s., 32s. 3d., 31s. 3d., and 31s. 3d., and in the Pref. at 19s. 9d. and acc. 20s. 6d.

Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

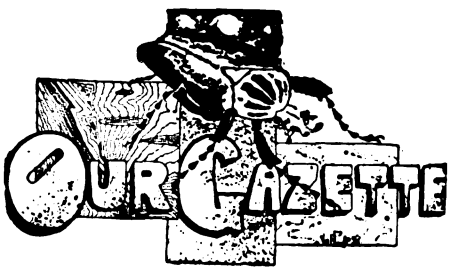
COMMERCIAL INTELLIGENCE.

Re EDWARD JOSEPH MILIFFE, Printer and Stationer.

This debtor carried on business at 172, Clerkenwell-road, E.C., and resided at 16, Wells-street, Grays-inn-road, W.C. The first meeting of his creditors was held last week, at the London Bankruptcy Court, before Mr. W. P. Bowyer, official receiver, who reported that the liabilities were roughly estimated at £1,500, and the assets at £430. According to the statements of the debtor, when before the examiner, he was, prior to 1896, employed by a Dublin firm of printers and publishers, but in that year he entered into partnership with a Mr. Hutchinson, and they traded as E. J. Melville and Co., designers and engravers, at 62, Farringdon-street, E.C. The partnership lasted about one year, when Mr. Hutchinson retired from the firm; the debtor traded alone for another year, and was then joined by a Mr. R. Hawkes, and they continued the business at 109, Tottenham-court-road, and 2, Racquet-court, Fleet-street, E.C., chiefly as photo-engravers and designers. That partnership existed until 1904, when the debtor retired from it, receiving £150 for his share in the business. In 1907 he commenced business as a newsagent and stationer at 172, Clerkenwell-road, with a capital of £50. It was a new business and was fairly successful. A Mr. H. Howes joined him as a partner in July, 1908, paying £120 for one-half share. A deed of partnership was executed and they traded as Miliffe and Howes. The newsagent's branch was given up during that partnership and a printing branch was substituted for it. The trading was successful, but in 1910 the partnership was dissolved owing to disagreements, and Mr. Howes retired from the business, but took out no money. The debtor continued it with the aid of borrowed moneys, but had since been financially short. A balance-sheet as at June last showed losses by bad debts; about the same time certain of the creditors threatened legal proceedings, and acting on the advice of his solicitors the debtor filed his petition. He had further stated that in connection with that business he printed and published a paper called *Ireland in London*. It was started in January, 1912, and was stopped on June 28th last, owing to the debtor's shortness of capital, it having cost him about £216. The debtor attributed his failure to want of capital, losses by bad debts and the loss upon *Ireland in London*. The assets included stock, £60; machinery and plant, £200; fixtures, £30; furniture, £10; and book debts, £130. No offer was submitted on the debtor's behalf, and a resolution was passed for Mr. Algernon Ashton Hall, C.A., Broad-street-avenue, E.C., to act as trustee and administer the estate in bankruptcy, assisted by the following committee of inspection, viz.:—Mr. R. S. Cooper, Mr. Owen Ward, and Mr. George Graham D'Arcy. The bond to be given by the trustee was recommended at £400. The following are among the creditors:—



R. S. Cooper	£575
A. Cowan and Sons, Ltd.	27
A. W. Foy	60
Hare and Co., Ltd.	10
Wm. Jones	25
Lepard and Smith, Ltd.	12
Sayer Ledgard and Smith	25
Woods and Sons, Ltd...	10
O. Ward	185

Re ISRAEL CHINKIN, Printer, etc.

The first meeting of creditors was held last week, at the London Bankruptcy Court, under the failure of this debtor, who carried on business until recently at 200, Francis-road, Leyton, as a tobacconist, newsagent and stationer, and at 8A, Maryland-point, Leytonstone-road, E., as the Maryland Printing Co. Mr. E. Leadam Hough, senior official receiver, reported that a statement of affairs had been lodged showing liabilities £590 16s. 11d., and assets "nil." The debtor, whose present address was 96, Murchison-road, Leyton, stated that he was a Russian Jew, and came to England 24 years ago. In 1900 he obtained a lease of 200, Francis-road, and commenced business there as a tobacconist, newsagent and stationer. He traded under the style of Chinkin Bros., but had no partner, and employed his brother in the business. It did not pay very well, and on May 24th last he sold it for £140 to a gentleman to whom he then owed £50. The purchaser took over a charge of £82, and handed to the debtor the balance of £8 in cash. It further appeared that two years ago the debtor opened a stationer's business at 2, The Parade, Stroud-green-road; that venture was unsuccessful, and was closed after nine months at a loss to the debtor of £30. Then about nine months ago the debtor took a workshop at 8A, Maryland-point, Leytonstone-road, E. He obtained a Cropper machine on hire purchase and a few cases of type, and started to work as a printer under the style of the Maryland Printing Co. In May last he was joined by a partner, who paid in £25 capital. The debtor attributed his failure to bad trade, lack of capital, loss on the Stroud-green-road business, and family illness. In the absence of any offer, the case was left in the hands of the official receiver to be wound up in bankruptcy.

The MULTI-VIEW ADVERTISING Co., Ltd. Official Receiver's Report.

Under a compulsory winding-up order made last June against this company, which carried on business at Century House, 27, Queen Victoria-street, E.C., the report of Mr. H. M. Winearls, official receiver and liquidator, has been issued to the creditors and shareholders. The accounts filed under the liquidation showed liabilities £774 19s. 8d.; assets, "nil," and a deficiency of £6,274 19s. 8d. with regard to shareholders. The company was registered as a private company on May 25th, 1912, with a nominal capital of £10,000, in £1 shares, of which 5,500 were issued as fully paid, and two were issued for cash to the signatories of the memorandum and articles of association. It was promoted by Mr. James Edward Olvis and Mr. George James Parham (now deceased), for the purpose of acquiring and developing a device for displaying advertisements. It is stated that prior to the formation of the company an agreement was entered into between them by which Parham was to advance £1,000 for financing the invention; but this agreement has not been produced, and the official receiver is informed that the arrangement was subsequently modified to the effect that Parham should advance £300 without security, and should bear a portion of the costs of registration. Parham advanced £300, as follows: June 4th, 1912, £100; July 15th, 1912, £50; September 2nd, 1912, £120; January 8th, 1913, £30. He died on September 15th, 1912, in British Honduras, and the last amount (£30) was advanced by his executors. The secretary states that in consideration of the advances made or to be made it was arranged that there should be allotted to Parham as fully paid one quarter of the capital. There is no agreement by the company to this effect, but there is a resolution of the directors, dated October 17th, 1912, authorising a contract to be prepared between the company and Parham's executors for the issue of £2,500 in fully-paid shares. No formal agreement was, however, prepared. Agreements were entered into with the promoters and vendors, but they were neither dated nor stamped. The secretary says that the company had no funds to pay for the stamps. These agreements were as follows:—(*a*) Agreement between Olvis and Joel of the one part, and the company of the other part, for the sale to the company of an invention for an advertising machine (which had been provisionally protected in the United Kingdom and the Isle of Man) for £500, to be satisfied by the issue of fully-paid shares. (*b*) Agreement between Joel and the company for the sale to the company of a "Thermostat" (a part of the advertising machine), also provisionally protected in the United Kingdom and the Isle of Man, for £500, to be satisfied by the issue of fully-paid shares. (*c*) An agreement with Olvis that in consideration of his agreeing to act as managing director for five years there should be allotted to him 2,000 fully-paid shares. (*d*) A similar agreement with Joel, that in consideration of his agreeing to act as technical adviser for five years, there should be allotted to him 2,000 fully-paid shares. The company had office accommodation in the office of Mr. H. S. M. Grover, the company's solicitor, at 27, Queen Victoria-street, London, E.C., at a cost of 10s. per week, and there was also a tenancy of Albert Works, Chatsworth-road, Stratford. In April, 1913, Messrs. Buck and Hickman, Ltd., judgment creditors for goods supplied, levied execution at the works, and the property there, consisting of two advertising cabinets, five iron frames for cabinets, and a quantity of fittings and tools were sold by auction for £35. The company did not get beyond the experimental stage, and no trading was done. No accounts were prepared. At the date of the winding-up order, no record had been kept in the books of the company's financial transactions. Since the winding-up order a rough cash book has been compiled by the secretary. The failure is attributed by the directors to the death of Mr. Parham and the consequent stoppage of funds with which to finance the business

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

WOOD, C., 259, Bath-road, Hounslow, lately carrying on business at 150, Acre-lane, Brixton, London, S.W., stationer, etc. Date of order, July 4th. Discharge suspended for three years. Bankrupt to be discharged as from July 4th, 1916, provided always, and it is hereby further ordered that the said order is without prejudice to and shall not release the bankrupt from the debt due to the petitioning creditor. The grounds named in the order for refusing an absolute order of discharge were that the bankrupt's assets are not of a value equal to 10s. in the pound on the amount of his unsecured liabilities; that he had omitted to keep such books of account as are usual and proper in the business carried on by him and as sufficiently disclose his business transactions and financial position within the three years immediately preceding his bankruptcy.

SCOTLAND.

SEQUESTRATION.

FAIRLEY, J., 39-40, Giles-street, Leith, printer and stationer. Sequestrated August 6th. Meeting to elect trustee and commissioners August 18th, 2 p.m., at Dowell's Rooms, 18, George-street, Edinburgh. Campbell, Anderson and Chisholm, S.S.C., 44, Queen-street, Edinburgh, agents.

Papermaking in Turin.

In his annual report on the industries of Turin, Major W. Chapman, British Consul-General, states that large capital is invested in paper mills, established on some of the most important waterways in the province of Novara, and their output of paper is very considerable and always increasing. Altogether there are 19 mills (without counting the pulp making mills), most of them being large concerns worked with modern machinery. They manufacture all types of paper, cream and antiques, art and litho, woven, drawing, fine printing, etc. Much of the wood pulp is manufactured on the premises. The number of workpeople engaged in this industry exceeds 4,000. Among the most important are:—

The Serravalle Sesia Paper Mills (Cartiera Italiana, capital £200,000) give work to about 2,000 people, possess engines aggregating 4,000 horse power, and cover an area of 90,000 square metres. There are two mills, one at Quarona for the manufacture of wood pulp (output 3,000,000 kilos. per annum) and one at Serravalle Sesia for the production of paper, the annual output of the latter being 14,000,000 kilos. per annum. Every kind of paper is produced, including cigarette, bank and securities, as well as imitations of India and Oxford paper for Bibles. To this production a large output of envelopes and writing paper should be added, the potentiality of the mills being up to 1,000,000 per diem of the former and 300,000 of the latter. Attached to the works are a band, a fire brigade, provision stores, etc. Annexed to the mills, and founded by the company, there is an infant asylum, workmen's cottages and gardens, a home for girls whose families reside far away from the mills, libraries, etc. There is also a relief fund.

The Verzuolo Paper Mills (Messrs. Burgo and Co., capital £144,000), founded in 1905, employ engines aggregating 3,000 horse power, produces 162,000 quintals of wood pulp, paper and pasteboard per annum.

Spottiswoode Institute Flower Show

A few weeks ago the popularity of the Lloyd Memorial Caxton Seaside Home at Deal was demonstrated by the employees of the Amalgamated Press and the Associated Newspapers, Ltd., devoting the whole of the proceeds of their flower show to the funds of this excellent trade institution. The other Saturday a most successful and highly encouraging show was promoted by the members of the Spottiswoode Institute, at their club in East Harding-street, the sale of flowers and vegetables realising over £6, which was to be the first instalment towards the £100 for naming a bed at the Home at Deal. It is quite evident that the accommodation at the Lloyd Memorial Home will be far too small when the full effect of these great co-operative acts becomes apparent. Even at the present time the number of patients in the Home occupy every bed at the disposal of the Committee, necessitating that eight holiday makers who had previously been accepted should be boarded out so that the subscribers should be admitted without waiting.

The large hall at the Institute was a veritable fairy scene, added to which the charming little daughter of the Secretary darted in and out among the visitors like a fairy seeking collections for the Deal Home, and collecting no less than 17s.

At one o'clock, Mr. J. H. Kent declared the show open, amidst the applause of those present. The judging was then proceeded with, under the direction of Mr. W. Sparrow, of the King's House, a well-known prize-winner at Seven Kings. Although the exhibits were not of first-class importance, still some of the specimens proclaimed the fact that skill was not lacking in their production. The display as a whole was distinctly encouraging, and amid much enthusiasm an autumn show was decided upon. Everyone seemed determined to eclipse the first attempt and to prove that the members of the Institute devoted a large part of their spare time to the care of their gardens. In gardening, perhaps as in no other outdoor pursuit, is there so much good done for those with weak lungs, or at all inclined to contract that dreadful malady, the white scourge. Specialists agree that the aroma from newly turned soil has most beneficial and healing effects upon the lungs, and therefore, if for no other reason, gardening operations should be encouraged on every hand.

The cut flowers were a better class than the flower-pot display, although the latter was fairly good. Mr. Patterson took the first prize for cut flowers, by a narrow verdict, from Mr. Spice, who is an ardent amateur gardener. Mr. Walker and Mr. Hicks took the first and second prizes for pot culture in the order named, whilst Mr. Tom Taylor unquestionably deserved the first award which he secured for his fine exhibit of vegetables. Mr. T. Davies took a special prize for potatoes.

The awards were justified by general consent, the unsuccessful competitors being the first to congratulate the winners, generally coupled with the remark that they would have no walk-over on the next occasion. It is just this spirit which promises so much for the success of future shows.

Mr. T. Hanscomb, proprietor of the "Red Cross," Paternoster-square, sent a handsome collection of flowers to be sold for the benefit of the funds, while Mr. J. E. Coxen, one of the vice-presidents, handed the chairman a sovereign to help the funds.

During the proceedings songs were sung by members of the committee, under the control of the assistant-secretary, Mr. H. R. Thomson. The secretary, Mr. W. Hanscomb, together with Mrs. Hanscomb, deserve the utmost credit for the manner in which they carried out the general arrangements.

A Combined Wayzgoose.

"Sunderland Echo" and Hartlepool "Daily Mail."

By the kind invitation of the proprietors the combined staffs of the *Sunderland Echo* and the *Northern Daily Mail*, Hartlepool, had a most enjoyable day's outing at Southill, the residence of Mr. Samuel Storey. The members of the staffs were accompanied by their wives and lady friends. On arrival the party were welcomed by Mr. and Mrs. F. G. Storey.

After visits to the gardens and the pretty ravine the party adjourned to the lawn, where a lengthy programme of sports was submitted for decision, which brought forth several keen contests for supremacy.

Tea and supper were generously provided in a large marquee in the grounds. After supper the prizes won by the successful competitors in the various sports were gracefully presented by Mrs. F. G. Storey.

Mr. S. Storey, in introducing Mrs. F. G. Storey to present the prizes, expressed the pleasure he felt at being present with them after so many years of absence from their "annuals." The last occasion of the kind he was with them was at Mr. Candlish's at Shotton. That gentleman, who was at present in the Highlands recruiting his health, had sent a telegram:—"Best wishes for a pleasant day."

Mr. J. G. Stainsby, Father of the *Mail* Chapel, proposed a vote of thanks, to Mrs. F. G. Storey for kindly presenting the prizes. On behalf of those present he also expressed the pleasure they felt at the presence of Mr. S. Storey, and hoped they would have the pleasure of meeting at many future gatherings. He also expressed their thanks to the proprietors, including Mr. F. G. Storey, for providing that day's outing.

The vote of thanks was seconded by Mr. W. Darke, Father of the *Echo* Chapel, in a pleasing speech.

Mr. F. G. Storey acknowledged the vote of thanks. He trusted the *Echo* would not go away downhearted, though the *Mail* had annexed the "Wayzgoose Cup" for the third year in succession.

"Auld Lang Syne" wound up the proceedings.

The following were the successful competitors in the various events:—

100 Yards Race.—G. Braithwaite (H.), 1; T. R. Brown (S.), 2; T. Robson (S.), 3.

Veterans' Race.—J. H. Atkinson (H.), 1; T. Temple (H.), 2.

Three-Legged Race.—G. Braithwaite and C. Sanderson (H.), 1; L. Harrison and T. Robson (S.), 2.

Sack Race.—S. Anderson (H.), 1; W. Dobbie (H.), 2; P. Spenceley (S.), 3.

Ladies' Thread-Needle Race.—Mrs. Shewan (S.), 1; Mrs. Oliver (H.), 2; Mrs. Palmer (S.), 3.

Egg and Spoon Race.—T. R. Brown (S.), 1; W. Dobbie (H.), 2; N. Jefferson (H.), 3.

Tug-of-War.—Won by *Mail* team.

The cricket match between the two papers ended in a decisive victory for the *Echo* team, the scores being 41 and 17.

THE commercial value of good taste, to buyers of printing, is marked by the rising demand for advertising managers, keen in their sense of appropriateness and expert in their knowledge of the harmonies of subject-matter with paper, type, form and colour.

¶ Of two catalogues, the same in purpose, but differing in quality, the one built on the laws of good taste will win by a margin big and decisive. Tests have proved this—and the truth of it is spreading.

¶ With this recognition has come an insistent call for men of good taste, and with the vision of its possibilities, who can plan, lay out, and put through the printing campaigns of high-grade houses.

¶ To such houses and to such men *The Graphic Arts* comes as a magazine full of suggestions, and educational features that stimulate good taste in all the factors that make for good printing.

¶ Send 30 cents for a sample copy.

Tariff Changes
AND
CUSTOMS REGULATIONS.

From the "Board of Trade Journal."

AUSTRALIAN COMMONWEALTH.

It has been decided that calendars and almanac cards bearing water colour paintings, with date sheets fastened on with gum or staple, are dutiable under No 356a of the Tariff, at 6d. per lb. or 35 per cent. *ad val.*, whichever is higher.

BRITISH GUIANA.

In future, paper or manufactures thereof of British origin, will pay only 12 per cent. *ad val.* on importation, in place of the general Tariff rate of 15 per cent. An additional 10 per cent. on the duties is imposed in any case.

FINLAND.

It is announced that pasteboard for stereotyping, bookbinding, etc., is dutiable on importation under No. 237 (3) of the Tariff at about 1s. 5d. per cwt.

SWITZERLAND.

Insulating pipes of paper or paper pulp, with sheath of common metal are dutiable under No. 635 of the import Tariff at about 4s. 10d. per cwt. gross weight.

AUSTRALIAN COMMONWEALTH.

It is announced that grease proof papers, used for covering shoes during the process of manufacture to prevent them being soiled, is dutiable under No. 356 [I.(1)] of the Tariff, at the rate of 5s. per cwt., or 4s. 6s. if of British origin. Ruled tissue paper, used for wrapping confectionery, is dutiable as "paper, ruled, etc.," under No. 357 (A) at 30 per cent. *ad val.*, or 25 per cent. if British.

ARGENTINE REPUBLIC.

Some recently promulgated regulations with respect to imported food products contain the following clause:—Article 352.—Wrappers, such as tin foil (*papel de estano*), common papers, tissues or any other kind of covering used for protecting products, and adhering to them, must not contain substances injurious to health, nor colouring matters of mineral origin or derived from coal.

PORTO RICO.

An internal revenue tax of 25 cents per pack of not more than 60 is now levied on playing cards imported.

Belfast Evening Telegraph.

The Annual Excursion.

Warrenpoint, a delightful place for the holiday-maker, formed the rendezvous for the annual excursion of the employees of Messrs. W. and G. Baird, Ltd., and the *Belfast Evening Telegraph*. The day chosen was gloriously fine, and a large party assembled at the G.N.R. terminus, entraining at 9 a.m. The directors were represented by Mr. R. H. H. Baird, J.P., and Mr. James M'Quitty, who together with the committee, of which Mr. D. E. Jones was chairman and Mr. J. Strickland, hon. secretary, did all possible to make the outing the marked success it proved to be. Warrenpoint was reached prompt to time, and the party set themselves out to enjoy the day. For those bent on a "cooler" the fine sea baths proved a great boon, and there was plenty of boating to be had. Dinner, which was arranged for 12 o'clock, and 12.45 being partaken of, at the Great Northern Railway Hotel Pavilion, the afternoon was spent in witnessing an interesting programme of sports which had been arranged under the direction of Mr. J. T. Gibb; but not a few of the party, bent on sight-seeing, climbed the wooded slope to Cloughmore, and others undertook a char-a-banc drive to Newcastle and back. This was an outing in itself. The outward journey was by the coast road, which is very pretty indeed, but the tit-bit comes when, after an hour's stop in Newcastle, the home journey is undertaken. Passing through Bryansford and the familiar woods of Tollymore Park, the road swings towards the mountains, and passes along the top of a richly-wooded chasm, which has as a background the picturesque Mourne range. A glimpse is caught of Lough Island Reavey, and the road, embosomed between rocky hills, takes the traveller through a most picturesque district to Hilltown, and then on through an equally interesting tract of country by Rostrevor to Warrenpoint, which was reached at a highly opportune moment—tea time. The remainder of the day was quickly wiled away, and the home journey was commenced at 8.30, Belfast being reached at 10 o'clock sharp.

THE SPORTS.

The following were the results:—

Girls under 16 years—1, Miss S. Houston; 2, Miss M. MacNamara; 3, Miss J. O. Toole.

Girls over 16—1, Miss M. Murray; 2, Miss R. Gafney; 3, Miss J. Boyle.

Boys under 18—1, W. Bingham; 2, H. Brady; 3, J. M'Kenna.

Men's 100 yards—1, H. Christie; 2, W. Holmes; 3, J. Strickland.

Married Men's Race—1, W. Hewitt; 2, C. Hughes; 3, J. Cunningham.

Three-legged Race—1, J. Strickland and R. Browne; 2, J. Hamilton and E. Willians; 3, R. Kelly and Hesselberg.

Married Women's Race—1, Mrs. M'Henry; 2, Mrs. Mallon; 3, Mrs. Thompson.

Skipping Competition—1, Miss Gafney; 2, Miss O'Toole; 2, Miss M'Namara.

A football match between the Office and Works resulted in a draw 1 goal each.

After tea the prizes were distribted by Mrs. Baird.

Journalism in New Zealand.

The correspondent of the *Liverpool Post and Mercury* at Christchurch, New Zealand, writes as follows to that paper:—The Arbitration Court of New Zealand, which has been in operation for 18 years, and which is notable for the fact that it imposes compulsory provisions and enforces its decisions with all the power of the Supreme Court, has made an award dealing with the work of journalists. It has dealt with almost every trade carried on in the Dominion, but this is the first time that it has been called upon to intervene in the methods of conducting a profession. The newspaper proprietors were cited to appear before the Court by the Christchurch Union of Journalists, and the dispute was argued at great length by a judge who is president of the Court and two assessors representing the two sides. Journalists in nearly all branches of the profession were involved, but the Court decided that its award should apply only to reporters and proof-readers. It has fixed a reporter's working day at twelve consecutive hours, including meal hours. Except in special circumstances a reporter cannot be brought back to work until after an interval of at least ten hours from the completion of his day's work. Any time worked in excess of these hours must be paid for within the next 14 days, either in time off at the rate of 1½ hours for each hour worked or in cash at the rate of 2s. 6d. an hour. A reporter must be allowed one clear day and one clear evening off in seven and two weeks' holiday on full pay in each year. The salaries fixed are:—Senior reporters, £5 15s.; general reporters, £5; junior reporters, £3 10s.; cadets, first quarter £1 5s., second £1 10s., third £2 5s.; casual reporters, 10s. for half a day or 15s. for the whole day.

In ordinary awards the Court has made it a practice to insert a clause providing that when workers are engaged preference must be given to members of trades unions if they are as qualified as non-unionists. The newspaper proprietors strongly opposed the application of this principle in the journalists' dispute, on the ground that it would bring the reporters into close affinity with trade unionism generally, and would prejudice the news columns of the journals, especially during strikes and other industrial troubles. To prevent this the Court has provided that, although preference to unionists may be granted, the Journalists' Union must maintain an independent existence, and must not join the Trades Council or any other association of trades unions.

Previously the Court has always refused to regulate the conditions in vocations in which workers have "broken time," and its intervention in the case of the journalists has caused a great deal of discussion.

M. E. NICHOLLS, president of the *Winnipeg Telegram*, and retiring president of the Western Associated Press, who is leaving Winnipeg for Montreal, to become president of the *Daily Mail*, the new morning paper being established in that city, has been presented by the publishers of the Prairie provinces with a cabinet of silver as a mark of appreciation of his services.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe **$5.00** per year; Canada **$3.00**. 64 pages weekly.

Canadian Press Association.

A Study of the Paper Market to Cut Down Expense.

The Canadian Press Association, which has engaged Mr. John M. Imrie as permanent secretary, with head offices in Toronto, and has been incorporated, has made several radical departures. It will divide the present and future work of the association into departments. The Paper Department will compile statistics regarding the capacity of the various paper mills on each size of machine in their respective equipments, and also figures regarding the daily requirements of the various publications of Canada. The publication of these statistics and changes, as they take place, will show members what mills are best equipped in the handling of their respective orders. It was recently remarked by one of the officials of the Canadian Pulp and Paper Association, that the daily newspapers of Canada could effect a considerable saving in their news print bill every year through co-operation and more intelligent buying. The department will also make a study of the methods in use in various daily papers in the Dominion to cut down their paper bills through checking before and after press runs, reducing margins, careful disposition of waste, and report to the members. It will also investigate freight rates on paper and work for the prevention of discriminatory rates. It is known that the freight levies on news print, from Canadian cities to certain United States cities are lower than to certain Canadian cities through which the shipments pass through to reach American points.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

"The Editor and Publisher."
Leading Weekly Periodical of the United States devoted to the Newspaper and Advertising Fields.

Presents the Important News of the daily and weekly publications, their editors, managers and staffs. Gives lists of new papers, new incorporations and changes in interest. Prints articles on newspaper management, the latest improvements in printing machinery and methods for increasing circulation. One of its most valuable features is the department devoted to the subject of advertising. Each week it contains "Tips for Business Managers," in which is given the names of new advertisers, lists of old firms that are making new contracts for space, and general news concerning the entire field. Some publishers have secured thousands of dollars worth of advertising through the information thus furnished.

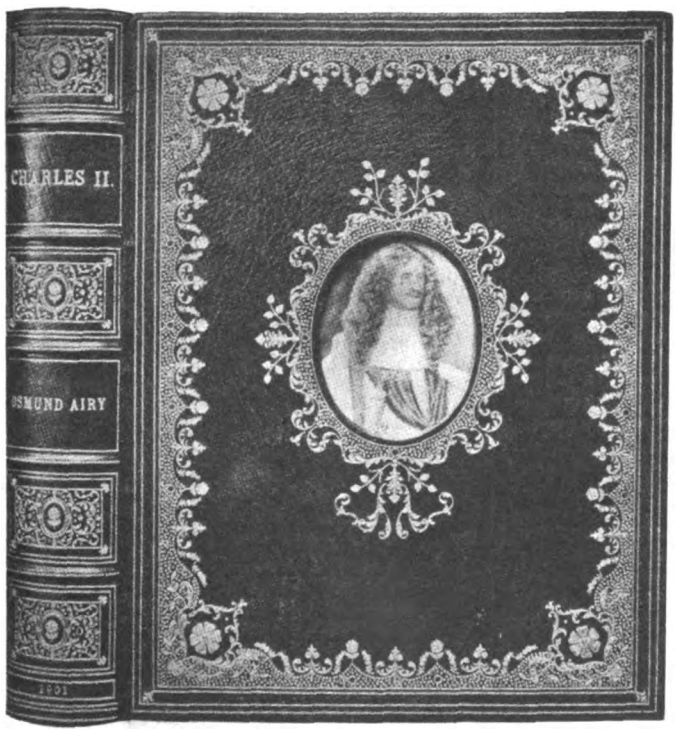
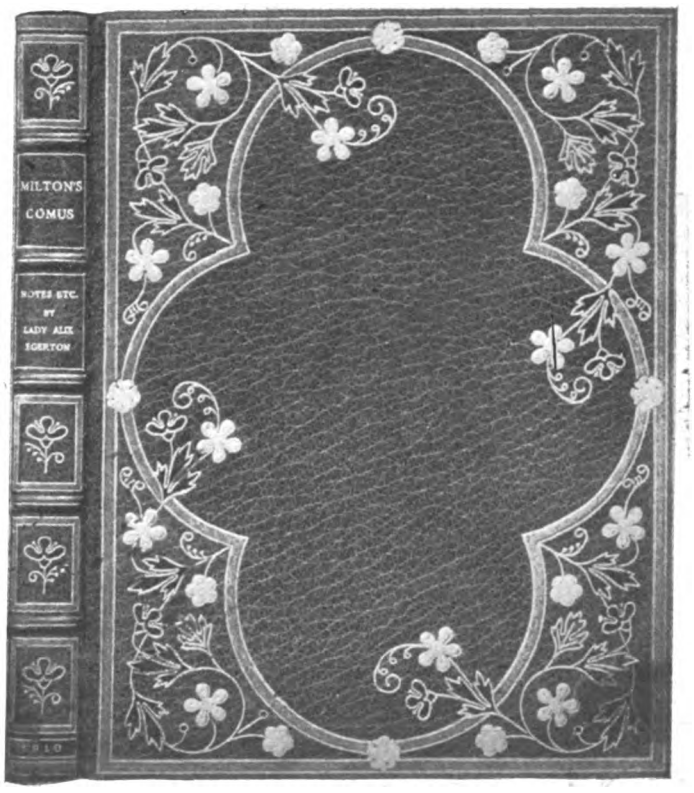
TYPICAL Modern American Binderies.

IX.



The Trow Press.

In our Bookbinding Number for January last we reprinted some remarks on American art binding by Mr. Morris Kalaba, of the Trow Press, 201–213, East Twelfth-street, New York.



Our attention has since been further directed to the subject by the receipt from that house of a copy of the second and enlarged edition of a well got-up pamphlet on art binding in general, with special reference to the Trow Press's capacity for executing it—entitled "Bibliopegistic," which, being interpreted, means "pertaining to the art of binding books." Its slaty-blue cover, printed from a half-tone block with an imitation of levant morocco, is of a shade well chosen to show up the gold and colour design in imitation of tooling, with which it is decorated, unlike some examples of the kind we have seen lately, on which the "tooling" is barely visible save in certain lights, owing to the want of judgment in the selection of a colour for the cover. With its gilt inside border, simulation crimson morocco linings, art marbled fly-leaves, and numerous illustrations of fine bindings, printed on art paper, this is a pamphlet well worth preserving for its artistic excellence.

As its name implies, the Trow Press is mainly a printing establishment, but it includes under its own roof three distinct binderies, (a) for ordinary pamphlet and magazine work, (b) for edition binding in cloth or leather, and (c) an art bindery, the department with which we are concerned in this article. In one of the numerous little "folders" the firm issue for the purpose of advertising their business, they refer to this bindery *de luxe*, "where the orders of those who love the exquisite in bookbinding, and of those who deal in beautifully bound books, are executed by skilled craftsmen. Our artistic bindings are exhibited in the bookshops of the dealers who handle rare and fine bindings, ranking with those imported from abroad. The increased volume of business done in this department during the past few years is evidence that we do not over-estimate our ability to execute fine bindings with the most careful regard to elegance and artistic merit and durability."

The compiler of the "Bibliopegistic" pamphlet says that "barely fifty years ago America did not have a binder capable of covering a volume to compare with the work of the artisans of France *or even England*." The words which we have italicised demonstrate the American writer's opinion of the position of English binders in relation to those of France, although he admits that the latter no longer hold their former supremacy of place. England, he says, "has developed some craftsmen of great skill and original artistic feeling, even though their best efforts are many times but reproductions of older models." In answer to which it may be remarked that evidently the same practice prevails in America, as the Trow Press pamphlet states that "the older models are followed where original designs are not required." That the firm is in a position to command the services of expert and talented designers in modern styles is obvious from the illustrations in the pamphlet under notice. Several of them are on the lines of the "Cosway" Bindings referred to in our Bookbinding number of August, 1911, *i.e.*, the covers have inset miniatures of persons or subjects referred to in the books, surrounded by elaborate tooling. One example of this class of binding, designed by Mr. Kalaba himself, we reproduce herewith (No. 1). The volume is bound in wine-coloured levant, with inlays of red and green on both covers. The portrait of the king is painted on ivory and protected by glass. Here we have book cover decoration of a good modern type, without any attempt to reproduce the style of the period with which the work deals. The back gives an impression of artistic dignity and physical strength. Another fine piece of modern work is that illustrated in No. 2. It is in blue levant, inlaid with white, red and green. The seemingly informal, yet well balanced manner in which the floral sprays break into the otherwise blank centre space is very noticeable. The last cover design for which we have room (No. 3) is the doublure of a copy of Charles H. Grosvenor's "Book of the Presidents" (of the U.S.A.). It is executed in levant in the American national colours—red, white and blue, and was designed by R. W. Smith. Our final picture shows a row

Bindings from the Trow Press:—No. 1.
(Designed by M. Kalaba.)

Bindings from the Trow Press—No. 2.

Digitized by Google

Bindings from the Trow Press:—No. 3.
(Designed by R. W. Smith)

of book backs designed for the Trow Press by C. Sesselman, for use on publishers' or "edition" bindings in leather.

The firm are now making considerable use of specially designed hand-coloured cloth for the sides and linings of books, in place of marbled paper, and they claim greater durability for this class of work, as the surface does not rub, or the edges wear off where turned over. Moreover, in linings it obviates the use of the extra cloth joint, and as the folded edge of the cloth is pasted in the joint the cover lifts without risking the drawing of the end papers away from the book. Some specimens of these cloths are included in the pamphlet referred to and look very well. Amongst its other illustrations is one of the solid gold covers of a volume of Milton, which are mostly occupied by inset portraits of that writer. But except

Bindings from the Trow Press:—No. 4.
(Designed by C. Gesselman.)

for his name on the back, and the presence of the hall mark just above it, the cover is perfectly plain and does not attract, may indeed take rank among "freak" bindings. But taking the Trow Press extra-finish work as a whole, there seems no reason to doubt the correctness of that firm's claims for it, as set out in the commencement of this article.

In conclusion, we reprint "A Stick from the Bindery," which appeared in one of last year's numbers of the firm's house organ, the *Trow Booster*. It touches upon what has long been a sore point with the binder who takes a pride in his work, but cannot do his best when he is pressed for time through no fault of his own.

"Without the fine clothes the binder puts on the printed sheets the printing would be of very little value; therefore you printers should give us time to add the necessary finishing touches to your work, so that the finished product will be a credit to us both.

"Do not take it for granted that the binder can be relied upon to turn out any job overnight, irrespective of the size, number of pages or style of cover, and do justice to the work. And again, do not assume that what is best and most convenient for you must be all right for him.

"As the binder is a necessary evil, consult him in the preparation of your catalogue or book, regarding his requirements and time allowed to do the job right."

City & Guilds of London Institute.

New Programme for Examination in Typography.

The Department of Technology of the City and Guilds of London Institute have issued the programme for the session 1913–14, containing regulations for the registration, conduct and inspection of classes, and examination of candidates in technological subjects, the syllabus for typography having been altered. With respect to typography the programme contains the following:—

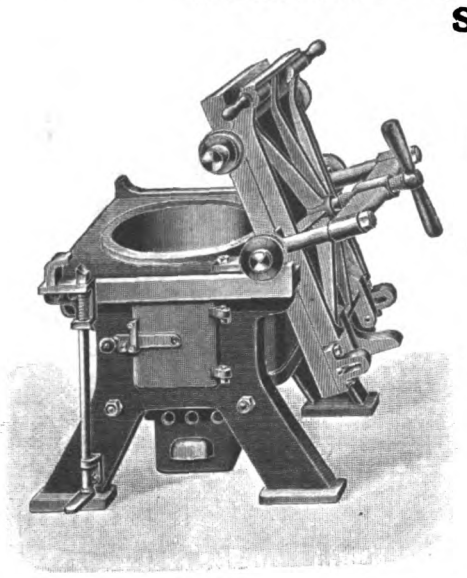
With the view to encouraging apprentices to take a continuous course of instruction in this subject, the examinations will be held in three Grades, of which Grade I. will be of an elementary character. No certificates will be given on the results of the examination in Grade I, but the list of the names of the candidates who pass will be sent to the Centre at which they were examined. Candidates may enter for the examination in Grade II. without having passed in Grade I., but candidates for the final examination will be required to have previously passed in Grade II.

The examination in Grade I. will consist of a paper of questions only in two sections, (1) for compositors, and (2) for press and machine candidates, but candidates for either section will be expected to show some knowledge of elementary geometry and freehand drawing. The examination will include composing (material, technical terms generally, the point system, elementary typographic calculations, composition and distribution), and press and machine (technical terms and phrases, appliances and materials, and general). The examination will be held on Monday, April 27th, from 7 to 10. The fee for the examination is 1s.

The examination in Grade II. will consist of a paper of questions, and of a practical examination for compositors to be held in a printing office. Candidates who enter under Section I. must pass in both parts of the examination to obtain a certificate. The written examination will be divided into two parts, (1) for compositors, and (2) for pressmen or machine minders. Candidates, according to their occupation, may select their questions from Section I. or from Section II. Candidates will be expected to show a more advanced knowledge of the subjects mentioned in the syllabus for Grade I. and a knowledge of such subjects as the following: — Composing — historical, casting-off copy, bookwork, table and tabular work, mechanical composition, imposition, news and magazine work, display, reading and paper. The written examination will be held on Tuesday, April 28th, from 7 to 10 p.m.

The Practical Examination will consist mainly of composition from manuscript or printed copy supplied to the candidate. It is intended to be a test, not so much of mere rapidity in "picking-up," as of general intelligence and ability in setting any kind of matter that may fall in a compositor's way, clean setting and good spacing being important; for instance, a piece of bad manuscript, a simply displayed title-page or job, a difficult piece of punctuation, a moderately complex table, classical phrases or proper names, or a foreign paragraph in fairly good hand-writing. The Practical Test will take place at different centres throughout the country, at which the necessary arrangements can be made. The examination will be conducted, as far a possible, under the superintendence of expert assistants, who will be required to report to the Chief Examiners as to the manner in which the candidates have set about the several exercises given to them. The Practical Examination for Compositors will be held on Saturday, April 25th, from 2.30 to 7. The fee for compositors (including both Written and Practical Examinations) will be 3s. 6d.

With a view to encourage apprentices to pursue their studies at a technical school, whether the apprentices are regularly indentured or not, provided they are under 21 years of age and have been working as learners at the printing trade for a period of at least two years, the Worshipful Company of Stationers offer prizes of four guineas and two guineas, with a silver medal in each case to the two candidates respectively who obtain the highest number of marks in the First Class of Grade II. of the Institute's Examination in Typography, including Compositors' Work. In the award of these prizes preference will be given to apprentices working or residing within a radius of 20 miles of Stationers' Hall, Ludgate-hill, E.C. Candidates who succeed in obtaining either of the Stationers' Company's prizes will not be also eligible for the Institute's prizes of £2 and £1, which are awarded to qualified candidates in each section of the Typography Examination.



Section II.—Press and machine, comprises a knowledge of such subjects as:—Historical outlines of the printing press and machine, knowledge of machines, making ready, rollers, inks, colour printing, working off, imposition, paper, general. The examination will be held on Tuesday, April 28th, from 7 till 10.

Digitized by Google

The fee for candidates in the machine and press section of Grade II. is one shilling and sixpence.

Candidates for the Final Examination must hold a certificate in Grade II. The questions will not be limited to any particular syllabus but will be based upon the groundwork of the syllabuses for the lower Grades, with a wide range of the whole subject of letterpress printing, and will include subjects relating to the composing department, machines, foundry, metals, illustrations, printing inks, power and transmission, papers and boards, warehouse work, general management. The Final Examination will be held on Tuesday, April 28th, from 7 to 10 p.m. The fee for the examination is one shilling and sixpence.

The Printers' Managers and Overseers Association offer a prize of £1 to the winner of the first prize at the Final Examination, prizes of £1 to the winners of the first prizes in each section of Grade II., and prizes of five shillings to the winners of second prizes in each section of Grade II.

With regard to lithography and allied printing processes, the course of instruction is intended to cover at least three years. Each year's work is indicated in the syllabuses, which form a continuous and progressive course of study, and also define the subjects upon which the examination questions will be founded.

The examination in Grade I. will be adapted to the standard of apprentices; candidates for examination will be expected to possess a knowledge of practical processes and an elementary knowledge of the principles on which they are based in accordance with the syllabus.

The examination in Grade II. will include more advanced questions on the subjects of the syllabus for Grade I., and, in addition, a knowledge will be required of:—Characteristics of the various surfaces employed in lithography, papers, inks, machines, rollers, transferring, chromo-lithography, shading media, etc.

With a view to encourage apprentices to continue their studies at a technical school, whether such apprentices are regularly indentured or not, provided they are under 21 years of age and have been working as learners at the trade for a period of at least two years, the Worshipful Company of Stationers offer a prize of £3 3s. and a silver medal to the apprentice or learner who passes the Institute's examination in the first class of Grade II. and obtains the highest number of marks among qualified candidates. In the award of this prize, preference will be given to candidates working or residing within a radius of 20 miles of Stationers' Hall.

The examination in Grade II. and the final examination will be held on Wednesday, April 29th, from 7 to 10 p.m. The fee for either examination is 1s. 6d.

Candidates for the final examination must hold a certificate in Grade II. The questions will not be limited to any particular syllabus, but will be based upon the groundwork of the syllabuses for the previous grades, with a wide range of the whole subject of lithography and allied printing processes.

The Printers' Managers and Overseers Association offer a prize of £1 to the winner of the first prize at the final examination, and a prize of 10s. to the winner of the first prize at the examination in Grade II.

The Cordwainers' Company offer prizes as follows:—Final Examination: A prize of £2 and Institute's silver medal. Grade II.: First prize, £1 10s. and Institute's bronze medal; second prize, £1 and Institute's bronze medal.

WRAPPING PAPER FROM SEAWEED.—It is reported that a company is being formed to exploit the seaweed process of treating paper introduced by Mr. Thomas Ingham, chemist, of Bear's Paw-buildings, 53, Lord-street, Liverpool. It is claimed that a non-porous and serviceable paper is produced for the protection of perishable goods, and that ordinary paper may be chemically treated to render it more durable, pliable, absolutely non-inflammable, and proof against all acids. As a substitute for lead and tin, the new paper will, it is considered, find an extensive demand for wrapping tea and cotton, and also for fruit, meat, etc. Mr. Ingham claims that his paper is fire proof, damp-proof and germ-proof. It is expected to replace the present inflammable cinematograph films.

British Writings.

The exports of British writings, first classified separately in 1908, were as under during the five years mentioned:—

1912	217,444 cwts.	£469,504
1911	218,392 ,,	464,576
1910	246,075 ,,	511,559
1909	238,259 ,,	488,775
1908	218,767 ,,	455,846

The values of the shipments to Foreign Countries and British Possessions in 1912 as compared with 1908 were:—

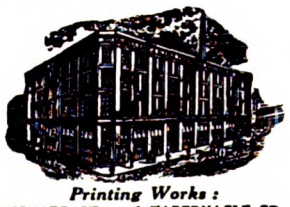
In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—



Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe **$5.00** per year; Canada **$3.00**. 64 pages weekly.

PRINTING TRADE NEWS.

Paper Trade of Japan.

The following information is from the report by H.M. Vice-Consul at Yokohama (Mr. C. J. Davidson) on the trade of that district in 1912, which will shortly be issued:—

The trade in printing paper showed an improvement of some £40,000 over 1911. The imports from the United Kingdom were valued at £49,060 in 1911 and £88,987 in 1912; from Germany £8,644 in 1911 and £53,179 in 1912; and from Belgium £53,171 in 1911, falling to £21,607 in 1912. The unusual large decrease in the imports from Belgium is to be attributed to the fact that the cheaper grades used principally for books and magazines, of which Belgium formerly had a monopoly, are now almost entirely supplied by Japanese factories. The increase in imports from the United Kingdom and Germany was due to the very heavy imports of higher grade papers, a large portion of which remained over at the end of the year, the actual consumption having been practically the same in 1911. The United Kingdom headed the list in writing papers with £20,196, out of a total of £26,959. Art paper, which is classified under printing paper, was in good demand throughout the year, but there was a falling off in the demand for drawing paper, which is being superseded by Japanese-made paper of inferior quality. Fancy papers have been hard hit by the new tariff, but the imports of packing paper showed an increase of about 60 per cent., due in large measure to the Conventional Tariff. Owing to a protest on the part of Japanese manufacturers that paper, properly belonging to other classes, was being brought in as packing paper, the Customs authorities have decided that only paper weighing more than 30 grammes per square metre can be entered as packing paper. The demand for home manufactured paper continues to increase, and the Japanese mills have been very busy throughout the year. The classes of paper which will, however, continue to be imported for some time yet are high-grade printing paper, writing paper, parchment, paraffin and wax papers, and cardboard.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Applications.

17,888 TREVLIN, H., KEMBALL, G. J. and E., device for feeding labels or the like to packing machines.

17,886 KENNEDY, D. S., typographical machines.

17,896 BROWN, A. M., and W., elastic or pliable solution for binding books or paper.

17,897 BROWN, A. M., affixing the edges of two or more sheets of paper together.

17,930 WILLIAMSON, I. L., detachable book covers or cases.

17,938 CAPILL, R. H. E., and RIDLEY, T. P., machines for printing on cheques and the like.

THE PRINTING ART.

An Illustrated Monthly Magazine of the Art of Printing and of the Allied Arts Issued by The University Press, Cambridge, Mass., U.S.A.

THE PRINTING ART is the most beautifully printed periodical in America. It is entirely different from the other printing magazines, in that it does not go into the technical details of the crafts it represents, but gives **actual examples** which are of service to the publisher, printer, advertising man and book lover. It is full of suggestion for Typography, design, colour of ink and selection of paper stock, and will be found invaluable by those desiring to improve the quality of their work. PRICE 21/- per year. Single copy 2/-. Send this amount for sample copy to—

Arden Papermaking Co., Ltd.

(*In Liquidation*).

Meeting of Creditors.

A meeting of the creditors of the above company was held in Manchester last week.

The statement of affairs shows liabilities £15,380 1s. 9d., and the total estimated assets, subject to realisation, £9.565 10s. The deficiency as regards creditors is £2,280 1s. 9d., the total deficiency amounting to £15,380 1s. 9d. Unsecured creditors are returned at £9,923 13s. 11d., and estimated preferential creditors at £170 7s. 5d.

The meeting agreed to Mr. A. G. Wilde acting as liquidator. A resolution was passed for the appointment of a committee of inspection, Messrs. Varcoe, Greenhalgh, and the Williams Deacons Bank, Ltd., being elected to serve.

The mill will be offered for sale as it stands, and if a purchaser is not found the plant and machinery will be sold piecemeal.

Government Contracts in July.

During last month H.M. Stationery Office entered into the following contracts:—

PRINTING, BINDING, ETC.

Binding, etc., 900 book "D. 209," 1,100 book "D. 459," printing, binding, etc., 1,000 Counter Balance Books, 1,750 books "London No. 9," 1,000 books "D. 238 Depot Requisitions," 650 Attendance Books D. 58, 2.500 Warrant Book No. 87, 1,500 books List of Registered Articles, 5,000 Diaries, 1,000 Delivery Note Book, supplying 100 Portfolios D. 17A, 30,000 Recorders Books, McCorquodale and Co., Ltd., Wolverton, Bucks. Telegram Forms "A," McCorquodale and Co, Ltd., Oakenholt, near Flint. Binding, etc., 4,000 books D. 223, 2,700 books D. 192 M. 209, printing, binding, etc., 4,000 Sub-Office P.O. Trade Notes.

THE late Mr. William Waddell Dickson, stationer and bookseller, Glasgow, has left estate valued at £2,529.

WE understand that Mr. Edward Grimwood has resigned the secretaryship to the proprietary of the *Morning Advertiser* after nearly 50 years' service.

THE death is announced of Miss Dora D'Espagne Chapman, a versatile and prolific writer, whose articles were regular features of several of the ladies' journals and other papers.

THE death is announced of Mr. David Young, late editor of the *North British Agriculturist*, after a two-year's illness. He was one of the best-known writers on practical agriculture in the country.

THE Commonwealth Government of Australia has appointed as its official delegate to the third International Congress of Refrigeration at Chicago Mr. A. W. Pearse, editor and managing director of the *Pastoral Review*.

ACCORDING to *Kemp's Mercantile Gazette*, there were three failures in the printing and stationery trades of England and Wales for the week ending Friday, August 15th; the corresponding week in 1912 also showed three.

FOUR cases of lead poisoning were reported to the Home Office from printing establishments during July, making a total of twelve since the beginning of the year, as compared with sixteen in the corresponding period of 1912.

AN outbreak of fire occurred at the premises of Messrs. Clarkson and Currie, bookbinders, at the corner of Farringdon-avenue and Farringdon-street, London, on Saturday. The flames were confined to the top floor, and the outbreak speedily stopped after slight damage.

ADVANCE IN PRICE OF "NEWS."—The Union of Finnish Papermakers has fixed the price of "news" paper at 34 pennis per kilogramme, or 33½ pennis, 33 pennis and 32½ pennis for one, two and four years' contracts respectively. Owing to the high price of paper, Finnish publishers announce increased charges for advertisements.

A NUMBER of the men and boys connected with the dispatch department of the *Dublin Daily Independent* struck work on Tuesday and were dismissed. Thereupon the newsboys declared that they would not sell the *Evening Herald*, the evening edition of the *Independent*, and caused considerable disturbance by attacking the delivery vans and scattering the papers.

THE Acting British Consul-General at New York reports that a firm in that city desires to receive samples and quotations for small crêpe paper bags, which it is prepared to buy in large quantities, if prices are suitable. The name and address of the firm may be obtained, and samples of woven bags at present in use may be seen on application at the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall-street, E.C.

THE London Society of Compositors have given notice of a resolution, to be brought before the coming Trade Union Congress, which asks that:—"In view of the continued increase in the cost of living, and the consequent reduction in real wages. the Congress should declare in favour of the trade unions taking early and simultaneous action to obtain an increase of 5s. a week for all grades of time and piece workers in both public and private employ." And also asks that the Parliamentary Committee should be instructed to take whatever steps may be necessary, in conjunction with the unions prepared to take part in the movement, to give effect to the demand at the earliest practicable moment.

TENDERS WANTED.—For the supply of printing, etc., for the Westminster Board of Guardians; particulars from Mr. W. J. Lickley, Princes-row, Buckingham-palace-road, S.W. For the Kent Education Committee for printing minutes and reports; forms of tenders from the Stores Superintendent, the Sessions House, Maidstone. For printing parliamentary register, burgess roll, and register of parochial electors, for the Borough of Oxford; particulars from the Town Clerk's Office, Town Hall, Oxford. For the supply of printing and stationery for the use of the Portland Council and its officials for one year; particulars from Mr. R. A. Colenutt, clerk, New-road, Portland. For printing, etc., of registers of voters, for the Carnarvonshire County Council. Forms of tender from Mr. J. T. Roberts, County Offices, Carnarvon. For the supply of printing and stationery for the Urban District Council of Enniskillen; particulars from Mr. A. W. G. Ritchie, town clerk, Enniskillen.

THE late Mr. Walter P. Appleton, wholesale stationer, of Forest-hill and Clerkenwell, has left estate of the value of £112,525.

AN American newspaper, the *Shields' Tamora Lyre*, is a novely. It is printed each week on scarlet paper, and has quite a striking appearance.

AN important decision has been delivered by the Osaka Court, which rules that the registration of representatives of foreign domiciled trade mark owners under the old trade mark law in Japan, is invalid under the new law, and that fresh registration is required.

A FIRE broke out the other day in the warehouse of Messrs. A. E. Walter, Ltd., printers, Tabernacle-street, Finsbury. The outbreak originated in the machine-rooms and stores in the basement. The firemen succeeded in restricting the fire, but a deal of damage was caused to the lower floor.

"THE HOODLET" is the title of a new house journal that is issued by Messrs. Hood and Co., process engravers, etc., Middlesbrough-on-Tees. It is a beautifully got-up production illustrated with half-tone and colour prints from blocks made by the firm, and is an excellent example of the high-class work that can be turned out at Messrs. Hood and Co.'s works.

THE Hon. Wm. Frederick Danvers Smith, a partner since 1890 in the great newspaper distributing firm, has become Viscount Hambleden, through the death of Lady Hambleden, widow of the Right Hon. William Henry Smith, of railway bookstall fame. The new peer was born in 1868, and married the third daughter of the fifth Earl of Arran, by whom he has three sons and two daughters.

"DYES AND DYEING," by Charles E. Pellew, is a practical hand-book on a craft that has had too little attention from competent authorities. It is published by Messrs. Sampson Low, Marston and Co., Ltd., and makes an equal appeal to men and women, as stencilling, batik, and tied and dyed work are thoroughly covered, as well as the dyeing of feathers, basketry, leather, silks, cottons, woollens—in fact, practically all dyeable materials.

A NEW sixpenny book, published by Messrs. Thomas Murby and Co., is "Out West: Sketches of Prairie Life," by E. Pearse Wheatley. It differs from the usual visitors' book on Canada in that it is the work of a homesteader, and, by vivid sketches, it conveys to the reader the actual atmosphere of life on the plains. There are articles appealing to the investor such as:—"Birth of a Western Town, "The Western Hustle," and "Comparisons," and there are others of importance to the intending emigrant. The aim of the book is to give in the small compass suited to a busy man's spare time a real whiff of Western life, to picture things as they are, and disperse misunderstandings.

A MOVEMENT has been started in the United States to raise funds with which to erect a monument to the memory of the late John Jonathan Pratt, the Alabamian who, it is claimed, was the inventor of the present day typewriter. Mr. Pratt was register in chancery of Cherokee county for a number of years and while engaged in his duties became a victim of writer's cramp. Immediately he went to work to contrive a machine that would do his writing for him. He became actively engaged in this work in 1864, but he had worked on a typewriter before that time. In fact he had made a machine before then that worked, but it was not until 1867 that his machines were first put upon the market. There are other claimants to the honour of having invented the typewriting machine, but it has been apparently well established that Mr. Pratt, of Centre, Alabama, was the actual inventor. He died in 1905.

ON Monday the report of the Select Committee appointed to assist the Speaker in the arrangements for the official report of debates, and to inquire into the expenditure on stationery and printing for the House of Commons and the public service generally was issued. It was the intention of the Committee to inquire into the question of the establishment of a printing department, under the control of the Stationery Department, but the prolongation of the Session, and the resignation of Sir Rowland Bailey rendered this course impossible. On the recommendations of the Committee the contracts which expire at the end of the current year will, where possible, be extended till December, 1915. The Committee found much to criticise in the way departmental publications are prepared, and they think that Departments should consult the Stationery Office before the "copy" is prepared. The Committee are of opinion that in order to secure as wide a distribution as possible of papers presented to Parliament, it is desirable to lower the price in proportion to the actual cost, and in their view a larger sale would compensate for the reduction in price.

PAPERMAKING IN SOUTH AFRICA.—Mr. A. Laughton has made successful arrangements with the Cape Town local authorities to purchase for a term of ten years the waste paper, cardboard, rope, string, bagging and sacking collected by the carts of the cleansing departments. He undertakes to put down plant to utilise the materials in the production of pulp for papermaking. Considerable local interest is being shown in the plans put forward by Mr. Laughton; if successful, it is probable that machinery will be established in Johannesburg and other large centres of population throughout the Union for the utilisation of waste materials, and also the local prickly pear and certain species of aloes.

A Lithographic Library.

That well-known American litho supply house, the Fuchs and Lang Manufacturing Co., of New York, to whose publication of a new translation of Senefelder's "Complete Course of Lithography," we referred a few months back, have lately entered upon a very public spirited enterprise, *i.e.*, the formation of a gallery of lithographic prints, old and new, and a library of books upon or illustrated by lithography. A very representative collection has been already got together, including many hundreds of prints, and a large number of books, both technical and artistic. A 60-page catalogue of the items acquired down to the early part of the present year has lately been published, and it is announced that as fresh items come in supplementary lists will be issued from time to time, so that the foundations of a Bibliography and Iconography of Lithography will soon be laid in a very substantial manner. A feature of special importance and value is the copious indices appended to the catalogue, a copy of which should be in the hands of all those lithographers who take an interest in the history of their art. According to the entries, the first American lithograph was a print of a water mill, by B. Otis, published in the *Analectic Magazine*, Philadelphia, in 1819, and the first chromo litho a print entitled "Grandpa's Pet," by J. H. Richards, litho'd by P. S. Duval, of Philadelphia, for an issue of Miss Leslie's magazine, of which the exact date has not yet been ascertained, but was probably about 1850. We congratulate the Fuch and Langs Co. on the very successful start they have made in the initiation of an American lithographic library and art gallery, and shall look forward with interest to the receipt of future supplements to their valuable catalogue which forms an important contribution to the literature of the trade.

The Institute of Journalists.

Annual Conference at York.

On Saturday, over 250 members gathered from various parts of the United Kingdom, representative of every branch of journalism in the country, met in York, and there was also a contingent of overseas members, among them being journalists from Australia, South Africa, India, the Straits Settlements and Egypt. The headquarters were at the Station Hotel, where the proceedings opened on Saturday afternoon, when the ladies of the Reception Committee held a reception, the guests being received by Mrs. Phillips, wife of Mr. J. S. R. Phillips, of Leeds (president of the Yorkshire District Reception Committee). In the evening a smoking concert was held at the Davy Hall, the chair being occupied by Mr. J. T. Clayton, of Skipton. On Sunday many of the members attended morning service at the Minster. The preacher was the Rev. Canon John Watson, sub-Dean, who said the profession of journalism wielded an enormous power in this country, and a power that was exercised, on the whole, on the side of justice, humanity, and righteousness. Their profession was not without its difficulties or its perils. They saw much of the seamy side of public life. The fringe of journalism was sometimes not over clean, but the English newspaper manifested, as a rule, high ideals and integrity of purpose on the part of its producers. Let the Press, equally with the pulpit, be ever on the side of what was holiest and best, remembering that great power carried great responsibility.

The opening session of the Conference, when the actual work was commenced, was held in the historic Guildhall of York, where the members of the Institute were welcomed by the Lord Mayor of that city.

Mr. Robert Donald, the president of the Institute, in his address, said the Press had become commercialised, and nine-tenths of

Digitized by Google

the leading papers belonged to companies, corporations with neither bodies to be kicked nor souls to be damned. The private owner preferred less profits to compromise with principle, but when company dividends had to be earned principle suffered in the process. The new system placed the power to sway public opinion in the hands of a few who could influence or mislead. Some idea of the newspaper of the future was given by Mr. Donald. He said it would not contain less reading matter, but the pages would be smaller, methods of distribution quicker, and the circulation over greater areas. Airships and aeroplanes would be used for the most distant centres, electric trains and motor-planes running in special tracts utilised, and editions come out almost every hour. News would be collected by wireless telephones, and the reporter would always have a portable telephone with him with which to communicate with his paper without the trouble of going to an office or writing a message at the other end. The wireless telephone message would be delivered to the sub-editor printed in column form. The chief competition to the national newspapers, the speaker added, would be the cinematograph and the gramophone. People might become too lazy to read and news would be laid to the house like gas and water. The occupier would listen to an account of the news of the day read to him while sitting in his garden, or have his daily newspaper printed in column form by a printing machine in the hall of his house. In conclusion Mr. Donald said: "We cannot prevent or even check the irresistible trend towards more concentration and keener competition, but we can do our part to maintain the honour, the dignity, and the reputation of the British Press. Capitalists may call the tune, but we are still able to give the tone."

Mr. James Sykes, of Leeds, was elected president for the ensuing year.

On Tuesday, Mr. A. J. Mundella spoke in favour of something in the nature of an apprenticeship for journalists. In the course of a discussion the president stated that under the National Insurance Act there were 292 members on the funds, and in the National Union of Journalists there were 2,600. It was not creditable to the profession that there were 3,000 journalists earning small salaries which brought them under the operation of the Act.

Mr. J. C. Fairfax, of Sydney, New South Wales, read a paper on the education of journalists. He said the majority of the men engaged in newspaper work were in favour of a special training for journalists. Their difficulty was to give it practical effect. He hoped the day was not far distant when an efficient School of Journalism would be in working order.

The President expressed himself in favour of men with university education as journalists, provided they had some aptitude for journalism.

Mr. F. Hinde said the discussion had proceeded on the presumption that journalists were badly educated. He denied that that was so. If education consisted in knowing a little of everything, there was no body of men in the country who knew so much as journalists.

Exhibition at Plymouth.

An exhibition of rare and curious books was held at Plymouth, recently, the Free Library in that town being well patronised during its continuance. Many rare and valuable books were shown, and local residents freely lent from their stores of antique volumes. A feature of the exhibition was the collection of bindings in which the work of Mr. Cedric Chivers, of Bath, was prominent. That gentleman showed a volume bound in grey Levant, with two panels under transparent vellum; a book bound in pink crushed Levant, with a panel under transparent vellum; another in purple Levant, with a panel under transparent vellum; one in green morocco, with a panel under transparent vellum; Rogers' poems, bound in golden brown crushed Levant, with a panel under transparent vellum; and Herrick's "Hesperides," bound in purple Levant, with panels under transparent vellum. Messrs. Zaehnsdorff, Ltd., of London, exhibited some specimens of old bindings, as follows:—Stamped leather binding (circa, 1480), tools used being of much earlier date, before the introduction of modern millboards; manuscript, early printed matter, and any other scraps of paper which could be obtained were used; Dutch binding, 1500; oak boards, bosses, and clasps, the covers have been rebacked; English stamped binding, oak boards, circa 1532; Dutch stamp binding, of about 1550; calf cover, with heraldic stamp worked by hand, 18th century; Dutch stamp binding, 15th century, oak boards, unusual form of clasps. Messrs. W. H. Smith and Son, of Plymouth, contributed about thirty specimens of modern binding in velvet, Persian, morocco, free calf, full calf vellum, and many other varieties.

Late Bookbinding Notes.

As we go to press, we learn that the dispute at Messrs. Burn and Co.'s, referred to in our Bookbinding Section this week, has assumed a new and graver aspect, as the firm have expressed the intention to sever altogether their connection with the trade union. Mr. Mercer (managing director) states that not only are the non-union men at Esher content with their conditions, but this is also the case with those union men employed at the London branch. He contends that the present dispute has been brought about merely by agitators, and that the men are obeying the orders of their union against their will. Mr. Mercer on Saturday morning said: "Not only do we refuse to turn our Esher works into a union house, but we have now decided to turn our London establishment into a non-union house, and we are engaging steady, reliable men to fill the place of those men who have been indiscreet enough to cease work. These number only about 25 per cent. of the men employed at our London house, and as we employ a further 600 at Esher, business will proceed as usual." The establishment in Kirby-street was strongly picketed on Saturday morning, while police protection was afforded for the non-strikers. As we write, police and pickets patrol the street continuously, and both sides show an unyielding front.

It may be mentioned, apropos of the appeal to British operative binders' unions to join the International Secretariat (printed in full on another page of this issue) that there is some hope of the idea being realised in the near future. Both the English delegates to the Brussels Congress (Messrs. Kelly and Evans) referred favourably to the prospects of this consummation, in fact the executive committee of the National Union of Bookbinders and Machine Rulers voted for affiliation five or six years ago, but the recent extension of the organisation had prevented the project being carried into execution yet. It was expected, however, that the matter would go through at the next British Bookbinders' Congress. The Dutch bookbinders are in a somewhat similar position, affiliation to the international organisation having been voted last June at their congress. The question has, however, to be submitted to a referendum, which it is expected will turn out favourably. The American binders' unions seem to have ignored the appeal made to them.

Technical Education in the United States.

IN the report of the International Typographical Union, which is just published, it is gratifying to note that technical instruction for the youthful printer is engaging the attention of the Union authorities, and with excellent and gratifying results, and that there are now more than four thousand students taking the course of technical instruction that has been instituted and offered at such a low fee that no man in the trade can plead lack of opportunity of learning the principles of his work and making himself efficient. In commenting upon the desirability of such an opportunity to gain the desired knowledge, the report says:—"There is no possession like knowledge. Comprehensive and intimate understanding of history, science, fiction, this is to have a liberal education. Coupled with such learning, breadth of understanding of one's chosen life-work, be it a profession or trade, equips the owner, arms him cap-a-pie, for the battle of existence. The demand to-day for the capable and competent compositor is insistent, and with it is coupled the offer of a wage that is commensurate with the deftness and resourcefulness of the knight of the art preservative in applying the very latest ideas to the printed page. For years the education of the apprentice, if not neglected, has not been thorough. There has been a tendency towards specialisation, and that means low wages and infrequent opportunities for employment. The compositor who knows all branches of his calling and can apply that knowledge is not a seeker for work; it finds him. To a greater and greater extent, the employer is offering inducements to the competent workman. Especially is this true in the commercial field, for the higher wage obtaining in the newspaper industry has drained the book and job office of many of the more expert, who find a more lucrative return for their knowledge when it is applied in the newspaper ad. room. So generally is this a fact, that the proprietor of the commercial office realises that he must abandon hard-and-fast scale limitations if he would secure the best workmen. Under these conditions it is incumbent on our local unions to give more emphasis to the demand that the apprentice shall be taught the trade. The novitiate of to-day is the union man of to-morrow, and on him will the future welfare and progress of the union depend. For this responsibility he will be the better equipped if he is a good workman, for that acquirement will add to the independence that union membership nourishes and broadens." In this direction the American unions are doing good work in instructing their members in the intricacies of the printing trade.

Wrappings and Paper Bags Under Criticism.

BRADFORD, the central hub of the textile industry, has a most ingenious official who has lately been studying the pros and cons of wrappings and paper bags, from a public point of view. We hear so much nowadays about the necessity of wrappings to promote hygienic habits amongst certain classes of tradesmen, and the long-felt want that wrappings and paper bags are supplying in other channels of our everyday life, that the report of the Chief Inspector of Weights and Measures, at Bradford, is of interest. The Inspector says: ". . . There is a great variation in the weight of bags and wrappers used. The bags used in the sale of 1 lb. of raisins varied in weight from 44 to 336 grains. The latter bag was seven times heavier than the former, and yet in some cases the lighter paper, costing 32s. per cwt., would wrap 14,473 packages, whilst the heavier paper, costing 9s. per cwt., wrapped only 3,431 packages; to wrap 14,473 with the heavier paper would have cost 40s." The Inspector adds that whilst the heavier paper cost 8s. more than the lighter for the same number of packages, this was more than made up for by the sale of the extra 3 cwt. 24 lb. of paper used, which was, of course, sold at the same price per lb. as the article wrapped in it. In the case of a low-priced article like sugar, at say 2d. per lb., this 3 cwt. 24 lb. brings in 60s. and by deducting the extra cost of the paper, it will be seen, says the Inspector, that the trader made an extra profit of 52s. The whole object of the Inspector's contention is to protect the public from a practice which is not uncommon, viz., weighing the article in wrappings and bags. The papermakers' interests are not directly affected, as he is only concerned in the supply of a suitable product for wrapping purposes. It is not a curtailment of consumption that is wanted, but a more extended use of paper wrappings, for instance by butchers in place of old newspapers, and by bakers to save handling and exposure of bread in the process of delivery.

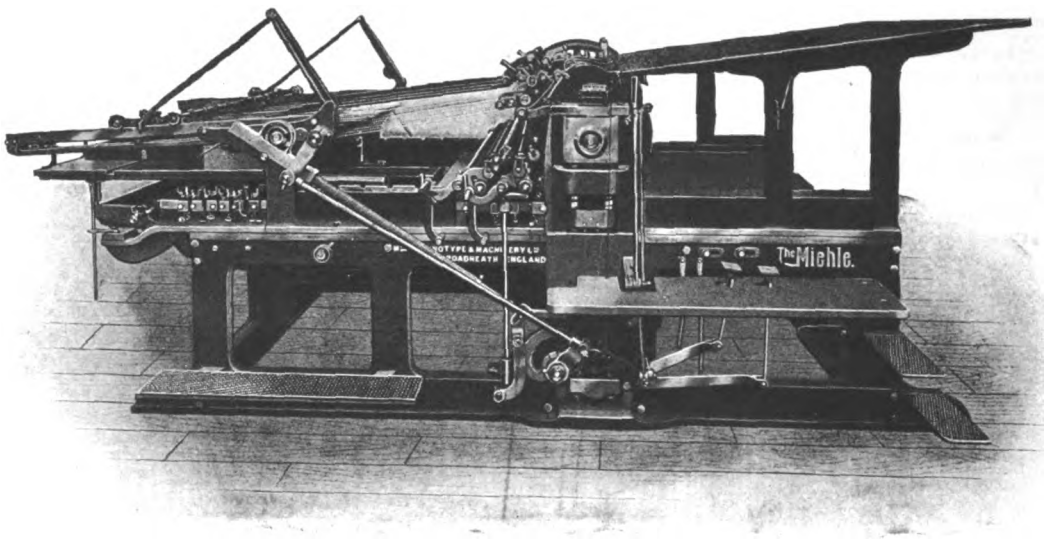
Who Pays for Spoiled Work?

SHOULD employees be held responsible for spoiled work that may be due to carelessness or neglect? is a question that has often agitated the printing office, and in some cases has even led to sectional strikes when payment has been enforced. Several of the unions have rules dealing with this matter, but in many cases these rules are not recognised by the employers, and the whole subject

Digitized by Google



bristles with difficulties. In the United States this spoiled work question is constantly cropping up, and dealing with it our American contemporary, the *Inland Printer*, says that the matter is one that is open to considerable discussion, for: "It must be acknowledged that the promiscuous charging of employees for losses would be detrimental, and would have a degrading effect on the working force. Accidents will happen, mistakes will occur, even under the closest supervision; and to make a practice of charging for every error would most certainly be bad policy. On the other hand, where losses are constantly occurring on account of carelessness or indifference on the part of the employee it would seem only right that, if after having his attention called to the matter, he made no effort to overcome the difficulty by improving himself or being more careful, he should be charged for the loss sustained by his carelessness or be dismissed from service. Those there are who, no matter how hard one tries to assist them, will take advantage of leniency, and pressure must be brought to bear upon them before they will make any attempt to improve themselves. The foreman's responsibility is a subject too large for proper treatment in limited space. It must be borne in mind, however, that every employee is under moral obligation to those who are paying the bills. This applies as well to the other question; for while the O.K. is supposed to be final and to clear those handling the job after it is placed on, it does not excuse any employee letting an error that has been missed go through just because the job has been O.K.'d. The old saw, 'We are none of us saints,' can also be stated, 'We are none of us perfect.' The old song goes: 'Accidents are apt to happen in the very best of families; people oft forget their punctualities'; and so it is that mistakes will creep in, be we ever so careful, and the golden rule may well be applied by all concerned."

THE Labour Exchanges of the Board of Trade, during the five weeks ended July 18th, received 1,838 applications for work in the printing, stationery, book and paper trades, of which 937 were from women. 876 vacancies were notified, 579 of them being for women, but only 648 were filled through the Exchanges, and 443 were taken by women. In the Juvenile Branch, the number of vacancies notified was 935, of which 611 were for girls. The number filled was 661, of which only 200 were taken by boys.

"NEWS PRINT FOR AUSTRALIA."—We are officially informed that there is no truth in the report published in the *Pulp and Paper Magazine of Canada*, to the effect that the Anglo-Newfoundland Development Co., Ltd., had received an order for 40,000 tons of news for Melbourne.

The Miehle
TRADE MARK

IS PRODUCING THE FINEST COLOUR, BOOK, AND JOBBING PRINTING THROUGHOUT THE UNITED KINGDOM AND COLONIES.

In half-tone work, the Miehle reproduces every gradation of tone contained in the blocks—from soft high-lights to heavy solids.

Its reputation for perfect colour printing (which includes efficient rolling power and the features which make for dead register) is embraced by the standard phrase "Miehle Quality," which means essentially Miehle printing.

The Miehle is fitted with two deliveries, which at will deliver the product printed side up or printed side down.

The inking equipment provided on this press consists of sixteen rollers and a large ink table; of these, four are forme rollers with reciprocating riders and rollers over them (nine in all, arranged in pyramid form). The other seven rollers distribute the ink on the table before it reaches the forme rollers.

This press is built in six sizes; the smallest size takes a sheet up to 26-in. by 39½-in. and the largest size 46-in. by 66-in.

Miehle presses are also supplied in tandem, so arranged that the units may be disconnected and used as single machines.

The Miehle is Manufactured and Sold by

LINOTYPE AND MACHINERY LIMITED

who have the sole and exclusive right to manufacture and sell The Miehle in the United Kingdom and Colonies (except Canada).

Offices of the *British and Colonial Printer and Stationer*,

58, SHOE LANE, LONDON, E.C.

WEDNESDAY, August 20th, 1913.

DISPLACEMENTS of cash have been considerable this past week, but they have not affected the conditions of the short money market, where credit is still superabundant. The demand for loans was quiet yesterday, but rates are unchanged, as are also those for discounts. Last week's Bank Return showed a large increase in the reserve. Bullion movements this week have resulted to date in a net influx of £113,000. Once more the political horizon has become clouded, and the cheerful optimism that has been recently displayed in stock markets has given way to dullness. Consols weakened yesterday, the quotations now being 73 1/16 to 73 1/8 for money, and 73 3/8 to 73 3/4 for the account.

The miscellaneous industrial market maintained its general good tone, with a rising tendency, until yesterday, when there was a marked falling off in business. On the whole, however, the tone remains steady. In the section relating to paper and print there are but few and slight movements to record. Amalgamated Press Ord. have risen 1/8 to 6 1/16—6 1/8, and Carl Hentschel Pref. have fallen 1/8 to 1/4—1/2. Business has been done during the past seven days in Amalgamated Press Pref. at 20s. 6d.; in Associated Newspapers Pref. at acc. 20s., 19s. 6d., 20s., 19s. and 20s. 3d.; in *Financial News* Pref. at 15s. 6d.; in Carl Hentschel Ord. at acc. 1s. 3d., and in the Pref. at acc. 5s.; in Ilford Ord. at 13s. 3d. and 14s., and in the Pref. at 18s. 6d.; in International Linotype at 73, 73 1/16, 75 and 74 1/2; in Lanston Monotype Corporation at 10s. 3d.; in Linotype and Machinery A Deb. at 53 1/4 and 54 3/4, and in the B Deb. at acc. 36; in Edward Lloyd Pref. at 22s. 3d. and 22s.; in George Newnes Pref. at 16s., 16s. 9d., 16s. 3d., 17s., 16s. 3d., 16s. 9d., 16s. 9d. and 17s. 3d.; in Raphael Tuck and Sons Ord. at 18s. 9d., and in Weldon's Ord. at 30s. 9d.xd.

DIVIDENDS AND REPORTS.

MASON AND MASON.—The report of Mason and Mason, Ltd., for the year ended June 30th last, shows a surplus of £600, after meeting interest charges.

MANSELL, HUNT, CATTY AND CO., HAMPSTEAD. Interim dividend of 8 per cent. per annum is declared on the ordinary shares for the half-year. The same dividend was paid last year.

ABERDEEN UNIVERSITY PRESS.—The report of the Aberdeen University Press, Ltd., for the year ended June 30th, 1913, states that the profits for the year (subject to depreciation) amount to £4,150, to which must be added net balance brought forward of £979, giving a total of £5,130. The directors recommend that there be written off the book value of machinery and plant £2,000, that there be deducted from heritable property £500, and that a dividend at the rate of 2½ per cent. per annum be paid on the ordinary shares, leaving a balance of £805 to be carried forward, subject to the payment of directors' and auditors' remuneration.

NEW COMPANIES.

GOODE BROS. (1913), LTD.—Registered on August 12th, with a capital of £5,000, in £1 shares (2,000 six per cent. preference), to acquire the business carried on at 88, Clerkenwell-road, E.C., as "Goode Brothers, Ltd.," to adopt an agreement with A. E. Goode and E. Goode Hill, and to carry on the business of printers, stationers, bookbinders, manufacturers of and dealers in fancy goods, Christmas cards, valentines and toys, etc. The subscribers are A. E. Goode, W. V. Marchant, W. C. Lohner and E. G. Hill. Private company. The number of directors is not to be less than three nor more than five. The first are A. E. Goode (managing director), W. V. Marchant and W. C. Lohner (life directors). Qualification 100 ordinary shares. Remuneration as fixed by the company. Registered office, 88, Clerkenwell-road, E.C.

WALLER-FRANKS CO., LTD.—Registered on August 12th with a capital of £3,000, in £1 shares (1,500 cumulative preference), to take over the businesses carried on by Hull Topics, Ltd., and the Hull Premier Printing Co., Ltd., as printers, publishers, newspaper proprietors and advertising contractors. It is proposed to extend and improve *Hull Topics* under the title of the *Hull Weekly Echo*. The subscribers are W. Stephenson, M. Waller, C. Watson Mill, J. Franks, J. W. Nicholson, W. H. Hopper and A. W. Wilkinson. Minimum cash subscription 300 shares of either class. The first directors are W. Stephenson, M. Waller, C. Watson Mill and J. Franks. J. Franks and M. Waller are joint managing directors. Qualification, 50 shares. Registered office, 54, Humber-street, Hull.

PICTORIAL SUPPLEMENT CO., LTD.—Registered on August 14th, with a capital of £4,000, in £1 shares (2,000 participating preference), to carry on the business of printers, engravers, publishers, newspaper and magazine proprietors, art journalists, etc., and to adopt an agreement with Universal Promotions, Ltd. The subscribers are F. G. Putt and C. W. Kendall. Private company. The number of directors is not to be less than two nor more than seven. The first are S. H. Hunt and I. B. Hobsbann. Qualification, £1. Registered office, Eldon-street House, Eldon-street, E.C.

CHARLES BARKER AND SONS, LTD.—Registered on August 2nd, with a capital of £20,000, in £1 shares, to take over the business carried on as "Charles Barker and Sons," and to carry on the said business, particularly as regards advertising, and to adopt an agreement with Mrs. E. J. Barker. The subscribers are Mrs. E. J. Barker and M. M. Barker. Private company. The number of directors is not to be less than three nor more than nine; the first are Mrs. E. J. Barker, M. M. Barker, R. Barker and A. E. Cumming. Registered office, 2, White-lion-court, Cornhill, E.C.

ANDREW MELROSE, LTD.—Registered on July 30th, with a capital of £24,000, in £1 shares (12,000 5 per cent. cumulative preference), to take over the business of a publisher carried on by Andrew Melrose at 3, York-street, Covent-garden, W.C. The subscribers are A. Melrose and D. O. Melrose. Private company. The number of directors is not to be less than two nor more than five; the first are A. Melrose (chairman), G. S. Church and R. R. Merton.

A. W. BAIN AND CO., LTD.—Registered on August 1st, with a capital of £25,000, in £1 shares, to carry on the business of publishers, bookbinders, stationers and printers, as formerly carried on by J. G. Bain at 17 and 19, Bishops-road, Cambridge-heath, and elsewhere in London, as A. W. Bain and Co. The subscribers are J. G. Bain, and A. S. Colley. Private company. The number of directors is not to be less than two nor more than five; the first are J. G. Bain (permanent managing director) and A. S. Colley. Qualification 500 ordinary shares. Registered office, 17 and 19, Bishops-road, Cambridge-heath, N.E.

Property charged—the company's undertaking and property, present and future. No trustees.

Joshua Jones and Co., Ltd.—Particulars of £7,300 debentures, created July 28th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the whole amount being now issued. Property charged—the company's undertaking and property, present and future, including uncalled capital (if any). No trustees. A memorandum of satisfaction in full on July 28th, 1913, of debentures dated January 7th, 1904, and April 30th, 1909, securing £9,000, has also been filed.

Home Publishing Co., Ltd.—A memorandum of satisfaction in full on July 30th, 1913, of debentures dated March 2nd, 1909, securing £6,000, has been filed.

North-Eastern Paper Mills Co., Ltd.—Issue on August 6th, 1913, of £4,800 debentures, part of a series of which particulars have already been filed.

"Oxford Chronicle" Co., Ltd.—Transfer of mortgage dated August 6th, 1913, to secure £2,200, at 4½ per cent. interest, charged on certain buildings in High-street, Oxford. Holder—Commercial Union Assurance Co., Ltd., 24-26, Cornhill, E.C.

Sussex Publishing Co., Ltd.—A memorandum of satisfaction in full on July 26th, of mortgage debentures, dated June 16th, 1913, securing £100, has been filed.

W. H. Irlam and Co, Ltd.—Particulars of £400 debentures, created August 1st, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the amount of the present issue being £270. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

The "World," Ltd.—Particulars of £5,000 debentures, created May 6th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the amount of the present issue being £450. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees. Also issue on August 1st, 1913, of £200 debentures, part of a series of which particulars have already been filed.

Aviation World Publishing Co., Ltd.—Particulars of £570 debentures, created July 10th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908; the whole amount being now issued. Property charged—the company's property, present and future, including uncalled capital. No trustees.

COMPANY NOTICES.

ST. CATHERINE PRESS (1909), Ltd.

Notice is given, that a meeting of the company will be held at London, on September 23rd, for the purpose of having an account laid before them, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

THE PAPER SUPPLIES, Ltd.

The creditors of the above company are required, on or before September 30th, to send the particulars of their debts or claims to Mr. Arthur Barlow, 1, High-pavement, Nottingham, one of the two liquidators of the company.

COMMERCIAL INTELLIGENCE.

Re ROBERT H. AVERY, Stationer, etc.

At the Salisbury Bankruptcy Court, before the Registrar, Mr. R. A. Wilson, this debtor appeared for his public examination. The gross liabilities in the statement of affairs were put at £582 7s., of which the sum of £513 0s. 6d. was expected to rank. The assets were estimated to produce £137 17s. 7d., leaving a deficiency of £375 18s. 9d. In reply to the deputy official receiver (Mr. H. T. Rowe), debtor said he commenced to trade as a hairdresser in 1893. Later he embarked upon a stationer's business and a fancy work department. When he commenced he had something like £40 capital, although he could not say precisely. With the exception of £5, that was his own free capital. He added the newsagent and stationery business within 12 months or 18 months after he started. He thought the business could very well be extended. He never prepared any accounts showing the results of his trading. A creditor pointed out that the debtor stated he had been aware of the insolvency for some years years past, and that there had been serious competition during the past eight years. He said it was only four years ago since the debtor was put right with the composition of 7s. 6d. in the £. Did he think he was justified in re-commencing business then? Debtor said he thought so at the time, as he had already stated. The examination was closed.

GEORGE HENRY ETESON, Stationer.

The public examination of this debtor, who had carried on business as a stationer in Liverpool under the style of Eteson and Co., took place on Monday at the Liverpool Bankruptcy Court, before Mr. Registrar Howarth. The liabilities were returned at £155 3s. 9d., and the assets at £14 4s. 9d., and debtor attributed his insolvency to ill-health during each winter for the last three or four years, and also to losses on betting. The debtor stated that he began business in January, 1890, at 26, North John-street, in partnership with a Mr. Higginson, but the partnership was dissolved four months later. From 1897 to 1900 the debtor did not follow any occupation. He again started business, but without capital, and in 1907 removed to 67, Dale-street. The landlord distrained for rent in December, 1912, and the debtor had since been carrying on business from his lodgings in West Derby-street. He admitted he had never taken stock or made out any statement showing his financial position during the time he had been trading. He first became aware of his insolvency in March last year. It was about then he began his betting. He found himself short of money, and a friend induced him to go in for betting. "I won money," the debtor said, "but could not get what I did win." He had a list of people who owed him money, which he could not get. The debtor admitted having defended a bankruptcy petition on purely technical grounds, and, notwithstanding that he knew himself to be insolvent. He said he was ill at the time, and entrusted his affairs to a solicitor, who told him he had a good defence. The examination was closed.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

THE BANKRUPTCY ACTS, 1883 and 1890.

RECEIVING ORDERS.

CROOKE, A. L., 43, Byron-street, Bradford, paper merchant. Date of order and of adjudication order, August 13th, made on the debtor's own petition. First meeting of creditors, August 23rd, 11 a.m., at the official receiver's chambers, 12, Duke-street, Bradford. Public examination of debtor, October 8th, 10 a.m., at the County Court House, Manor-row, Bradford.

JONES, E. H., 14, Highfield-street, Leicester, stationer and newsagent. Date of order and of adjudication order, August 13th, made on the debtor's own petition. First meeting of creditors, August 25th, 11 a.m., at 1, Berridge-street, Leicester. Public examination, September 12th, 11 a.m., at The Castle, Leicester.

NELSON, J. H. H., trading as Nelson and Son, 51, Broad-street, and lately at 4, Brunswick-square, Bristol, bookseller. Date of order and of adjudication order, August 16th, made on the debtor's own petition.

FIRST MEETINGS AND PUBLIC EXAMINATIONS.

ACKLAND, T. J., 32, North-street, Bridgwater, Somerset, stationer, bookbinder, etc. First meeting, August 27th, 11.30 a.m., at the official receiver's office, 26, Baldwin-street, Bristol. Examination, September 8th, 11.30 a.m., at the County Court Offices, Bridgwater.

SEATH, H., 110, Park-street, Luton, publisher. First meeting, August 27th, noon, at the official receiver's office, The Parade, Northampton. Examination, October 16th, 11.30 a.m., at the Court House, Luton.

ADJUDICATION.

MAXEY, H. H., 39, Stamford-road, and Station-road Works, Mossley, Lancs., printer. Date of order, August 8th.

NOTICES OF INTENDED DIVIDENDS.

VIGERS, T. W., and FORD, A. G. N., trading as The Standard Photographic Co., Hampden House, Kingsway, W.C., and 1, Queen Elizabeth-street, Bermondsey, London, S.E., manufacturers of photographic paper. Claims by September 2nd to F. W. Davis, C.A., 95-97, Finsbury-pavement, E.C., who will also up to the same date receive claims against the separate estate of A. G. N. Ford.

SEARLE, G., 45, Magdalen-road, Mount Radford, Exeter, newsagent and stationer, etc. Claims by September 12th to A. E. Ward, official receiver, 9, Bedford circus, Exeter.

NOTICES OF DIVIDENDS.

HANDLEY, A., 133, Stratford-road, Sparkbrook, Birmingham, stationer, etc. First and final dividend of 1s. 10¼d., August 25th, at the official receiver's office, 191, Corporation-street, Birmingham.

ROTHERA, G. T., 39, Crown-street, Portland-street, and 11, Craven-terrace, Halifax, stationer and printer. Supplemental dividend of 7½d., August 25th, at the official receiver's chambers, 12, Duke-street, Bradford.

APPOINTMENT OF TRUSTEE.

MILIFFE, E. J., 172, Clerkenwell-road, London, E.C., stationer. Trustee, A. A. Hall, C.A., 71, Broad-street-avenue, E.C. Appointed August 7th.

NOTICE OF RELEASE OF TRUSTEE.

KNOWLES, J. N., 103, Vicar-lane, 2, Back Harrison-street, and 18, Reginald-mount, Leeds, printer. Trustee, C. S. Holliday, 4, Greek-street, Leeds. Released July 7th.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

I am writing these lines from the Garden of Eden.

o o o

If you doubt that, let me recall a yarn of Dr. Garnett's. He was speaking at an engravers' supper, and told how in or near Newcastle-on-Tyne there was once a tremendous flood (or "flud"), by which it became the custom to reckon as a standard date.

o o o

At one Assize Court an elderly witness was called. "What is your name?" "Adam." "And where do you live, Mr. Adam?" "In Paradise." The Court became interested. "And how long have you been living in Paradise, Mr. Adam?" "Since t' flud."

o o o

The judge began to hint at contempt of court, but a barrister present who knew of "t' flud" and of Paradise-row, put matters right.

o o o

Now will you please believe that I'm writing from the garden of Eden, by the river Eden, near Carlisle. A master printer beguiled me—one drops unconsciously into the appropriate language in thinking of Eden—into a glorious riverside ramble on the right, the north, bank of the river, through field and copse, on towards its meeting with the sea.

o o o

But the only temptation was one which he repressed. It seems that there's a little so-called Spa spring, a small up-bubbling among stones, a thing most easily overlooked, but a genuine medicinal spring all the same, mildly sulphurous, like the objurgation of a much-enduring printer. It is known that the wayfaring man intent to find the spring, will discover it with its concreted covering, and bless those who have made the task of locating it so easy. He will taste its clear water, and identify its sulphurous nature, and pass on happy in having done the regulation thing; happy at least till someone tells him that the spring is hard by. He has merely sampled the bacteria bed effluent.

o o o

However, Carlisle master printers don't tempt printing reformers to that sort of fall. They could perhaps reconcile themselves to letting cost injurers and printing de-formers do the wrong sampling. For myself it was all right; I had no mishap to lament in my Eden. There was an angel at the gate when we returned, but it was only a printer's wife; and her drawn sword looked like nothing more dreadful than a supper knife.

o o o

As thought rambles on, I'm wondering if it isn't time that printing in Carlisle and its countryside became a little more Edenie, at any rate a little more ideal.

o o o

To attain this would not mean a turn round. It would only mean pressing on a bit more strenuously in the course already being pursued.

o o o

Hudson, Scott and Sons, for instance, showed only last Saturday, by way of their annual sports, how genuinely alive the directors are to the human relationship, and how wishful to see their staff "bright-eyed, full-breathed, and happy-hearted," to use words of which Ruskin was so fond. Their splendid institute opposite their works, and their ten minutes' stoppages for the workers lunch about ten or ten thirty are other indications of this temper of mind.

o o o

There are other like indications in the local trade. There is no employing body of printers I feel that I honour more than the employing printers of Carlisle of whom I have so far any knowledge. They are exceptionally good men; and it's time they knew it. For some of them don't.

o o o

Thurnam's, for instance, yield to hardly any house in the kingdom for the length of time of the services of their staff.

There's good jumping off ground for further improvement. And that might take several forms. No, I'll alter the phrasing and say, "and that will take several forms."

o o o

I will not allude here and now to the wages application being made by the journeymen printers of Carlisle, other than to say that I never knew of a negotiation of this character which appeared to be conducted in more admirable tone and temper. It is *sub judice* in fact, if not *sub judice* in form; and so I will leave that topic.

o o o

But I will suggest that just as the Carlisle authorities and its leading men are reported to me as now doing something for technical instruction in relation to textile goods, so they might do something for the advancement of printing.

o o o

I have been assured by young printers of the City (and I think I may add by printers hardly now very young, but still wishful for more craft knowledge) that they are very conscious of the lack of any sort of evening class, or any lectures, or any outings, or anything at all in the way of an organised effort towards interesting Carlisle's working printers as a whole in their craft; promoting their competence; fostering their ambition, or facilitating their social intercourse.

o o o

To be sure the Scott Institute does much for the amenities. I don't forget those sports, nor the Scott flower and vegetable show, which was a companion event of the afternoon; Mrs. G. Scott-Nicholson presenting prizes to winners in both events. These things are not small; nor do they fail to radiate an important and very healthful influence. But these sports and that flower show are after all special to one firm.

o o o

It's lecture hall was thrown open to employees of other houses when a technical talk was given by Mr. Greenhill, of Andrè and Sleigh's. That was doing the large and friendly thing.

o o o

But it will be understood I am envisaging some organised effort, not by one firm, nor related to one firm alone, but of common application to all the printers of the City.

o o o

Something corresponding to the Cleveland Guild of Printers, employing and employed, which does such good work at Middlesbrought might perhaps be attempted.

o o o

Printing is an important industry in the town. I emphasise this because the Carlisle master printers, who have somehow failed to realise what capital fellows they are mentally and morally, have also failed to realise how considerable is their present, to say nothing of their potential business scope. Two or three have talked to me about the "smallness" of their environment and opportunity.

o o o

Opportunity's as big as we are.

o o o

There was brought to my notice to-day a reminder, and in a way a sort of parallel, a sort of measure of the progress of the City.

o o o

I handled an 1880 copy of the railway time table issued by Halstead and Beaty, as the well-known Beaty firm was then styled.

o o o

Midland "arrangements," which chiefly consisted of two important trains in the day, are now represented by many trains and by a very notable network of table matter.

o o o

The London and North-Western's comings and goings could be easily got into one page; now they spread over some six or seven.

o o o

The whole large time table means a two or three weeks' attent and intent reading and revising by a responsible and very zealous chief; so scrupulously insistent is the firm that error there shall be none.

This Beaty time table, this substantial little book, is indicative at once of the development of Carlisle as a railway centre, and of the resources and enterprise of the Beaty firm, one of the most alert, most shrewdly enterprising and competently and worthily conducted that I have ever had the pleasure of meeting.

o o o

I think I break no confidence if I mention that to-day one master printer showed me the docket of a little job which he said betokened the new spirit in Carlisle. "This is a job we are doing for So-and-so"—another firm in the City. "We are helping them out. A few years ago it would have been an almost unthought-of thing that they should ever call upon our help at a pinch or we call on theirs."

o o o

This process of discovery of themselves—their real selves—and of their competitors, the real sort of men those competitors are, and the real red blood (and not diluted ink) which courses in their veins, is likely to continue.

o o o

I expect soon to see all the master printers of the City applying the lessons and suggestions of the Costing Congresses, and thereby becoming empowered to do better for themselves and do better for their staffs.

o o o

I expect, too, to see the other printers of Cumberland showing themselves wishful to have a formative and influential part in the new order of things in the printing craft.

o o o

It's perhaps nobody's fault in particular that there is no organic connection between Carlisle and Whitehaven and other Cumberland printers.

o o o

No one seems to have thought of it. But this is a time of happy ideas. And the happy idea has now entered the head of the northern printer that after all he is not and cannot be quite an irrelevance in the universe; that he has some relationship and responsibility in the scheme of things.

o o o

Here, as elsewhere, printing ink is proving not to be quite as black as it's painted.

o o o

Paraffin is a liquid so named because it has so little chemical affinity for other substances. The past spirit of north-west printerdom has been the spirit of paraffin. But we've no use nowadays for that sort of paraffin, nor for any of its paraffinalia of mutual distrust and over-working; and under-charging.

o o o

That's been an old story. But now we're writing some new "Tales of the Borders."

FRANK COLEBROOK.

Papermaking in Canada.

Wayagamack Co.'s Report.

The Wayagamack Pulp and Paper Co., which was formed two and a half years ago, has now completed its first six months of papermaking. The six months' earnings of the pulp and paper plants, with which is included the season's earnings of the lumbering plant, was $256,774. After deducting half of that portion of the earnings due to lumbering, the sum represents over double the half-year's bond interest and an amount equal to a rate of 4½ per cent. on the common stock. The installation of a third paper machine is now under way, and at the same time the output of the first two machines is being considerably enhanced as greater operating efficiency is developed. The company's liquid assets stand at about $745,000 against current liabilities of $524,000. At the same time a reserve against lumbering operations and contingencies of $168,266 has been set aside. In the report of the President it is stated that the company's timber limits are being conserved by the most modern and scientific methods.

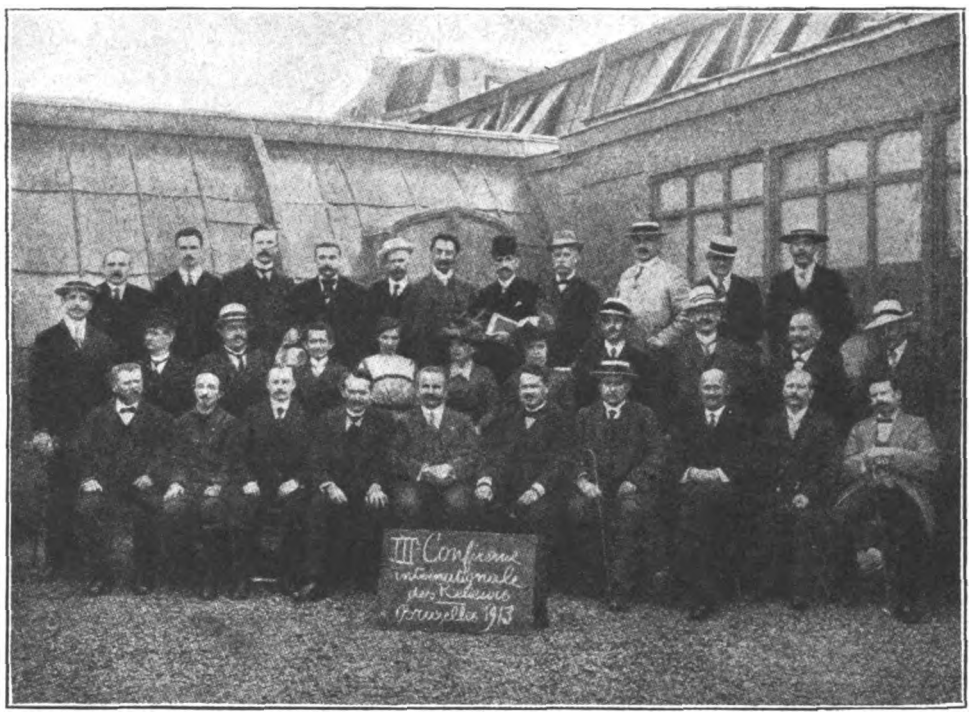
BOOKBINDING SECTION.

Bookbinding Notes and News.



In the current issue of the *Bookbinding Trades Journal* (volume 2, No. 13) Mr. Thomas Harrison, the able teacher of finishing at the Northampton Institute, London, continues his excellent series of articles on "The Organic Element in Design." The writer emphasises the canon that suitable ornament must be the first thought in a scheme of decoration, and that its basis shall then be considered according to the limitations of the process and the effect desired. He points out however, that "it would be quite reasonable to argue that on a given book, for some special reason, it is desirable to suggest in a decorative manner some flower, leaf, or other natural form." To illustrate his view the author points out that the violet is always regarded as Lord Byron's flower, and he proceeds to describe in detail, with the aid of his sketches, a decorative treatment of the violet suitable for Byron's best-known work, "Childe Harold." Mr. W. Mellor, the editor of the *Journal*, gives the second instalment of his interesting article on "The Novel with a Purpose." Mr. S. Gigney contributes a useful article on "Banding and Lacing Account Books," and there is an illustrated article on "The 'Hollington' Loose Leaf Sectional Ledgers."

We understand that Messrs. B. Riley and Co., of Huddersfield, the well-known firm of library bookbinders, have again secured the contract for the binding of the books in the Norwich Public Library.

There is a feeling with many bookbinders that quantity as well as quality is an essential factor in successful ornament. We recently came across the following sane remarks in the preface to the privately printed catalogue of books bound by Miss S. T. Prideaux, the accomplished craftswoman and author of several works on historical and artistic bookbinding: "Personally, I like decoration at all times used with great reserve, and strictly confined to very limited proportions. It gives me but little pleasure to see a book covered with a mass of small 'tooling' which effectually hides the beauty of the underlying material, and necessitates much study before the design can be distinguished. What is the use of selecting at great cost of money and time the finest and most flawless skins only to overlay them with a glitter of gold? To use inferior material, and in this way conceal its defects, has long been the device of the cheap bookbinder. When once we have learnt to appreciate the quality of skins we realise that hardly out of France may be found a book habited in the very best; much of the very costly and most decorated work turned out by our chief binders is put upon morocco that would only be used in France for what is contemptuously described as 'de la camelote.'"

In the August issue of the *Librarian and Book World*, edited by Mr. A. J. Philip, is a short article on "Library Bindings," in which it is hinted that arrangements are being made, apparently on a comprehensive scale, for the supply of publishers' books in library bindings. We note with satisfaction that the advocacy of library bindings made during the last few years by the library Press, by a number of librarians—particularly Mr. Geo. A. Stephen, the Norwich librarian, who is a well-known writer on bookbinding subjects—and by the *British and Colonial Bookbinder*, is being continued by the *Librarian*. This article also states that the *Librarian* is offering prizes of eight guineas in cash for the following:—Best article (not more than 4,000 words in length) on library bindings, £4 4s.; best glossary of bookbinding terms, £3 3s.; and best bibliography of bookbinding, £1 1s. We cannot understand why three guineas is offered for a glossary and only a paltry guinea for a bibliography; the compilation of a glossary is a comparatively easy matter because of the limited number of terms used in bookbinding (unless one drags in the terms of allied industries), whereas the literature of bookbinding is very extensive, and the compilation of a bibliography would involve a long and arduous search if it is to approximate to completeness. An up-to-date, well-arranged bibliography would be of much utility, and we hope that the best bibliography will be published.

In our last Bookbinding Number we referred to the fact that the Dexter Folder Co., of New York, have taken over the manufacture and sale of the Kast Insetting, Gathering and Stitching Machine. The T. W. and C. B. Sheridan Co. ask us to mention that they are the sole European agents for the Dexter Co., so that all enquiries for the Kast or any other of their machines for the bookbinding trade, from firms on this side of the Atlantic, should be addressed to them at 63, Mount Pleasant, London, W.C.

Delegates to the International Congress of Operative Bookbinders, June 1913.

It is announced that Mr. E. L. Hough, official receiver in bankruptcy, has been released from his trusteeship of the estate of R. S. Buffery, bookbinder, Fitzroy-street, W., who was adjudicated a bankrupt in 1911.

A few weeks since a binder at Weimar, in Germany, Herr Adolf Oszwald, gave a dinner to his workpeople, in celebration of the completion of the seventy-fifth year of his connection with the trade. He is 91 years of age, and has been for 60 years a master binder.

Employment in the German bookbinding trades continued unchanged during June. In Norway there was a slight improvement, the percentage of unemployed trade unionists, out of a total of 561, rising from 0·5 in April to 0·2.

Employment in the London bookbinding trade continued quiet during June, although the percentage of unemployed trade unionists, out of a total of 3,363, fell from 5·3 in May to 4·1, which is good as compared with the 5·6 recorded in June, 1912. In other parts of the kingdom there was but little change on the whole, the percentage of unemployed, out of 3,305, being 3·1, against 3·2 in May, and 3·4 in June last year. At Edinburgh employment was dull, but it was good at Leeds and Glasgow. With fancy and morocco leather finishers in London it continued bad, and worse than a year ago, but with other fancy leather workers it continued fair.

The largest Bookbinding Trade Union in the world is the German Binders' Federation, whose report for 1912—recently issued—extends over 108 pages. At the end of last year the Association had 33,428 members, almost exactly divided between the two sexes, the number of women being 16,711. During the year, 2,673 new members joined one or other of the Association's 132 branches. The receipts from subscriptions, etc., during the twelve months amounted to £47,000, and the expenses to £33,000, so that there was a substantial surplus to place to the credit of the accumulated funds, the amount of which, in the hands of the Central Executive, was thus brought up to £41,650, whilst £15,000 remained in the hands of the branches. In the course of 1912 seventy-six disputes or negotiations, affecting hours or wages, were handled by the Association, 10,116 operative binders, employed in 790 different establishments, being concerned therein. Fifty-four of these affairs were settled without strikes, but in eighteen strikes were ordered, four of them being of a defensive character arising from lock-outs. The gross result was that 5,619 persons had their weekly hours of labour diminished by an average of nearly 1¾ hours, whilst 5,882 persons had their wages increased by an average of about 1s. 10d. a week.

Amongst the contracts made by H.M. Stationery Office during June were the following:—Binding 20,000 Manual of Field Engineering, 1911, J. Adams, 76-78, Grays - inn - road, W.C.; 19,950 cps. Field Service Pocket Book, 17,500 cps. Instructions regarding Inland Telegrams, M. Bell and Co., Temple Works, Cursitor-street, S.E.; 1,250 cps. "Scotch Education Reports, 1912-13," Harrison and Sons, St. Martin's - lane, W.C.; supplying 300 portfolios, Waterlow and Sons, Ltd., Finsbury, E.C.

An interesting report on the new Technical Art School at Offenbach, Germany, a prominent centre of the fancy leather goods trade, has just been published by Mr. R. R. Carter, Principal of the Walsall Art School. Mr. Carter, it appears, was very struck during his visit of inspection by the care devoted to costing, as well as designing. Each student had a large folio book, in which he had made at the top of each page a drawing of a leather article, such as a purse, pocket book, or bag. Following the drawing was a calculation of the cost of material required in the article, and the time spent in making, and a total was thus arrived at from which the student learnt the value of his labour and the market value of the article he had made.

The employment of women in bookbinding was among the questions debated at the recent International Bookbinders' Congress at Brussels. It was evident that there was a good deal of difference of opinion as to which operations should be considered as strictly women's work, and *vice versa*, but the thirty and odd delegates, amongst whom were three ladies, were agreed, as a whole, upon the importance of carefully delimitating the two branches of labour. It was generally agreed that woman has conquered so important a position in the trade that to maintain an attitude of antagonism toward her would be absurd. One of the most important matters to attend to, after the delimitation of her work, will be to see that a proper minimum wage is accorded her, though this is a point that the master binders' associations will probably resist if they can. Here, however, the international organisation—which it is

Digitized by Google

intended to strengthen in every way possible—will prove its utility. Operative binders, in the fourteen countries whose national associations are affiliated with the International Secretariat of Bookbinders, will be kept fully informed of all local movements of importance by means of the Secretariat's organ, the *Mitteilungsblatt*. The next International Conference of Operative Binders is to be held in 1916, at Christiania.

Some rather plain speaking was indulged in by both sides in the Court of Chancery at the end of last month, on the occasion of the hearing of a winding-up presented against Messrs. C. W. Forward and Son, Ltd., the well-known London wholesale binders. The concern had previously decided on a voluntary winding-up, but the Court converted this into a compulsory winding-up. A full report of the proceedings appeared in the issue of this journal for July 31st.

The City and Guilds of London Institute Examinations in Bookbinding for 1914 will be held as follows:—Written Examination in both branches on Tuesday, April 28th, from 7 to 10 p.m. Practical Examination in Finishing on Saturday, May 2nd, from 2.30 to 6.30 p.m.; and in Forwarding on Friday, May 8th, from 6 to 10 p.m., and Saturday, May 9th, from 2.30 to 6.30 p.m. Candidates must send in their entries to the Secretary of the local training centre not later than March 11th, and all specimens of practical work or designs must be forwarded to the Institute by April 27th. The syllabus and scale of fees remains unaltered. The list of "Persons Registered as Qualified Teachers" in Bookbinding includes nineteen names, against seventeen last year, but although it is said to have been revised to March 31st, 1913, it still includes the name of Mr. F. Sangorski, who died nine months before that date. Four others of the teachers named did not have a class last session.

According to the twenty-ninth annual report of the Portsmouth Public Libraries, which has just been issued, 5,950 books were bound or rebound during the year ended March 31st. This report also gives the following particulars regarding the bookbinding for the libraries: "In the years 1910–11, 4,334 books were bound by contract, and 989 by our own bookbinders, a total of 5,321 volumes, at a total cost of £565 11s. 9d. In the year 1912–13 our library binders bound 5,950 volumes, at a total cost of £455 3s. 6d. From this we see that 629 more books were bound at a less cost of £110."

A general advance in the prices for electrotyping and stereotyping is announced to take place on September 1st. Under the new scale bookbinders' electros will be charged at 2d. per square inch, unmounted, with a minimum of 1s. for any block, mounted or not. The making of electros direct from the surface of bookbinding leathers is now a recognised branch of the trade, the charge varying according to the thickness of the copper shell desired.

Mr. John J. Pleger, whose writings on binding matters have appeared from time to time in these pages, has now left Manila for the United States, and recently about 400 Americans and Filipinos met to bid him farewell. Mr. Pleger was the popular foreman of the bindery division of the Bureau of Printing, at Manila, P. I., and the ball and reception were given by the one hundred employees of the bindery division, to show the high esteem in which their departing chief was held. Mr. Pleger has been connected with the Bureau of Printing for the last eight years, and the high standard of binding executed by the Government may be attributed to his skill in handling the large force of men and the many labour-saving devices he has introduced, which have saved the Government many thousands of dollars. Mr. Pleger is considered one of the foremost authorities on bookbinding, and enjoys an international reputation. His many articles on bookbinding have attracted wide attention, especially in England and Germany, where he is recognised as the foremost authority in his trade. He has also discovered binding materials which are immune from attack by croton bugs and other insects. He is the author of "Inconsistencies in Bookbinding," and has recently written a 500-page book entitled "Bookbinding and Its Auxiliary Branches." While in the United States he will have this published. The book is written in clear language is profusely illustrated and should prove of great value to not only the novice but the skilled craftsman.

The death has occurred, at Croydon, of Mr. John Somerton, formerly of Worcester, in his 87th year. He was a bookbinder in that city, but 20 years ago accepted service under the National Telephone Co.

Negotiations have for some time been proceeding between representatives of the bookbinders in Scotland and their employers on the question of the employment of female labour in the manufacture and binding of books. The question of wages or working hours does not enter into the dispute at all, the sole point at issue being the number of female as compared with male workers. These negotiations have now reached a point at which the men's representatives consider they can go no further, and a ballot of the members of the Bookbinders' Union is to be taken to determine whether or not the men should strike in order to enforce their demand on the employers. About 1,400 bookbinders are employed in Scotland, several large publishing houses in Glasgow and Edinburgh being affected, as well as the smaller bookbinding establishments. The trade is at present good, and a remarkably small percentage of the members of the Bookbinders' Union are unemployed.

The Corporation of Cheltenham have recommended for acceptance the tenders for bookbinding of Cedric Chivers, Ltd., Bath, and Riley and Co., Ltd., Huddersfield.

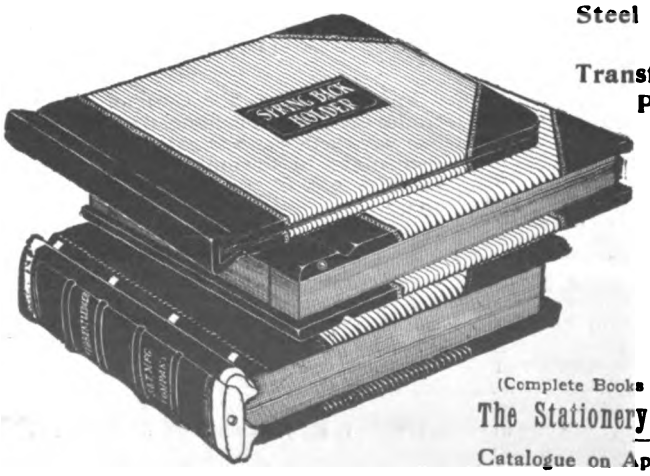
An American contemporary tells of a bindery producing a specialty requiring several operations to complete the article, that could trace a good many valuable hours of non-productive, yet chargeable, time to the transferring of the product from one machine to another. Floor space did not permit the use of trucks which might have been used. To overcome this, special casters were obtained and fastened to the legs of every table in this department. Immediately a surprising amount of time was saved and later the department showed much higher efficiency.

The Bookbinders' Department of the Ben Franklin Club of St. Louis, U.S.A., continues to hold its meetings, and at the last some interesting cost figures were put on the blackboard showing cost on hand folding and pamphlet binding. These figures would seem to indicate that they are still not getting enough for their product. The members of this department are very earnest in getting all the information possible about costs, and for this reason take a lively interest in the work of the club.

During the past twelve months the members of the National Union of Bookbinders and Machine Rulers have been actively engaged in remedial work in various parts of the United Kingdom, with very gratifying results. As the result of an agreement entered into some time ago with the Master Printers' Federation, the working hours in most provincial towns have been reduced to a maximum of 51 hours per week. The following advances of wages have been secured during the same period:—

	Minimum Wage Increased from				
	s.	d.	s.	d.	
Belfast	32	0 to	34	0	per week.
Blackburn	31	0 to	32	6	"
Bradford	33	0 to	35	0	"
Bristol	28	0 to	30	0	"
Cardiff	34	6 to	36	0	"
Huddersfield	30	0 to	32	0	"
Hull	32	0 to	34	0	"
Manchester	33	0 to	36	0	"
Merthyr Tydfil ...	30	0 to	32	0	"
Newcastle-on-Tyne...	34	0 to	35	6	"
Newport (Mon.) ...	30	0 to	31	0	"
Oldham	33	0 to	35	0	"
Preston	31	0 to	32	6	"
Swansea	30	0 to	34	6	"
Wigan	32	0 to	34	0	"

There are several other advance movements pending, and the prospects of success are very satisfactory.



The dispute with Messrs. Burn and Co., Kirby-street, E.C., which it was hoped had been satisfactorily settled, has again broken out; the whole of the binders have tendered

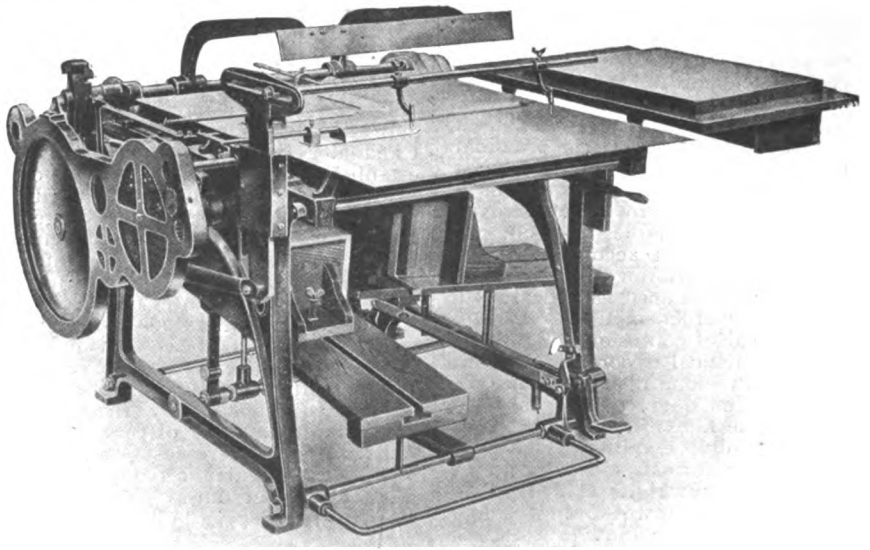
their notices. When the settlement was arranged some weeks ago it was, we believe, on the distinct understanding that the London Chamber of Commerce agreement, that is loyally accepted by the London employers, should operate at the Esher works of Messrs. Burn and Co., with one or two agreed exceptions. On this understanding the men resumed work. Within a few days of the settlement the firm issued a notice to their customers that an agreement had been arrived at with the trade union whereby the Esher branch of the firm could be carried on under non-union conditions. This was in contradiction to the assumed settlement, and was at once repudiated by the Union. After various futile attempts to interview the firm, the men again handed in their notices, and left work on Friday last.

Bookbindings

AT THE

National Art Competition Exhibition.

The display of work submitted for the National Art Competition, which is being exhibited in the North Court of the Victoria and Albert Museum at South Kensington until the end of this month, is worth a visit from the student of bookbinding. The premiated examples in that branch of art, some thirty in number, are arranged together in a double case. In looking over them, one is, in the first place, struck by the fact that patterns made up of small leaf forms predominate, a large majority of the covers being thus decorated, the elaborate inlays and mosaic work so beloved of the advanced art school student being not nearly so much in evidence as at some displays of this kind. The bronze medallists this year are A. J. Vaughan and J. A. Odam, of the Camberwell School of Arts and Crafts, and Miss Mary E. Thomason, of Wolverhampton. Two volumes bound by the first-named are exhibited; *(a)* an 8vo edition of Tennyson in crimson morocco, adorned with small leafy sprays arranged in a large central and smaller corner ornaments, and (*b*) a copy of Shaw's "Encyclopædia of Ornament," 4to, in green morocco, the covers simply decorated by a five-line panel in the centre (the lines interlacing in the corners) with an outer four-line border, relieved by occasional groups of dots and tiny roundels, the whole design somewhat recalling those in vogue amongst the English binders in the early part of the last century. Neither of these books presents anything very remarkable in the way of decoration, but sound workmanship, which is more important, is in evidence throughout. Miss Thomason also selected an 8vo Tennyson to work upon, but in this case the padded covers of olive-green leather are decorated with an embossed design, in slight relief, made up of a conventionalised grouping of wild rose blossoms and stems very effectively arranged. The panels of the back are treated in similar fashion, there being no gold whatever about this binding, save on the edges, and what was used there has seemingly oxidised. It may be remarked, *en passant*, that in an adjacent wall frame are several rather elaborate book cover designs embossed on light brown leather, the work of typical lady art binders. The one we liked best, for a small folio altar service book, bears a simple crucifixion scene in strong relief, which is protected from the effects of rubbing by blue enamelled studs at the corners. This is by Miss Gladys E. Orton, of Leamington, and has gained her a bronze medal. We noticed amongst the binding exhibits a few hailing from centres of art or technical instruction not usually represented in this connection. There is, for instance, an 8vo volume of Keats, bound by Alex. Pettett, a student at the Wigan and District Mining and Technical College, in maroon morocco, with a plain cross outlined on the covers within a rectangular line border, the general simplicity of the design being relieved by groups of tiny coloured inlays at the centre and angles. There are two or three exhibits from the School of Art in Margaret-street, Birmingham. A. W. Freeman has one, a copy of the Vale Press edition of Browning's "Romances and Lyrics," a royal 8vo, in crimson morocco, the covers ornamented with a border in a sort of cable-work, enclosing an oblong central panel. The angles are decorated with floral ornaments. This neat piece of work has been awarded a book prize. Another Birmingham exhibitor, F. Dorricott, has a 4to copy of Milton's "Lycidas," in russia, with groups of leafy sprays arranged in small central and corner circular panels, with the title in bold roman letters on the upper cover, a comparatively plain but effective bit of binding. The work of still another Birmingham competitor, Wm. E. Gibbins, is represented by a finely bound copy of Jacquemart's "History of Ceramic Art," a royal 8vo, in white pig-skin (?), the covers bordered with a series of small rectangular panels divided by interlacing gold line ornament. The centre is left plain, the edges goffered, and some plaited clasps provided, which look much too frail for the size and weight of the book. This has been Commended, and a like recognition of good work has deservedly been bestowed on Miss Clare Hamill's (of the Acton and Chiswick Polytechnic) "Tristan and Iseult," a folio volume massively bound in polished red-brown morocco, the sides decorated by a bordering of interlacing ribbon pattern, of Celtic type, with large ornaments of similar character at the corners. There is no gilding on this binding, save the lettering on the back, and it appealed to us as quite one of the best pieces of work on view. Another commended volume was Otto Bollman's Longfellow, a thick 8vo. in dark blue morocco, with a plain line border and square leafy ornaments at the angles. The Camberwell School of Arts and Crafts is the most represented institution in the Bookbinding Section of the Exhibition, sending eight examples of its students' work, whilst the Camden School of Art has four. The Leicester School of Art sends an unusual exhibit, three 8vo volumes bound in cloth, with plain gilt line decoration and bold roman title lettering on the cover; nice little bits of work, suggesting that there are hitherto unsuspected possibilities in the treatment of this rather despised material. One mannerism may be called attention to, viz., the practice of interposing a gilt dot between the figures of a date. Several students indulged in this, so it is evidently popular, but why they should think that 1·9·1·2· is better than plain 1912 we can't for the life of us see. One competitor had his date thus—19 C.H. 12—the initials being his own. Lucky for him, perhaps, that the book was too, and not for sale! In conclusion, attention may be drawn to a couple of frames of "Studies of Bindings of Various Periods," exhibited by Grace A. Gamble, of Burton-on-Trent, chiefly facsimiles in colours, well executed and decidedly effective.



The report of the examiners as regards bookbinding, is presumably chiefly due to Mr. Douglas Cockerell, and is to the effect that the examiners welcomed an increase both in numbers and in the variety of the designs, but still found that in many cases the effect is marred by incompetent execution. "The problem of decorating the back in unison with the sides has again been entirely shirked in many instances. While it is permissible to make a design for a back only, a design for a side only is incomplete. The examiners are glad to have thoroughly workmanlike working patterns for tooled designs, but they note that here again the problem of the back has

been neglected. They are also pleased to see three specimens of cloth binding, although they consider that gold tooling is not the most workmanlike method of designing for cloth binding, and they would like to see carefully drawn working designs for the block cutter."

A Bindery Statistical Record.

By ROBERT T. FRAILEY in *The American Printer.*

In our Bookbinding Number of December last we reprinted some sound advice by Mr. Frailey on keeping an account of the stock in a bindery. In the present article he deals with the equally important subject of preserving a detailed record of all orders received and carried through.

For many years, says Mr. Frailey, it has been customary for business concerns, large and small, to take what is termed "An account of stock," or "An annual inventory," to ascertain just what the profit and loss accounts will reveal for the year. To properly accomplish this it is necessary to go over the books and records for the previous year's production, income and expenses, and then draw a balance. Again, it is a duty developing upon the officers of a firm to submit an annual report for the benefit and information of shareholders; and it is impossible to have such reports too explicit, on account of the severe and critical scrutiny to which they are subjected. A good manager will never fail to have his annual report of the year's business in proper form in every detail, showing a proper interest in the work entrusted to his stewardship. As a matter of fact this is as true in the printing and binding business as it is in all others. It is necessary that these reports should be technically correct; first, because it is right and proper that the employers should have an exact and intelligent understanding of the state of their investments, and second, that the slightest suspicion of mismanagement on the part of the manager may be eliminated. A safe and sane method to obviate any such uncertainties as those mentioned above is to inaugurate a record system. In this instance we shall refer to the bindery division in publishing houses only, and deal exclusively with the "Bindery Statistical Record."

In the bindery statistical record should be recorded all matter pertaining to each class of work from the time it is received until its final delivery. It may be bound in the regular blank book forms. Strength should be the principal feature in binding, as it is intended that it should be carefully kept and remain as a matter of record. The form herewith is a foundation perfectly reliable in itself, but subject to rearrangement according to the nature of the work performed. A form of this nature must of a necessity deal with the ever present "order number," without which a great deal of confusion will prevail. The bindery statistical record reveals all information upon the one line, extending the entire width of the page, the pages being numbered and the lines being numbered at each end of the subject matter. This is so arranged that any information desired can be obtained easily and quickly.

The line number is arranged in the first and last column in each line. The second column indicates the date the work is received. The first division of the column designates the month, the second division the day of the month. The most reliable method of locating an order for work is by its number. This is found in the third column, and is provided with four unit lines, so that a book of two hundred pages and fifty lines to a page will provide for ten thousand orders.

The next important column is the "name column," in which is placed the name of the individual or firm placing orders for work, followed by a column for their business address. The adjoining column is that of quantity, designated "number of books," and will accommodate an order from one to ten thousand books in the unit lines found in this column. This is followed by a column indicating size, *i.e.*, duodecimo, octavo, quarto, etc. The "style" column is a very essential one and designates the nature of the binding, viz., cloth, half morocco, full morocco, sheep and the many attending styles in which books are bound. The succeeding column indicates the name or title of the work. This column concludes all information complete as to the construction of the work.

The feature placing the statistical record as an important book in a bindery is the fact that it locates an order immediately, while in course of completion. This information is found under the heading "located in [sheet or folding-room, forwarding-room, finishing-room, etc.]," these facts being reported each day on report forms for this purpose.

Next we have to consider the cost account, conjectural and actual. This is provided for in the two succeeding columns. In these the difference between an estimate and an actual cost may be readily detected. An estimate may be given and errors creep in unnoticed. Be this as it may, no errors ever gain admittance in an actual cost. The two columns are, first, "estimated cost," and second, "actual cost."

The next column is that of "delivery," and practically corresponds with the date column, the notation being the same, the only difference being that the one begins while the other completes the transaction.

The final column is that for "miscellaneous," in which any matter of a nature not otherwise provided for may be recorded.

A NEW Canadian Price List for Binding.

The Cost System movement in the printing and allied trades has just borne good fruit in Canada. There is a government printing establishment there, but a good deal of binding work is nevertheless put out to private firms by contract. These latter met together last autumn with the view of formulating a better scale of prices for such work. One was accordingly drawn up and presented to the Canadian King's Printer for acceptance, and he has lately intimated his willingness to adopt it subject to certain modifications. The average increase over the old schedule of prices is about 25 per cent., though the new rates first proposed by the binders often showed an increase of cent per cent., and even more in some cases. Take some of the items in the scale for pamphlet binding, for instance, as set out below. (25 cents equal about 1s.)

Folding:	Old Rate cents.	Proposed Rate cents.	New Rate cents.
1 fold, per M.	25	50	40
2 fold, per M.	45	95	60
3 fold, per M.	65	140	80
4 fold, per M.	85	185	100
Extra for oblong, per cent.	10	10	10

The new rates are based on the use of super calendered paper (if coated paper is used an additional 25 per cent. will be charged) and on sizes from 4x6 up to 7x10½-ins.; if size is larger or smaller than these an additional 10 per cent. will be charged.

The old rate for wire stitching was based on a maximum of five signatures, with an allowance of 5 cents extra per M. stitches for each additional signature; the proposed new rate was based on a maximum of five signatures, with an allowance of 5 cents per M. stitches, saddle stitch, and 6 cents. per M. stitches, side stitch, for each additional signature; the actual new rate is however based upon a maximum of four signatures, with an extra allowance of 5 cents per M. stitches extra for each additional signature. It is 35 cents per 1,000 for saddle and 45 cents for side stitches.

The following are details of the old and new rates for other operations in this branch of work:—

	Old Rate. Cts	New Rate. Cts.
Trimming:—		
Pamphlets, 64 pages or less, per M.	50	80
Additional for each 16 pages over 64, per M.	5	5
Round cornering—(two corners):—		
Five signatures or less	100	150
Four signatures or less	—	100
Each additional signature	15	15
Covers, pasted or glued on pamphlets:—		
Per M. up to 64 pages	100	125
Per M. for each additional 16 pages	5	5
Additional for extended cover	50	50

The allowance for profit on material supplied by the printer remains as before, viz.:—

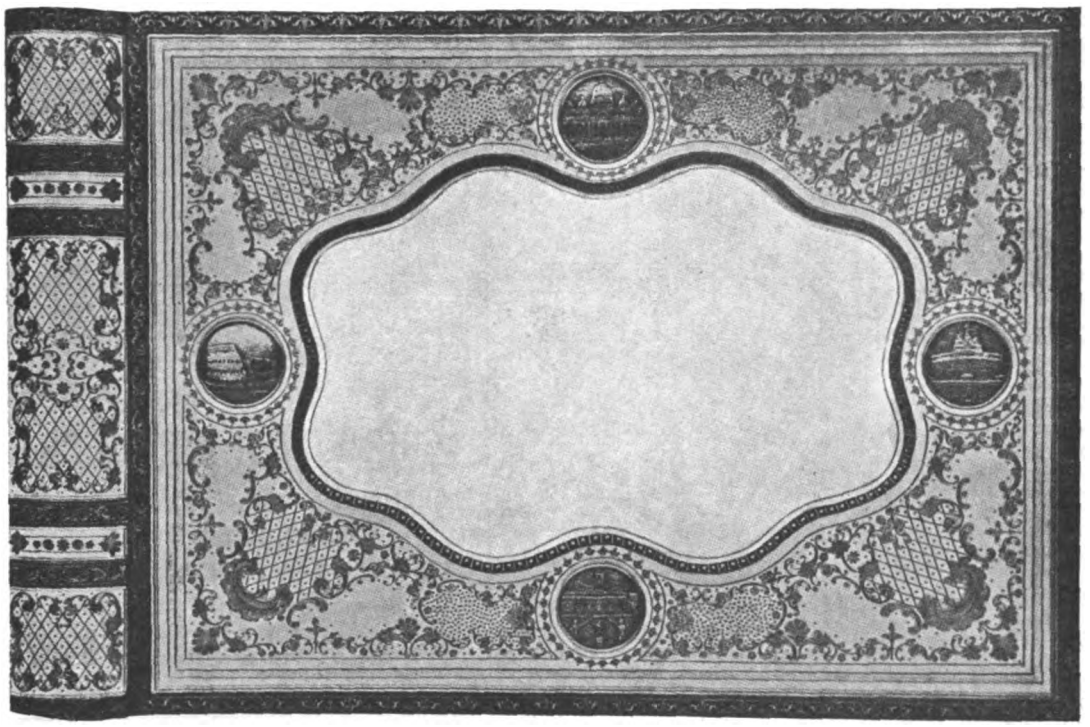
	Per Cent.
Where cost is $10 (£2 2s. 0d.) and under	33⅓
Where cost is $25 and under	25
Where cost is over $25	20

In the new schedule of prices there is an addition to the effect that where material is supplied by the Government printing office 10 per cent. of its value may be allowed by the King's Printer, to cover responsibility and cost of handling. This charge does not apply where only part of the operations necessary to the production of a completed job are ordered.

A Plea for Uniformity in Bindings.

An aid to promptness and regularity in bookbinding work is the standardisation of trimmed sizes, squares and bands. To obtain uniformity of sets, it is often necessary to send a bound copy as sample; and if the customer inadvertently fails to do so, a discrepancy in style or size may result, says a writer in the *American Printer.* This is because the trimming, squares and bands have not been standardised, nor a copy of the back lettering kept. The trimming of all volumes should be standard. Magazines of one kind should be trimmed for all customers alike: the squares should be the same on all letterpress books up to ten and one-half inches in length, and increased one sixteenth inch on large books up to fourteen inches. The back of the book should be divided into five or six equal parts, after measuring off one-half inch at the tail. A brass rule the size of the trimmed book, bent on one end one-fourth inch, and with squares marked with an awl and holes drilled for the position of bands, should be used as a pattern. The headbands should be uniform, to permit the leather, when the heads are set, to be rubbed down even with the boards. The finishing should also be uniform. The record may be kept by alphabetical card index. After the book is finished, a copy of the title and rolls used should be made, and the

Digitized by Google



trimmed size written on the card. Note may be made on the back of the card for style of binding and name of customer. Thus at any future time the same class of work can be bound in uniformity without fear of varying the bands, lettering, size of book, squares, or style of binding.

Italian Bookbinding

IN THE

NINETEENTH CENTURY.

This forms the subject of an interesting article by Sig. Guido Giannini in the June number of *Il Risorgimento Grafico*, Milan. At the commencement of the century, he says, the art was in a very neglected state, the glorious traditions of the golden age of Italian binding having been almost entirely forgotten, and the extant specimens of its productions locked up in collections, where they were seldom looked at or studied. The way to a revival was paved by the arrival of a few foreign binders in Italy, whose example in artistic workmanship began to be followed by the natives. Progress was, however, very slow at first, and largely confined to the more or less slavish imitation of out-of-date styles that had had their day in other countries, chiefly France. But as time went on there was less of mere copying and more of attempts at originality in the way of design. Old motifs were not so much made use of, their place being partly taken by others, not previously utilised for book decoration purposes. For example, the frescoed ornament on the walls of the salons in the Vitelli Palace at Castello, the beautiful sunk panel decoration, likewise of Renaissance date, in the Royal Gallery at Venice; the wrought iron screen that encloses the Scaliger monument at Verona, etc., have all contributed beautiful details. Iron plaques of Siennese character have also been used with excellent effect. There is, in fact, a wealth of artistic material in Italy and elsewhere, awaiting exploitation at the hands of the art binder. The chief decorative characteristic of Italian nineteenth century bindings is the use of parchment covers, either gold tooled or having such accessories as mosaics of leather, metal mounts, colour decoration, etc. This is partly derived from old models, but is nowise dependant on external influences. Sig. Giannini considers that this style is destined to achieve even greater triumphs in the near future than in the recent past. One example of this class of book cover decoration, the work of Sig. Enrico Andersen, of Rome, we reproduce herewith from among the many fine illustrations which add so much interest to Sig. Giannini's article.

A Modern Italian Binding in Parchment, Gold Tooled, and Decorated with Inset Vignettes.

The International Bookbinders' Union

An Appeal to Britain and America.

In our Bookbinding Number for November last we gave some details of the membership, etc., of the international organisation to which most of the Continental operative bookbinders' associations are affiliated. The unions in English speaking countries, however, are not connected in this way with their European brethren, an aloofness which is felt by the latter to be inimical to the interests of working binders as a body. Therefore, a short time previous to the holding (in June) of the International Union's Congress at Brussels the following appeal was sent to the Bookbinders' Trade Unions in England and America:

Fellow-Workers—An invitation to join the International Secretariat of Bookbinders' Unions has been repeatedly extended to you, but, unfortunately, neither the National Union of Bookbinders and Machine Rulers of Great Britain nor the International Brotherhood of Bookbinders of North America have hitherto decided to become affiliated. This is certainly due to the fact that the purpose and the actual work of this International Secretariat is not sufficiently known. It is for this reason that we should like to outline briefly the main objects of our organisation.

The International Bookbinders' Secretariat was established at an international conference of bookbinders held in 1907. Delegates from Belgium, Denmark, Germany, Norway, Austria, Sweden, Switzerland, and Hungary were present at this conference. All unions of the European continent, however, had maintained some sort of international relationship long before that time. A mutual agreement between the German, Swiss and Austrian unions had been in existence since 1884. This agreement provided for the mutual assistance of travelling members, and so forth. Later it was extended by the admission of the bookbinders' unions of Denmark, Sweden and Norway. In view of the ever-increasing number and importance of labour disputes, however, and in view of the fact that the employers were always eager to fight us with foreign labour and blacklegs, it was thought desirable that our unions should enter into closer connection one with the other, and that they should assist each other on an international basis whenever such assistance might be of use to the trade as a whole. A special international conference of representatives of bookbinders' unions was organised for 1905, when this question was to be taken into consideration. That conference did not take place, owing to unforeseen difficulties, but it was held officially in 1907.

Eight unions joined the International Secretariat during the first year of its existence, these unions covering Belgium, Denmark, Germany, Austria, Norway, Sweden, Switzerland and Hungary, with a combined membership of 19,610 male and 14,566 female, or altogether 34,166 members. Their aggregate annual income amounted to £46,050, their expenditures reached the sum of about £39,300, while at the end of last year the reserve funds amounted to £18,650 in the central, and £10,000 in the local funds.

At the end of 1911 the following countries were affiliated to the International Bookbinders' Secretariat: Belgium, Bosnia-Herzegovina, Bulgaria, Denmark, Germany, France, Italy, Croatia-Slavonia, Norway, Austria, Sweden, Switzerland and Hungary. They had altogether 23,959 male and 20,644 female members, making a grand total of 44,607 bookbinders organised in the International Secretariat. In the year just referred to they had a combined income of £60,000, their expenditures amounting to £43,000, while their aggregate funds amounted to £68,000. These figures prove the rapid growth and development of our affiliated unions, which have been making very satisfactory progress both as regards finance and numbers. The numerical strength of these various unions, of course, depends much upon the size of their respective countries and the *rôle* the trade plays in such countries. The largest affiliated union, the German union, for instance, numbered 15,950 male and 14,805 female members at the end of 1911, whilst the smallest society, which represents the bookbinders of Bosnia-Herzegovina, reported only 31 male members.

We are also in continual communication with bookbinders' societies in Russia, Finland and Servia, and the influence of the entire organisation is much felt even in these countries. This fact should be of special interest to our American fellow-workers, whose position is specially threatened by the uncontrolled emigration from eastern Europe, where the general standard of living is so low, and where the despotism of autocratic governments has had its share in lowering their moral condition. If our American friends were to join the Secretariat, we believe it would be possible to check this emigration to a certain extent, and it would enable them to publish accounts of their conditions through the agency of our Secretariat, and thereby make it clear to would-be emigrants that the luring appeals of shipping agents and employment sharks have no foundation in present-day labour conditions. The American unions would be in a position to assist the Inter-

national Secretariat in making all intending emigrants acquainted with such conditions, and so prevent them becoming, willingly or unwillingly, wage cutters or strike breakers. We need scarcely point out that even international boycotts can be of value to labour, as has been well proved by the boycott the German unions declared against the Butterick fashion papers. This boycott, declared at the request of the American Typographical Union, was carried on for several years, with the result that the firm had to give way to the demands of their men in America, owing to the pressure brought to bear upon them by the workers in Europe.

Furthermore, it might be said that it would certainly be in the interest of your organisations if all *bona fide* members could be induced to join you upon landing on your shores, so as to get them under your control and influence, for otherwise they are partly taken up by rival organisations or fall victims to the wiles of the employer class.

We are well aware of the fact that in the case of the American union it is the branch which fixes the conditions of admission, while in other countries it is customary that such conditions are uniform throughout the entire union. Entrance fees in that case vary very much, making it very difficult for many immigrating fellow-workers to join, apart from other conditions imposed. It is put forward by these branches that they cannot take the risk of admitting members without high entrance fees, as it might happen that the relatives of transferred members would claim the extraordinary high death benefits usually paid by the American unions. We believe, however, that it would be possible to come to a mutual agreement whereby transferred members would be entitled to free admission and to the usual trade benefits, while they would be required to pay regular dues for a certain period in order to become entitled to superannuation, old age, and death benefits. A reciprocity agreement which is in force at the present time for all unions affiliated to the International Bookbinders' Secretariat merely provides, in the case of transfer of affiliated members, for free admission, travelling, unemployment and sick benefit. Similar arrangements, by which the specific interests of the British and American unions could be safeguarded, might certainly be agreed upon supposing they were to join our International. Our American friends, moreover, should not overlook the fact that the *bona fide* immigrant is usually a healthy, able-bodied man who would be scarcely liable to fall a burden on the benefit funds for a long time after landing.

We certainly hope that you will give the foregoing facts due consideration, and that your organisation will soon decide in favour of affiliation. It might not be amiss to add that the American Federation of Labour, as well as the British Federation of Trade Unions, is affiliated to the International Secretariat of Trade Union Centres, together with the national centres of sixteen other countries, Germany included.

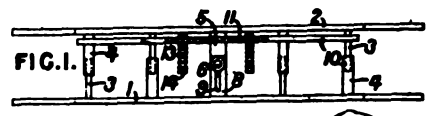
Mr. Samuel Gompers, president of the American Federation of Labour, who visited Berlin in 1910, was kind enough to promise that he would, upon his return, try to improve the relations between the respective unions, and also try to get the American bookbinders to come within the fold of our trade International. It is most pleasing to note that Mr. Gompers' tour in Europe, as well as the recent visit of Mr. Legien, who, upon the invitation of the American Federation of Labour, visited a great number of cities and trade union headquarters in the United States, have been helpful in promoting a better understanding and co-operation between the European and American labour movements.

We should also like to set forth briefly the specific value such international relations have for the working classes in Great Britain. The unions of the printing trades who were engaged in a serious struggle for a reduction of hours last year were liberally assisted by their continental brothers, while the recent movement of British transport workers received active support and financial aid from all German and other continental unions, including the bookbinders. This proves that international solidarity may even be helpful and necessary for the unions of a country which can boast of the oldest labour movement.

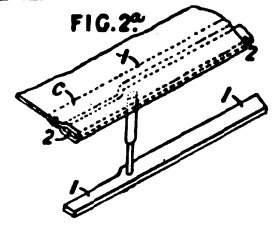
It is scarcely necessary to draw attention to the ever-increasing improvement in the international organisation of capital and of the employers of all countries. These facts should be further arguments for the necessity of the closer affiliation of the bookbinders and kindred trades in all lands.

Might we suggest that you authorise your union executive to join the International Bookbinders' Secretariat at once, if possible, and to admit *bona fide* members of our international without entrance fee, or, at least, at a reduced fee. Copies of rules and of reciprocity agreements in force have been forwarded to your office. We shall be glad to give any information upon request.

This straightforward and well thought out appeal was signed by Herr Emil Kloth, Secretary of the International Bookbinders' Secretariat and President of the National Union of German Bookbinders.

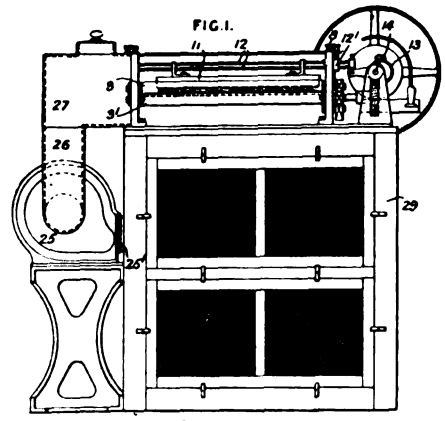


Some Bookbinding Patents.

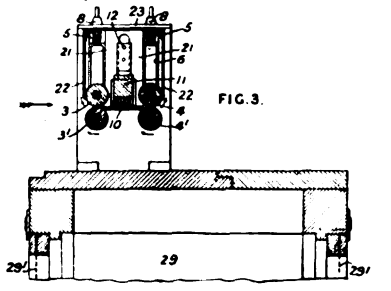


A locking-follower for loose-leaf binders, invented by Mr. F. Harcourt, comprises a frame made of two plates H, H¹, held apart by studs G¹, G², G³, G⁴, and containing two

sliding bars D, D¹, guided by the studs. The plates H, H¹ and the bars D, D¹ are apertured to pass over the filing posts, and the bars D, D¹ are operated by means of a key-operated conical nut F to grip the posts.



The side plates 1, 2, Fig. 1, of a loose-leaf binder patented by Mr. H. M. Douglas, and having telescopic posts 3, 4, are provided midway of their lengths with locking plates 8, 5 respectively, the plate 8 being slotted at 9 to receive a clamping screw 6 carried by the plate 5. Passing upon the telescoping posts is a hollow compressor bar 10, in which a small slotted plate 11 is arranged to slide, the edges of the slots being adapted to engage with circumferential grooves 13 on pillars 14 attached to side plates 2 in order to lock the



bar 10 in a clamping position. The ends of the side plates 1, 2 are reduced in section as shown in Fig. 2a so as to form a wider hinge or creased portion *c* at the ends of the cover, thereby reducing the wear at this part and relieving the covers of the binders from stress at the ends of the frames. The flexibility of the leaves used in the binder is increased by forming the leaves with a series of gaps or parallel rows of holes near the folding edges.

A machine for removing surplus metal from paper, cardboard, leather, and like goods which have been blocked with gold leaf or like material, has been patented by Messrs. J. Charlesworth and A. Jubb. It is

constructed with reciprocating brushes, or wipers, arranged in a closed casing, nipping-rollers for feeding the goods past the brushes, and a fan acting to draw the surplus metal from the casing in which the wipers are arranged. As shown, the blocked goods are fed by rollers 3, 3¹, Figs. 1 and 3, over a platform 10, and while passing over this the goods are acted on by a brush 11 carried by rods 12 which are reciprocated by eccentric 13 on a driving shaft 14, which also drives by worm gearing the rollers 3, 3¹ and other feed rollers, 4, 4¹. The upper rollers 3, 4, are pressed towards the lower rollers 3¹, 4¹ by springs 5 acting on bearers 6 and adjustable by wing nuts 8, and the rods 12 pass through blocks 12¹, which can be similarly adjusted to vary the pressure of the brush on the work. The brushes and rollers are enclosed in a casing 21 formed by sides 22 and a movable cover 23, the platform 10 forming the bottom. A fan 25 communicating by a pipe 26 and air box 27 with the casing 21 removes the surplus metal from the casing, and delivers it by an outlet 25¹ to a chamber 29, preferably fitted with perforated doors or panels 29¹ which permit escape of air. The fan is driven from a pulley on the shaft 14. Two or more brushes may be fitted in the casing 21. In a modification, the goods are carried by a supporting band past cylindrical brushes, or rollers covered with felt, which are given combined rotary and reciprocating motions. Or three sets of feed rollers may be used for feeding the goods past similar brushes or wipers.

MESSRS. W. D. EDWARDS AND SONS, LTD., inform us that their Mr. A. H. Edwards has just returned from Germany, and has secured for them the agency of Mr. J. Buchmann, of Ruinthal, Sarnstall, who makes machine-made leather boards, imitation leather boards, news boards, duplex boards, grey boards, etc. Enquiries, both for home and export trade, are solicited.

DURING the six months ended June last 89,587 tons of paper and 12,207 tons of pasteboards were exported from Sweden, as compared with 85,334 tons and 10,251 tons, respectively, for the first half of last year.

THE BRITISH & COLONIAL PRINTER AND STATIONER

FOUNDED 1878. PUBLISHED WEEKLY.

[REGISTERED AT THE GENERAL POST OFFICE AS A NEWSPAPER FOR TRANSMISSION IN THE UNITED KINGDOM.]

THIRTY-FIFTH YEAR.

VOLUME LXXIII. NUMBER 9.

LONDON: AUGUST 28, 1913.

EVERY THURSDAY. PRICE TWOPENCE.

The Technical Press of France.

By THEODORE BIRCH.

Altogether there must be some sixty or more papers associated with the graphic arts in La Belle France. There are weeklies, monthlies, which are the most numerous, fortnightlies, and even two quarterlies, *La Typologie*, a well-produced house organ issued by the Paris agency of the Caslon Foundry. This paper is noted for the competitions organised among compositors for display work. The other quarterly, *La Fonderie Typographique*, is also devoted to typemaking interests, being the official publication of the French typefounders' "ring." It is an excellent specimen of the latest "faces."

The fifty or sixty publications dealing with printing and the allied trades represent various interests. There are the Bulletins of of the Syndicats Patronaux or Master Printers' Associations, published in every large town, which champion the employers' views. There are the independent trade papers, though these are comparatively few in number, endeavouring to hold a just balance in all questions affecting the crafts. Then the workmen have their own organs to uphold their cause, although these labour periodicals are unimportant and usually consist of four pages only. The overseers, those indefatigable and earnest workers placed as a "buffer" state between the masters and the men, possess a publication of their own well worth mention, called *La Circulaire des Protes*, the official bulletin of the Union des Protes, or the Overseers' Association. It is a very creditable monthly, of quarto size, printed with taste and showing a fair support of advertisements, in addition to the text devoted to professional questions.

The technical press across the Channel has made very considerable progress during the past decade. With the evolution of the printing trade it was only natural that the papers, if they did not lead and show the way, should at least keep on the move. Some of these periodicals had reached a ripe old age and required "rejuvenating," for their younger contemporaries were out-distancing them at rapid pace.

The French prototype of the *British and Colonial Printer and Stationer* is la *Revue des Arts Graphiques*, composed of sixteen large quarto pages (two columes per text page) and a light green cover. It is a weekly, in its 33rd year, edited by Monsieur Paul Bluysen, a distinguished journalist, and Member of the Chamber of Deputies, who has made a speciality of all questions affecting the graphic arts, and is a recognised authority.

Le Courrier du Livre is the very smart fortnightly, edited by Monsieur Leon Berteaux, who was one of our honoured guests during the festivities in connection with the Printers' Exhibition of 1910. *Le Courrier du Livre* is a really "live" paper. Its sixteen or more literary pages—according to circumstances—are brimful of matter of up-to-date interest. There is a fine show of advertisements—almost all the houses catering for our trades in France—and an artistic cover gives the finishing touch to this excellent small quarto sized paper, which is fifteen years old.

Among the monthlies the palm must be awarded to *Le Bulletin Officiel de l'Union Syndicale des Maitres Imprimeurs de France*. The official organ of the Federation of Master Printers of France is in its seventeenth year, and measures 9½ by 12¼ inches. The *Bulletin* is certainly the finest publication from a typographical point of view. The between forty and fifty pages of advertisements, printed on coated paper in two colours—the contrasting inks, furnished by the famous firm of Lorilleux and Co., are changed each month—from type which is displayed with artistic merit, is a special feature. Each issue of *Le Bulletin* records a complete chronicle of the proceedings of the federation in the official section devoted to that purpose. The unofficial part of the paper contains a good deal of useful matter for trade readers, printed on a rough cream laid paper. Another distinctive merit of *Le Bulletin* is its insets—generally contributed by paper or ink makers—which at times form quite an artistic picture gallery. In this respect a splendid effort was made by the *Bulletin* with its last Christmas number. Although it is rather late in the day to speak of last Yule Tide, still a word of praise must be bestowed on the 1912 "Noël" issue of the *Bulletin*, which was a bulky volume weighing over 3 lbs., half of which consisted of remarkable specimens of high-class printing in black and in colours, contributed by a number of eminent firms in France. It was a worthy effort, calling in mind the souvenirs issued by the Institute of Printers and Kindred Trades of the British Empire, which can give but good results, and it is to be hoped that the hard-working gentleman in charge of the *Bulletin*—Monsieur Réné Billoux—will realise a bigger success next Christmas, the just reward of years of enthusiastic labour.

Other monthly organs deserving a reference are *l'Imprimerie*, which is an authority on technical subjects; *La Revue des Industries du Livre*, a bright little publication; and *Les Affiches de l'Imprimerie*. The latter is in its thirty-sixth year, and is the "sales and wants" advertiser for printing businesses in France.

Of the official Bulletins of the Provincial Master Printers' Associations, the most active monthly appears to be the organ of the busy northern district round Lille. It is a quarto publication of 36 pages and cover; the advertisements, of which there is a goodly number, are printed on pink paper, and the literary matter on 24 pages of white paper. The colour contrast is certainly a good idea, and gives prominence to the announcements. Monsieur Gaston Robbe, who is responsible for the production of the *Lille Bulletin*, must be complimented for the energetic manner in which he conducts this paper. The *Lyons Bulletin*, too, deserves credit, whilst a number of other monthlies in different parts of the country, though smaller in size, are doing much good in their aim to unite all master printers.

With a view to better understand trade conditions in France, British Master Printers would no doubt be glad to peruse some of the leading French organs. The local Bulletins are mailed free to members of the district, and a small charge is generally made to non-member printers. The subscription to the different papers is generally a small figure. The following are the rates per annum for abroad:—*Courrier du Livre*, 10s.; *Revue des Arts Graphiques*, 12s.; *La Publicité*, 4s.; *Les Affiches*, 2s. 6d. This list will give my readers a fair idea of the usual cost.

"l'Annuaire de l'Imprimerie" issued by Mr. Arnold Muller, 79, rue Dareau, Paris, price 2 francs, is the French Printers' Directory. In its 23rd year of publication this handy work (4 by 6¼ inches) contains a mine of useful information, an extract of the law of the Press, a list of technical schools, trade tables, and the addresses of all letterpress, litho, and copperplate printers in France, Belgium, and Switzerland. The little volume runs to nearly 400 pages and is well worth the small cost of 1s. 8d., but subscribers sending their remittance before October 1st are charged only 1s. 3d. per copy, plus cost of postage.

A very fine and complete Directory of the French Press is issued by Monsieur Paul Bluysen, from 33, rue St. André des Arts, Paris. The book contains everything that a pressman requires to know In the discharge of his professional duties in France, in addition to a complete list of the French Press and the legislation relating to newspapers.

Advertising in France, which has also made a good deal of progress lately, has two monthly champions, *La Publicité* and "*l'Atlas*. Both are well-printed publications advocating publicity and affording advertisers very valuable help in the science of the day: that of how to make yourself or your goods known with the minimum of expense and the maximum of returns.

Monsieur D. C. Hemet, editor of *La Publicité*, has just published a volume entitled, "Traité Pratique de Publicité," which should prove an invaluable guide to French advertisers.

The papermaking trade in France possesses some ten periodicals, and also a Directory known as "l'Annuaire Déséchaliers."

Organisation and the Printer.

The following address was delivered by Mr. C. D. Traphagen of Lincoln, Neb., at the Missouri Valley Cost Congress at Omaha:—

It is my hope that in the not far distant future that whenever it may be the pleasure of myself or others to speak upon this topic, that that intransitive verb of performance, "does," which requires no further object or explanation to complete its sense, may be substituted for that imperfect one, "should," as used in these remarks, which at its best is but a word of promise or contingency and the supposition of a fact; however, we must deal with conditions as they are, recognising that the awakening and effort of the last two or three years, the effect of international cost congresses, similar to this in their character, are resulting in a fruitage that will eventually cause printing and its kindred crafts to take their rightful place in the industry of this country.

The institution with which I am connected has always, within the years past, had a system of cost finding, crude though it may have been, and at its command a vast amount of accumulated detail of time consumed and material used in various manufactured products, in consequence of which we had at our disposal experience data of an invaluable character whenever the exigencies of business required its use. Whatever degree of success has accrued to the institution is due in a large measure to its attention to the accumulation of this information.

The activities of international cost congresses and cost commissions caused an active investigation by your speaker

Digitized by Google

as to whether methods in use by us could not be improved upon, with the result that early in 1910 we began a complete revision of our methods for the ascertaining of cost of production, with the result that it was soon found that scientific cost finding would not produce its greatest benefits without an accompanying system of accounting and the revolutionising of the methods in use by us.

One the decisions made, all the traditions and heritages accumulated in more than a third of a century of business existence were put behind, and the necessary revision of method devised. This revision of method has changed uncertainty into positive knowledge that stress of competition does not shake, and no time is devoted to nullifying the results of the accounting and cost finding system by estimating the maximum of possible production gathered from the literature of the press and machine builder, against the minimum of the productive hour as shown by experience.

The diversified interests in the institution made something of a problem of the accounting question, and I shall go into that largely, by the presentation in detail of that which might seem complex and complicated, for the reason that I wish to avoid creating the impression that accounting and cost finding for the average printing office is a formidable task. Suffice it to say that our accounting and cost finding system is but an enlargement of the elementary plan of the American Printers' Cost Commission, adapted to our peculiar needs.

The first step in the devising of the accounting system is to decide the accounts necessary for the accumulating of the desired information and provide for a proper distribution to the various departments and their subdivisions. the charges for material, labour and overhead burden, and to this end a chart of accounts was devised. Its purpose is to guide those whose duties require them to keep the accounts, and also those who designate the accounts to which material and overhead burden shall be charged.

This chart of accounts is divided into three classes of accounts, namely, assets, liabilities and revenues, and as the assets must equal and be in balance with the liabilities and revenues, it consequently forms the basis of the balance sheet. For analytical and informative purposes assets are divided into four classes: active, passive, invested and accruing, and they may be explained as follows:—Active assets signify cash or that which is negotiable and quickly converted into cash. Passive assets represent the exchange of active assets for material, labour and departmental expense in the course of manufacturing operation, and remain as such until written off in a profit and loss statement Invested assets signify the exchange of active assets for machinery and tools, and represent that portion of the physical plant and are of a permanent nature, subject to deductions for replacement, or depreciation, if you please. Accruing assets represent the exchange of active assets for benefits paid in advance, such as taxes and insurance, and is handled in this manner for the purpose of making an equitable division for entry on the monthly cost of production sheets.

These four divisions may be and in our case are subdivided into the many accounts necessary for securing the desired information on cost of production. For the same purposes of analysis and information, liabilities are divided into three classes, known as floating, accruing and capital, and may be defined as follows: — Floating liabilities are those of a current and changeable nature. Accruing liabilities are those anticipated in the future and for which a fund is created known as reserve, to which moneys are credited that would otherwise be credited to loss and gain and be distributed in dividend. Capital liabilities represent the indebtedness of the company to its stockholders for the amount of their investment and undivided profits. Revenues are represented in the income accounts to which are credited the sales of the various departments, and are subdivided to the extent necessary to secure the desired information through such distribution.

While a more extended explanation might under some circumstances be desirable, the purpose sought has been served in illustrating the first steps necessary in my opinion, to the installation of a satisfactory cost finding system.

The cost finding system developed and at present in use by the company with which I am connected is, as previously stated, an adaptation of the plan recommended by the American Printers' Cost Commission and known as the standard uniform cost finding system, for which the United Typothetæ stands as sponsor, and now being installed by the fieldmen of that organisation wherever their activities take them, which at this time embraces the entire United States.

If present plans presented to the membership of the Ben Franklin Club of America and of the United Typothatæ of America eventuate as their officers hope and believe they will, it will become the standard uniform system in fact as well as in name, and for no other system or method will have the endorsement of any organisation of consequence.

To my mind much harm has already been done by the exploitation of the printing industry by unattached so-called cost experts, whose varying methods are particularly responsible for the present existing confusion and lack of uniform results.

The science of cost finding is based upon certain underlying principles, which may seem complex and complicated to the uninformed, but which are surprisingly simple and exact when understood. The application of these essentials results in confusion if the seeker after knowledge of his business fails to thoroughly inform himself as to those basic principles. One of the greatest benefits of cost finding lies in its value for comparison. Through these comparisons the value of any given proposition may be determined, the efficiency of various workmen, quantity of material used ascertained, and, in fact, every question constantly arising in this industry of never ending detail.

When cost of production is accurately determined and the printer has the courage of his knowledge and tenaciously holds his position, you may be sure that prices will be raised to a living level and a profit secured.

Attempt will not be made to give a detailed explanation of the cost finding system as operated by us, and I will do no more than give a general explanation of the method to accumulate the information shown upon our statements of production costs, which are divided into the departments of printing, photo-engraving, and also exhibiting the cost finding results of steel die stamping and embossing and copper plate printing.

Inasmuch as the cost of the sold hour is the primary information sought, it is necessary to know, in addition to the payroll cost, the exact amount of expenditure in each department for the month separately.

The items accumulated to the cost of production sheets are payroll, rent, heat, light, power, insurance, taxes, interest on department investment, replacement, or depreciation if you please, bad debts, spoiled work, department direct expense, office stationery and postage, advertising, miscellaneous expense, and cost of stock handling and shipping.

Over the heading of each department for which information is sought, is carried the exact amount of the investment in that department, and this investment allotment is the result of an exact and painstaking appraisal of the department and the total of all departments being in balance with the investment as shown by the books of the company.

The payroll sheets show in detail the time charged to each department, and the entries to the cost of production statements are made therefrom.

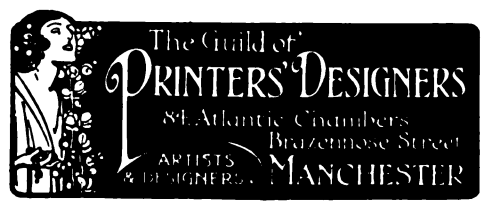
Rent and heat are apportioned according to the floor space occupied by each department.

Power and light is apportioned on the basis of the amount consumed in the department.

Insurance and taxes are determined on the basis of the total expenditures required for the year, and one-twelfth of this total charged to its proper department into the cost of production statements.

Interest on department investment is computed upon the basis of 6 per cent. per annum, and one-half of 1 per cent. is charged each subdivision based upon the department investment.

Replacement or depreciation partakes of the nature of an arbitrary charge, but 25 per cent. on type, brass rule, etc., and 10 per cent. upon furniture and machinery is the accepted practice, and one-twelfth of the total so arrived at is charged against its proper department each month.



Bad debts are computed on the basis of 1 per cent. of the total of yearly sales, and one-twelfth of 1 per cent. is charged into each monthly cost of production statement to the general expense column.

Spoiled work accruing within each cost of production period, is a definite charge against the department producing it.

Direct department expense is also a definite charge, and the totals for each month are taken from the analysis ledger and charged to the department for whose benefit the expense was incurred.

Office stationery and postage and advertising are definite charges, and in common with the charge for bad debts, are charged into general expense and distributed to all departments in the diffusion of the general expense account.

The general expense account is made up of the cost of the general office administration

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.

The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe **$5.00** per year; Canada **$3.00**. 64 pages weekly.

of the business, consisting of salaries and expenses of a character that are not directly departmental.

Stock handling and shipping is carried in a column to which all cost incidental to these departments may be entered, and its relation to the total cost of material handled may be determined by percentage. We have found it to be 15 per cent. and frequently more, depending upon yearly conditions.

It may be desirable to call the attention of those printers whose custom it may be to accept orders for printing to be executed on material furnished by the buyer, to this cost of handling and shipping.

These cost figures are the result of neither dreams nor indigestion, but the product of unsentimental experience, and when you follow the practice of accepting the buyer's material for manufacture, you are not only assuming the risk of manufacture without an attendant profit, but are making a present of the traditional chromo for the privilege of doing so.

When, by the methods sought to be described, you have found your department cost, by the addition of the several columns, without general expense, you are then prepared to apportion your general expense to each of the several departments and its sub-divisions, and this is accomplished by distributing it upon the basis of the relation of the cost of each department sub division to the total general expense, by percentage, and when the necessary calculations have been made and the division found, its addition to the department cost will give you the total department cost.

You are then ready to ascertain the cost of the sold hour, and upon reference to your pay-roll sheets you will find that the time you have paid for, as shown by the time tickets of your employees, will be shown thereon as chargeable or non-chargeable hours, or in more self-explanatory terms, sold and unsold hours.

The simple division of your total cost of each sub-division of departments by the number of sold hours, as shown by your pay-roll sheets, of that sub-division of a department, will give you the cost of the sold hour of that sub-division.

I am not going to weary you with further details, but in passing to generalities it may not be amiss to direct your attention to data you may obtain in addition to the cost of the sold hour.

In addition to the cost of the sold hour for the particular period under consideration, you can have before you the comparison with the cost for the same period last year, and the average cost for any given number of months.

We enter the chargeable or sold hours of each sub-division, as shown by the payroll, on our cost of production statements, and also accumulate and enter those posted to our individual cost sheets against them as a check, and they should and usually do balance, thus proving that you have posted to your individual job costs all the hours that you have paid for. There can also be shown the percentage of productive and non-productive time, and comparisons made with any period of time desired.

In finding the cost of production of presses it is possible to ascertain the total number of make-ready and running hours, these being the sold hours, and their cost per hour, and in addition ascertain the total number of impressions produced within any given period, and the number of impressions averaged per running hour, also the cost per thousand impressions, as well as obtain comparisons with any given period.

The cost of composition is found for both hand and machine work. Hand composition is brought out on the sold hour basis only, while in finding cost for machine composition you may obtain it both on the sold hour basis and the cost per thousand ems. The finding of production costs for stereotyping and electrotyping, photo-engraving, lithographing and any of the allied crafts, is but a repetition of the methods touched upon, varied to meet the requirements of the particular craft to which they are applied.

Accounting and cost finding as followed by us, and as I now comprehend it, is one of the fruits of organisation, and without organisation the progress of the last three years would not have been marked, and every individual in attendance upon this cost congress should avail himself of what is now common knowledge, and be prepared to contribute of his time and ability to the effort being made to place the industry in that eminent position to which it is entitled, and assist in making it a profit-producing business for every one engaged in it. Only through organisation and co-operation within the organisation can the present level, where printing as a business finds itself, be raised.

With organisation and co-operation it is within the range of possibility that the printer could have voice and influence concerning his interest in the trade customs established by the paper manufacturer and dealer, and they, together with the typefounder and press builder, might lend a more willing ear to the representatives of organisation concerning the correction of some of their methods.

With organisation and co-operation exerting the beneficial influence of which they are capable, there could be brought about the cessation of the present cannibalistic competition, and substituted in its stead the competition of intelligent and honourable, creative and constructive salesmanship, and the field of activity of the piratical purloiner of ideas, who sows the seed that produces a harvest of destructive, ruinous and pernicious practices, would be so restricted that his influence would become a minus quantity.

With organisation and co-operation there could be devised and installed a uniform system of accounting and cost finding, all embracing in its purview, correcting the existing confusion resultant from the lack of standardised method.

With co-operation, uniform cost finding would be followed in natural sequence by uniform estimating, and there could be substituted for the uncertain and variable judgment of to-day, a fixed and positive unit of measurement and production, and a value placed upon all the various operations within the industry.

Don't permit yourself to be persuaded into the belief that any system has been devised that will operate itself without trouble or the intervention of intelligence.

You must be willing to dig, burrow and bore into those details.

There is no place for the printer inoculated with the virus of mental or physical hookworm, in the installation or operation of an accounting and cost finding system.

Those men are successful who find their business an absorbing vocation.

When a man puts his very life into his business, it is because he likes the game.

If you can't do this, it is time to hire the expert, but it is a rare bird that gives service of comprehensive benefit without your assistance.

There is nothing the matter with printing as a business. The fault, if any, lies within the individuals pursuing it as an avocation.

The business as a business was good yesterday, good to-day, will be good to-morrow and good in all the to-morrows following.

The individuals engaged in printing and its kindred crafts are responsible for the customs and practices which make the conditions what they are to-day, and these selfsame individuals, who are continuing these undesirable customs and practices, have the power to eradicate them if they so desire.

The eradication of the abuses and destructive practices now existing will never be brought about by a revolution, but by a reformation, and this reformation must be within ourselves. It is an individual problem and work, and its solution lies not in awaiting the change in your neighbour.

Everywhere in the printing industry we hear of the unrestrained, ignorant and spineless competition conducted by first aids to the press builder and typefounder, and of that band of Ishmaelites "whose hand is against every man and every man's hand against his brother." To attempt their elimination by individual effort would result in the postponement of the printers' millennium to a date beyond eternity.

That Elysian field where there is less of cannibalistic competition and more of "brotherly love" is a consummation devoutly to be wished for. Organisation and co-operation will advance the date of one, and make a present-day realisation of the other—*Ben Franklin Monthly.*

IT is now thirteen years since Mrs. Stepney Rawson had the unusual distinction of seeing her first novel run into six editions. Since then a book from her pen has appeared every year, and she has succeeded in preserving the freshness and gaiety which first won her popularity. Her latest book, "The Watered Garden," is to be published by Stanley Paul and Co., and is "an open-air romance" of the West Country, in which she combines the story of a woman's development and love, with a sense of the passion and charm of the country in a manor garden standing upon a wooded estuary.

The Strength of Paper.

Testing Two Pieces at Once.

By Sindall and Bacon.

Article II.

In the previous article we explained the principle of the method used in testing two or more pieces of paper simultaneously, and quoted as an example the figures obtained by trying a good paper of average quality, 16½ lbs. demy.

We now give a similar series of figures for a common wood pulp paper of lower weight, 6 lbs. demy, taking first the tensile strength on strips ½-inch wide, and then the bursting strain.

Table III.

Strength Readings on Strip Half-inch Wide.
Paper 6 lbs. demy (Leunig's machine.)

No. of strips in the machine.	Tensile strength mean of 5 tests lbs.	Results calculated for one strip.
1	3·9	3·9
2	7·9	3·95
3	12·0	4·0
4	16·0	4·0
5	20·1	4·02
6	24·1	4·01
7	25·6	3·67
8	31·4	3·92
9	34·4	3·82

In this case, as with the stronger paper, the readings are proportional to the number of strips. The breaking weight of the paper found by testing a number of single strips is 3·9, while the average of all the readings is 3·82.

There is no indication of any gradual increase in the results calculated to the common basis of one strip.

The same paper being examined for bursting strain gave strength readings showing the operation of a different law, in that the figures were not strictly proportional.

Table IV.

Bursting Strain Readings.
(Mullen Machine.)

No. of sheets in the machine.	Bursting strain mean of 5 tests lbs. per sq. in.	Results calculated for one sheet.
1	8·8	8·8
2	22·2	11·1
3	37·3	12·4
4	51·7	12·9
5	65·0	13·0
6	88·6	14·8
7	108·1	15·4
8	120·8	15·1
9	143·5	15·9
10	157·0	15·7

If the results obtained may be taken as typical, it is clear that the law of proportion which appears to hold good in the case of tensile strength does not apply to the bursting strength.

This is amply proved in both the papers tested, for the increase of tensile strength due to the addition of extra strips in succession is proportional to the number of strips tested. But with the bursting strain the strength increases apparently in a greater ratio than the number of sheets.

With the stronger paper the strength of 22·7 lbs. per square inch works out at 29 lbs. as the result of testing five sheets together.

This represents an increase of 22 per cent. Then with the weaker paper the strength registered as 8·8 lbs. would apparently be recorded as 13·0 lbs. per square inch, if five sheets are taken instead of one. This represents an increase of about 30 per cent.

Such facts as these should be examined more closely in the light of further experimental evidence. It is undoubtedly a matter of great convenience to be able to test a weak paper on a machine not specially constructed for the accurate measurement of low strengths, but when any such unusual methods as those described are applied it is necessary to determine the conditions required for correct results. Such results can only be relied on if they correspond to the readings of the apparatus which should have been used in the ordinary way, that is one capable of registering the breaking weight of thin papers exactly.

The curious fact is that the experiments made appear to justify the adoption of the method when a paper is tested for the breaking weight of a strip, but that the bursting strain cannot be treated in the same manner. This difference may be in some way connected with the stretch of the paper, and when the two systems are compared this seems most likely.

In the Leunig machine the strips are always parallel to one another, and these put in the machine simultaneously are always cut from the same direction. In the Mullen machine the sheets are put in haphazard unless special precautions are taken to ensure that the directions of the sheets are the same. In the experiments recorded no attention was paid to this point. Whether any material difference would have been possible if this matter had received consideration can hardly be ascertained by an examination of the results given, for the remarkable uniformity of the figures does not indicate it.

Some further trials were made to see to what extent the Mullen readings were affected by the relative position of the machine and cross directions of the paper when two or more sheets were tested in the apparatus at once.

THE Paper Industry of Austro-Hungary.

New features have marked the recent close of the business year of the Austro-Hungarian paper industry, according to the recently-issued report of the Austro-Hungarian paper manufacturers for 1912-1913. This is particularly the case as regards the arrangements for uniform prices and terms. In this matter the example of the German Association seems to have been followed.

The Balkan troubles seem to have exercised a special effect upon the Austrian paper industry, of which the Balkan territory had long been special outlet.

Among the measures of a social-political order, to which the attention of the association has been directed, was the question of resting from work on Sundays and the prohibition of juvenile night work.

The question of the increased cost of wood and other raw materials had engaged the attention of the Government in connection with the augmented difficulty of procuring supplies.

The proposed imposition of an export duty on rags had also been much discussed on the same lines as have marked that proposal in Germany.

Another question of importance has been the revision of commercial treaties with foreign nations.

According to the statistics of production issued by Herr Franz Kramany the figures show for 1912:—

	Tons.
Paper of all kinds	424,785
Board of all kinds	49,521
Wood Pulp	258,036
Cellulose	292,195
Bleached Straw Pulp	2,762
Total, 1912	1,027,299
Total, 1911	981,740
Total, 1910	954,036
Total, 1909	893,856

A neat, well-designed circular comes to us from Messrs. Williams and Houghton, East Woodbridge-street, Detroit, in which they announce to buyers of fine printing that they have established an up-to-date printing plant, and are prepared to do good work at reasonable prices. The circular is a good example of composition, well printed in brown and gold on a good paper.

For long Runs use N.S. Black

N.S. Black **never** dries on forme, rollers or slab.

N.S. Black **does** dry well on any paper where drying is by absorption; *i.e.*, on all except hard ledger and similar papers.

N.S. Black never skins in the tin, so that you can use all the ink.

N.S. Black is a Non-Stop Ink as well as a Non-Skin Ink, because you need never stop to wash up right through a long run unless the ink gets clogged with dust or paper fluff.

N.S. Black will do capital half-tone work on art paper.

Many jobs come your way where N.S. Black would be a real help in profit-making. Place an order for a dozen pounds to-day. Price 1/9 per pound.

JOHN KIDD & CO., LTD.,

False Motions.

A writer in the American *Typographical Journal* says that:—Newspaper men as a class are clever and intelligent, but for the most part lack business ability. I use the term newspaper men in the broadest sense, including all lines of work. Lost time and misunderstandings can be traced to this source. Efficiency engineers were not thought of until recently. Printers have always known the economic loss of what is called false motion—that is, extra or inaccurate movements made in lifting types into the stick, which caused a compositor to appear to be going like a windmill, when in reality half his effort was wasted in getting in his own way. The laws of this theory have been well worked out by linotype operators, where smooth technic is an essential to speed, and speed is essential to holding down a job, because of the capital tied up in a modern plant, which should run to capacity when running at all. The economic truth of this is understood by everybody. Yet it was not thought necessary to apply business principles to newspaper proof-rooms, and consequently practically all newspapers of metropolitan size go to press with matter in their pages that has been railroaded. This has been considered so unavoidable that it is a matter of course. But the explanation was false motion in the proof-room. Two examples: A proof-reader can deliver a finished proof with one hand and take a new one with the other in the same moment. If he does not do this, but makes two processes, he may lose three seconds, and he is more tired at the day's end because of extra exertion, though he does less work. This is well demonstrated. I have seen again and again that the big producers are fresher at the end of the day or night and appear to be working easily all the time. If reading aloud, a reader should read along until his lungs are empty, and take breath where he happens to be. If he follows the old practice of reading, and pauses at each comma and breathes at each period, he may make beautiful elocution for the copy reader's delight; but what is gained, since he alone is responsible for the sense of the article? This process will double one's speed.

A most valuable quality in a newspaper man is accuracy. If he has not accuracy he has not speed, and neither has any one else, because all the processes dovetail together. Now accuracy is not born, but it is often achieved, and proof-readers have it thrust upon them. When it is thrust upon you enough times it adopts you as it were, it rises, and retires and travels with you until it really becomes a bore. Fate seems to have decreed that authors, publishers, managing editors and superintendents should be men of imposing presence and proof-readers men of inoffensive demeanour and light avoirdupois or else women innocent of the franchise. This explains why you have accuracy thrust upon you as seldom as possible. The most valuable factors aiding one in acquiring the habit of accuracy are imagination and a sense of humour. I know because I can prove it, and always stand ready to explain, that is between editions.

Co-operation reminds me of Poe's resuscitated mummy. He said when asked about progress that it was quite a nuisance in Egypt at one time, but as it never progressed no one paid any attention to it. Now, co-operation is all desirable and right if you know what it is and how to work it. Every part of a locomotive co-operates perfectly. How? By being 100 per cent. efficient in its own function. So with us. The best way to co-operate is not to carry some other fellow's burden to the neglect of your own, but to pass on the power transmitted by the cog behind you to the one in front as undiminished as you can and as soon as you can. If a desk man feels bound to mark what a compositor should know—style, punctuation, capitals—he not only takes time from his own function, but interferes with the compositor's individual right to do what he is paid for.

THE William H. Pool Printing and Binding Co., South Clark-street, Chicago, U.S.A., send us a specimen book showing the faces of type they hold at the command of their customers. The range is a fine one, most of the faces being held in series, and the selection thus offered should bring business to the firm. The book itself is excellently printed on good paper.

Our Annual Wayzgoose.

The state of the weather counts for so much on the occasion of the annual wayzgoose, that the very unpromising outlook last Saturday morning caused some uneasiness among the employees of Messrs. Stonhill and Gillis, when they started on their journey to Southsea, which had been chosen as the venue for the thirty-fifth annual outing and dinner. However, their good luck was in the ascendant, for hardly had they left the railway station at Portsmouth Town when the rain ceased, and the sun burst through the clouds with a splendour that was undiminished throughout the remainder of the day.

Some of the party took advantage of the opportunity of visiting Nelson's old battleship, "The Victory," some went across the ferry to Gosport, and others made straight for Southsea front, with its numerous attractions and ever-moving panorama of life. About one o'clock there was a reunion at the Clarence Pier, and the party then made their way to the Portland Hotel, with appetites as keen as a strong sea-breeze could make them. Here, on a pleasant lawn, photographs were taken previous to the dinner, which was an excellent one, admirably served, thanks to the capable management of the proprietress, Miss E. M. Clarke.

Full justice having been done to the generous fare provided, a few complimentary toasts were given. "The Firm" was proposed by Mr. R. Burch and responded to by Mr. F. Gillis, who referred to alterations that had been made recently in the machine department and in the size of the *British and Colonial Printer and Stationer*, which were proving of decided advantage. Mr. Gillis next gave the "Composing and Machine Departments," testifying in appreciative language to the cordial co-operation that existed on the part of the employees, which contributed so largely to the smooth and successful running of both papers, the *World's Paper Trade Review* and the *British and Colonial Printer and Stationer*, both having shown encouraging signs of increasing circulation and growing prosperity during the past twelve-months. Mr. J. Butler (composing-room overseer) and Mr. Shambrook (machine department) both replied in appropriate terms. "The Editorial Department" was submitted by Mr. E. Kennedy, and the toast was responded to by Mr. G. Brown. "The Commercial Department" was given by Mr. W. H. Wardley, to which Mr. R. Burch replied. The last toast, "The Chairman," was proposed by Mr. F. Reeves, and was enthusiastically received.

In the afternoon a most enjoyable cruise was taken round the interesting harbour of Portsmouth, providing a fine opportunity for the inspection of Dreadnoughts, torpedo boats, destroyers, cruisers, submarines, etc. Tea was partaken of on the Clarence Pier, and after another promenade along the front to the South Parade Pier and back it was time to make for Portsmouth Town railway station, and it was a tired but contented and jolly party that returned to London after what was unanimously conceded the best outing they had ever held. Mr. E. Kennedy, the steward, who had so painstakingly and successfully seen to all the arrangements, was voted the hero of the day.

Foreign and British Paper.

Our Foreign Trade.

The trade returns for July, and also for the seven months ended July, show a considerable increase in both imports and exports of paper as compared with the corresponding periods of last year:—

JULY.

Imports ...	£706,292	+ £72,574
Exports ...	334,433	+ 64,782
Re-Exports	32,117	+ 24,358

JANUARY–JULY.

Imports ...	£4,392,925	+ £454,280
Exports ..	2,223,261	+ 262,266
Re-Exports	158,145	+ 58,255

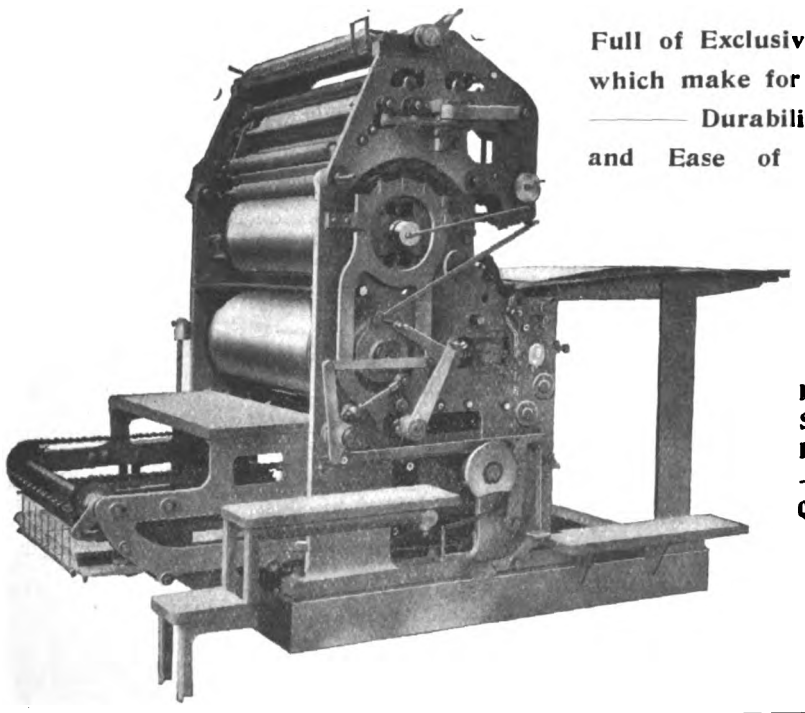
Imports.

THERE was a steady increase last month in the arrivals of packings and wrappings, the value showing an addition of £29,951. Printings and writings evidence a small advance of £493, due to larger imports of reel paper. Newfoundland heads the list of countries shipping reel paper to the United Kingdom, the value last month being £72,079, as compared with £36,975 credited to Norway and £21,631 to Sweden. An extensive outlet is found for foreign straw, mill and wood pulp boards, the imports into this country showing an increase in value of £34,290. The only weakness is that displayed by printed paper (hangings, etc.), there being a reduction in value of £2,949. Unenumerated and articles of paper show an addition of £10,789. For the seven months ended July (as compared with the corresponding period of last year) the imports show the following increases:—Printings or writings on reels, £46,780; printings or writings not on reels, £34,466; packings and wrappings, £217,334; strawboards, £95,838; mill and wood pulp boards, £23,912; and unenumerated, £50,609. Decreases: Hangings, £3,766; other printed or coated papers, £10,901.

Exports.

Last month's exports of printings show an improvement in value of £35,267. The shipments to British Possessions were of the value of £113,750 and to foreign countries £57,943, increases of £34,281 and £986 respectively compared with July of last year. Writings were in better demand to the extent of £2,572, due solely to an increased business with British Possessions, whose purchases amounted to £29,343 (against £26,727), whilst foreign countries took £12,103 worth, or £44 less than the corresponding month of last year. The exports of packings and wrappings show an advance of £15,244 and paperhangings £5,159. All along the line (with the exception of unenumerated) increases are registered. The seven months' shipments of writings show an increase of £2,232 and printings £181,703.

Exports of Paper Bags.



Paper bags were exported from the United Kingdom during 1912 and the four preceding years as under:—

1912	47,859 cwts.	£53,563
1911	39,914 ,,	42,705
1910	41,402 ,,	42,442
1909	33,665 ,,	34,572
1908	33,311 ,,	35,062

The markets stand as under, with comparative values for 1912 and 1908:—

	1908.	1912.
Foreign Countries	£3,261	£5,560
Cape of Good Hope ...	12,495	15,947
Natal	2,310	4,745
Transvaal	2,218	3,345
Australia	3,400	3,273
New Zealand	5,995	11,240
Other British Possessions ..	5,383	9,453

Trade Notes.

THE death is announced of Mr. Alexander Milligan, editor of the *Natal Mercury*. Mr. Milligan was a native of Edinburgh.

AT a meeting of the London Press, held at De Keyser's Royal Hotel, on Monday, it was resolved that a luncheon be given to Sir George Reid, High Commissioner for Australia, on September 8th, at the Trocadero.

WE understand that Mr. John M. Gibbon, at one time editor of *Black and White*, and author of "Scots in Canada," has been appointed General Publicity Agent of the Canadian Pacific Railway Co., and his offices will be in Windsor-street Station, Montreal.

IT is announced that on and after July 1st next *Lloyd's List* will cease to be incorporated in the *Shipping and Mercantile Gazette*. We understand that it is the intention of the Corporation of Lloyd's to publish *Lloyd's List* from July 1st next as a shipping morning journal.

WITH the view of advertising Barmouth in the daily Press during the autumn as a winter resort, a successful gala and fête was held last week under the auspices of the Advertising Committee. Visitors took a prominent part in the proceedings, and nearly £100 was realised.

THE membership of the International Typographical Union at May 31st last was 55,614, whose aggregate earnings for the previous year amounted to 56,944,486 dollars; an average of 1,023 dollars per member. The Union covers the whole of the United States, with branches in Canada.

MR. T. M. YOUNG has been taken upon the personal staff of the Public Trustee to take charge of the work coming from Lancashire, with a view to the opening of a branch office in Manchester. Mr. Young joined the editorial staff of the *Manchester Guardian* in 1897, and since 1903 has been responsible for the organisation and supervision of the financial and commercial news services of that paper.

THE Carlisle branch of the Typographical Society is endeavouring to obtain an increase of wages generally. At present the printers are paid at the rate of 30s. for a week of 51 hours. They asked for an advance at the rate of 6s. a week. The employers offered 2s., but this has been refused, the printers intimating that they would accept an increase of 3s. a week now and 1s. a week more on January 1st next.

The *Board of Trade Journal* announces that the proprietors of a newspaper in Ontario contemplate the purchase of new printing machinery to the value of about £1,850. The name of the firm to which the foregoing relates may be obtained by United Kingdom manufacturers desirous of supplying plant, on application to the Commercial Intelligence Branch of the Board of Trade, 73, Basinghall-street, E.C.

MR. W. J. SANDIFORD, of the Clarendon Art Stationery Works, Chorley, Lancs, has installed a double keyboard Monotype setting and casting plant, and is now prepared to do typesetting for the trade, either in large or small quantities for bookwork, balance sheets, reports, etc. Prospective customers are invited to call and inspect the plant so that they may see for themselves the remarkable features and capabilities of the new installation.

AT the Mansion House, on Friday last, Charles Lightband, secretary of the Newspaper Workers' Club and Institute, was charged on his own confession with embezzling the money of the club, and was convicted. Mr. Francis, solicitor, said that the prosecution desired to proceed against Lightband under the Industrial and Provident Societies Act, 1893, and to reduce the charge to withholding the money. The Alderman fined the accused £2, and ordered him to pay the £57 14s. back, and said that if he did not do so he would be kept in prison without hard labour for six weeks.

SPEAKING on the occasion of the presentation of prizes at the technical school at Sydney, President Middleton, of the Typographical Association, said: — "All the artificial means—wise and unwise—that the typographical union may adopt, can not save its members from the effects of inefficiency, for ability is bound to overcome all obstacles. In these days, no one can expect to get more than the scale unless he studies and learns and knows." Last year the total enrolment in the classes numbered 160. Extension and re-arrangement of the college is enabling the work to proceed more expeditiously, and will also insure accommodation to a larger number of students.

THE late Mr. Walter Pewtress Appleton, director of Fenner, Appleton and Co., Ltd., has left estate of the value of £112,525 gross.

ACCORDING to *Kemp's Mercantile Gazette* there were two failures in the printing and stationery trades of England and Wales for the week ending Friday, August 22nd; the corresponding week in 1912 showed five.

A NEW edition of the "Miehle Booklet" has been issued by Messrs. Linotype and Machinery, Ltd., 188-9, Fleet-street, E.C. The chief features of the machine are set out and illustrated, and details of the latest developments in design and construction of the Miehle Press are given, so that printers may form an opinion of the great capabilities for high-class work that the machine possesses. The booklet is beautifully printed, and is an example of what can be done on the press.

THE strike of bookbinders and machine rulers at Messrs. Burn and Co., of Hatton-garden, E.C., has now entered upon its second week. About 190 employees, men and boys, are out. They wish the firm to declare its works at Esher a union house, and therefore observe trade union rates and conditions there. The firm state that they are rapidly filling their London works with competent non-union men, while the staff at Esher are remaining perfectly loyal. The men say that the firm will find it impossible to fill all their places and will be obliged eventually to surrender. The premises in Kirby-street are strongly picketed.

THE Victorian Master Printers' Association, whose headquarters are at 450, Collins-street, Melbourne, held their annual dinner recently in Sargent's Cafe, Melbourne, and we have, by the courtesy of the secretary, Mr. W. Auguste Wilson, been favoured with a copy of the programme of that event. It is a beautifully got-up production, neatly printed in a chocolate ink on a heavy repped paper, the pages having a cut index, so that menu, toasts, music, etc., can be at once referred to, and there are several blank pages on which to secure the autographs of members attending the dinner, a feature that might well be copied at some of our own gatherings.

ILLUSTRATED TRADE ALMANACS.—Samples are to hand of Messrs. Abel Heywood and Son's crown 8vo. Almanac and Almanac Companion, this being the forty-third year of publication of these useful aids to the printer issuing a local year book, or anyone seeking an effective advertising medium among the public in their own particular locality. Both are got up in a high-class style, printed on paper of a superior quality and finish, the illustrations of seaside and inland resorts being from good photographs, and the reading matter instructive and interesting. Continuing the plan adopted 43 years ago, the firm are issuing the almanac complete and ready for sale in certain cases, a plan (of which particulars will be sent on application) being adopted by the firm by which a purchaser who takes the trouble to obtain six pages of advertisements may have his almanacs, ready for issue, for less than nothing.

A NEWSAGENT'S CLAIM.—In the City of London Court, before Mr. Assistant Registrar Tattershall, a claim was made by Alfred Ritchie, newsagent, 5, Pemberton-row, Gough-square, against Mr. Ernest H. Wheeler, printer, etc., 54, Caledonian-road, King's-cross, for the sum of 7s., balance of account. The plaintiff said he admitted having received from the defendant a cheque which contained a receipt on the back which he had placed there. He said he would like to explain that when he received the cheque from the defendant he also received a certain amount of returns which he afterwards found out to be about five times the usual number he was entitled to accept. He took the cheque so that the account should be settled, but he found afterwards there was 7s. waste paper. There were only a certain number of returns allowed in magazines, and the defendant claimed that he (plaintiff) should take everything he (defendant) liked to send back. The defendant had returned a lot more than he was entitled to do. Only three copies were allowed in a quire. He (plaintiff) had already taken into account the number of returns the defendant was entitled to, and the balance in question was the amount of returns he had refused to take back. In answer to the Assistant Registrar, the plaintiff said he received the defendant's cheque at the same time as he received his returns. He did not examine the returns then because he had not the opportunity. There were too many. The Assistant Registrar said it was the plaintiff's own fault for accepting the defendant's cheque in settlement. He was not obliged to do so. It was too late now for the plaintiff to dispute the settlement. There was a special endorsement, "Received from Wheeler in full settlement." Judgment was entered for the defendant.

FOR advertising on the cars for five years, for the Corporation of Aberdeen, the tender of Messrs. Courtenay, Ltd., London, has been accepted.

THE death took place at Hammersmith, on Sunday, of Mr. Garden Smith, the editor of *Golf Illustrated*. Mr. Smith was 53 years of age, and had been in bad health for some time.

ON Tuesday night a fire broke out in Gunpowder-alley, Shoe-lane, E.C., by which the premises occupied by printing ink manufacturers, stationers, and bookbinders were endangered. The private fire brigade of Messrs. Eyre and Spottiswoode, who occupy adjoining premises, turned out and extinguished the outbreak before the arrival of the city engines.

HARD ON THE POSTMEN.—In connection with the custom which has obtained for many years of proprietors of certain newspapers to send copies of their journals free of charge to the various post offices in their district for use in their libraries and reading-room, the Postmaster-General has circulated the following letter to the newspapers concerned:—

"From the Comptroller, London Postal Service.

"Sir,—I understand that a copy of ——, addressed to the post office library at ——, has hitherto been posted and delivered without payment of postage. The Postmaster-General is not empowered to exempt newspapers so addressed from prepayment, and failing prepayment from surcharge, even if, with a consideration which he does not fail to appreciate, the newspaper be supplied without payment of its purchase price by the proprietor for the perusal of post office servants. I am instructed, therefore, to give notice, that on and after September 1st any newspaper so posted must if not prepaid be dealt with in the same manner as any similar newspaper posted by or addressed to a private individual."

TENDERS WANTED—By the Guardians of Whitechapel Union for printing for twelve months; forms of tender from Mr. F. J. Tootel, 74, Vallance-road, N.E. For printing, stationery and bookbinding for one or three years for the Guardians of St. Pancras Parish; particulars from Mr. J. E. P. Hall, Town Hall, Pancras-road, N.W. By the Gosport and Alverstoke Urban Council for printing; forms of tender from the Surveyor, Town Hall, Gosport. By the Brentford Union for a supply of printing, stationery and books; particulars from Mr. W. Stephens, Union Offices, Isleworth, W. For a supply of stationery and printing for the Epsom Rural District Council; particulars from Mr. A. R. Cotton, Waterloo-road, Epsom. For the supply of school and other apparatus for the Halifax Education Committee; tender forms from Mr. W. H. Ostler, Halifax. The Kent Education Committee invite tenders for printing minutes and reports; particulars from the Stores Superintendent, Kent Education Committee, Sessions House, Maidstone. For printing, lithography, bookbinding, stationery, drawing materials, and typewriting sundries required by the several departments of the Huddersfield Corporation for five years; schedules and forms of tender may be obtained at the Town Clerk's Office, Huddersfield. For the supply of books, stationery, and furniture for the elementary schools in the administrative county area, for the Lancashire Education Committee; particulars from Mr. H. L. Snape, Director of Education, County Offices, Preston. For printing and binding burgess lists for the Corporation of Swansea; particulars from Mr. H. L. Coath, Town Clerk, Guildhall, Swansea.

PASSING A PROOF.—Before Mr. Assistant Registrar Tattershall, in the City of London Court, last week, a claim was made by the Farringdon Press, general printers, 148 9, Fleet-street, against Messrs. Lyons and Sons, expert tobacco blenders and cigarette makers, 255, Franciscan-road, Tooting, S.W., for £1 1s., for printing circulars for the defendants. The plaintiffs' representative produced the first specimen proof of circular that was submitted to the defendant, and also the last proof which had been passed by them. The rest of the circulars were printed in precisely the same manner as the last proof. The defendant said his complaint was that the circular should have been numbered the same as the first proof submitted to him. The plaintiffs' representative said that they had considered that the numbering of the circular in the first proof was for the defendants' guidance only. The numbering did not appear upon the proof as passed by the defendant. The defendant said there was also a mistake in the printing of the circular which was a printer's error. The mistake was in the price list, which made him (defendant) look ridiculous as charging more for 50 cigarettes than for 100 of the same kind. He could not accept mistakes in the price list as his responsibility. No person could say he could use circulars with such typographical

Digitized by Google

errors in them. The Assistant Registrar said that the defendant had not pointed out the mistake and had marked the proof as passed. When there was a blunder in the proof or not the defendant had passed it. The defendant had told the printer it was all right, and that justified them in printing off the circulars. The defendant was in the wrong in passing the proof. Judgment was entered for the plaintiffs for the amount claimed.

As the carbon of ordinary printing inks does not bleach in using printed material for making new paper, a French firm has patented a special ink. The black pigment is ferroso-ferric oxide, or a compound from tan-bark extracts acting on ferrous sulphate, and this is incorporated with rosin, or mineral oil and rosin, or boiled linseed oil. In re-pulping the paper, the ink is bleached with an acid solution of a hypochlorite, chlorine gas, or hydrochloric or oxalic acid, the pulps being made perfectly white.

Messrs. Grosvenor, Chater and Co., Ltd., 68, Cannon-street, E.C., are offering two excellent ranges of cover papers to the trade. The "Eureka" papers, which are stocked in medium, double crown, and royal, from 40 to 68 lbs., 480 sheets, are in sixteen colours, offering a choice for all tastes. The "Basingwerk" papers are stocked in double crown, medium, double-medium and royal, 504 sheets, and in weights ranging from 52 to 104 lbs. Ten colours are offered in this series. These cover papers, in both instances, are of excellent quality, with surfaces that take printing well, and they should be seen by printers who do pamphlet, circular, and similar classes of work.

"The Commercial Year Book" of the Leeds Chamber of Commerce, which is in its second edition, is a handsome volume in which particulars are given of the great industrial resources of the city of Leeds, and a short account of the facilities it affords for commercial activity. The book is beautifully illustrated, many of the pictures being in colour, and to increase the value of its contents to those abroad the information has been printed in French and Spanish as well as English, and separate classified trade indices in the three languages are given. The year book is a publication that should be in the hands of every commercial man, and its information should greatly benefit the trade of Leeds by bringing business from all over the world. The printing has been done by Messrs. Bemrose and Sons, Derby, and amongst the business announcements we notice those of several of our own advertisers, including George Mann and Co., Ltd.; Waite and Saville, Ltd.; Joseph Kaye and Sons, Ltd.; Elliott and Co. (Otley), Ltd., Taylor and Watkinson; and T. G. and J. Jubb. The two latter firms' advertisements are illustrated with handsome coloured plates, one showing an old-time typefoundry, the other Messrs. Jubb's works with piles of their celebrated metals.

Russia.—In his last annual report, the British Consul at Odessa, referring to the tricks of some local traders, says:—"Cases have come to my notice where Korans have been ordered in South Russia by Mahommedan British subjects. The books have not been delivered, although paid for in advance. The victim is in a distant country, and would have the greatest difficulty in proving his case against a swindler in Odessa, so he cannot be advised to throw good money after bad. Money is lost through want of caution in regard to applicants for credit. Sometimes these persons are trusted to important amounts on the smallest recommendation. I know a case where some merchants proposed to send £500 or £600 worth of goods to a person in Odessa on the strength of a good heading to his writing paper. Inquiry showed that this man's real place of business was at the top of some back stairs, with a card pinned to his door. At Nicolaiev there should be an opening for British stationery goods. On inquiry at one of the largest stationers recently, I was told that the only article of British manufacture kept was tracing paper. In reply to my request for a British ink, I was offered French and German. Germany supplies the bulk of the fancy goods, as well as the better quality writing papers."

Cases in Camera.

At the closing sitting of the conference of the Institute of Journalists, on Monday, Mr. J. S. R. Phillips, of Leeds, read a paper dealing with the decision of the House of Lords on the hearing of cases in camera. He said that one fact seemed to stand out in regard to the hearing of cases in camera so far as the Press was affected. It was that the only class of cases as to which there was any difference of attitude between the Press and the law courts related to matrimonial cases. There was no newspaper interest involved in the publication of a secret process of manufacture; if the result of the action was given, the public would not trouble to read the technical details. If they might judge by the flood of novels printed every year, and indeed by a large number of modern plays, it was the sex element which most attracted the public. He would urge, bearing in mind the solemnity of Lord Shaw's demand for publicity as the only safeguard which the nation could have, that journalists should watch with the greatest jealousy all attempts to interfere with the freedom and openness of our judicial system. He did not ask for this in the pecuniary interests of journalists themselves. This might be, indeed, of importance to many of them but they could not stand for one moment if they were in opposition to the interests of the public. They had not a prescriptive right to report cases of that kind, and unless they could maintain their ground upon large principles of national importance, they could not maintain them at all. He would, therefore, urge, not that there should be no power of calling them to account, but that this censorship, or whatever might be the name of it, should be exercised not only upon the newspaper press in the reporting of divorce cases, but that all publications of the kind, whether professing to be reports of actual cases in any part of the world, or novels or plays should be subject to precisely the same degree of censorship. They could not in this matter allow novelists or playwrights to acquire a monopoly.

A Business Jubilee.

On Saturday last, Mr. Walter Hazell, J.P., head of the firm of Messrs. Hazell, Watson and Viney, Ltd., completed fifty years of close business connection with the firm. In order to mark in a special way his thankfulness for the success of the business, and also to show his appreciation of the services of those who for many years have been associated with him in it, Mr. Hazell has made a gift of the sum of £7,000 for the benefit of his workpeople.

No hint of this jubilee celebration had leaked out, and the old servants of the company were much surprised to receive envelopes shortly before pay-time on Saturday. The gift was in the form of a distribution of four weeks' wages to all men who have been in the firm's service for 25 years, and to all women who had served for ten years. Some 270 of the employees of the London and country works received their cheque with a personal letter signed by Mr. Hazell. These gifts amounted to a little over £2,000, and in addition Mr. Hazell has handed securities to the value of £5,000 to trustees to be held by them as a trust fund for the benefit of the employees.

In a letter accompanying the gift Mr. Hazell stated that he wished the income of about £300 per annum used for:—"Any purpose which may benefit the employees without sapping their independence, and especially to encourage the firm and the employees to work together for the increased welfare of the staff." The powers of the trust deed would be drawn widely so that as changes occur in the future, the fund may not become fossilised and useless."

Among the uses to which the income may be put, Mr. Hazell suggests:—Grants to widows and orphans of members of the firm's provident fund; grants to employees leaving through slackness if they are for a time unemployed; grants to boys and girls whose earnings cannot make them self-supporting, and whose fathers are dead or out of work; loans towards emigration and migration.

The provident fund in connection with the firm has been in existence for many years, and has accumulated a capital of £15,500, and it is Mr. Hazell's intention that the income from his jubilee gift shall be used for purposes which are beyond the scope of the existing provident fund.

It is interesting to note that the firm has always encouraged the employees to save by means of the savings bank, by offering shares in the company at less than their full value—and by other means, and the total of all these funds amount to nearly £60,000; a very satisfactory result of encouraging thrift and the saving of small sums.

Treating Lead Poisoning.

PLUMBISM, or, as it is more commonly called, lead poisoning, is not a very common disease among compositors, but it does sometimes occur, and almost every year it accounts for a few deaths that are duly recorded in the annual Report of the Chief Inspector of Factories. It is not so much the actual handling of the types that is looked upon as the cause of this disease as the inhaling of the fine lead dust that arises from the cases, and especially when they are being blown out, and the trouble is often accelerated by insanitary workshop conditions, such as want of fresh air, or facilities for washing. Once lead poisoning takes hold of a man, his case is looked upon as almost hopeless, and so a new method of treating the disease, which promises to give good results in the way of eliminating the poison from the system, will be welcomed. It is due to the skill of Mr. T. Maltby Clague, a Newcastle chemist, and is described in the current issue of the *Lancet* by Professor Sir Thomas Oliver, who has been conducting experiments on the suggestion of the inventor. The lead by this new method is actually withdrawn from the body by electrical means, and what is still more important the method can be effectively employed, it is claimed, to prevent the lead poisoning in persons employed in occupations in which lead processes are used. Some of the white lead manufacturers in Newcastle have allowed the treatment to be put to a practical test upon their workmen. Mr. Clague fitted up an electrical installation in the factories, and arranged a series of arm and leg baths whereby several workmen who suffered could have the bath at the same time. The bath was given for half-an-hour daily on every second day, the positive pole of a battery being placed in a foot bath, and the negative in an arm bath. Fourteen men with marked symptoms of lead poisoning were treated, and not only did the symptoms decrease in severity and the patients improve in health, but lead was found in the bath water. Another feature was that in most instances where lead was found in the water passed before submitting the workmen to the double electrical bath treatment, less lead was found in the water passed after the bath. If this treatment proves the success that it is claimed to be, a great boon will be conferred, not only on sufferers in the printing trade but also on those workers who have to deal with lead in any of its many forms in their daily occupations.

Newspaper Developments and the Papermaker.

MAKERS of "news" are vitally interested in all that concerns the progress and development of newspapers and the periodical press generally. The more they grow and increase in prosperity the greater will be the consumption of the commodity the papermaker has to sell. The stories one occasionally hears of how in the future the newspaper will be superseded by the wonderful instruments of mechanical speech and picture, now so popular, may make the papermaker pause to speculate on the future of his industry. We believe, however, the influence of these inventions will only be relative; the newspaper will not go, but it will of course continue to experience changes in its constitution and format. This point was touched upon in the very interesting address delivered by Mr. Robert Donald, President of the Institute of Journalists, at the annual conference of that body at York this week, when he reviewed the changes which had taken place in the newspaper world during the last 20 years, and indulged in a prophecy of what the newspapers of 20 or more years hence are likely to be. Mr. Donald is well fitted to gauge the trend of events in the newspaper world, and the papermaker will appreciate the usefulness of his seasoned judgments of present-day tendencies in newspaper production and his forecast of the possible developments of the near future. Looking 20 years ahead, he believes that daily newspapers will be fewer, but the tendency towards combinations will increase and, happily for the maker of "news," colossal circulations will continue to grow. A paper which has not at least a half-million readers, he opines, will not be considered seriously as an organ of the people. In a word, his conclusion is that there will be fewer newspapers, but the total circulation will be greater. Besides these "national newspapers" there still will be localised newspapers, following the method of the national Press in presenting news, says Mr. Donald, and a revival, he hopes, of the purely local country newspapers, in improved form and style. Furthermore, the inability of the more national newspapers to give space to sectional interests will lead to specialised daily newspapers taking the place of the specialised weeklies which now exist. The morning and evening newspapers will be merged, and editions will come out almost every hour, day and night. Again, judging from the trend of events, Mr. Donald predicts that the next generation will see the activities of municipal and other public authorities very much extended, with the result that newspapers will not be able to report their proceedings, and municipalities will have to issue official gazettes, daily or weekly as the case may be. Thus, in one way or another

Digitized by Google

printing paper must be consumed in increasing quantities, though the purposes for which it is used may change and vary in the course of events.

An American School of Journalism.

The training of the journalist has been taken seriously in hand in the United States, and a Department of Journalism is carried on in the New York University under the control of a large and capable staff of teachers. There is a strong belief that journalists, like poets, are born, not made, and there is considerable reason for faith in the truth of the statement, but given the born journalist, a course of training previous to his taking up actual work will fit him better for the task than if he had entered a newspaper office without any such preparation.

In an address which the late Mr. Whitelaw Reid, of the *New York Tribune*, delivered at New York University, he thus outlined what special instruction in journalism might hope to accomplish:—"West Point," he said, "cannot make a soldier; and New York University cannot give us an assurance of an editor. But West Point can give the training, discipline, and special knowledge without which the born soldier would find his best efforts crippled and with which men not born to military greatness may still do valuable service. This University may yet do as much for the embryo Bryants and Greeleys, Weeds and Raymonds, and Ritchies and Hales, who are to transmit American journalism into a profession, and emulate the laurels of these earlier leaders, with larger opportunities on a wider stage to more beneficent ends."

In the New York University the Department of Journalism is designed to meet the needs of five classes of students:—

1. Those who wish to prepare themselves for magazine work either as editors or as writers.

2. Those who are attracted towards newspaper work and are anxious to secure a preparation for positions as reporters, editorial writers, department editors, copy readers, etc.

3. Those who wish to enter the field of trade journalism either as editors or writers.

4. Those who want a special training for the work connected with the advertising department of a magazine or newspaper.

5. Those who want a special training for the work connected with the circulation department of a magazine or newspaper.

The students in the main are allowed to select their own studies from the courses outlined in the prospectus, but their selection must meet with the approval of the director of the department and must be made with some definite end in view. This plan enables the student to select those courses which best prepare him for the work he intends to take up after graduation. A total of twenty hours of weekly work in the technical courses in journalism are required of regularly enrolled students who are candidates either for a degree or for the certificate of the school. Information as to the working of the school can be had from Mr. James M. Lee, director, 32, Waverley-place, New York City, U.S.A.

THE LINOTYPE FOR BOOK WORK.

Faces of Type, etc.	**Linotype Users have the choice of over 400 faces of type; new faces are being added continually. Many of these faces have been specially cut for Book Houses. (Every Linotype User has also the choice of 84 complete borders, 73 varieties of rules, dashes, etc., and over 600 figure faces.)**
Alignment.	**Face alignment on the Linotype is quite automatic; no adjustment whatever is necessary. Type matter set twenty years ago would align with that set to-day on any Linotype machine.**
Justification.	**Line justification on the Linotype is perfect; this applies to corrected lines as well as the initial product.**
Quality of Product.	**The Linotype line is cast in one complete piece. This permits of slow and deliberate movement in alignment and casting, which obviously is the best way of obtaining a perfect printing surface. Incidentally it may be mentioned here that, owing to the comparatively slow movements made by the machine, the cost of upkeep is only a few pence per week.**
Ease of Make-up.	**The superiority of the Linotype unit of composed matter is apparent immediately the operator empties his machine galley; whether the slugs are put on a random or on a galley there is no danger of pie. Linotype matter is so easily handled that a saving of fifty per cent. is effected in makeup alone.**
Electrotypes and Stereotypes.	**The Linotype shoulder height and depth of strike are ideal for wax, lead, or flong moulding, with the result that the finest possible plates are made from Linotype-set matter.**

A Booklet containing specimens of Linotype Faces specially suitable for Book work will be sent to anybody interested in the production of high-class printing.

Financial.

Offices of the *British and Colonial Printer and Stationer*,

58, SHOE LANE, LONDON, E.C.

WEDNESDAY, August 27th. 1913.

THE position of the Bank of England was, last Thursday, shown to be much stronger than a week previous; the market's resources have also increased substantially, and supplies of credit are as abundant as before. Rates for both loans and discounts are easy. In the bullion market the Bank has notified the arrival of a considerable amount this week, but Turkey and Egypt have taken the bulk of it, leaving a net influx to date of £191,000. With regard to stock markets, there is a pause in the spell of nervousness over Near Eastern affairs, and the tone is cheerful. The carry-over was easily arranged yesterday, and there appeared to be no increase in the speculative position. Consols are firm, and the quotations are higher than a week ago, at 74 to 74⅛ for both money and the account.

Quietness has continued all this week in the miscellaneous industrial market, the opening of the new Account yesterday not being accompanied by any material increase in the volume of business. The general tone, however, is firm. In the section relating to paper and print business has been restricted, and movements in our list of shares shows movements each way. Waterlow and Sons Def. Ord. have risen ½ to 25½ to 27½, and Weldons Ord. have fallen 3/32 to 1 15/16—1 31/32. Business has been done during the past week in Amalgamated Press Pref. at 20s. 7½d.; in Associated Newspapers Pref. at 19s. 3d. and acc. 19s. 9d.; in John Dickinson and Co Deb. at 98; in Eyre and Spottiswoode Deb. at 84; in Carl Hentschel Pref. at 7s.; in Ilford Ord. at 14s. 3d., and in the Pref. at 18s. 9d.; in George Newnes Pref. at 15s. 9d., 17s. and 16s. 9d.; in C. Arthur Pearson Pref. at 73s. 9d.; in *Standard* Newspapers Pref. at 19s.; in Raphael Tuck and Sons Ord. at 19s. 6d. and 18s. 6d.; in Waterlow and Sons Def. at 26½; and in Weldons Ord. at 30s. xd., and in the Pref. at 20s. 6d., 19s. 6d. and 20s. 6d.

CHARLES BOWMAN, LTD.—Land registry charge on 8, King-street, Tower-hill, E.C., dated August 14th, 1913, to secure £550. Holders, Mrs. E. Bowman, West End Lodge, Isle of Wight; C. J. Bowman, 22, Windsor-street, Thornton Heath; and A. G. Stanzick, 8, King-street, Tower-Hill, E.C.

COMPANY NOTICES.

TRANSPARENT PRINTING CO., Ltd.

At a meeting of the company, held at London, on June 30th, the following resolution was passed; and at a subsequent meeting on July 29th, was duly confirmed:—"On account of the company not having done any business for a considerable time, and as the company has no assets or liabilities, it be voluntarily wound up; and that Mr. J. F. Gibbs, of 65, Wool-exchange, E.C., be appointed liquidator."

BRITISH ADVERTISING CO., Ltd.

At a meeting of the company, held at Manchester, the following resolution was passed:—"That it has been proved to the satisfaction of this meeting that the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily." And at the same meeting Mr. Edgar Oates, 20, Cross-street, Manchester, was appointed liquidator for the purposes of such winding-up." Notice is given, that a meeting of the creditors of the company will be held at Manchester on September 4th.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

THE BANKRUPTCY ACTS, 1883 AND 1890.

FIRST MEETING AND PUBLIC EXAMINATION.

NELSON, H. J. H., trading as Nelson and Son, 51, Broad-street, and lately at 4, Brunswick-square, Bristol, bookseller. First meeting of creditors, September 3rd, 11.30 a.m., at the official receiver's office, 26, Baldwin-street, Bristol. Public examination of debtor, October 17th, noon, at the Guildhall, Bristol.

APPLICATION FOR DEBTOR'S DISCHARGE.

TATCHELL, C. J., 171-172, Snargate-street, Dover, stationer, etc. To be heard October 7th, 11 a.m., at the Guildhall, Canterbury.

ORDER MADE ON APPLICATION FOR DEBTOR'S DISCHARGE.

QUELCH, H., 35, Limesford-road, Nunhead, London, S.E., newspaper editor. Date of order, July 25th. Discharge suspended for two years on the grounds that the bankrupt's assets are not of a value equal to 10s. in the pound on the amount of his unsecured liabilities.

NOTICE OF RELEASE OF TRUSTEE.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Have you ever been a stagnant swamp? Or felt like one?

o o o

If so, there may be interest for you in a figure Mr. Rupert Tapper used at the Monday lunch of the Executive Club meeting at the Birkbeck Cafe in Holborn, E.C. (At one o'clock to be precise).

o o o

He spoke of a morass all sodden and useless. Let some even small new activity arise, some energetic trickle begin to operate in the centre of the morass. The trickle quickly becomes a tiny stream, and then a larger stream; and it begins to gather to itself water from right or left, and in due course it drains the morass and gives to it a new, a bountiful, and a productive nature.

o o o

The nature and service of that spring, Mr. Tapper thought, fairly illustrated the nature of and the effect of some new activity in life. The effect to put it in a word, of work.

o o o

The damp mass becomes vivified and fructified by a new energy; and so too a thing that is too dry. For some of us may remember the lines which tell of the power of a new interest.

o o o

"A little hope, a little trust . . .
And life, as dry as desert dust,
Is fresher than a mountain stream."

o o o

Hope is the mainspring of energy. A new hope, even a new wild seeming imagining, may express itself in energy; and the energy may alter the whole condition of things. May alter them chemically, so to say; not simply mechanically.

o o o

Just as the frog, instead of drowning in the cream pail, swam on, and by swimming churned it into firm supporting butter; changed it chemically.

o o o

Mr. Tapper's topic was "The art of profit-making." Any gentleman connected with the Kenrick and Jefferson firm (as he is) has a right to a hearing on such a topic.

o o o

Less than twenty years ago the firm, an ordinary provincial printing and newspaper publishing concern, on not at all a great scale, issued their triplicate telegram book. It furrowed a way through the then stagnant swamp of office usages; it gathered to itself right and left other good notions, trickling in and swelling the volume; it tore out a channel; and things became changed; the ordering of Kenrick and Jefferson's affairs and the ordering of the affairs of offices and businesses in general.

o o o

The outcome is a magnificent business employing many hundreds of workers, pretty well all engaged in some way in the supply of utilities, printed or other, included comprehensively under the heading, System supplies.

o o o

It's a fine thing to see how a new force was set in motion and with such beneficent result.

o o o

It does one good to meet or even to think of these "first jump," men, the "Pioneers, O pioneers," of the familiar lines.

o o o

They're the salt of the business world.

o o o

"There is always room for a man of force; and one man makes room for many."

o o o

Mr. Tapper had his own definition of the art of profit-making. There's a lot more in it than at first springs to sight. He called it "the art of keeping on the best possible terms with all those with whom we come into contact."

o o o

That means, he said, in enlarging on the thought, giving the best possible service to the community; and that means our being in the most efficient condition for giving service.

o o o

That means golf, in its proper time; or motoring; or holiday at any rate. For me it means a good sea swim as often as I can get it.

o o o

"You must keep fit; you must use your leisure well," Mr. Tapper very shrewdly counselled.

o o o

In holidays or leisure we make ourselves; in our business time—well, we make our businesses.

o o o

This particularly is a word for the employer. He should be able to take a holiday, at least, and he should take it.

o o o

The employee begins by being dispensable. He should set about making himself indispensable.

o o o

The employer begins by being indispensable. He should set about making himself dispensable.

o o o

As Mr. Austen Leigh, of Spottiswoode's, reminds us, where an employer finds everything going wrong directly he's away, "There's one man about the place who doesn't know his business."

o o o

Yet another word of Mr. Tapper's was very important and had the quality of being somewhat unusual in business gatherings. He laid stress on the avoidance wherever possible of monotony in work; on the lessening at any rate of monotony.

o o o

I know I've said before but I shall say again until the editor's pencil once more begins to look blue that it is as important for all interests that labour shall be reasonably interesting as that it shall be reasonably brief.

o o o

Don't ask me to say here and now how this boon is to be accomplished. I'll only promise to give it my best thought as one worker in the craft, and I'll promise on your behalf that you'll do the same. Of a hundred readers of these notes everyone can probably do something that I can't do; every one of the hundred certainly knows something that I don't know. It's nothing in the way of reflection or disparagement of a good idea that the one proclaiming it like Mr. Tapper, or catching it up and emphasising it, like myself, should not be ready with its cut and dried application to all conceivable cases.

o o o

It's a great deal to be simply looking in the right direction; the next thing will be moving in the right direction. And then *solvitur ambulando*. Difficulty is often cleared out of the way as we "walk along."

o o o

Now this is a jolly sensible contemplation for the silly season.

o o o

I've a personal objective in the notes. Next Monday I've been roped in to give the luncheon talk, and having no particular ideas of my own I've stolen Mr. Tapper's, and am going to worry through a further stage that notion of his that a very large part of the prospect of business success consists in the elimination of monotony.

o o o

We really don't hear the word often enough. Perhaps that's why the boy in the story didn't understand—the boy, I mean, who went wrong in his examination paper. "Some people have several wives. That is called perligemy. Some have only one wife; that is called monotony."

o o o

I'm all for that last sort of monotony; as every man should be who has a better wife than he deserves; which no doubt is your case and mine.

o o o

But the other sort of monotony——as to that I really want a Frenchman to cry *à bas*.

o o o

Will any of you take pity on a man broiling away in Fleet-street these August days, and called upon to do some thinking before Monday mid-day. Send me a post card with a hint or a suggestion; or a reference.

o o o

You know some concern that did grapple with the problem of dreariness and dullness in work. They let their girls sing; or they instituted some craftsman competitions; or they tried to introduce variety into the style of work done in some way. They fought monotony anyhow.

o o o

The triumph over tedium will call for a Te Deum.

o o o

Mr. Tapper seemed to find or to look for the remedy in the increasing of the productive character of the work done by their staff.

o o o

He doesn't claim to have any magical wand wherewith to convert non-productive into productive work; but he does feel, and any Kenrick and Jefferson associate has a right to say, that a great deal can be done in the way of eliminating unproductive work.

o o o

We must have some of it. Let's have as little as possible.

o o o

I'm not striking off those copies of the "Te Deum" yet because I can see some difficulties ahead. They'll take time to settle. But the fact that a job will take time seems a better reason for starting on than for hanging back.

o o o

The Giant Monotony like the Giant Monopoly wants, or at any rate will be all the better for a sharp deep thrust under the fifth rib.

o o o

Where's Jack the Giant Killer? I'm sure there must be a lot of him about. I want a post card from a number of him between now and Monday morning, at my—thank heaven—unmonotonous idea-workshop at 146, Fleet-street.

o o o

Shoot in some suggestions please. Even what you in modesty may almost consider to be rubbish, may be shot here. I've not the slightest doubt that if you send me any hint or fact or suggestion at all it will be well worth my pondering.

o o o

By the way, any one reading this will be very welcome, I am sure, if he chooses to take his lunch with the Executive Club (1 to 2 o'clock next Monday, in a separate room of the Birkbeck Café, close to the old Birkbeck Bank, Holborn.)

o o o

This holiday time there are vacant chairs. I'm glad to reflect that there are. There'll be plenty of room. It's not a drawn out affair either. It usually breaks up a few minutes after two. The lunch is the modest 1s. 6d.

o o o

I don't want to see simply the same faces. Come along. It will break the monotony.

FRANK COLEBROOK.

A Monotype Specimen Book.

A new specimen book of "Monotype Display Type Matrices" has been issued by the Lanston Monotype Corporation, Ltd., and its contents make one wonder at the possibilities possessed by that appliance for the production of display founts of type by the printer in his own office and at any time he may desire. The great versatility of the monotype casting machine enables it to cast body type from 5 to 18-point, and display type for the cases from 14 to 36-point, so that display advertisements, circulars, or other work may be entirely composed on the machines. The book shows no less than eighty series of display types (in all 377 founts), that can be cast by the owner of a Display Type Attachment to the monotype. Such a range places a new power in the hands of the printer, as any of the matrices may be purchased at a low price, while many of the sets may be hired, and this method shows a great economy for the user. These latter are numbered, and a reference card is inserted at the beginning of the book on which their numbers are indicated, the rate charged for their use being one half-penny per matrix per day, or fifteen shillings for the use of a complete fount for one week. The book is beautifully got up and printed, and is enclosed in a double grey cover with the title embossed on the front. We may mention here that thirty-two Display Attachments have been sold in Great Britain since January 1st last.

THE ballot of Scottish bookbinders on the question of female labour has resulted in favour of a strike. The details of the voting show that the number in favour was 706, while 120 were against and 36 were neutral. The position of affairs is to be considered at a meeting of the Scottish District Council on Saturday.

Printers and their Employers.

President of Typographical Association on Conditions of Labour.

Several speeches of an interesting character were deliyered on the occasion of the anniversary dinner of the Bradford branch of the Typographical Association, which took place at Otley on Saturday. In the afternoon the members were afforded an opportunity of visiting Farnley Hall, the residence of Mr. F. H. Fawkes, and of inspecting the famous collection of Turner water colours there. Dinner was served in the evening. Mr. Wheater Jolliffe, President of the Bradford branch, occupied the chair, and accompanying him were Mr. J. O. French, of Manchester, President of the Typographical Association; Mr. C. F. Tumber, Bradford, vice-chairman and President-elect for next year; Mr. A. F. Paine, secretary of the Bradford branch; Councillor W. H. Broadbent, Halifax; Mr. J. E. Gledhill, Huddersfield; Mr. J. R. Crawford, Harrogate, and others.

After the usual loyal toasts had been honoured, Mr. Tumber submitted that of the Typographical Association. He urged the rank and file to recognise their duty, and to come forward and do the work as it was laid down by the older leaders. The battle of Waterloo, he said, was not won by Wellington alone, but by the heroic soldiers that fought under him. Referring to the work done by Mr. French, Mr. Tumber spoke in terms of approval of the manner in which that gentleman had conducted the proceedings at the annual delegate meeting. Speaking of the approved Society, Mr. Tumber caused some amusement by stating that the maternity benefit had been paid out pretty frequently. That, he thought, indicated that the printers were fulfilling their duties to the nation. (Laughter and applause).

Speech by the President.

Mr. J. O. French, who was cordially received on rising to respond, first apologised for the absence of Mr. Geo. Roberts, M.P., their representative in Parliament. One of the striking features at the annual delegate meeting, he went on, was the presence of the young men. Mr. Tumber was one of the young men on whom many eyes were focussed, and much was expected from him in the future. Old men could not be expected to keep at the helm of the ship, and it was for the young men to step into their places. In no craft did they find the spirit of comradeship so much in evidence as amongst the members of the T.A., and it was a fact of which they might be proud. Mistakes had been made in the past, and would continue to be made in the future, but on all occasions the members had been willing to grant their indulgence. It was not generally known that at the annual delegate meeting the delegates altered the constitution of the Executive Council. A desire had been spreading for some time that it should be made more democratic, and with that he was in entire agreement, as then the rank and file would be entirely responsible for the management of the Association. Never in the history of the Association had they had men more willing and anxious for the good government of the body. (Cheers.)

The Doctrine of the Strike.

Referring to the policy of the Association, Mr. French said we were living to-day in strenuous times. A great awakening was taking place, and of that awakening they ought to take full advantage. The T.A. held a unique record as a trades union, inasmuch as they had never once made a retrograde step. From the inception of the movement they had grown year by year. There were men who had taken advantage of the labour unrest to suit their own purpose and to achieve their own ends. They had been preaching the doctrine of Syndicalism, which was a doctrine to which neither he nor his fellow members could subscribe. (Applause.) Trades unionism was conceived for a noble purpose—that of bettering the conditions of the workers of the country in a valid and a legal way—(applause)—and they of the T.A. would not be worthy of their salt if they departed from that policy. (Hear, hear.) Trades unionism was conceived to lift the bottom dog, and so long as they pursued that policy so long would success attend their efforts. He suggested that there was a great difference between the preacher of trades unionism and the preacher of syndicalism. There was no room in the labour movement for the man who preached the doctrine of the strike. They were not out to strike, but rather to use all pacific methods to improve the conditions of labour. There were men who would strike at the first opportunity, and who would pledge their association's funds for that purpose. But the strike hurt the worker more than the capitalist, and they would only use the strike as the last weapon, and when all pacific means had failed. They had employers in the country with whom they could not agree, and they had employers of whom they were proud, and before they decided to strike, those facts should be taken into consideration. There were, of course, times when they would be called upon to demonstrate their strength, and to show the faith that was in them, and if they had to strike they would fight to the bitter end. But the doctrine that he had always preached was that all pacific methods must first be exhausted. (Cheers.)

Employers and Employed.

Up to the present, continued the speaker, they had had many successful movements on behalf of the men. And what did these mean? They meant that the employers of the country had every confidence in the members of the T.A. They meant that the employers recognised that the spending power of a sovereign was not by 4s. 6d as much as it was five years ago. He therefore wished to advise all the branches that had not recently had an increase to go in for one at once. The workers of the country were awakening to the fact that they were masters of the situation, and there was a chance now for every branch to better their conditions by pacific methods. He did not think that any worker throughout the country should receive less than 35s. per week, and he was disappointed that the annual delegate meeting had fixed the minimum at 30s. No man could decently clothe and feed his family on less than 35s. per week. (A voice: They cannot in Bradford.) The workers had a right to claim a share of the world's wealth, especially as they were living in the wealthiest country on earth. Many employers had built up mighty fortunes on the sweat and brains of the workers, who now desired to have some share of that wealth. It was not their place to be always lagging in the rear, but to lead in the van. (Cheers.)

A Word for the Employers.

The Chairman, in submitting the toast of the employers, emphasised the necessity of fair dealing. He was not, he said, a man for peace at any price, but he was not one of those who believed in for ever flaunting the red rag at the bull. They had men in the Association of whom it would be correct to say that they were never happy except when creating some turmoil. He did not agree with that policy, as in his experience he always found that if the men had any grievance the bulk of the employers were always ready to listen to them. He had had many interviews with employers, and on all occasions he had been treated with the utmost courtesy and on equal ground. They never lost anything by trying to look at a matter from the point of view of the other side. (Applause.)

The Competition of the Non-Union House.

Mr. E. P. B. Brockwell, of Otley, responded, and referred to the happy relations that had always existed between employers and employed so far as his office was concerned. That there were two sides to every story was never better exemplified than in the industrial life of to-day. They were bound to go wrong if they only looked at one side. There was no right-minded employer but who wished his men to have a living wage, but the employer was frequently handicapped because next door to him was a non-union office with an employer paying what wages he liked, and when the public wished for a thing done cheaply they went to the cheap man. What they ought to aim at was to get all the offices into the Union, so that the public could not get their work done cheaper at one place than at another. (Cheers.)

The toast of "Our Visitors" was submitted by Mr. E. Harrison, of Otley.

Councillor W. H. Broadbent, of Halifax, responded, and spoke of the work that was being done in Halifax and district.

A Rise at Harrogate.

Mr. J. R. Crawford, of Harrogate, also responded, and mentioned the fact that as a result of recent agitation in Harrogate they had just got an offer of an increase of 2s., making the rate 33s. 6d. per week, and also a change in the overtime rates. Previously they had received only about the same for overtime as for day work, but they had now got an advance to 10d. per hour, with 1s. after the first three hours. Naturally they were a little bit pleased with themselves. (Applause.)

Mr. Riddibrough, of Keighley, also responded with a humorous speech.

Representation on Authorities.

"The Bradford Branch of the Typographical Association and its Otley Section" was submitted by Mr. French, who spoke of the excellent work done by the officials in that district, especially by Messrs. Jolliffe and Paine. The Trades Union movement, he said, was becoming a political movement—(A Voice: Certainly it is.)—and if they desired to see it progress they must send to the House of Commons and to the munipalities county men like Councillor Paine who were in sympathy with it. The time had come for them to throw away the shibboleths and the prejudices of the past. He believed in proportional representation, and in both sides of a case being heard. He was glad to know that the Typographical Association had not been backward in that respect, but had sent men to the authorities who had proved their worth. (Applause.)

Cutting Prices.

Councillor A. F. Paine, who is a member of the Stationery Committee of the Bradford City Council, responded. He first read a letter from Mr. Geo. Roberts, the Typographical Association Parliamentary representative, who had been invited to that meeting, but who was unable to be present. Mr. Roberts said he greatly regretted the fact, as he would like to have renewed his acquaintance with the Bradford members. After alluding to the earlier work of the Bradford branch, Councillor Paine said that in many cases the employers themselves were alone to blame for the lowness of prices. In estimates submitted to his committee on the Bradford Council he had found a variation in the same job of from 250 to 300 per cent. One firm had quoted £3, and another firm had offered to do the same work for 10s. Councillor Paine concluded by proposing a vote of thanks to Mr. F. H. Fawkes for so kindly allowing the members to visit Farnley Hall. This was seconded by Mr. E. Harrison, and carried unanimously.

The toast of the host and hostess was drunk on the proposal of Mr. H. Rees. Mr. T. B. Houseman responded.

The final toast was that of the chairman, which was submitted by Mr. H. R. Inglis, and carried with musical honours. Mr. Jolliffe suitably responded.

"PRINTED on Irish Paper with Irish Ink" is an announcement on the title-page of the "Directory of Users of the Irish Trade Mark (1913)," issued by the Irish Industrial Development Association (Incorporated), Dublin.

A SMALL hand-book, entitled "Die. Klebstoffe," is issued by the Drucktechnischer Verlog, Dresden. It deals with the manufacture of pasteboards by hand and machine, and their use in the box-making, printing, photographic and other trades.

Canadian News Print.

Figures Relating to Production.

Mr. A. G. McIntyre, the retiring secretary of the Canadian Pulp and Paper Association, gives some remarkable figures relating to the production of news print in Canada. He states that the present production in Canada is 1,300 tons a day, made up as follows:—

Quebec.—Laurentide, Grand Mere, 200 tons; Belgo-Canadian Pulp and Paper Co., Shawinigan Falls, 100 tons; Canada Paper Co., Windsor Mills, 50; Ed. Crabtree and Sons, Joliette, 25; E. B. Eddy Co., Hull, 60; Jos. Ford and Co., Fort Neuf, 5; Jonquiere Pulp Co., Jonquiere, 40; Alex. McArthur and Co., Joliette, 25; News Pulp and Paper Co., St. Raymond, 30; Price Bros. and Co., Kenogami, 150; total daily production for Quebec province, 685 tons.

Ontario.—J. R. Booth, Ottawa, 125; Lake Superior Co., Sault Ste. Marie, 200; Riordon Paper Co., Merritton, 10; Spanish River Pulp and Paper Co., Espanola, 150; total, 485.

British Columbia.—Powell River Co., Ltd., 150.

In addition to this 1,300 tons, before January 1st, 1914, these figures will be increased by 390 tons, as follows:—Ontario Paper Co., Thorold, Ont., 120; Fort Frances Pulp and Paper Co., Fort Frances, Ont., 120; Donnacona Paper Co., Donnacona, Que., 50; Powell River Co., Powell River, B.C., 100; total, 390.

Last year the increase in tonnage in the production of news print in Canada was 430 tons per day. So far this year an additional 235 tons has come on the market, and this will be increased by another 390 tons per day by the end of the present year. These figures compare with an increased production in the United States for 1912 of only 235 tons per day, and for the present year an increase of 110 tons.

At the present time Canada is exporting to the United States at the rate of 600 tons of news print a day, which is 98 per cent. of the total imports of the United States. Eighty per cent. of this has been entering free under clause 2 of the Reciprocity Act.

British Envelopes.

The exports of British envelopes from the United Kingdom during 1912, compared with the four previous years, were as follows:—

1912	...	36,431 cwts.	£86,049
1911	...	26,122 ,,	67,275
1910	...	28,939 ,,	71,921
1909	...	25,137 ,,	65,005
1908	...	20,268 ,,	53,944

Foreign countries increased their purchases from £11,702 in 1908 to £21,084 in 1912, and British Possessions from £42,242 to £64,965.

The values of the shipments to the following markets are given for 1912 as compared with 1908:—

	1908.	1912.
Egypt...	£2,706	£8,251
Argentine Republic ...	3,007	5,437

The Condition of the Labour Market

IN THE

PRINTING AND ALLIED TRADES.

HOME.

According to the Labour correspondents of the Board of Trade, whose reports appear in the *Board of Trade Labour Gazette* for the current month, employment in the printing trades during July was good generally, and better than in June, or in July last year, as shown by the Table below :—

Districts.	No. of Members of Unions at end of July, 1913.	Percentage Unemployed at end of			Increase (+) or Decrease (—) on a	
		July, 1913.	June, 1913.	July, 1912.	Month ago.	Year ago.
London	21,118	4·6	4·8	6·8	— 0·2	— 2·2
Northern Counties and Yorkshire ...	5,790	2·1	3·7	2·5	— 1·6	— 0·4
Lancs. and Cheshire	7,272	3·9	3·9	3·8	...	+ 0·1
East Midland and Eastern Counties ...	2,810	2·3	2·0	2·2	+ 0·3	+ 0·1
West Midlands	2,753	1·6	3·4	2·7	— 1·8	— 1·1
S. and S.W. Counties and Wales ...	3,673	1·7	3·2	2·6	— 1·5	— 0·9
Scotland	6,140	1·9	2·5	3·5	— 0·6	— 1·6
Ireland...	2,502	6·6	6·1	4·9	+ 0·5	+ 1·7
United Kingdom	53,353	3·5	4·0	4·7	+ 0·5	— 1·2

In London, employment continued good, and was better that a year ago. In other centres, employment was good generally, and better than a month ago and a year ago, overtime being worked in many towns on voters' lists. It was slack, however, with letterpress printers at Liverpool, Nottingham and Dublin, and with lithographic printers at Edinburgh.

FOREIGN.

In France, during June, employment continued fair in the printing trades, but in Germany it fell off, so that the percentage of unemployed amongst 66,274 trade unionists rose from 3·0 (in May) to 6·1, as compared with 5·5 in June last year. In Holland and Norway there were only trifling changes.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Applications.

18,201 THOMPSON, W. P., paper tubes and methods of making the same.
18,218 COTTEE, A. J., self-opening envelope.
18,263 JONES, R., pencil holders.
18,278 HADDAN, R., machines for filing account slips.
18,403 BOLLE, A., and JORDAN, printing, blocking and stamping presses.
18,409 BLAKENEY, R., advertising apparatus.
18,411 KING, S. V., and J. KING, LTD., manufacture of discs of paper, cardboard, papier-mâché, and like materials.
18,431 HORN AND SCHNEIDER, automatic sheet feeding and delivery mechanism for platen presses.
18,441 SWIFT, W. E., machine for applying metallic fasteners to envelopes.
18,472 BRETTELL, F. G., sheet delivery machines.
18,484 VERBUNT, W., and OSTERMANN, W., bookbinding machines.
18,521 BOLTON, R. H., and J. W., binding for books and the like.
18,525 YATES, J., and GORDON, F. J., holders or clips for retaining music leaves, books, or the like in position.
18,567 CRUSE, H. V., safety attachments for envelopes and like packages.
18,580 JENKINS, J. W., attachable hinge for loose-leaf binding.
18,583 HARRIS, H. K., devices for making public announcements, exhibiting advertisements, and for other purposes of a like nature.
18,586 EVANS, R. G., fountain or reservoir pens.
18,624 CAINE, T., fountain pens, penholders, pencils, pencil and pen protectors, and such like.
18,650 RIDGWAY, A. D., typewriters or writing machines.
18,657 ORD, B. T., and BEAN, A. H., manifold copying books.
18,675 DIXON, J. F., clips for securing loose paper sheets and for other like purposes.
18,676 MARTIN, P., rotary printing presses.

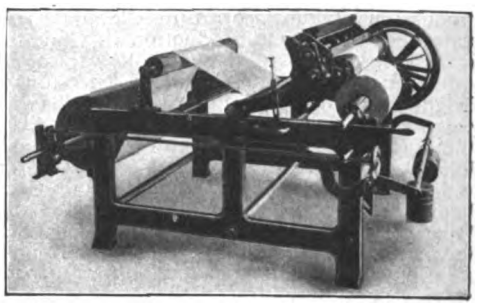
Specifications Published, 1912.

Moisteners for stamps, envelopes and the like—Hostmann; 2,895.
Advertising apparatus—Mitchell and Kent; 17,912.
Combined photographic and letterpress printing apparatus and the like—Graber; 18,096.
Goods Transportation labels, label-holders, tag envelopes, invoice holders, or the like—Taylor; 18,186.
Machine for displaying photo, pictorial, or advertising cards and the like—Clegg; 18,232.
Machines for cleaning and preparing composition inking rollers and lithographic inking rollers—Hurth; 19,229.
Driving mechanism of printing presses—Goss Printing Press Co. of England; 21,449.
Production of negatives for photo-mechanical printing—Miller and Millergraph Co.; 25,257.
Apparatus for changing the mould in matrix-setting and type line-casting machines—Schnellsetzmaschinen Ges. and Drewell; 26,168.
Means for mounting photographs, engravings, and the like—Molesworth; 26,521.
Sheet delivery mechanism—R. Hoe and Co.; 29,947.

1913.

Adjustable folding device for use in machines for the manufacture of envelopes, paper bags, and the like—Büse and Zingemann; 8,494.

COMPLETE SPECIFICATIONS OPEN TO PUBLIC INSPECTION BEFORE ACCEPTANCE.



1913.

Device for displaying advertisements or the like—Benchot; 17,425.
Typographical machines—Kennedy; 17,886.

THE offices of the *East African Standard*, at Nairobi, were gutted the other night, and only the walls were left standing.

SOME CONTRIBUTIONS TO

Scottish Paper Trade History.

X.—The Stoneywood Mills of Messrs. Alex. Pirie and Sons, Ltd.

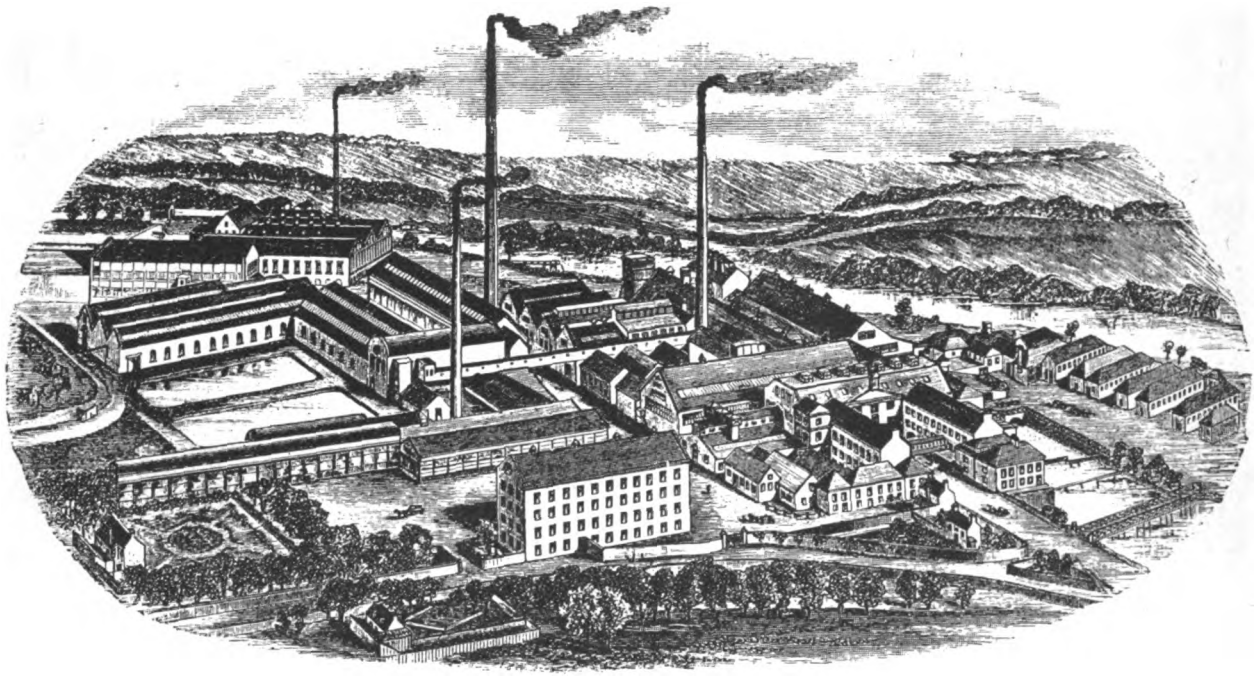
We come next to the extensive Stoneywood Mills at Bucksburn, which, with the exception of the Culter Mills, form the oldest existing papermaking establishment in the neighbourhood of Aberdeen. They date their origin from September, 1770, when John Boyle, a bookseller, and Richard Hyde, a dyer, both of Aberdeen, leased for 114 years the "island of Stoneywood," about four miles north-west of the Granite City. They formed a partnership in equal shares for the manufacture of writing and other paper. Boyle, whose place of business was at the head of the Broadgate, was also a printer, bookbinder, and newspaper proprietor. According to an advertisement in the *Aberdeen Journal* of February 25th, 1771, the new mill was expected to be in operation a few months later, and in the meantime Boyle announced that he was willing to pay 9d. for every 20 lbs. of old ropes or unbleached rags, and double as much for linen or check rags. However, it is doubtful whether he ever actually became a papermaker, as in the same year he sold his half-share of the business to his partner Hyde, who in his turn disposed of it to Alex. Smith, an Aberdeen wigmaker. In 1773, Hyde disposed of his remaining interest to an Aberdeen merchant named Thos. Spark, who in the following year sold it to his partner Smith, so that the latter finally became sole proprietor of Stoneywood Paper Mill. In the *Aberdeen Journal* for March 22nd, 1773, the following announcement appeared:

A PAPER WAREHOUSE.

Alexander Smith, proprietor of the paper mills at Stoneywood, has opened a warehouse in the head of the Broadgate, Aberdeen, where he sells on the lowest terms the greatest variety of lapping or wrapping paper, viz., whited-brown, Kentish cap, elephant royal, pot blue, filtering paper, cartridge of various kinds, dyers pressing papers, or pasteboards, etc. He gives the best prices, ready money, for old ropes and rags, or anything of the hemp or lint kind. Commissions from the country carefully obeyed, and to those who may buy a large quantity at one time, a proper allowance will be given for rental.

Five years afterwards the connection of the Piries with the business began. Patrick Pirie was the first papermaking member of the family of that name, who were then seated in the adjacent parish of Udny. He married Smith's daughter Margaret on March 1st, 1778, and his father-in-law took him into partnership in the papermaking business. Pirie was originally a merchant in Castle-street, Aberdeen. His career as a papermaker was a short one, for he died in March, 1787, leaving three sons (Alexander, William and Patrick) and a reputation which is thus summed up in his obituary notice in the *Aberdeen Journal*:—

As neighbour, husband, father, friend,
He acted well his part,
Blest with what's dear to all mankind,
A good and honest heart



In 1794 the surviving partner, Smith, made a will by which he bequeathed the lease of the mills, then containing two vats and employing only 16 hands, to his son Alexander, or in the case of his death (which actually happened soon after) to his grandson, Alexander, Pirie, who was the eldest son of his deceased partner, the other sons becoming woollen manufacturers. The firm's customers were then chiefly local merchants, printers, stationers and bookbinders, there being only one distant (London) buyer.

Alex. Smith the elder died in May, 1796, at the age of 66, when Alex. Pirie succeeded to his papermaking business. It was not at that time a very large or important one—the inventory then made included a stock of only 533 reams of paper, and 20 tons of raw materials, the whole being valued at £484—nor does it appear to have developed greatly during the forty and odd years that he was at the head of it. He was, however, fully alive to the advantages of economy of production, and thus availed himself of the introduction of the Fourdrinier machine by putting one down in 1822 at his firm's mill (No. 7), which in 1825 was one of the thirteen such machines then at work in Scotland. In 1827 some thirty hands were employed, the weekly wage bill being about £25. Two years later a great flood did considerable damage to the mills, with the result that they had to be reconstructed, though practically on the same site, the river bed being deepened with the view of avoiding any similar disaster in the future. The new mill contained two machines, running largely on printings and writings, and the town warehouse was in Adelphi-court, Aberdeen, where Mr. Pirie, though residing close to his mill, attended daily.

In 1836 Mr. Pirie took his eldest son, Francis, into partnership, and in 1839 his second son, Alex. Pirie. Soon afterwards he retired from business, leaving the mills in the hands of the two brothers, who almost at once commenced to enlarge and extend them, so that the magnitude of the present concern is largely due to their energy and business acumen. As early as 1848, when the first extensions were completed, about 70 or 80 men and boys and 100 women were employed at Stoneywood, where 600 or 700 tons of rags were used yearly.

In 1844 Mr. Francis Pirie was associated with a Scotch patent (taken out jointly by himself and Thos. Nash, of the Paul's Cray Mills in Kent, the latter being the sole patentee in England) for (1) some improvements in rag washing and cleaning machinery. The apparatus may be stated generally to have been a revolving cylinder, partitioned off in such a manner as to separate and agitate the rags while the cylinder was revolving. Water was admitted through the hollow axis of the cylinder. The patent also covered (2) an improved apparatus for drying paper, consisting of a series of stoves, having drums revolving round them, and between each stove and drum a fan, which, revolving with the drum, caused a current of air, that served materially to dry the paper as it passed successively round the drums; and (3) an improved apparatus for glazing paper, consisting of a cylinder having fillets at the end in combination with rollers, the arrangement being such that the copper plates then commonly used in paper glazing, having once passed between the cylinder and rollers, were immediately passed back again without removing them from the apparatus, and so on as often as might be found requisite.

In 1854, as mentioned in our fifth article, Messrs. Pirie and Sons took over the Culter Mills, and worked them for some ten years, prior to the formation, under their auspices, of the present company of that name. Shortly afterwards (1856) they acquired a factory at Woodside, previously used as a cotton works, and converted it into a rag sorting, cutting and dusting department. Another old cotton mill, at Poynernook, close to Aberdeen, was also taken over, and used for the envelope manufacturing and coated paper branches. This is now the well known Union Works. The firm exhibited specimens of their papers, etc., at the Paris International Exhibition of 1855, and were awarded a gold medal. In 1859 the number of employees had increased to more than a thousand, and the annual consumption of raw materials to 2,500 tons. By this time, the two machines had grown to four, making paper from 60 inches to 78 inches wide. The senior partner of the firm, Mr. Francis Pirie, died in 1870, leaving as his surviving partners his brothers Alex. and Gordon Pirie, and two of his sons, Mr. Alex. Pirie being at the head of affairs. The latter gentleman was also a director of the Aberdeen Railway and the Aberdeen Steam Navigation Co. About 1860, Mr. Pirie felt that he was in a position to enjoy a well-earned rest from the cares of business, and for the next seven years or so he resided chiefly on the Continent. He returned to Aberdeen in 1867 and died (at Dresden) in November, 1875, in the sixty-fourth year of his age. Amongst his many benefactions to the district were schools for the children of his firm's employees, started in 1865, and a recreation ground for their use. In 1859, Mr. Gordon Pirie, in conjunction with a chemist named Jullion, patented a method of manufacturing gelatine papermakers' size from bones. In 1876 the firm obtained a gold medal for their display at the Philadelphia Exhibition, and similar awards were gained at Paris in 1878, Sydney in 1879 and Melbourne in 1880. As recently as 1879 the chief papermaking material used at these mills was rags—400 women being engaged in sorting, etc., at Woodside—and of these and other raw materials some 5,500-6,000 tons per annum were then used, the annual turnout of paper being nearly 100 tons per week. Not long after this time, superfine printings were added to the firm's other makes. In 1886 the number of employees at Stoneywood Mills was from fifteen to sixteen hundred, 400 tons of coal per week were required, and 30,000 cubic feet of gas per week for lighting purposes during the winter. There were then some 30 steam engines of various types, for different purposes, including a "Corliss" put in by Mr. A. G. Pirie (said to be the first of its kind set up in the kingdom), and additional motive power was provided by three "Hercules" turbine water-wheels, supplied by an aqueduct, and furnishing about 1,000 h.p. The accompanying reproduction of an old woodcut illustration gives a good idea of the appearance of the mills some 35 years ago. The buildings of that day stood

STONEYWOOD MILLS IN 1879.

CYLINDER DUST BELLOWS
(Invented).
No more Short Circuits in Cleaning Electrical Machinery.

NEAT, LIGHT, DURABLE

USED THE WORLD OVER.
Invented and Manufactured by
Trade Mark No. 270,725.] AUGUST KRAUSHAAR.

For sale in six different sizes by the leading electrical and technical supply houses, felt, TYPE FOUNDRIES, hardware, machine and piano supply houses in the country. These Bellows have no metal mountings, the nozzle as well as body is made of wood, precluding short circuits or injury of any kind. They are very light and almost indestructible. Produce with one stroke 1⁶ to 5⁰⁰⁰ cub.-dec. of strongly compressed air, which removes all dust particles from the most inaccessible places.

AUGUST KRAUSHAAR, Hanau a/M. (Germany), 155.
Catalogues and Samples are sent only to Agents.

on a site nearly 16 acres in extent, on the west side of the river Don, from which the water supply is derived. One of the large tanks seen in the picture was filled by a Pulsometer pump, capable of discharging 600 gallons per minute. Now there is a sedimentation basin of 15,000,000 gallons capacity, after leaving which the water is strained through gravity sand filters of a total area of 48,000 square feet, working at the rate of three gallons per square foot per hour.

In 1890 there were six machines at work (which still remain), ranging in size from 60 inches to 96 inches, and ten years later the output had increased to 150 tons per week. To-day, Messrs. Alex. Pirie and Sons, Ltd., make about 9,000 tons a year of loft-dried tub and engine-sized writings, parchments and vellum papers; account book and safety cheque, bank and typewriting papers; loan, bond, chart, cartridge and drawing papers; blottings, buff copying and multi-copying papers; chromo, art enamel, gummed and cloth-lined papers; cards, boards and envelopes. The mills are within half-a-mile of Bankhead station on the Great North of Scotland Railway. There is an envelope factory at the firm's London premises (96, Farringdon-street, E.C.), and Messrs. Pirie and Sons have branch establishments at Glasgow, Dublin, Paris, New York, Melbourne and Johannesburg. Their papers, indeed, have a thoroughly world-wide reputation, which is maintained by the fifty or so registered watermarks that distinguish the various descriptions and qualities. The earliest "Pirie" watermark of which there is record is dated 1801. The business was converted into a limited liability company in 1882.

At the present day the works cover an area of about 35 acres, and include repairing and joiners shops, employing about 100 men. The old water-wheel of former days was done away with some half dozen years since, and the power plant now includes, in addition to the turbines, three triple-expansion steam engines aggregating 2,000 h.p., a 500 k.w. Parsons steam turbo alternator, and a 100 k.w. steam driven dynamo for lighting purposes. Steam is supplied by more than a score of boilers, mostly of the Lancashire type. In 1906 a new bleaching and beating plant, of the "Masson" and "Taylor" types, was put down by Messrs. Masson, Scott and Co., Ltd. About a mile from the mill is a reservoir, the water supply of which is reserved for fire protection purposes.

Stoneywood Mills incorporates an establishment of similar name, that was for forty years carried on as a separate entity. It was founded by Chas. Smith, nephew of Alex. Smith, sen., first proprietor of Stoneywood mills. He had been trained there under his uncle to the business of papermaking, left after his uncle's death in 1796, and started a small paper mill on his own account in the same neighbourhood. Here he was soon joined in partnership by Chas. Davidson, founder of the now well-known business of C. Davidson and Son, Ltd. (see ninth article), but this connection only lasted a few years. At the commencement of last century he built a new mill adjoining Stoneywood House (which he also acquired), but it was not on a very large scale, measuring only 50 feet by 38½ feet, the plant being driven by a waterwheel, 18 feet in diameter. About 1813, Smith formed the business into a sort of joint stock concern, the shares in which were held by himself and five others, and probably enlarged the premises, as in 1825 this mill of Chas. Smith and Co. (No. 8) contained three vats, employed in making printings and writings. The firm had a warehouse in St. Andrew-Street, Aberdeen, where one of the principals attended on Fridays. The partnership expired in 1826, when the business was offered for sale, but as no satisfactory tender was received the mill was kept going until early in 1832, when it was shut down. Subsequently, Messrs. Pirie and Sons acquired it, and added it to their own establishment. Smith for some years afterwards acted as manager of Mr. Davidson's Waterton Mill.

THE STONEYWOOD MILLS OF MESSRS. ALEX. PIRIE AND SONS, LTD.

How to Make Even.

Our contemporary, the *Inland Printer*, in a recent issue, prints the following letter, and comments on it thus:—"It seems impossible that such conditions exist, and the only consolation to be held out is the fact that such tactics cannot make for permanency, and that honest methods, while possibly carrying with them a certain amount of hardship, win out in the long run."

The Letter.

"Speaking about prices for job work, I should like to tell of an experience I had recently. I had not been in business very long. Was trying to get a start with two Gordons on the West Side, and intended to work along 'cost system' lines. After three months of that I wasn't getting anywhere. All the shops about were beating my prices. One day I got a chance to figure on five thousand postal cards, card and four rule lines, customer to furnish the cards. My price was $2.50 – really too cheap. But another printer took it for $1. I found out who got the job, and shortly after met him on the street. I asked him how he could possibly live on such prices. 'Oh, easy enough,' he answered; 'made good money on that job.' I told him that was ridiculous. 'Why, man alive,' he said, 'I got $18 for that job.' Eighteen dollars? How could that be? 'Why,' he said, 'I got $1 cash and stole 1,700 cards.'

"And I learned that he wasn't the only cheap printer that was making good by robbing furnished stock whenever he could, by hook or crook.

"But, you say, such fellows can't last long. Well, there's a new crop always coming, and how can an honest printer live meantime?"

American and English Words.

The American continues to retain words and meanings of words which were in frequent, if not in general use, both literary and colloquial, when his ancestors left their native land. It is to be kept in mind that a language transported from one country to another is fairly certain to undergo what is technically called an arrest of development. This is especially sure to be the case at periods when not only are distances vast but intercommunication infrequent. In the country emigrated from, words once familiar drop gradually out of use. New words are introduced to replace them. Others again change their meaning. Of two words once existing side by side and denoting essentially the same thing, one is taken and the other left. In this movement of speech the transferred language has little or no part. Not only are the words which have been brought over retained; they are retained in their original sense. Hence in time the language of the colony as contrasted with that of the mother-country tends to seem, if not to be, archaic to the dwellers in the latter.

Such a result has been distinctly manifest in the language of this country. Many of the so-called Americanisms represent the English usage of the former half of the seventeenth century, when the original settlements were made here. Most of this class of transported words were heard then everywhere in cultivated speech. On the other hand, some had their native home in the English dialects. They have never been used in English literature, at least on any scale worth considering. But brought over to America, they became here part of the common tongue. Take one notable illustration. Cracker, as the designation of a thin, hard biscuit, is widely used by all classes. Now this term is not entirely unknown to English literature, but it can not be said to have in it any recognised position. In the dialects of northern England and in parts of Scotland it is, however, not infrequent. From those quarters it was in all probability brought to America. Here it has come into general, if not into universal use.—*Harper's Magazine.*

PAPER, principally from Japan, was imported into Dairen during 1912 to the value of £58,222 compared with £57,484 in 1911, and £44,161 in 1910.

TO TRADE BOOKBINDERS, BOOKBINDERS' PLANT AND MATERIAL MANUFACTURERS AND DEALERS, PUBLISHERS, LIBRARIANS, AND OTHERS INTERESTED IN THE BOOKBINDING INDUSTRY.

THE Publishers of the *BRITISH AND COLONIAL PRINTER AND STATIONER* have pleasure in announcing that an ILLUSTRATED MONTHLY SECTION of that journal is now devoted to matter concerning the BOOKBINDING TRADES.

All branches of bookbinding are dealt with, from practical and technical standpoints, and the historical and artistic aspects of the industry also receive attention. Illustrations of hand-tooled bookbindings and publishers' cases which are remarkable for their artistic design, their historic interest, or their novel character are presented from time to time.

The BOOKBINDING SECTION appeals to all those who are interested in bookbinding, whether as a trade or as an art, as all phases of the subject receive their due share of attention in its columns.

The Editor will welcome any news of trade interest that may be sent him, and is prepared to consider original articles of a technical and practical character, with a view to their publication. Information concerning the working of the technical classes in bookbinding, and notices of meetings of trade unions and other bodies associated with the bookbinding industry, are also invited; arrangements can usually be made, if desired, to report the latter, as well as lectures, etc., for the BOOKBINDING SECTION. Illustrations and particulars of new machinery and appliances, and information concerning new materials and methods for use in the trade, are likewise of interest. The publishers having no end to serve save the presentation of matter of value to the various branches of the trade, the pages of the BOOKBINDING SECTION are open to all, employers and employed, unionists and non-unionists, for the free discussion of trade matters.

As far as READERS are concerned, copies of those issues of the *British and Colonial Printer and Stationer* that contain the BOOKBINDING SECTION will be sent regularly on application, at special rates.

With regard to ADVERTISEMENTS, the bookbinding trade announcements are placed in a POSITION NEXT TO OR FACING READING MATTER in the BOOKBINDING SECTION. ADVERTISING RATES sent on application. Arrangements have been made to circulate the journal in quarters likely to be most productive to advertisers of a return for their outlay, and no effort is spared to study the interests of advertisers and readers alike.

Orders for advertisements in and subscriptions to the BOOKBINDING NUMBERS of the *British and Colonial Printer and Stationer* should be addressed to the publishers:—

THE BRITISH & COLONIAL PRINTER AND STATIONER

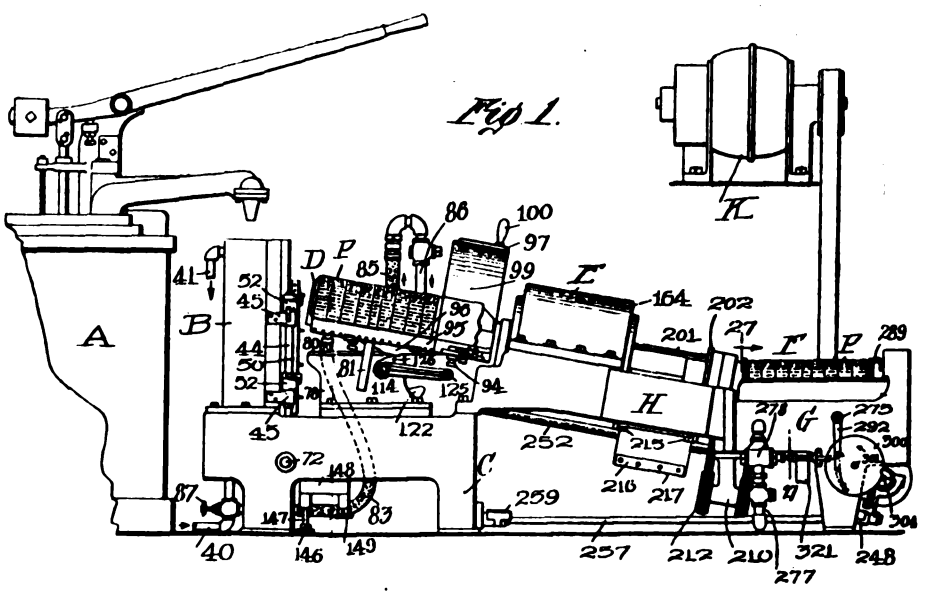
FOUNDED 1878. PUBLISHED WEEKLY.

[Registered at the General Post Office as a Newspaper for Transmission in the United Kingdom.]

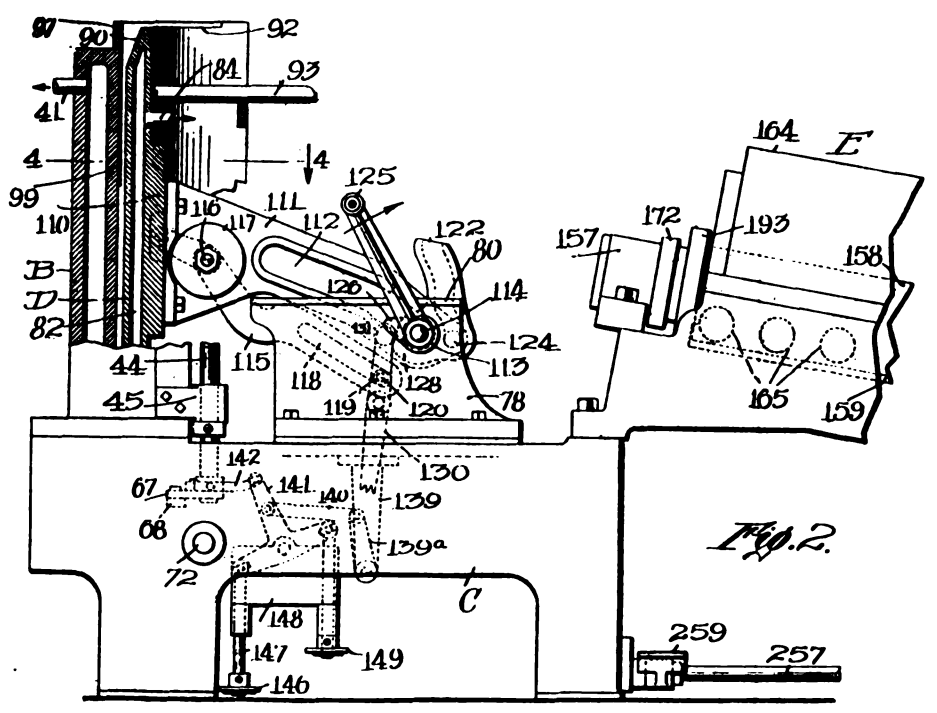
THIRTY-FIFTH YEAR.

VOLUME LXXIII. NUMBER 10.

LONDON: September 4, 1913



EVERY THURSDAY. PRICE TWOPENCE.



A Stereo Plate-Making Machine.

Mr. Charles E. Hopkins, an American gentleman, has patented a machine in this country by the use of which, it is claimed, one may be able to produce the stereo plates for a rotary newspaper press, and so cool that they may be immediately handled and put in position on the cylinders. Thirty-two drawings accompany the Specification, of which we reproduce four. Mr. Hopkins' description of his machine is substantially as follows:—This invention has reference to machines for casting stereotype plates, and to machines for finishing and cooling such plates. Under this invention, the making of stereotype printing plates is adapted to be carried out in the one machine, that is, the improved machine is adapted for casting, finishing and cooling, one machine being provided for carrying out the whole set of operations, each part being so connected as to enable the stereotype plate to move automatically from one part to the other.

My invention is for the purpose of producing semi-circular curved stereotype printing plates for use on the cylinders of rapid printing or rotary presses, particularly such as are in common use in producing newspapers, and is designed mainly as a labour-saving device whereby one man by manipulating certain handles and levers will be able to produce the stereotype printing plates completely finished, and cooled, so they can be handled by the bare hands, in condition to be immediately attached to the printing press cylinder; also to provide means whereby through the control of the contraction of the curved printing plate during the process of cooling, the operator will be able to produce plates of various curvatures or dimensions from the same casting chamber, and further, through the control of the cooling fluid, deliver the plates practically dry and ready to be attached to the press cylinders.

More specifically the invention comprises a practicable arrangement whereby the plate is cast vertically between a stationary back and a movable core in such a way that the core can be turned down from the stationary back to deliver the cast plate therefrom; to provide simple means whereby the plate is automatically lifted from the convex surface of the core when the latter is moved to position for delivery; to provide a construction in which the core is moved from the vertical casting position to a horizontal position, and further swung over to an inclined position from which the casting can slide endwise with the aid of gravity; to provide means of a simple character whereby not only are the casting box and core cooled during casting, but also the cooling of the core continue after casting and while it is being swung over to inclined position, and in fact all the time; to provide means whereby the latter cooling operation is caused by water circulating in the core while connected with a water supply system and retained therein if such connection is closed; to provide means whereby matrix clamps on the back can be swung out and in at the proper time so as to clamp the matrix when the casting operation is to be performed, and to unclamp it when required, these means being so constructed that the matrix is released before the cast plate moves out; to provide an improved construction of bottom ring support for supporting the core; to provide means whereby a bevel is cast on one end of the plate close to the type face of the matrix with a clean sharp edge so as to do away with the necessity of mechanical finishing thereof; to provide the movable core with means for forming projections on the cast plate on the concave surface of the riser portion for use in positioning the plate in the finishing mechanism; to provide the top of the mold with a wide opening for the entrance of metal and with means for preventing the over-flow of the metal over the tail-ring and other mechanism; to provide an improved adjustable tail-sheet for the core to overiap the bolster of the matrix so as to prevent metal from entering behind the latter; to provide a construction whereby the tail-sheet can be turned away from the top of the core when the core is turned over out of the casting box; to provide automatic locking means for preventing turning the core unless the tail-sheet and its ring are in casting position thereon; to provide simple and effective guiding means for guiding the core to and from its position in the back; to provide for supporting the core near its centre of gravity so as to have the core so balanced that the thick top end of the stereotype plate cast on it will overbalance it and assist in turning

Digitized by Google

it out of the casting box to its horizontal position, but without a stereotype plate the core will have a tendency to turn by gravity to the vertical position in the back; to provide movable means for assisting in this result; to provide simple and convenient means for automatically loading the core in casting position; to provide this locking means of such construction that the core can be guided into casting position or out, and that after it is in casting position the operating means can be further operated without moving the core so as to permit of the opening of the matrix clamps; to provide matrix clamps with pivoted jaws which automatically open and close; to provide means operated by the movement of the core to positively operate the matrix clamps to release the matrix and swing out of the path of the sides of the stereotype plate on the core; to provide means whereby when the core is moved into the back the side bars are forced solidly against the edges of the matrix supporting back and for positioning the core and aligning the edge of the plate lifters in the casting chamber with the edges

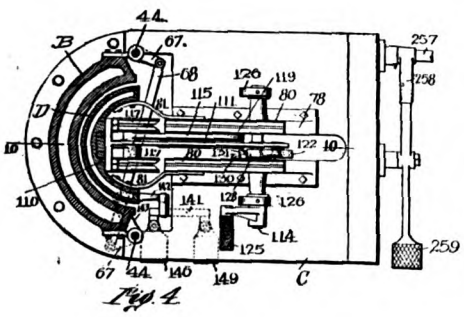


Fig. 4.

of the matrix holding jaws of the matrix clamps; to provide means within the control of the operator for closing the matrix clamps and for opening them without turning the core; to provide means for preventing the core being turned into casting position while the matrix clamps are open and for automatically releasing this means when they are closed to casting position; to provide simple and convenient mechanism in alignment with the core when it reaches its final open position for receiving the plate therefrom, shaving the ribs cast on the concave surface of the plate, cutting off the riser, bevelling the riser end, gradually lowering and finally dropping the tail cut off, releasing the plate and allowing it to be fed by gravity from the finishing mechanism to a final cooling mechanism; to provide simple and effective means for receiving the plate from the finishing mechanism and cooling it in such a way as to control the contraction of the plate during the cooling process so that plates both of less or of greater diameter can be provided from the same casting chamber; also to provide for controlling the cooling water so that the plate can be delivered dry and ready for the press cylinders.

The invention also involves numerous improvements in details of construction and in mechanism for carrying out the objects elsewhere specified herein. Further objects and advantages of the invention will appear hereinafter. Fig. 1 is a side elevation of a complete machine constructed in accordance with this invention; Fig. 2 is a side elevation on enlarged scale partly in longitudinal central cross section showing the casting position of the parts and the adjacent end of the finishing device; Fig. 4 is a sectional view on the line 4—4 of Fig. 2 of the mould showing the parts for receiving the casting therefrom in plan, but with matrix clamp omitted; Fig. 5 is an end view of the core, showing the tail sheet in closed position in full lines, and also showing the open position in dotted lines.

In order to get a general idea of the invention, it may be stated that the drawings, particularly Fig. 1, show a machine embodying the following elements, namely, a melting furnace and pump A of any desired construction for delivering metal in measured quantities to a segmental back B preferably located in vertical position on a base or frame C, also a convex core D constituting with the back the lateral walls of the casting box, but capable of moving out of the back with the cast plate thereon, and delivering the plate to a finishing mechanism E which in turn delivers it to a cooling device F. The base C and the base G of the cooling device support a frame H on which the finishing mechanism is mounted. A motor K is shown for the purpose of operating certain of the parts as will appear hereinafter.

The casting mechanism as shown is composed of the base C upon which is mounted in a vertical position the segmental or concave hollow matrix supporting back B. The matrix supporting back is provided with a chamber having an opening at the bottom in which is connected a water supply pipe 40, for the purpose of keeping the said back cool and thereby assist in rapidly solidifying the stereotype cast. An outlet 41 is located at the top for the discharge of the water. Near each straight edge 42 of the back are pivoted improved matrix clamps comprising jaws 56 supported by upright shafts 44 looseiy mounted in bearings 45, fixed to the sides of said back. Fastened on the said shafts are short links 46, the movable ends of which are pivotally attached by studs 47 to locking slides 48 having bevelled ends 49. Said slides are arranged on the exposed sides of matrix bars 50 and 51 which are pivoted on the said upright shafts by hinges 52, and on the opposite side of the said matrix bars are reciprocating bolster packing strips 53 and a sheet metal covering 54. Said locking slides and bolster packing strips are held together by studs 55 which operate in slotted holes through the matrix bars. At the opposite edge of the matrix bars 50 and 51 from that by which they are pivoted to the upright shafts, are the matrix jaws 56. They are pivotally mounted on rods 57 and are held normally away from the matrix bars and against the bevelled ends of the locking slides by spring actuated plungers 58, extending through the edges of said bars and engaging the adjacent sides of the jaws. The matrix bars are bevelled off at their outer edges at 59 to accommodate this motion of the jaws.

Mounted on one of the jaws are a series of tubes 60, which are closed on one end and have within spring actuated plungers 61, each of which plungers extends through an opening 62 leading into a slot 63 formed in the said jaw for the entrance of the matrix bolster. These plungers are positioned so as to engage the edge of the matrix bolster as the matrix clamps are turned into closed position against the edges at the back and the plungers will push the matrix toward and solidly in the slot of the opposite jaw. By this arrangement of the matrix jaw 56, the act of turning the shafts causes the matrix bars to turn towards, and their bolster packing strips 53 to engage, the straight sides 42 of the back, and a further turning movement of the shaft moves bevelled ends of the locking slides towards and over the hinged jaws. This is a cam motion which causes the said jaws to turn on their hinges. At the same time the bolster packing strips 53 and covering strips 54, on the opposite sides of the matrix bars, move toward the approaching hinged jaw until they engage each other, or the bolster of a matrix positioned in the matrix supporting back. The matrix jaw opposite the one with plungers is provided with a lip 64 which extends in the casting chamber and forms a groove along that straight edge of the cast for a purpose hereafter described. The matrix jaws are only of a height equal to the length of the matrix, between the top and bottom bolster 65 and 66 (Fig. 8), but the packing strip 53 is of a length equal to the combined height of the matrix and bolsters. The two matrix clamps as just described are connected by short arms 67 (Fig. 4) attached to the lower ends of the upright shafts and a rod 68, extending across from one to the other of said links; through these links and rod both matrix clamps move in unison. The shafts are oscillatable by means to be described hereinafter.

At the bottom of the casting box and internally aligned with the concave surface of the matrix supporting back is a concave-convex semi-circular ring 70. It is fastened to a support 71, which is mounted on a rock shaft 72 extending across and pivoted in bearings in the base. The ring 70 has its top edge bevelled downward at 70^a toward the concave side and its convex side formed with a recess 73 in which the lower bolster of the matrix enters when the ring is turned and engages the concave surface of the matrix supporting back as hereafter explained. However, the bevel is formed only on that portion of the ring extending between the matrix jaws, the balance being flat so as to engage the lower end of said jaws and co-acting side bars, hereafter described. This rocking ring 70, and its support are normally held at an angle away from the back and against a stop 74 by a spring 75 fixed at one end to a collar on the shaft 72 and at the other end to the frame. To the ring 70 are fixed matrix supports 76, which enter recesses 77 in the lower edge of the matrix supporting back and close into said recesses when the ring is turned into position against the concave back. The concave surface of the matrix supporting back is provided with a raised rib 79 extending the length of the curve and located so as to support the lower bolster of a matrix. The top portion of the rib is made convex so as to fit the back curvature of the bolster where the said bolster joins the type face. The recess 73 of the end ring 70 is provided with a like concave at the top so as to fit the front of the opposite side of the bolster and the top edge of the said ring is made slightly flat. By this means I am able to cast the bevel close to the type face of the matrix and at the same time produce a clean sharp edge on the cast, and thereby do away

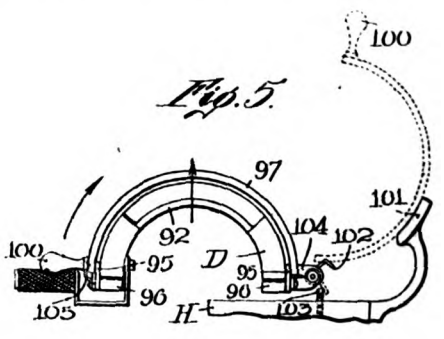

Fig. 5.

with the necessity of any mechanical finishing of that curved edge of the stereotype plate.

Supported on tracks 80 on supports 78 on the base C, and in front of the concave side of the matrix supporting back in the semi-cylindical core D, which is made to oscillate or turn from about 9 degrees beyond horizontal to a vertical position within the concave back and return. Guides 81 on the core engage the outer surfaces of the tracks. The core, like the matrix supporting back, is made hollow, and is provided with a water distributing chamber 82 at the bottom for the purpose of equal distribution of cold water as it enters the cooling chamber back of the casting surface of the core. The water is supplied from the pipe 40 to the distributing chamber through a flexible tube 83 connected to an opening leading into the said chamber. Near the top of the core is a discharge

Digitized by Google

opening in which is connected a pipe 84 and to which pipe is attached a flexible tube 85 connecting in turn with a stand pipe 86 located at one side of the base; by this means the cooling water freely circulates, and owing to the stand pipe the core is constantly kept filled with water, which cools the core and thereby quickly solidifies the cast.

Suitable valves 87 for regulating the flow of water through both the core and back are provided and positioned so the operating handles are located directly in front of the operator and of the base C.

In the face of the core D are made the usual recesses 88, which form ribs P^1 on the concave side of the cast plate P, and at each side and near the top of the core recesses 89 are made for the purpose of forming projections P^2 on the concave surface of what is called the riser portion of the cast plate. These projections are for use in positioning the cast in the finishing mechanism E, hereafter described.

The top of the core is bevelled at 90 so as to form a wide opening for the entrance of metal and to prevent the overflow of the metal over the tail ring 97. The tail P^4 is cast in this recess. A recess 92 is made along the bevel on the upper edge of the core beneath which a receiving pan 93 is located to catch any overflow and prevent it running on the core turning mechanism.

Attached to each of the straight sides of the core D by studs 94 are plate lifting bars 96 on which are mounted lifter plates 95, which form with the hinged matrix jaws 56, the edge walls of the casting chamber. Hinged to the upper end of one of the plate-lifting bars is the adjustable tail ring 97 with arms 98 extending lengthwise of the core. This ring and arms form with the thin metal sheet 99 fastened thereto, what is known as the pouring or tail sheet, which when in position in the back overlaps the top bolster of the matrix, thereby preventing metal from entering behind the matrix, when pouring a cast. To the opposite side of this ring from the hinge is fixed a handle 100 by which the ring can be turned away from the top of the core, when the core is horizontal, and against a support 101 on the finishing frame H (Figs. 1 and 5). During this turning motion of the ring away from the core, a hook 102 fastened to a hinge 104 of said ring, moves under a catch 103 attached to the frame of the finishing part of the machine (Fig. 5) thereby locking and preventing the turning of the core, unless the ring is in casting position on the core. A spring catch 105 is provided to hold the ring in position on the core. I also provide a wedge-shaped adjustment 106 for adjusting the pouring sheet referred to above.

Having described the matrix supporting back, its co-acting matrix clamps, bottom ring and core I will now describe the mechanism through which the different movements are made.

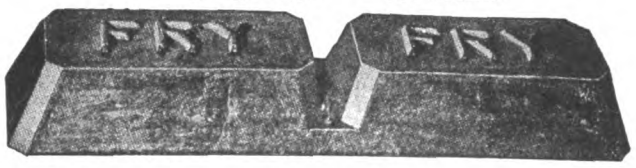
Fastened to a seat 110 formed on the concave side of the core is a core turning bracket 111, having a long slot or cam groove 112, which operates about a roller 113, mounted on a shaft 114, extending between the track supports. The seat on the frame C for the supports 78 of the core turning bracket 111 is provided with an opening 109, and between these supports and within the opening is pivoted a roller carrying lever 115. This lever has extensions through which a short shaft 116 passes, on which shaft rollers 117 are mounted so as to rest upon the tracks 80 and thereby form a rolling connection between the said tracks and core. The roller lever 115 extents beyond the rollers and its lower portion is provided with a long slot 118 which can move over and about a roller 119 mounted on a short stud 120 fastened in one of the tracks supports. This arrangement of the rollers on a pivoted lever is for the purpose of supporting the core near, but not on the centre of gravity. The object is to have the core so balanced that the thick top end of a stereotype plate cast upon the core will overbalance the core and assist in turning it to horizontal position, but without a stereotype plate the core will have a tendency to turn toward the vertical position. This overbalancing is greatly assisted through the rollers moving back and forth beneath its pivot point 114 as the core is moved on its rollers along the tracks.

In the horizontal position the core is supported by the rollers 117, engaging the tracks, but to move it to vertical position it is necessary to seat the bottom end within the ring 70, on the ring support 71, located below the matrix supporting back, whereupon the centre of support changes from the pivot of the roller carrying lever to the pivot 72 of the end ring 70. Upon a further turning movement the rollers 117 swing free from the tracks and the core, now resting on the end ring support, completes its turning movement into casting position within the matrix supporting back.

For the purpose of locking the core in casting position, a cam grooved plate 122 is mounted on the shaft 114 which extends through and between the track supports 78, and a roller 124 mounted upon the lower end of the core turning bracket 111, enters the cam groove formed in the grooved plate 122, when the core becomes seated within the bottom ring 70. The groove of the cam 122 is so shaped that by turning an operating handle 125 on the end of the shaft 114 it will move the core into casting position, or out. For the purpose hereafter described the cam groove is shaped so it may be turned further without moving the core after the core is in casting position.

Attached to each end of the shaft 114 are plate lifting cams 126, which engage the late lifter bars 95, as the core is being turned to horizontal position and, as the turning continues, force the lifter bars up and thereby lift the stereotype plate free from the surface of the core and support it in alignment with the finishing mechanism hereinafter described.

The opposite edge of the cam plate 122 is provided with a face cam 128, which operates a combination of levers, each time the core is turned to horizontal position. These levers in turn cause the matrix clamps to release the matrix held within the matrix supporting back and also cause the clamps to swing on their pivots back and out of the path of the sides of the stereotype plate carried by the core as the core is turned out of the casting back. The mechanism which I show to cause this movement consists of a rock arm 130, pivoted near its centre on one of the supports 78 and in a vertical position between the tracks. The upper end is provided with a roller 131 which engages the face cam 128 and is always held in engagement by a spring 132. To the lower end of the rock arm 130 is pivoted a pawl 134 which engages, when opening the mould, a pivoted arm 135. But when the core is turned into the back the pawl passes over the said pivoted arm 135, the pawl being provided with a bevelled tooth 136 for that purpose. The pawl normally rests on a pin 137 on the rock arm 130. The arm 135 is fastened on a short shaft 138, supported in bracket 139, attached to the underside of the base C On the opposite end of the shaft 138 is a like arm 139^a, the top end of which is pivoted to one end of a link 140. The opposite end is pivoted to the upright arm of a three armed rock piece 141. A second link 142 connects the said rock piece to one arm 143 of a bell crank fastened on the lower end of one of the matrix clamp shafts 44. One of the arms 67 constitutes the other arm of this bell crank. Through these connections the matrix clamps are made to open, but owing to the shape of the cam groove in 122, operated by the core locking handle, the core remains stationary and in casting position during this operation of opening the matrix clamps.



Attached to the plate lifters 95 on the core are lifter bar stops 145, which when the core is being turned into casting position engage the locking slide members 48 of the matrix clamps, forcing the core plate lifters back against the heads of the studs 94, and then force the jaw 56 from the full line position in Fig. 12 to the position in Fig. 13 to force the

casting bars solidly against the edges of the matrix supporting back, and also properly position the core and align the edge of the plate lifters within the casting chamber with the edges of the matrix jaws 56, of the matrix clamps. For the purpose of closing the matrix clamps, I provide a foot pedal 146 fastened to one end of a vertical rod 147, operating vertically in a bearing of a bracket 148 fastened on the interior of the base C. The opposite end of the rod is pivoted to one of the horizontal arms of the three armed rock piece 141 previously referred to. To the third arm, also horizontal, I attach a like foot pedal 149 in like manner for the purpose of opening the matrix clamps, if desired, without turning the core.

Fastened on the short shaft 138 mounted in a bracket fastened to the underside of the base, is a third rock arm 150, which carries a spring actuated catch 151, positioned so as to be in the path of the roller 152, which is mounted on the lower end of the core turning bracket 111. When the core is turned to horizontal position (the matrix clamps being in the open position), the roller compresses the catch 151, and as the roller passes by the catch is forced forward and in the path of the roller, thereby locking or preventing the core being turned into casting position while the matrix bars are open, but the movement of the matrix clamps into the closed or casting position causes the arm 150, with the spring catch, to rock out of the path of the roller 152, which releases the core.

Having described the casting mechanism of my invention I will now explain the mechanism shown for shaving the ribs P^1 cast on the concave surface of the stereotype plate P, the mechanism for cutting off the riser and bevelling that curved end, and the means for conveying the now finished stereotype plate from the finishing mechanism to the cooling mechanism F, all represented in a general way by the letter E. (Fig. 1.)

Mounted in three bearings 157 on the frames H and G is a longitudinal main shaft 158 operated from the motor K as will be explained hereinafter. Fastened to the main shaft and within the arch is a shaving knife 159 which extends lengthwise and is of a length slightly longer than the said arch, the said knife being so positioned as to engage and smooth off the faces of the ribs P^1 cast on the stereotype concavity.

Positioned on the main shaft beyond the arch are adjustable plate stops 160 and 161 which engage ledges P^2 cast on the side of the concavity of the riser of the stereotype plate and stop said plate in proper position when moved into the arch, from off the core, on which it has been cast and hold the said plate from further lateral movement until the lifters have raised it against the dome of the said arch. The stop 161 is spring actuated because the plate enters the arch out of horizontal alignment with the axis thereof and has to be moved sidewise and into axial alignment when lifted up into the dome of said arch to position to be shaved, as will appear hereinafter. The main shaft is caused to make one revolution each time a trip 259 is pushed down and released to operate a clutch 233. During the revolution of the main shaft a stereotype plate is shaved and the riser cut free from the said plate, by tools carried by the said shaft, which engage the stereotype plate when positioned in the stereotype plate supporting arch 164, which is mounted on the top of the frame and axially aligned with the said main shaft.

Beneath each straight side of the arch 164 are mounted supporting and guiding rollers 165 and beyond the arch but carried by the main shaft by reciprocating studs 166 operating in bearings 167 are a group of three rollers 168. These are caused to move toward or away from the axis of the said main shaft by pins 169 on each stud engaging in grooves 170 cut in a cam plate 171. The latter moves axially on the said shaft and is operated by a stationary face cam 172 fastened to the upper bearing 157 of the main shaft, through a connecting rod 173 a cam arm 174, and a spring 175. The reason for making the rollers move toward the axis of the main shaft when the shaft starts to revolve is to move the rollers from under the edges of the riser of the stereotype plate resting upon the said rollers within the arch, the movement being accomplished by the end of the cam arm, 174 moving out of the recess in the fixed face cam. Upon the finish of the revolution of the main shaft the spring 175 mounted upon the connecting rod pushes the rollers out, and the rollers become a support for the stereotype plate as it moves out of the arch and toward the cooling mechanism.

Beneath one side of the supporting arch is a mechanism for lifting the stereotype plate into position against the arch dome. As will be seen by the drawings the rollers 165 which support the stereotype plates are located out of horizontal alignment with the axis of the arch and a recess is formed beneath one side of the arch. At one side of the arch beneath this recess double flanged rollers 177 are located. The purpose of these flanges is to guide the stereotype plate as it moves into position within the arch and over a plate lifter 180. This plate lifter moves in cam ways 181 fastened to the frame at an angle and as the lifter rises, it also moves toward the axis of the arch and a lip 182 formed on the seat 183 of the lifter engages in the groove P^3 cast in the edge of the stereotype plate as the lifter moves upward and forces the said stereotype plate to move at the same angle as the lifter so that the plate is moved solidly against the opposite side of the arch simultaneously with its rise. Upon the return movement, the lip 182 engaged in the groove formed on the stereotype plate, pulls the plate back into position between the flanges of the rollers and a further movement of the lifter downward disengages the lip from the groove.

Pivoted by studs 185 fastened in the lifter are spring rods 186 which operate through a rock roller 187 pivoted to levers 188 mounted on a shaft 189 supported by bearings on the frame. Mounted upon the rods are adjustable compression springs 190, the purpose of which is to compensate for any variation in the circumference of the stereotype plate. To one end of the shaft 189 is fastened a lever arm 191 to which is pivoted a link 192 by one end, the opposite end engaging with a cam 193 fastened to the main shaft. For the purpose of holding this arm 191 in position one end of a link 194 is pivoted to it, the opposite end being pivoted to a cross piece of the frame. The cam roller rests in a recess in the side of the cam, and upon turning the main shaft the recess moves from over the roller, the roller thereby being depressed, which act causes the lifter to rise. The return movement is accomplished by gravity.

(To be continued.)

Tariff Changes

AND

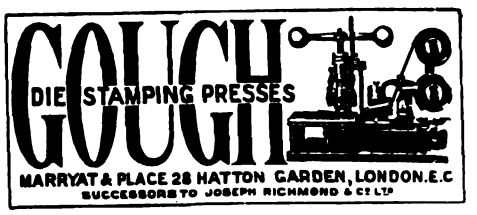
CUSTOMS REGULATIONS.

From the "Board of Trade Journal."

COMMONWEALTH OF AUSTRALIA.

It has been finally decided that duplicating paper, such as that used for the Neostyle apparatus, may be imported free of duty, under No. 356 E of the Tariff. Grease-proof paper, corrugated, in rolls or flat, in sheets $9\frac{1}{2}$ by 29 inches, or $12\frac{1}{2}$ by 37 inches, is subjected to a duty of 30 per cent. *ad valorem* under 357 B, or 5s. per cwt. under 356 I, whichever is the higher. In the case of British goods the rate is 25 per cent., or 4s. 6d. per cwt. The "Attractoscope," an apparatus for projecting advertisements on footpaths in the form of light and shadow, is dutiable at $17\frac{1}{2}$ per cent. *ad valorem* under No. 178 D, or 10 per cent. if of British origin.

DOMINION OF NEW ZEALAND.



A recent Ministerial Order gives some decisions with regard to the application of the Customs Tariff, including the following:—Automatic metal furnace, for remelting and casting type for use with typecasting machines, 30 per cent. *ad valorem* (if British, 20 per cent.); "Duckett-ine" ink powder, 10 per cent., or free if British; embossed paper lace, for use in the manufacture of cardboard boxes, 20 per cent., or free if British; stencil set, consisting of tin, letters and figures, ink, sponge and brushes, 30 per cent., or if British 20 per cent. If imported separately, the various articles are to be classed under their respective tariff headings.

DUTCH EAST INDIES.

Playing cards for use in the local game of "Omi," are dutiable at the rate of 10 per cent. *ad valorem*.

SALVADOR (CENTRAL AMERICA).

Common paper for printing periodicals, except that imported by publishing concerns, will in future be dutiable at the rate of one centavo (about one-fifth of a penny) per kilo. of nearly $2\frac{1}{4}$ lbs. Labels, receptacles or wrappers with printed matter describing a foreign pharmaceutical specialty, has to pay 5 pesos (about 9s. 2d.) per kilo.

THE PIONEER WEEKLY PRINTING TRADES JOURNAL.

Important Notification to

Printers' Engineers and Brokers, Typefounders, Stereotypers' Foundry and Matrix Furnishers, Engravers, Bookbinders' Furnishers, Papermakers, Wholesale Stationers, Dealers in Stationers' Sundries, and Manufacturers for the Export Trade generally.

There is an Immense market for British Productions in the above Trades throughout INDIA, AUSTRALIA, AFRICA, CANADA, etc.

YOU have to SELL What the COLONISTS want to BUY.

WHAT IS THE MOST EFFICIENT MEANS FOR INTRODUCING YOUR GOODS TO THEM?

Undoubtedly the publicity of an OLD ESTABLISHED and WIDELY CIRCULATED Trade Journal.

WITH THIS FACT IN VIEW THE PUBLISHERS OF THE

British and Colonial Printer and Stationer

(Established 1878.)

Have now at Press another

SPECIAL EXPORT NUMBER

for Circulation in India, Canada, South Africa, Australasia and British connections throughout the

ENGLISH SPEAKING WORLD.

A SPECIAL FEATURE OF THESE NUMBERS IS

THE BUYERS GUIDE An Up-to-Date, Selected, and Comprehensive List for Colonial and Foreign Buyers. **TO THE EXPORT HOUSES**

In deference to the wishes of a number of our Advertisers, who consider that the utility of these Special Issues will be thereby increased, arrangements have been made to give them a large

HOME CIRCULATION ALSO.

ADVERTISERS WILL PLEASE NOTE

that our Special Numbers are now entirely separate and distinct from the ordinary weekly issues, an arrangement which permits of more time and attention being given to their preparation and contents.

The very extensive advertising support accorded to these special issues of the BRITISH AND COLONIAL PRINTER AND STATIONER for many years past, by firms catering for the printing and allied trades, furnishes sufficient evidence of their value from an advertiser's point of view.

It is not intended at present to make any increase in the ordinary rates for advertisements, so far as the special numbers are concerned, and in this connection it may be pointed out that with the adoption of our new size and style at the commencement of this year the charges for advertising were greatly reduced. A copy of our new advertisement scale will be sent on application, together with a pamphlet containing 170 testimonies from readers, advertisers, and the Press, to the value and utility of the journal.

Advertisements Should be sent in **PROMPTLY, AND** For considerations of Display and Fine Printing **THE** SOONER BETTER

BUT MUST REACH US NOT LATER THAN SEPTEMBER 10th.

Trade Notes.

MR. JOHN MILNER EDMONDSON, newsagent and stationer, Belvedere-road, Burnley, has been created a Justice of the Peace.

MR. FREDERICK J. CROWEST, the editor-manager of the Walter Scott Publishing Co., Ltd., is about to pay a business visit to America. He sails in the "Mauretania" for New York on the 20th inst.

THE staff of the mechanical and publishing departments of the *Daily News* held their annual outing to Brighton, on Saturday, when an enjoyable day was spent. A brake drive and a motor boat trip were among the day's pleasures.

MR. A. E. FLETCHER, the well-known journalist, was, last Friday, presented with a handsome case of pipes to celebrate the occasion of the fortieth anniversary of his married life. Mr. Applegarth, the veteran Labour leader, made the presentation at the National Liberal Club.

THE Carlisle *Evening Journal* and the *Cumberland Evening News* unexpectedly ceased publication on Saturday. The *Evening Journal* was established in 1885, and the *Evening News* in 1910; both were halfpenny papers. A branch office of the *Newcastle Chronicle* has been opened in Carlisle.

MESSRS. ARROWSMITH, LTD., have removed from Charterhouse-street, to 26, Gray's-inn-road, E.C., where, in more commodious premises, they will continue their business of wood engraving, and the making of process blocks in half-tone and line, together with illustration by a number of methods.

A YOUTH named Edward Anstice Arnold, a journalistic pupil, of Winshill, Burton-on-Trent, went into the garden with a long-barrelled pistol which he used for scaring birds. Some time later his father found him lying dead with a bullet through his temple. He had apparently been looking down the barrel and killed himself by accident.

ON Friday last, at Birmingham, five men, all described as being engaged in the newspaper delivery trade, were remanded on bail charged with stealing and receiving newspapers. The alleged thefts extended over several months, and the total value of the papers stolen was more than £1,000. There were, it was stated, 1,479 papers in one morning's stolen parcel.

A MEETING of the North-Eastern Federation of Retail Newsagents was held at Saltburn, last week, Mr. T. Ellis, Middlesbrough, presiding. Reports showing satisfactory progress were submitted, and it was intimated that the United Kingdom Federation had been invited to hold their annual conference at Newcastle. Mr. J. A. Wilson, Newcastle, was chosen a member of the Executive of the United Kingdom Federation.

TENDERS ACCEPTED—For printing for the ensuing year for the Beccles General Purposes Committee, Messrs. Nobbs and Goate; for the printing of 3,000 copies of a catalogue of books for children in the Kensington and Wavertree branch libraries, for the Liverpool Corporation, Messrs. C. Tinling and Co., Ltd., Victoria-street, Liverpool; for advertising on tramway cars for the Liverpool Corporation, Messrs. J. W. Courtenay, Ltd., Norfolk-street, London, W.C. (recommended for acceptance).

THE Monotype Casting Machine (equipped with Display Type Casting Attachment) and DD Keyboard will be in operation at the Bristol and West of England Exhibition to be held at the Coliseum, Park-row, Bristol, from September 22nd to November 8th. A two-colour Harris letterpress machine will be working on an actual job. The speed of the press is from 3,000 to 7,000 per hour, according to the nature of the work. One of the famous Boston Stitchers will also be on the stand.

WE regret to announce the death of Mr. Bernard Quaritch, the famous bookseller, and a leading figure at book sales. Mr. Quaritch, who died at Brighton, was in his 43rd year, and was a worthy successor to his father, who established the business in 1847, and no big sale of books for the past 60 years has been complete without a Quaritch present to bid boldly for the treasures offered. The elder Quaritch made his first big purchase in 1858, when he gave £595 for a Mazarin Bible at the Bishop of Cashel's sale. For a similar volume the son paid £3,900 in recent years. The funeral took place at Highgate Cemetery, on Saturday morning, when a large number of representative members of the bookselling trade attended, among others present being Mr. de Villiers (British Museum), and Mr. G. P. Windship (representing the John Carter Brown Library, Rhode Island, U.S.A.). Among the many wreaths sent were two in the form of open books. One was from the International Association of Antiquarian Booksellers. The leaves of the book were formed of white flowers and the initials of the society were in blue flowers. The other book wreath was from the Eccentric Club.

ACCORDING to *Kemp's Mercantile Gazette*, there were three failures in the printing and stationery trades of England and Wales for the week ending Friday, August 29th; the corresponding week in 1912 showed five.

THOUGH the entries were not so numerous as on previous occasions, the quality of the exhibits reflected no little credit upon all connected with the annual flower show held the other day under the auspices of the Whitefriars Press Club and Institute, Tonbridge.

A COMPLIMENTARY dinner was given the other evening to Mr. Alexander Marr, who recently completed 50 years' service in the binding department of Messrs. William Collins, Sons and Co., Ltd., publishers, Glasgow. The meeting was promoted by the directors and the employees. Mr. William A. Collins, who presided, presented Mr. Marr with a gold watch from the directors, and Messrs. Hugh Allan and George Barclay, on behalf of the workers, presented Mr. Marr with a purse of sovereigns and a gold-mounted walking stick.

ON Saturday the Scottish District Council of the Bookbinders' Union met at Perth to discuss the position of the union with regard to the underpaid labour in the trade. The conference was held in private, but at the close it was reported that after prolonged consideration the council had decided to proceed in conformity with the vote recently given by the members. The matter will be further considered by the National Union Executive, when it is expected further arrangements will be made to enforce the terms of the men's memorial.

ON Monday, Mr. Thomas Marlowe, editor of the *Daily Mail*, on behalf of the directors, handed a cheque for £1,000 and various mementoes of his attempt to fly round Great Britain to Mr. H. G. Hawker. The prize would have been presented by Lord Northcliffe himself had he not been obliged to leave for America last week. In addition to the cheque Mr. Marlowe handed Mr. Hawker a gold medal from the Mayor of Margate and a silver medal for the mechanic Kauper. He also presented Mr. Hawker with an Admiralty watch on behalf of Mr. John Walker. Mr. T. O. M. Sopwith, the builder and entrant of the machine used by Mr. Hawker, was also presented with a medal.

TENDERS WANTED—For printing, stationery, account books, minutes, placards, Parliamentary register and burgess roll, bookbinding, etc., for the Corporation of Cardiff; forms of tender from the Stationery Office, City Treasurer and Controller's Department, City Hall, Cardiff. For printing and office stationery for the Hunts. Education Committee; conditions from Mr. S. G. Cook, County Education Offices, Huntingdon. For the supply and delivery of school books, stationery, maps, and similar apparatus, for the Luton Local Education Authority; tender forms may be obtained from Mr. P. J. Carter, Education Offices, Town Hall, Luton. For printing and stationery, account and other books, for the Corporation of Salford; particulars from the Borough Treasurer, Town Hall, Salford. For the supply of stationery and printing for two years, for the Portsmouth Tramways Committee; specification from the General Manager's Office, Town Hall, Portsmouth. For the supply of school requisites for the Swinton and Pendlebury Education Authority; particulars from Mr. W. T. Postlethwaite, Council Offices, Swinton, near Manchester. For a supply of books for six months for the City of London Union; particulars from Mr. E. R. Woodward, Union Offices, 61, Bartholomew-close, E.C.

ON Saturday *Trewman's Exeter Flying Post* completed the 150th year of its existence, the first number having been issued on September 2nd, 1763, which fact entitles it to the distinction of being the oldest existing newspaper in the West of England. It was founded by Robert Trewman and William Andrews, respectively ex-apprentice and ex-foreman of Andrew Brice, the proprietor of the *Old Exeter Journal*, who in his turn had been an apprentice to Joseph Bliss, whose *Exeter Post Boy* was among the earliest of provincial journals. It would appear, however, that Andrews did not take a very active share in the venture, for he retired from the partnership at the end of two years, and it was Robert Trewman's energy, resource, prescience, and business capacity, allied to exceptional technical knowledge, which made the *Flying Post* the best known weekly issue in the West of England. In its earlier years the paper had seven changes of title, and altogether it has been located in seven offices. The first issue was a little sheet of four pages each measuring 17 inches long and 11½ inches wide, with four columns to the page. We congratulate the *Flying Post* on its long and honourable career. May its shadow never grow less.

A TORONTO firm, specialising in printing and bookbinding appliances, is desirous of acting for British machinery manufacturers. Particulars may be had from the Canadian Government City Trade Branch, 73, Basinghall-street, E.C.

THE British South Africa Company has just issued a new set of postage stamps for Rhodesia. The stamps have been engraved by Waterlow and Sons, Ltd., from a photograph of the King by J. Russell and Sons. There are 18 values, ranging from ½d. up to £1, the majority of the stamps being in two colours.

WITH a view of showing what can be produced and manufactured within the Empire, an Imperial Exhibition is to be held in London in 1915. The site of the exhibition, which has been promoted by the British Dominions Exhibition, Ltd., has not yet been decided upon. A preliminary guarantee has been formed among members of the administrative committee, such guarantee to pay for all preliminary work in connection with the exhibition. Lord Strathcona has practically guaranteed half this amount, and has also promised to give a sum of £5,000 towards the larger guarantee when it is started.

IN September of last year the *Times* marked the publication of its 40,000 issue by the publication of a Printing Number, which gave a history of the art of printing and of the *Times* itself, and such was the reception it met with from the Press and the public that the demand for copies necessitated a reprint being made, the latter taking the form of a book. Now another book has been issued from the *Times* office in which over 160 quarto pages are filled with the reviews and opinions of the world's Press on the Printing Number. Appreciations from all nations find a place in it, and form a remarkable record of the high value of that publication. The book is bound in cloth and has as a frontispiece the cartoon issued by *Punch* on the occasion of the publication of the Printing Number.

A SECOND holiday number of variety and interest will be found in the September issue of the *Windsor Magazine*, which is fully up to the high level of its August predecessor as a most attractive holiday companion. A large instalment of Gertrude Page's new novel of Rhodesian life carries the drama of it to a moment of tense interest; romantic charm distinguishes the love story by Halliwell Sutcliffe, entitled "The Open Road," which is imagined and chronicled in its author's happiest vein, and the new episode in "The Fortunes of Virginia Bright" will be found fully as entertaining as its predecessors. In more serious vein are strenuous stories by G. B. Lancaster and other well-known authors. The articles include an interesting survey of "The Lawyers of Dickens," by W. Walter Crotch, founder of "The Dickens Fellowship." Charles G. D. Roberts contributes a new nature study, and many other features of interest are included in this number, which is lavishly illustrated by some of the most accomplished artists of the day.

CHEAP BOOKS.—So great has been the recent demand for cheap editions of popular books that a report has been current that publishers have found it necessary to reprint practically every edition. The manager of Messrs. Methuen and Co., interviewed last week, said that that report was an exaggeration; but, he added, that in many cases the demand was such that the printing of cheap editions went on almost continuously. The demand, he said, increases weekly, although we are always adding to the list of books published. An inquiry as to the effect of these issues upon the sales of other editions elicited the information that, while the British demand for the six shilling novel is now mostly confined to a few wealthy people and the circulating libraries, these books are exported in increasing numbers to the Colonies. Australia, in particular, is a big buyer, and the trade to that continent has increased by 50 per cent. in the last year. The Colonies, too, afford the principal market for the sixpenny paper

Digitized by Google

covered novel. Few people buy them in England now; but they find a ready sale among colonists living in the remote country districts.

AMONG the many articles analysed last year on importation into this country for assessment of duty on the sugar they contained were parchment paper and printers' roller composition.

FRED COOK, a well-known Canadian journalist, who was some years ago Mayor of Ottawa, recently went to J. R. Booth, the veteran lumber king of Ottawa, to secure material for a write-up. "What is your hobby?" he asked the lumber king. "Work," replied the octogenarian lumber king, without glancing up from the job of superintending the sharpening of a saw.

NEWCASTLE AND DISTRICT

Printers' Managers and Overseers ASSOCIATION.

The members of this Association recently paid an interesting visit to the works of the Richardson Printing Ink Co., Ltd., at their Team Valley establishment, and after being welcomed by Mr. Moor, a director, and Mr. Richardson, jun., were escorted in suitable parties through the various departments. Mr. Moor, Mr. Davidson, works manager, and Mr. Richardson acted as guides, and explained the various and mystical processes through which the materials passed before being ready for use in the art preservative. The laboratory was visited and the instruments and methods of experimenting, and investigating into the various materials which enter into the manufacture of all kinds of printing ink, roller composition, and other products of the firm were fully explained and proved most interesting. A visit was then paid to the grinding-room where the numerous mills were seen in use, the firm having been good enough to arrange for their staff to be at work, so that the actual conditions of manufacture could be seen. Many interesting questions were asked and answered, and the information gained will no doubt prove useful to the visitors in their daily duties. The methods used in the manufacture of various grades of varnishes, and in the making of roller compositions suitable for any climate were all fully explained.

Messrs. Richardson had kindly provided tea for the party, and at the close of the visit a vote of thanks was proposed to the firm for their hospitality and kindness in providing such an opportunity for seeing the various stages of ink manufacture, and this was responded to by Mr. Moor, who assured the visitors he was only too anxious to help the printer in any difficulties which might arise in business, and asked for the printer's co-operation, when no doubt many troubles would be obviated to their mutual advantage.

A very pleasant evening was passed, and the visit will not be readily forgotten by those who were fortunate in being present.

The Trade Unions Congress.

The annual Trade Unions Congress was opened on Monday in Manchester, Mr. W. J. Davis, of Birmingham, in the chair. Mr. Davis in his address spoke of the wider issues of labour organisation and of the effect it might, if sensibly conducted, have upon the all-round development of the people.

Mr. J. R. Clynes, M.P., bade the delegates welcome in Manchester. Since the Congress last met in that city, he said, organised labour had made great progress. The advance was not to be measured in numbers merely, but rather it should be judged by the improved outlook and higher understanding which the working class possessed to-day. They were no longer content with that subordinate and enslaved position in which so many of them were placed thirty years ago. It was for the Congress to show by the wisdom and coolness of its judgment that labour in its greatness could be trusted with the destinies of the nation. Manchester could claim to be second to none among the cities of the kingdom in trade union spirit and determination, and in the name of organised labour in Manchester he gave to the Congress the warmest possible Lancashire welcome.

Mr. J. E. Sutton, M.P., said he personally regretted that the Lord Mayor was unable to be present. Had he been present it would have put the delegates in a better frame of mind for doing their business. He might at least have sent some one to act as his deputy, seeing that he was unable to be present himself.

During the day's proceedings many topics were touched on, including the Dublin troubles.

In the evening the delegates and their wives were invited to a conversazione at the Town Hall by the Lord Mayor and the Corporation of Manchester. Between 800 and 900 attended. Music was furnished in the large hall. The Lord Mayor, addressing the company, said:—"I must apologise for not being able to be with you this morning. I was, however, determined I would be here this evening, and give you a very cordial welcome to this great centre of industrial activity. I hope you will profit by your visit, and that you will take away with you pleasant memories of the people of this great area. Another thing I would like to say. I hope your deliberations will be fruitful of good, and that you will have kind consideration for the employers as well as for the workmen. Be assured there is no antagonism between the master and the man. It is the interest of the master to be on good terms with his servant At times, no doubt, in business difficulties arise, and doubtless they will arise between masters and men. In such cases I appeal to you to try all possible ways of arriving at a settlement before you take the dreadful strike question into consideration."

Machine Rulers, Bookbinders, Printers, and Kindred Trades Overseers' Association.

The annual outing of this Association took place on Saturday last, when a number of members and friends went by train from Paddington to Windsor. Both before and after the event (especially after!) the weather had been somewhat inclement, but the usual good fortune was evident when the sun held sway throughout the day. Most of the party viewed the Castle and the State apartments, and were impressed with their lavish magnificence.

Mine host at the "Thames Hotel" laid out his best in the room overlooking the river, whereon a regatta was in progress. A couple of launches conveyed the party up the river and through the locks, and this was pronounced the most enjoyable event of the day.

On the return to the "Thames Hotel" for the evening's concert darkness fell and the rain commenced, the latter being unusually persistent.

An excellent programme was gone through, with the president, Mr. J. E. Dixon, in the chair, supported by the worthy vice, Mr. J. Walker. The usual toasts were honoured. The return journey was commenced at 10 o'clock, and all were unanimous in pronouncing the outing as one of the best the Association had held, and much credit was due to the able stewards, Mr. F. C. Peacock and Mr. F. Pearse, for their splendid arrangements.

PROGRAMME.

The Picture Post Card in Germany.

IN this country the official mind, as represented by the police authorities in various towns, has of late been much exercised over the suppression of the indecent or ultra-vulgar post card, which is so much in evidence in the side-street windows of the poorer quarters of so many of our large towns, and cases are being continually brought before the Courts in which fines are inflicted on conviction. As yet, however, there has been no attempt to stop the sale of reproductions of classical works, and the initiative in this has been left to Germany, in which country, for the protection of the morals of its inhabitants, a raid is being made on such pictures as the official Mrs. Grundy considers objectionable. The *Glasgow Herald* points out that a "few days ago the Dresden police seized a number of pictorial post cards, which consisted of reproductions of famous paintings by Rubens and Giorgione exhibited in the local art gallery, on the ground that they were a menace to public morals, and the police in Leipsic, at the instigation of the Public Prosecutor, have confiscated the reproductions of two important paintings that are exhibited in the Leipsic Museum, the 'Ulysses and the Sirens,' which is the principal work of Professor Otto Greiner, and the 'Adam and Eve' of Müller-Schoenefeld. The consternation that has been aroused in Leipsic by this step is all the greater as the canvas of the 'Ulysses and the Sirens' was presented to the local museum by a former Chief Burgomaster of the city, who purchased it in 1899 with a sum of money placed at his disposal by a number of lovers of art. The painting by Müller-Schoenefeld was presented to the museum by the Leipsic Society of Artists. The Director of the Leipsic Museum, Professor Julius Vogel, has stated in an interview with a press representative that he considers the confiscation of the reproductions as the act of an over-zealous official, which is sure to cause the greatest amusement in the educated world, and that if the decision of the Public Prosecutor was justified, then all art galleries ought to be closed by the Government." To endeavour to suppress this class of picture savours much of Grundyism, and will raise a laugh against the authorities, the action being on a par with that of the authorities of an American museum, who have recently draped all the classical sculptures in their gallery, to the great amusement of the citizens.

* * *

The Trade Unions Congress.

THE Trade Unions Congress, which is sitting in Manchester this week, has not favoured that city as a meeting place for over thirty years, and since that time very great progress has been made in the organisation and membership of the various unions that send delegates to this annual parliament of the workers. Thirty years ago a good many estimable people looked askance at the banding together of the working classes in organised bodies, and many prophesied the downfall of this country if such organisation with its demands and restrictions as to hours and wages were allowed to continue. Public opinion has meanwhile progressed, and to-day men of all shades of political opinions recognise in the unions the best machinery for dealing with industrial troubles, and for making binding agreements with the employers that are faithfully kept until some fresh concession may be desired, when negotiations are entered into for a settlement of the matter in dispute, and it is only when every other method has failed that the final arbitrament of a strike is resorted to. The present Congress is one of the most important ever held, and includes delegates from Canada, France, Germany and other countries. The total number of delegates present is 551, representing a union membership of 2,232,446, which is apportioned among the different trades as follows':—Boilermakers and iron and steel shipbuilders, 63,000; building trades, 63,739; cotton operatives, 87,000; dock labourers, stevedores, cranemen, enginemen, etc., 190,653; gasworkers and general labourers, 164,714; metal workers, 117,864; miners, 604,725; printing and paper trades, 68,954; railway servants, 153,000; weavers, 196,748; miscellaneous trades, 521,649. It is interesting to recall that when the Congress last met in Manchester in 1882 the delegates numbered only 153, representing a total membership of 559,000, about one-fourth of the present number.

* * *

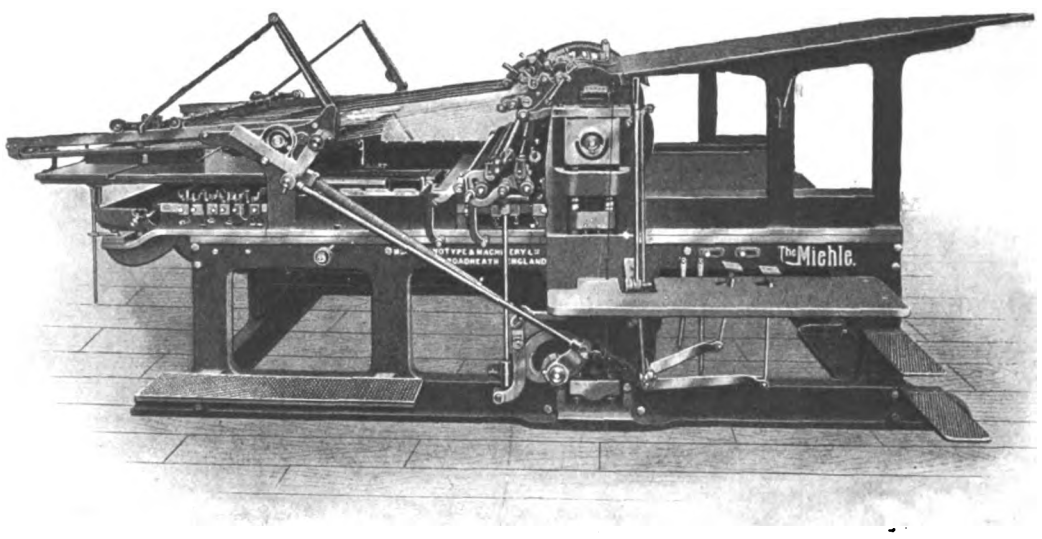
American Imports and Exports.

DURING the month of June the United States imported printing paper of the value of $726,923, compared with $243,940 for the corresponding month in the previous year. The total for twelve months ended June 30th was $6,034,023, as against $2,482,968 in 1912, and $2,507,670 in 1911. During the year Canada exported across the border printing paper—valued at not above 2½ cents per lb.—free of duty, to the extent of $4,512,807, which is an increase of $3,294,169 over the previous twelve months. These figures prove the growing demand there is for Canadian paper in the States, and they speak volumes for the attention our Dominion has given the market. Amongst the other imports into America, wrapping paper shows a falling off to the extent of $111,581, whilst hangings and surface-coated papers show a slight increase

Digitized by Google

The export of printing paper from the States declined during the year under review, the values being $2,450,520 in 1912-13 compared with $2,501,529 in 1911-12, and $2,434,964 in 1910-11. Paper-hangings, wrappings, and other classes of paper show an increase.

A WELL-KNOWN professor of literature, says the *Glasgow Herald*, had a "lucky" find the other day. "Whilst visiting in Rugby he turned over a quarto scrap album which was lying on the front stall of a second-hand shop. Hidden away between the pages he found an almost perfect copy of "The Waltz," by Horace Horrum, the very scarce work by Lord Byron, a satire of which he frequently denied authorship, although written by him in anger at his own inability through his lameness to dance. The book is rarely found, and is priced at £150 by the booksellers. The professor paid 6d. for the scrap book, and is fond of exhibiting it to his friends. Unhappily an autograph presentation is partly obliterated."



Cork Paper and its Uses.

Enormous quantities of cork are used annually for making tips on cigarettes. For this purpose the cork is converted into very thin sheets, which constitute what is known as cork paper, says the *Scientific American*. These sheets are exceedingly thin and come in the market 4¼ inches in width and 6, 7, 8, 9 and 10 inches in length. A package of about 250 sheets is scarcely an inch thick. Practically all the cork paper that comes to this country is entered through the New York Custom House and is valued (including 30 per cent. duty) at $300,000 annually. It is estimated that approximately $500,000 worth of cork is converted into cork paper every year, and almost all of this is used for making tips on cigarettes. The thin cork is pasted on long sheets of paper, which are passed between rollers and automatically covered with paste, while girls with deft fingers lay on the cork and smooth it down as the paper passes along. After this the sheets are passed through the cutting machines, in which they are divided into eight strips one-half inch wide and wound on reels for use in the automatic cigarette tippers. Each of these machines has a capacity of 10,000 sheets of cork paper a day. The total number of sheets used in the world is about 100,000,000, or about a quarter billion square feet. The cigarette tipping machines have a capacity of about 60,000 cigarettes daily. The cost of the finished tips to the cigarette manufacturer is from 9 to 20 cents a thousand.

MR. JAMES L. M'ARDLE was the guest of his colleagues on the Glasgow press the other day, in recognition of his appointment to the staff of the *Melbourne Age*. There was a large and representative gathering of journalists. Mr. A. T. Smith, on behalf of the subscribers, presented Mr. M'Ardle with a travelling case and a purse of sovereigns. Mr. M'Ardle, who has been a member of the sporting staff of the *Evening Citizen* for the past fifteen years acknowledged the gifts.

The Miehle
TRADE MARK

IS PRODUCING THE FINEST COLOUR, BOOK, AND JOBBING PRINTING THROUGHOUT THE UNITED KINGDOM AND COLONIES.

In half-tone work, the Miehle reproduces every gradation of tone contained in the blocks—from soft high-lights to heavy solids.

Its reputation for perfect colour printing (which includes efficient rolling power and the features which make for dead register) is embraced by the standard phrase "Miehle Quality," which means essentially Miehle printing.

The Miehle is fitted with two deliveries, which at will deliver the product printed side up or printed side down.

The inking equipment provided on this press consists of sixteen rollers and a large ink table; of these, four are forme rollers with reciprocating riders and rollers over them (nine in all, arranged in pyramid form). The other seven rollers distribute the ink on the table before it reaches the forme rollers.

This press is built in six sizes; the smallest size takes a sheet up to 26-in. by 39½-in. and the largest size 46-in. by 66-in.

Miehle presses are also supplied in tandem, so arranged that the units may be disconnected and used as single machines.

The Miehle is Manufactured and Sold by

LINOTYPE AND MACHINERY LIMITED

who have the sole and exclusive right to manufacture and sell The Miehle in the United Kingdom and Colonies (except Canada).

Head Office: 188 & 189, Fleet Street, London, E.C.

DUBLIN: 17, Crow Street. MANCHESTER: County Buildings, 4, Cannon Street. GLASGOW: 197, Howard Street.

Financial.

Offices of the *British and Colonial Printer and Stationer*,

58, SHOE LANE, LONDON, E.C.

WEDNESDAY, Sept. 3rd, 1913.

MONEY is still superabundant in the market. This the more evident since the better demand in evidence in the latter half of last week has lessened and supplies have increased. Call loans were easily obtainable at 2¾ per cent. yesterday, and 2½ per cent. in the latter part of the day, while fixtures were arranged at 3 and 2¾ per cent. The discount market is a shade easier, though Germany is still demanding gold. The bullion movements reported have been heavy, both in and out of the Bank, the result to date being a net influx of £229,000. Stock markets have passed a quiet, dull week. The general outlook seems to have improved, and the tone on the whole is firm, but caution continues to guide the judgment of the public, and business remains on a small scale. A firm tone is maintained in the gilt-edged section, and Consols rose yesterday. The quotations now are 73⅞ to 73¾ for money and 73 13/16 to 73 15/16 for the October account.

The miscellaneous industrial market has been very quiet, but fairly firm this past week. Business shows no expansion in the section relating to paper and print, as also in other sections. Our list of shares shows rises in *Daily Express* Deb. of 4 to 57—67, which occurred on Friday (2) and Saturday (2); and in Raphael Tuck and Sons Ord., which gained 1/32 on Friday to 3/32—1 1/32. Linotype and Machinery B Deb. gave way 1 on Monday to 36—41. Business has been done during the past seven days in Amalgamated Press Pref. at 21s.; in *Country Life* at 17s. 3d.; in Ilford Ord. at 14s. and 14s. 6d., and in the Pref. at 17s. 6d.; in Linotype and Machinery B Deb. at 37¼ and 36; in Edward Lloyd Pref. at 22s., 22s., and 21s. 9d.; in George Newnes Pref. at acc. 16s. 6d. and 17s.; in Spicer Bros. Pref. at 9 3/16; in Raphael Tuck and Sons Ord. at 19s. 6d. and 19s. 6d., and in the Pref. at 95s. 6d.; in Waterlow and Sons Def. Ord. at acc. 25¾ and 25⅞; and in Weldons Ord. at 30s.

NEW COMPANIES.

MAZDAZNAN PUBLISHING AND SUPPLY CO., LTD.—This company was registered on August 27th, with a capital of £2,000, in £1 shares, to acquire the business of G. Beeler, of 86, Seymour-street, Connaught-square, W., to carry on the business of printers, publishers, manufacturers of and dealers in statuary, jewellery, and mazdaznan insignia pins, buttons, emblems and banners, incense, incense burners and other articles for use in religious service and all articles for use in the mazdaznan method of living, to subsidise writers and lecturers, etc. The subscribers are G. Beeler and P. Hall-Smith. Private company. The first directors are G. Beeler and P. Hall-Smith. Registered office, 86, Seymour-street, W.

D. HARPER AND CO., LTD.—This company was registered on August 27th, with a capital of £5,000, in £1 shares, to take over the business of manufacturing stationers, show card printers, ticket writers, gold blockers, and manufacturers of and dealers in advertising novelties and devices carried on by S. C. Harper at 258, 260 and 262, Holloway-road, N., as "D. Harper and Co." The subscribers are S. C. Harper and M. E. Foster. Private company. The directors are to number not more than five. S. C. Harper is permanent governing director. Qualification, £100.

"BIRMINGHAM ECHO," LTD.—Registered on August 26th, with a capital of £2,000, in £1 shares, to take over the business of a printer and publisher carried on by W. E. Bilboe, at 6, Freeman-street, Birmingham, as the *Birmingham Echo*. The subscribers are W. E. Bilboe and J. S. Lee. Private company. Table "A" mainly applies. W. E. Bilboe signs documents as director. Registered office, 6, Freeman-street, Birmingham.

"MADAME," LTD.—Registered on August 25th, with a capital of £11,500, in 10,000 10 per cent. participating preference shares of £1 each, and 30,000 deferred shares of 1s. each, to carry on the business of proprietors and publishers of newspapers, journals and magazines, printers, stationers, etc., and to adopt an agreement with S. L. E. Ollif. The subscribers are S. L. E. Ollif and J. T. Luscombe. Private company. The number of directors is not to be less than two nor more than seven. The first are F. E. Grubb and S. L. E. Ollif (both permanent). Qualification, 100 preference shares. J. T. Luscombe is first secretary. Registered office, 68, St. James's-street, S.W.

H. E. ALLSOPP AND CO., LTD.—Registered on August 26th, with a capital of £5,000, in £1 shares, to carry on the business of manufacturers of and dealers in hosiery of all kinds, designers, makers and printers of tickets, wrappers or other printed matter for use in connection therewith, etc. The subscribers are H. E. Allsopp and W. H. Scattergood. Private company. The number of directors is not to be less than two nor more than five. The first are H. E. Allsopp and W. H. Scattergood. Qualification, 100 shares. Registered office, 65, Friar-lane, Leicester.

C. E. M., LTD.—Registered on August 18th, with a capital of £500, in £1 shares, to carry on the business of printers, publishers, newspaper and periodical proprietors, etc. The subscribers are C. C. Comyns, R. E. Gill, and A. E. Walker. Private company. The number of directors is not to be less than two nor more than five; the first are C. C. Comyns, R. E. Gill, and A. E. Walker (all permanent, subject to holding one share each.) Qualification one share.

COMMERCIAL EDUCATION PUBLISHING CO., LTD.—Registered on August 15th, with a capital of £2,000, in £1 shares, to acquire from A. E. Macdonald and G. E. Evans the weekly newspaper or periodical known as *Commercial Education*, and to carry on the business of newspaper proprietors and publishers, printers, etc. The subscribers are C. E. Harper, P. Machin, A. Nixon, J. A. Teale, W. H. Jones, J. Berry, and S. Wood. Minimum cash subscription £625. The number of directors is not to be less than three nor more than eight; the first are B. de Bear, J. Griffiths, F. G. Bristow, A. H. Mathews, A. E. Macdonald, G. E. Evans, P. Machin, and A. Nixon. Qualification five shares. No remuneration until 7½ per cent. dividend is paid; afterwards as fixed by the company. Registered office, 4, Adam-street, Adelphi, W.C.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

LIMEHOUSE PAPER BOARD MILLS, LTD.—Debenture, dated August 19th, 1913, to secure £3,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: London Joint Stock Bank, Ltd.

TALISMAN AND CO., LTD.—Issue on August 6th, 1913, of £100 debentures, part of a series of which particulars have already been filed.

MULTIPLEX ADVERTISING MACHINE CO., LTD. — Particulars of £5,000 debentures, created July 16th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the amount of the present issue being £1,350. Property charged — the company's property, present and future, including uncalled capital. No trustees.

COMPANY NOTICES.

BUSY BEE PRINTING and PUBLISHING CO., Ltd.

The creditors of the company are required, on or before September 15th, to send the particulars of their debts or claims to Edmund Meadowcroft Owen, 8, Victoria-street, Liverpool.

COMMERCIAL INTELLIGENCE.

Re JOHN FAIRLEY,
Printer and Stationer.

This debtor, residing at 74, Henderson-street, Leith, and carrying on business in Leith, was examined in the Edinburgh Bankruptcy Court, on Friday. He stated that he began business in 1893 with £6 capital of his own. He borrowed £100, which had been paid back. His present position was due to want of capital, bad trade, and bad debts. The state of affairs showed a deficiency of £232. The statutory oath was administered.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

DISTRIBUTION OF ASSETS.

YOUNG, H., late of 24, Philadelphia-street, Bristol, newsvendor. Claims by October 14th to H. Pomeroy and Son, 44, Baldwin-street, Bristol, solicitors for the administratrix.

THE BANKRUPTCY ACTS, 1883 AND 1890.

NOTICE OF INTENDED DIVIDEND.

DEAN, R. S., 78, Gillygate, York, stationer, newsagent, etc. Claims by September 18th to D. S. Mackay, official receiver, The Red House, Duncombe-place, York.

NOTICES OF DIVIDENDS.

SHAW, L. B., trading as Shaw and Sons, 105, Loampit-vale, Lewisham, London, S.E., printer. First and final dividend of 2s. 7½d., September 15th, at the official receiver's offices, 132, York-road, Westminster Bridge-road, S.E.

GOOSE, F. H., 16, Bishop Bridge-road and 6, Brigg-street, Norwich, bookseller and stationer. First and final dividend of 5s. 8d., September 1st, at the official receiver's offices, 8, King-street, Norwich.

APPLICATION FOR DEBTOR'S DISCHARGE.

WORSLEY, W, H., lately carrying on business at 210, Strand, London, W.C., printer's agent. To be

heard October 14th, 11 a.m., at Bankruptcy-buildings' Carey-street, W.C.

NOTICES OF RELEASE OF TRUSTEES.

BURGHES, A. M., 4, Paternoster-row, London, E.C., literary agent. Trustee, E. L. Hough, official receiver, Bankruptcy-buildings, Carey-street, W.C. Released June 25th.

DAVIES, F. W., trading as W. W. Davies and Sons, 51, Broad-street, Bristol, advertising agent. Trustee, C. H. King, official receiver, 26, Baldwin-street, Bristol. Released June 19th.

Printers' Managers and Overseers ASSOCIATION.

A Musical Evening.

A re-union of the members of the Parent Association, after the customary recess during August, took place at the Old Bell, Holborn, E.C., on Tuesday evening. The President, Mr. C. J. Gray, was in the chair, and after some preliminary business had been transacted the remainder of the evening was spent in the enjoyment of a smoking concert, arranged by Messrs. T. A. Catling and R. B. Hardie.

The election to membership of the following candidates was first unanimously confirmed, viz.:—Mr. H. Keats (Anglo Engraving Co., Ltd.—general overseer printing dept.), and Mr. A. G. McLean (Messrs. Mullock and Sons., Ltd., Newport, Mon.—machine.

Messrs. W. Hermon Gill and C. E. Parry were elected auditors for the ensuing year.

To fill two vacancies on the executive council caused by the resignation of Messrs. D. Greenhill and A. J. Smith, the council appointed Messrs. A. H. Wilson and H. Summerfield, and the meeting confirmed their action.

The President said a communication had been received from the London Society of Compositors' Jobbing Guild with reference to the opening night of the new session, which takes place at the St. Bride Foundation on Thursday, 11th inst. One of the members of the P.M. and O.A., Mr. A. C. Fowler, would take the chair, and the following gentlemen had promised to address the meeting on the "Apprenticeship Question":—Mr. G. E. Hart, from the employer's point of view; Mr. W. H. Slater, from the technical instructor's point of view; Mr. A. C. Hayward, from the workman's point of view; Mr. T. E. Naylor, from the trade unionist's point of view; and he (Mr. C. J. Gray) was down to speak from the manager's and overseer's point of view.

The business completed, the musical programme was opened with a pianoforte solo, "Masaniello" (Auber), skilfully played by Mr. H. G. Laughton, who acted as accompanist during the evening. A humorous song followed, "Signs and Indications," by Mr. Fred Hylton, whose other contribution was the popular "The Other Department." Mr. A. Reed next contributed the stirring song, "The Trumpeter," his other song being "Love, Could I only Tell Thee." Miss Elsie Elgar then sang in good voice and with charming expression, "A Proposal," and replied to an encore with "Going to Kildare," in which she was equally successful. Mr. Alfred Millner, who is the happy possessor of a full, deep bass voice, gave splendid interpretations of "Reuben Ranzo" and "Big Ben," his encore song to the former being "Simon the Cellarer." Miss Dora Thorpe sang in sweet mellow voice "Until," and "Genevieve," both accompanied with 'cello obligato. Mr. Manley Clarke sang two favourite tenor songs with much feeling, "Mountain Lovers" and "Good Night, Love." Mr. Jock McCallam was very entertaining with his humorous stories, introducing his comic songs, "'Twas in Trafalgar-square" (McCallam), "Wee Doch an Doris," and Harry Lauder's "It's Nice to Get up in the Morning," each of which he sang in Highland costume, and was greatly appreciated. The singing of "God Save the King" brought a pleasant musical evening to a close.

WHEN a man buys a piece of printing cheap says the *Printing Trade News*, he may feel good when he pays for it, but it is pretty certain he will feel rotten when he is using it, but when he buys a quality job he feels good every time he uses it, and he thinks about the quality long after he forgets about the price. It is this line of argument the printing house salesman should dwell on. Then he will sell his shop's work at prices which will mean profits.

THE "Red Rail Guide" is a little publication that gives the times of departure of the train services to and from all parts of the United Kingdom, and includes the suburban services. It is arranged for easy reference, is published monthly, and costs only twopence.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

The Speaker once said of the late Sir Wilfrid Lawson that if he was not technically "the Father of the House" he was by common recognition the Grandfather of the House.

o o o

Somehow I'd got into a way of thinking of Mr. Walter Hazell as being the Grandfather of the craft.

o o o

Whereas he's hardly its Father; "technically," to use the Speaker's term, or in any other way.

o o o

He's *so* incorrigibly young, very little more than "seventy years young," as Oliver Wendell Holmes used to say.

o o o

But, though he's so ridiculously young considering the decades through which he has been an outstanding figure in the printing world, he yet has put in fifty years work since the day he formed his first business connection with the firm, now known as Hazell, Watson and Viney, Ltd.

o o o

He has just presented £7,000 to his employees to mark his own gratification at the business success that has attended him and the other bounties of life which he has so far enjoyed.

o o o

The gift was not heralded. Some mysterious envelopes surprised about 270 of the workers one fine, very fine, morning or afternoon.

o o o

They contained four weeks' salary as an extra for all men who had been twenty-five years in the firm's employment, and, as I understand, also four week's salary for all of the other, the gentle, or the generally gentle sex, who had put in ten years with the house.

o o o

You see ten years of a woman's work is as good as twenty-five years work by a man.

o o o

At least I hope and cannot doubt that the alert wits of the H. W. and V.'s binding staff of women and girls have read this interpretation into these comparative figures.

o o o

These extras took £2,000 of the £7,000.

o o o

How about the nine years and the twenty-four years hands, and how about all the rest of them? Well, they've not been forgotten. Mr. Hazell has handed over securities to the amount of £5,000 to the firm's employee's funds; and the income from this, which, I hope, will be £250, will be available for many purposes.

o o o

If the firm has to part with a man through slackness and he cannot quickly get a fresh job this £5,000 fund may help to tide him over. If a boy or girl is fatherless and has to live on youthful and small earnings this fund again may come in very serviceably to help. Convalescence or sanatorium treatment or things of like character will be recognised as proper for its helping hand.

o o o

Here's to Walter Hazell. May he live long yet; and healthfully and happily. I should like to see him, man of so many distinctions, as he is, become printing's famous and much-honoured centenarian, and may I write the "Quads" on that great day.

o o o

He encourages us by a very notable example. Perhaps he almost censures some of us by the mere "dignity of his excelling."

o o o

This is but the latest of a long list of schemes he has excogitated for the welfare of the staff—with doubtless through many years the whole-hearted sympathy of Elliott Viney; a man whom though I knew him less intimately than I could have wished I hold in abiding honour.

o o o

Lately Mayor of Holborn, erstwhile Member of Parliament for Leicester, keen aider of emigration in what he deems the right cases, a prominent man in Nonconformity—first President of the Master Printers' Federation, and the only one elected to that office for a second term—an enterprising pioneer in technical training (in that his firm employs that past-master in the art, Mr. W. H. Amery, to go to Aylesbury and conduct a class); a pioneer, too, in the erection of works in the country and a helper and encourager of others to do the like, Mr. Walter Hazell has indeed in his time played many parts, his acts being seven decades.

o o o

If I've any misgiving about him it is a fear that he was an altogether good boy, and slept—not crept—only too willingly to school.

o o o

Any scape-gracing his memory can urge in his defence shall be put down to his credit.

o o o

However that may be as regards his first stage, we'll all believe that in the due amatory time he sighed like a furnace and wrote woeful ballads.

o o o

Again his denials, with full particulars, will be duly taken into account.

o o o

As to strange oaths I can only say that any oath would be strange in his mouth. "Wise saws" would not. Of "modern instances" his works are full.

o o o

He is not, and never likely to be, a lean and slippered pantaloon. He's comfortably rotund, though not because he has "run in a groove."

o o o

It's because he's an out-door man, a back-to-the-lander, a bit of a "Punch" John Bull. He's a dairy farmer, if you please, in which line I'll engage to say that even he is not making inordinate—I'd nearly written in-Alderneyte—profits.

o o o

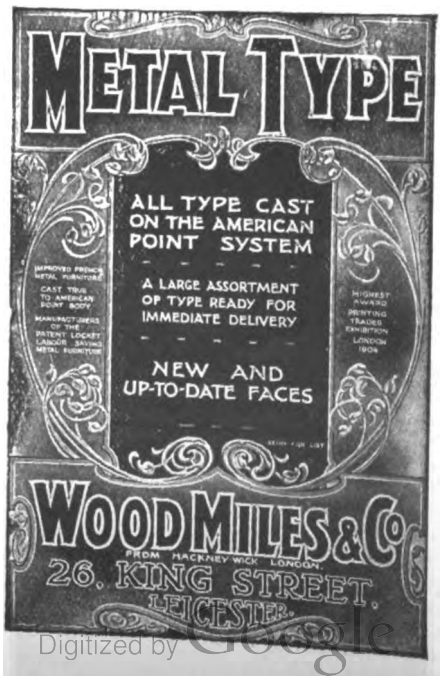
When at all vexed by anything printerian he simply and philosophically falls to discussing mangolds.

o o o

I hope the "dis" won't come just at the end of a line; and so take the reader's thoughts back to the strange oaths.

o o o

He has material fortune I do not doubt. He has won moral fortune too. And he is supremely happy it seems to me in having for sons two men, one whom at the moment is doing an invaluable service in helping to make a success of the Leipzic Exhibition. which means helping on that supremely important thing, the bringing about of better relationship with Germany; and the other of whom has for years been a silent powerful largely unobserved but most efficient worker towards costing reform and other reform of the craft, and has at last come into his own, and is being everywhere gratefully acclaimed for the man of talent and high serviceableness he undoubtedly is.



o o o

I am sorry to hear by the way that Mr. Howard Hazell has anxiety at the moment in the illness of one of his children, and perhaps this note may save him from a few momentary appeals for his advice. I am sure he is constantly receiving very many such appeals.

o o o

It has done me good, and I hope it will be not unrefreshing to the reader to give space and pause for a while to express acknowledgment to Walter Hazell—seventy or so years young—and still, as for so long, one of the world's encouragers.

FRANK COLEBROOK.

The Bodoni Centenary Celebration.

The programme of the proceedings in connection with the observance of the first centenary of the death of that once famous Italian typographer, Giambattista Bodoni, of Parma, has just been issued. The printer's demise actually occurred on November 20th, 1813, but the centenary festival has been fixed for September 20th, 21st, and 22nd. It is under the care of a committee, of which Cav. Vigliardi Paravia, a well-known printer at Turin, is president. On the first day—Saturday—there will be a general meeting of those interested at the Piazza Bodoni, Turin, when commemorative medals in gold, silver, and bronze will be distributed. A procession will then be formed, and proceed to the "Mediæval City," a relic of the late Turin Exhibition, for the purpose of opening a Bodoni Exhibition and formally inaugurating the National Museum of the Book, which will be permanently located there. The inaugural speech will be delivered by Com. P. Barbèra, President of the Italian Printing and Bookselling Association. An adjournment will then be made for lunch, after which, at 3.30 p.m., a national convention, dealing with the printing and allied trades from artistic and technical standpoints, will be opened. At 9 p.m there will be a gala performance in the theatre. The following day, although it is a Sunday, will be a busy one for the Bodonian Anniversarists, who leave Turin at the early hour of 7.30 a.m. on a visit to Saluzzo (Bodoni's birthplace), about 40 miles south. Arriving there at 9 o'clock, they will be formally received at the station by the local authorities. A move will then be made to the Bodoni monument, where a commemorative tablet in bronze will be unveiled. A visit to the Town Hall follows, when a speech will be delivered by Com. Prof. Costanzo Rinaudo. At 12.30 there will be a banquet, and in the afternoon the local Bodoni Exhibition will be opened and inspected. After a tour round the town the party leaves at 7 p.m. for Turin. On Monday at 10 a.m. a bust of Bodoni, by Cav. G. Ambrosio, will be unveiled at the Royal School of Typography, after which there will be a second session of the Congress on Typography, followed at 7 p.m. by a dinner to the Committee.

The arrangements also include a visit to the tomb of Bodoni at Parma, but the date of this has not yet been fixed.

Full particulars may be obtained on application to the Director of the Royal School of Typography, *via* Carlo Alberto, 39, Turin, who has arranged to issue special tickets admitting to all the meetings, etc., including the luncheons, and the visit to Saluzzo, at £1 each.

PAPER AND PULP MAKERS' DIRECTORY OF SWEDEN, NORWAY, DENMARK AND FINLAND. Edited by Hugo Brusewitz. 8vo, cloth, 242 + 20 pp. Price 7s. 6d., post free 7s. 10d. Gothenburg, 1913. Sole British Agents, Stonhill and Gillis, 58, Shoe-lane, London, E.C.

This is the English edition of this well-known Directory of the Scandinavian Paper and Pulp Manufacturers, the Swedish one having been issued a few weeks since. The last edition was dated 1911, and thus the one under notice records the numerous changes that have taken place in the trade during the past two years, which are also graphically indicated on the map that accompanies the volume. For many years Mr. Brusewitz's directory has been looked upon as one of the best of its kind, being practically indispensable to all those who are directly connected with the Scandinavian pulp or paper trades. The information included has been checked and verified with that possessed by the local mill owners' associations, and thus may be relied upon as accurate and up-to-date in all respects. Quite apart from the fact that each of the four countries dealt with is provided with a separate alphabetical arrangement of localities, no less than 22 pages are occupied by indices to the contents, so that the time required to locate a particular entry is reduced to an absolute minimum, and when turned up, these entries will be found to contain all the information that may reasonably be looked for.

A MILL for the manufacture of paper and roofing felt has been established at Wegstadtl on the Elbe, Bohemia. The machinery will be operated by a 200-h.p. engine.

The Apprenticeship Question

AND THE

L.S.C. JOBBING GUILD.

The L.S.C. Jobbing Guild opens its autumn session on Thursday, September 11th, at the St. Bride-lane, E.C., when the following gentlemen will express their views on the Apprenticeship Question :—

Mr. A. C. Fowler, chairman.

Mr. G. E. Hart will speak from the employer's point of view.

Mr. C. J. Gray will speak from the manager's and overseer's point of view.

Mr. W. H. Slater will speak from the technical instructor's point of view.

Mr. A. C. Hayward will speak from the workman's point of view.

Mr. T. E. Naylor will speak from the trade unionist's point of view.

In view of the wide interest that has been previously shown in this question, it has been decided to throw the meeting open to the general trade, and all interested in the subject are cordially invited to be present. Chair will be taken at 7 o'clock sharp.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Applications.

18,703 SOUTTER, C., bronzing and dusting attachment for printing and lithographing machines.
18,722 SHELDON, W. G., and REMINGTON TYPEWRITER CO., LTD., typewriters and the like
18,787 LAW, J. A., files for documents, papers and the like.
18,811 GILBERT, A., apparatus for addressing envelopes, statements and the like.
18,844 LAMSON PARAGON SUPPLY CO., LTD., and WINDER, A., voucher, cash or credit book and ledger entry book or the like
18,885 DAVIS, C. H., sheet-delivery apparatus for printing machines.
18,947 VITTY, T. H., stamp cancelling and obliterating machines.
18,980 MATHEWS, T., advertising media.
19,035 JEFFERSON, E., envelopes.
19,049 HODGSON, A. E., means for advertising.
19,073 QUICK, A. S., letter covering or advertising device.
19,110 TURNHAM, A. E., apparatus for the display of announcements, advertisements and the like.
19,124 WESTERN ELECTRIC CO., LTD., relinking mechanism for use in printing telegraphs or the like.
19,158 WALKER, A. H., typographical distributing mechanism.
19,179 STEVENSON, A. W., receptacles of cardboard and in the method of making same.

Specifications Published, 1912.

Machine for making bags, envelopes, or the like of paper or other materials—Barnett; 11,219.
Method of and means for securing pencils, penholders and the like to show cards—Harte; 18,317.
Means for preventing set-off from printed sheets—R. Hoe and Co.; 18,605.
Advertising devices—Thomas; 19,523.
Combined advertising cover and holder for newspapers—Wheelhouse and Carswell; 20,399.
Fountain or reservoir pens—Wade; 20,490.

1913.

Apparatus for closing envelopes and the like—Kilburn; 4,021
Stencilling apparatus for inking or colouring printing plates or blocks from which coloured pictures are printed—Woodhead and Stickland; 7,790.

COMPLETE SPECIFICATIONS OPEN TO PUBLIC INSPECTION BEFORE ACCEPTANCE

1913

Addressing machine with multiple impression controller—Lee; 17,083.
Printing, blocking and stamping presses—Albert Bolle and Jordan; 18,403.

In Crown 8vo. With 6 Plates, and other Illustrations.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe $5.00 per year; Canada $3.00. 64 pages weekly.

THE INFLUENCE OF SUBSTANCE UPON The Physical Qualities of Paper.

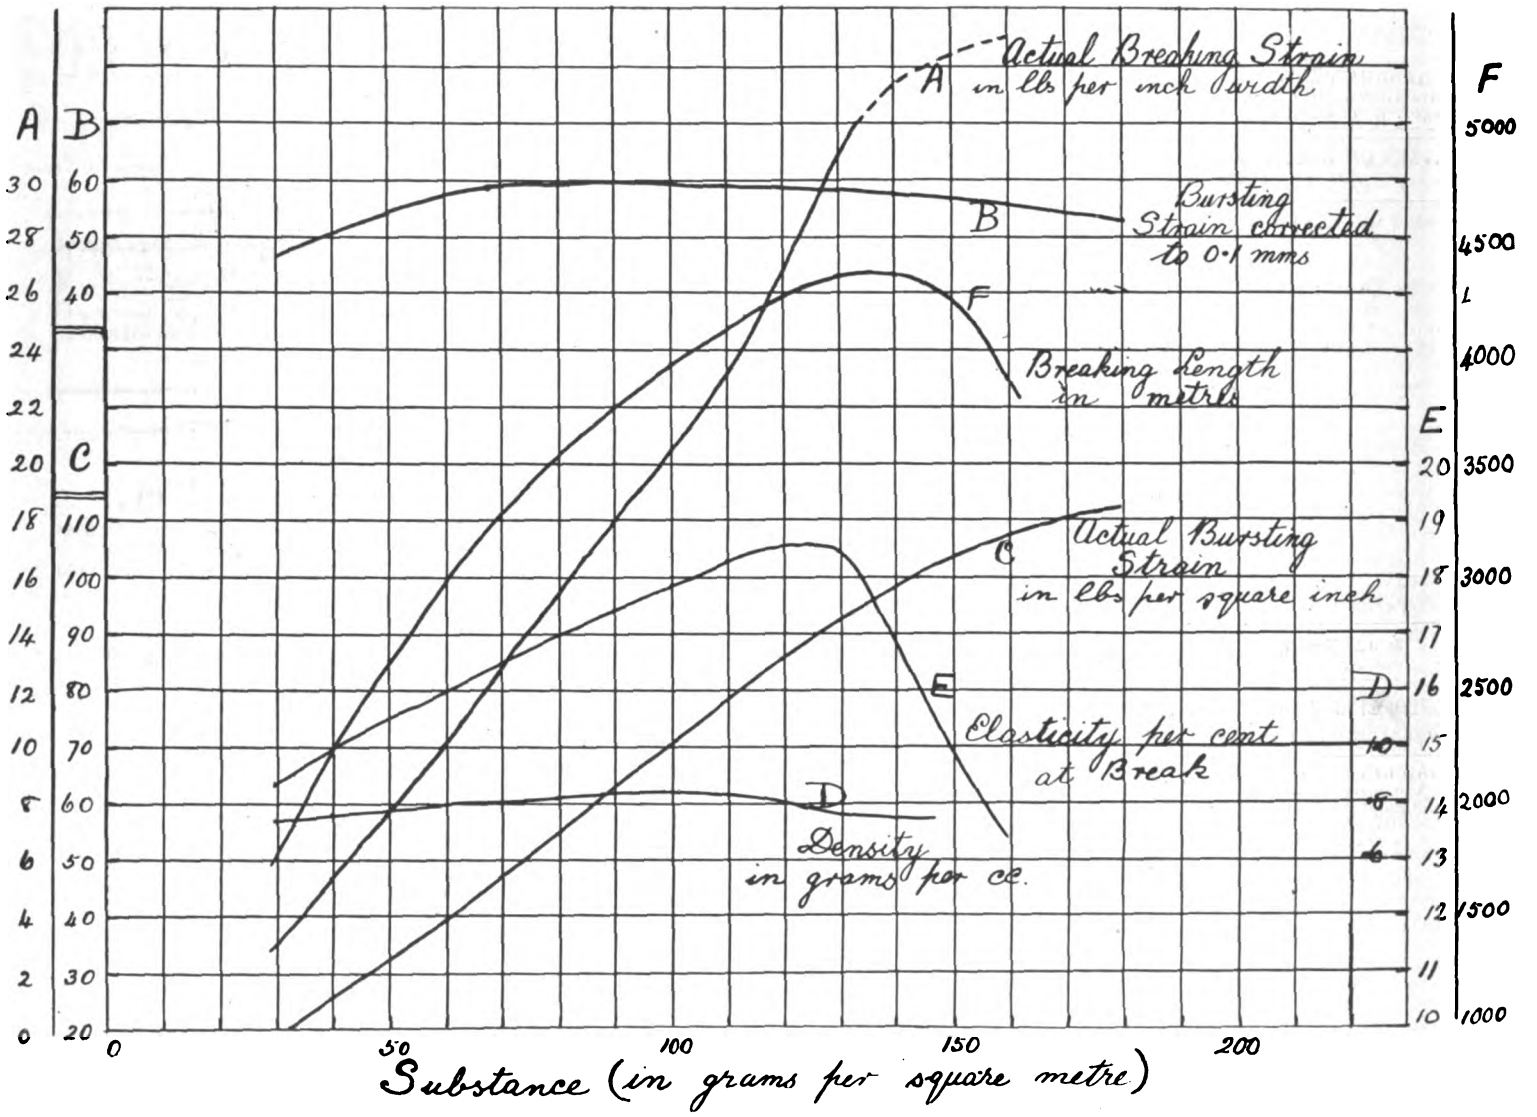
As Exemplified in Papers made from Hedychium Coronarium.

By CLAYTON BEADLE and HENRY P. STEVENS.

(Second Communication.)

Since our first communication upon the subject, which appeared in your issue of June 28th, we are gratified to find a letter from Messrs. Sindall and Bacon in which they state that "the results now given by Messrs. Beadle and Stevens are in complete accord with the results published by us two years ago, not only in reference to the breaking length, in which we found a gradual rise to a maximum with a subsequent diminution as the substance of the paper was increased, but the same results were noticed in our experiments with the bursting strain, though we corrected the bursting strain to a standard substance of 100 grammes per square metre."

We were very gratified to see this letter, but we wish to express our regret that we had no knowledge of the previously published work by Messrs. Sindall and Bacon appearing in the *Papermakers' Monthly Journal*, 1911, in the series of articles which they then communicated upon the subject. If we had read this paper we should, of course, have referred to it, but we think our results are all the more interesting in consequence of the fact that we have arrived at our conclusions without any knowledge of what had been done by the above investigators, and that we have both arrived at the same results.



Since our first article, it has been pointed out to us that we omitted to give the individual thicknesses and substances of the papers used for bursting strain. These were omitted quite by accident. The figures for bursting strain (columns 11 and 12, previous article) were contained in the same table as those for breaking length, elongation, etc., but the actual thicknesses of paper used differed somewhat.

We, therefore, give another table on this page in which we give the thickness (Col. 1), substance in grammes per square metre (Col. 2), bursting strain of each thickness in pounds per square inch (Col. 3), and bursting strain corrected to standard thickness of 0·10 millimetres = 83 grammes per square metre (Col. 4).

In this table it will be seen (Col. 4) that, when the bursting strain is corrected to a standard thickness of 0·10 millimetres (which comes to practically the same thing as correcting it to standard substance as was done in the case of Messrs. Sindall and Bacon's results), we arrive at figures which indicate an increased specific bursting strain up to a substance of about 100 grammes per square metre, followed by a diminution in specific bursting strain as the paper gets thicker. But it will be noticed that the actual bursting strain of the sheet increases with the thickness right away to the thickest piece, but not in proportion to the increased thickness. Hence, when the specific breaking strain is expressed per unit of substance, we get a rise to a maximum, and then a subsequent diminution as the result of increasing the thickness. The same may be said of the actual breaking strain in relation to breaking length.

described in our previous communication. The horizontal line is marked in substance (grammes per square metre). The vertical scales A to F are graduated according to the various qualities and intended to illustrate and correspond with the curves A to F of the diagram. Against each of these curves is given a description of what the qualities are. When the paper in question, in different substances, is tested for actual breaking strain in the usual way, one obtains a curve similar to A, a considerable portion of which is practically a straight line, with a tendency towards a horizontal direction as it reaches the higher substances. With breaking length figures (F) there is a very distinct maximum followed by a fairly rapid fall. The elasticity curve (E) shows a very distinct maximum at almost the same point as the maximum in (F). From this it might appear that the elongation at break corresponds in the same way with the breaking length when papers are all made from one material but of variable thickness. In the case of both (E) and (F) the curves were drawn through the mass of observations so as to represent the general mean direction of each of the curves, but, as a matter of fact, there is distinct evidence of an undulating line crossing and recrossing the general mean direction in both cases. This we have not attempted to illustrate, but may have occasion to refer to it later. We do not think this undulating line has anything to do with experimental error, because in both cases it follows a distinctly regular course, so that the curves, instead of being strictly regular, as represented in the diagrams, both take a decidedly serpentine course.

The density of grammes per cubic centimetre is represented by curve D. This, in the case of the papers which we have under examination, shows an undeniable maximum at somewhere about 100 grammes per square metre. It is quite conceivable that this maximum density to a certain point in the thickness is to be observed with most papers of the class that we have under consideration. These papers are strong, crackly and hairy. It is quite conceivable that, if the material had been of the nature as made use of by Messrs. Sindall and Bacon, we should have obtained similar results in this respect to those obtained by these authors, particularly if the papers in question had been pressed and glazed in the same way that these investigators had done in their own trials. The samples which we had under investigation were allowed, to a large extent, to assume their own natural form in the course of drying, and were very little affected as the result of subsequent pressing.

Although, as previously explained, the actual bursting strain (curve C) does not become less as the result of increasing the thickness at the higher limits, its rate of increase per unit of thickness becomes less, consequently (C) tends to curve towards a horizontal direction.

The various curves are placed upon the same diagram for the purpose of reference, but, in comparing one with another, it must be remembered that their relative position in the scale is entirely a matter of convenience. They are placed at different points in order to distinguish them to better advantage.

An Ancient Printing Press.

At a recent printers' gathering in the United States Mr. W. J. Oatman, of Pittsfield, a veteran printer, was asked to tell the story of an ancient press which he once ran. It was called a "Guernsey," which none of those present had ever heard of before, and was made in the time of the civil war, or before, by Gordon McKay, of Pittsfield. It would print two pages of an eight column paper. It had a peculiar motion, as, instead of reversing on its track, the forms ran out, then dropped five or six inches and ran back under the cylinder of the press, then rose to the former level. The press was taken on a wagon and drawn to wherever it found a job. These presses found a mission immediately after the close of the war in printing a class paper in the south for coloured people's societies. The particular press run by Mr. Oatman had been used on the *Lee Chronicle* by W. H. Hill, and went with that paper's effects to the *Gleaner* office, from which place it went out into New York State, and in the '70's to a place called Canaan. As Mr. Oatman went toward the office of the *News* he heard a noise like a threshing machine. A few steps more and he saw a white horse working a treadmill, from which a belt ran to a second storey, where the Guernsey press, with its combination of perpendicular and horizontal motions, was getting off the edition with the aid of the horse. The uproar of the press and the threshing machine was something to wake the dead. Mr. Parsons, present editor of the *News*, then a boy in the store underneath, remembers the running of the "Guernsey" press. He can never forget it, and says it used to shake the building so they were afraid the press would come through the floor. What became of the press finally no one knows. It certainly was worthy of a place in a museum of antiques and curios of the printing trade.

Photographing on Zinc.

A process has been devised by Mr. J. A. Heppes that has proved very satisfactory, and has to do with the photographing on a medium rough ground zinc plate. It has been found very difficult to develop an albumen print on rough zinc on account of the ink settling down in the small but deep interstices which cause the roughness. This may be fully overcome by first making up the following solution:—

Ammonium Bichromate	... 300 grains.
Albumen, desiccated ...	... 2 oz. dry.
LePage's glue	... 1½ oz.
Water	... 40 oz.

After mixing this in the usual way and filling, coat the plate, whirl till dry, and print according to the density of the negative. Then take the print out of frame and instead of rolling up with ink, wash it out with asphaltum or Mogul varnish, fan dry and then roll up with a leather roller using one-half crayon and one-half good black printing ink, thinned out with a small amount of O varnish. This treatment pulls out every particle of unexposed solution and ink, caused by the tremendous suction of the grained leather roller, and leaves the dot clear, hard and square stencilled on the zinc with an asphaltum base, which will stand the roughest kind of treatment and enables one to pull many more impressions from the plate than by the old way of developing with a cotton wad. There are several establishments using this process with the greatest success, but this is the first time it has been published so far as the writer knows.—The *National Lithographer*.

AN ATHLETIC LADY JOURNALIST.—Miss Marguerite S. Cody, a member of the Victoria Amateur Swimming Club, Belfast, recently entered upon an attempt to swim across Belfast Lough from Bangor to the Co. Antrim side, and successfully accomplished her task at 5.40, having taken the water at Bangor at a minute past one o'clock. Miss Cody is a member of the editorial staff of the *Belfast Evening Telegraph*, and is a noted swimmer. She held the championship of Girton College, Cambridge, for three years, and has accomplished several remarkable feats in the water at Portsmouth, her native place, and elsewhere during recent years. While training for the last event Miss Cody a few days ago swam from Portrush to the Skerries and back with ease. Miss Cody does not confine her attention to swimming, as she is an all-round athlete, excelling especially at lawn tennis, hockey, cycling, and pedestrianism.

The Bodoni Centenary. 1813-1913.

Some Notes on a Famous Printer and His Work.

As many of our readers will be aware, the Italian printers are celebrating at Turin this month the centenary of the death, on November 20th, 1813, of Giambattista Bodoni, one of the most noted typographical revivalists of that country.

He was born at Saluzzo, in North Italy, on February 16th, 1740, his father being a printer in that town. Young Bodoni learned his trade in the paternal establishment, and soon showed that he was capable of producing better work than was commonly turned out of the Italian printing offices of that day.

Although Italian printers once stood in the very foremost rank of typography, the great names of Jensen, Ratdolt, Aldus and their contemporaries were almost entirely forgotten—the lessons of their work certainly were—in Italy in the middle of the eighteenth century, and a glance over some of the books printed there about that time will show to what depths of degradation Italian typography had then fallen. The artistic type faces introduced by Caslon from 1720 onwards had penetrated into Italy hardly at all, and the example of men like Baskerville, who sought to raise the art of printing to a higher level, left the dull uniformity of Italian work quite unaltered.

There being obviously but little opening in Saluzzo or its neighbourhood for a young printer of Bodoni's energy and advanced ideas, he resolved to try his fortune in Rome, where an uncle of his resided, although the Eternal City was by no means, at that period, the busy metropolis it is to-day. When he, and a friend who accompanied him, arrived, in a rather impecunious condition, the uncle, perhaps foreseeing a possible drain on his purse, recommended them to return, as he could do nothing for them. It seemed good advice, and Bodoni would probably have acted upon it, except that he had decided to first pay a visit to the printing establishment of the Propaganda branch of the Church of Rome, which was even then one of the best equipped establishments of its kind in the world. The Superintendent took a fancy to him, and gave him an engagement in the office, where his attention to his work, and devotion to the trade in general, soon brought him under the special notice of Cardinal Spinelli, who was at the head of the Propaganda branch. By his advice, Bodoni set to work to learn some of the Oriental and learned language, so as to thoroughly qualify himself for typesetting in those tongues. As a result, in 1762 he was entrusted with the getting out of works in the Coptic and Tibetan languages and the Superintendent was so well pleased with the way in which he acquitted himself that he allowed him to put his name at the end of the volumes, as that of the actual printer. His patron's death soon afterwards led Bodoni to decide to leave Rome, and although he had, at first, some idea of coming to England, he ultimately accepted an offer to undertake the superintendence of a State printing establishment which Ferdinand I., Duke of Parma, egged on by his French Prime Minister, intended to set up in that city, in imitation of the one at the Louvre in Paris, and he accordingly settled at Parma in 1768. Here, though at first dependent on French types, he soon designed new founts, cast types, and commenced the publication of that series of finely printed books which has made his name so famous from that day to this His experiences of polyglot printing at Rome stood him in good stead, and many of the works that issued from his press were on somewhat similar lines. Such were a sort of specimen book got out in 1771; a work by Rossi on ancient inscriptions in 1774; and the great folio entitled "Epithalamia exoticis linguis reddita," issued in 1775 on the occasion of the marriage of the Prince of Pied-

mont with a French princess, which contained laudatory addresses in twenty-five languages.

Probably few of the works he printed at this time would now be looked upon as possessing any extraordinary typographical merits, except by comparison with what other Italian printers—indeed Continental printers generally—were in the habit of turning out. Appreciation of really fine printing was then, as now, largely confined to a few persons of good position and education, who were willing to patronise and encourage a good printer when they found him. The Spanish Ambassador to Rome, M. D'Azara, had tastes of this kind, and contemplated setting up a semi-private press in his residence at Rome, for the production of finely produced editions of the classics. In 1788 he offered to place Bodoni at the head of it, if he would leave Parma for Rome, and

CHRISTVS

TRAGOEDIA.

CHRISTVS

Adest citata tempus advectum fuga:
Surgetque magnus ille iam terris dies,
Ego mei quum sanguinis manantibus
Rivis vetusti diluam labem mali,
Quam nulla saecla, nulla de summis cadens
Delesset astris flamma, non liquentibus
Totum quod ambit fluctibus terram mare.
Dura ergo dura, tetra, perpessu aspera
Feram necesse: quanta vix ullus tulit
Mortalis unquam. Nexibus centum obrutum,
Scissumque plagis membra me ad mortem abripi

Clavus cruorem: clavus hos figet pedes:
Rigorque ferri crudus hoc solvet latus
Iam mortui: rivusque post plagam duplex
Sequetur ex hiante vulneris specu.
Sic auferar: sic vester ille Dux cadet,
Quicum procellis saeviens circum nigris

An Example of Bodoni's Italic.

that typographer would probably have done so in default of anything better presenting itself, for hitherto his work, like Baskerville's, had brought him great applause but little profit. At this crisis in his affairs, the Duke of Parma made Bodoni a somewhat similar offer, viz., to establish a press in his own palace, quite separate from the State Printing Office, for the purpose of printing *de luxe* editions of the Greek, Latin, and Italian classics. Bodoni closed with this proposal, which took effect in 1789, and from that period, rather than from any time in the twenty years that preceded it, the zenith of his fame may be dated.

It must not, however, be supposed that all his productions for the next two decades were uniformly splendid. Like other fine printers, he had his limitations, and even in works got out on an important scale, such as the "Prudentius" in two large 4to. volumes, quite ordinary typography can be found, especially when, as in that case, the symmetry of the pages was spoiled by the addition of a crowd of notes.

Although very many of his books were quite small, 12mo.'s and the like, yet Bodoni's special weakness seems to have been for printing on a grand scale. Hence we find in numerous instances, such as the celebrated Homer of 1808 in three folio volumes, huge pages, exceptionally wide margins, extravagant spacing, and the like. He anticipated William Morris in producing many of his publications in very limited editions, sometimes as few as thirty copies being printed, and there was generally a small edition on vellum as well as the ordinary one on paper. Bodoni and the Duke of Parma divided the resultant glory between them, and though the former was also, at any rate nominally, director of the "Stamperia Reale" at Parma, the artistic side of his work seems to have quite overshadowed the commercial one.

The wars that followed the French Revolution of 1789, and resulted in the occupation of Parma for some years by the French, did not cause any interruption of Bodoni's work. In 1810, by way of return for a present of some of his publications from the printer, Napoleon conferred a pension of £120 a year on him. Some time after, when he proposed to add French classics to his other series, he had a present of £720 from the Emperor, to aid him in the enterprise, which did not, however, proceed very far. The French on more than one occasion offered him the post of Government Printer in other and more important Italian cities, but age and ill-health determined him to stay on at Parma, which he did until his death.

Notwithstanding that this eminent typographer was himself a capable wood engraver, his fame rests rather on the excellence of his letterpress printing than on anything he did in the way of issuing illustrated books, which, indeed, was very much the exception with him, even such ordinary accessories as head and tail pieces being not much in favour.

Type was, in fact, practically all that he relied upon to produce the sumptuous effects seen on opening so many of his publications. Careful presswork, accurate set-out, strict attention to the laws of proportion, and, above all else, personal interest, not to say enthusiasm, were what established Bodoni's reputation as a fine printer. In his own day that reputation was exceeding great, but not long after his death it began to wane. A certain nobleman made a collection of almost everything he had printed, but when it came to the hammer the bidding was so spiritless that the receipts barely repaid the cost of compiling the catalogue. To-day, Bodoni and his books rank with Aldus, Plantin and the Elzevirs, and *their* books, *i.e.*, are but little thought of or enquired for, save in the case of a few of his very finest productions. Ordinary examples will now scarcely fetch as many pence as they cost shillings, nay, even pounds, a century ago. *Sic transit gloria Bodoni!*

He took great pains to demonstrate to the world the capacity of his printing establishment, and as early as 1788 issued his well known specimen book, the "Manuale Typo-

Specimen of Bodoni's Greek (Caps).

grafico." An enlarged edition, with the printer's portrait prefixed, was published by his widow (who completed his unfinished works) in 1818, five years after his death. He of course had his imitators, even during his lifetime, one of them being Mussi, his successor in the office of State Printer at Parma, who signalised himself by getting out a beautiful edition of Ovid, in six folio volumes, in 1806.

Though Bodoni's memory has never been quite effaced from the minds of book collectors and second hand booksellers, if from those of printers, it was more than half a century before any steps were taken to perpetuate it in his native town, by the erection of a statue, which event took place in 1872, when a National Festival was held in the printer's honour. His biography, however, was much more promptly undertaken by G. de Lama, and published in 1816, together with a list of his productions. The vast dimensions of many of these latter preclude our supplementing this article with facsimiles from the pages of some of the best of them. The few that we give are, nevertheless, fairly characteristic of his style. Among the most noteworthy of his smaller books is the "Anacreon" of 1791, published in both 8vo and 12mo editions. Two of our facsimiles have been made from a copy of the latter, which was printed in caps. throughout in both the Greek and Latin versions. They, as well as some of the others, exhibit one of Bodoni's mannerisms in the case of small books, viz.: placing the page numbers in a little tablet. The page reproduced from the "Epictetus" of 1793 shows one of Bodoni's Greek founts, the Roman being exemplified, on a modest scale, by the title and page of text from the Italian version of the same work. The specimen of Italic comes from an Italian translation of a Scriptural play composed by Martinani, Bishop of Cosenza, and acted at the University of Parma in 1786. All the facsimiles are of the full size of the originals.

The State printing establishment at Parma, over which Bodoni presided for so many years, was abolished in 1862, when the

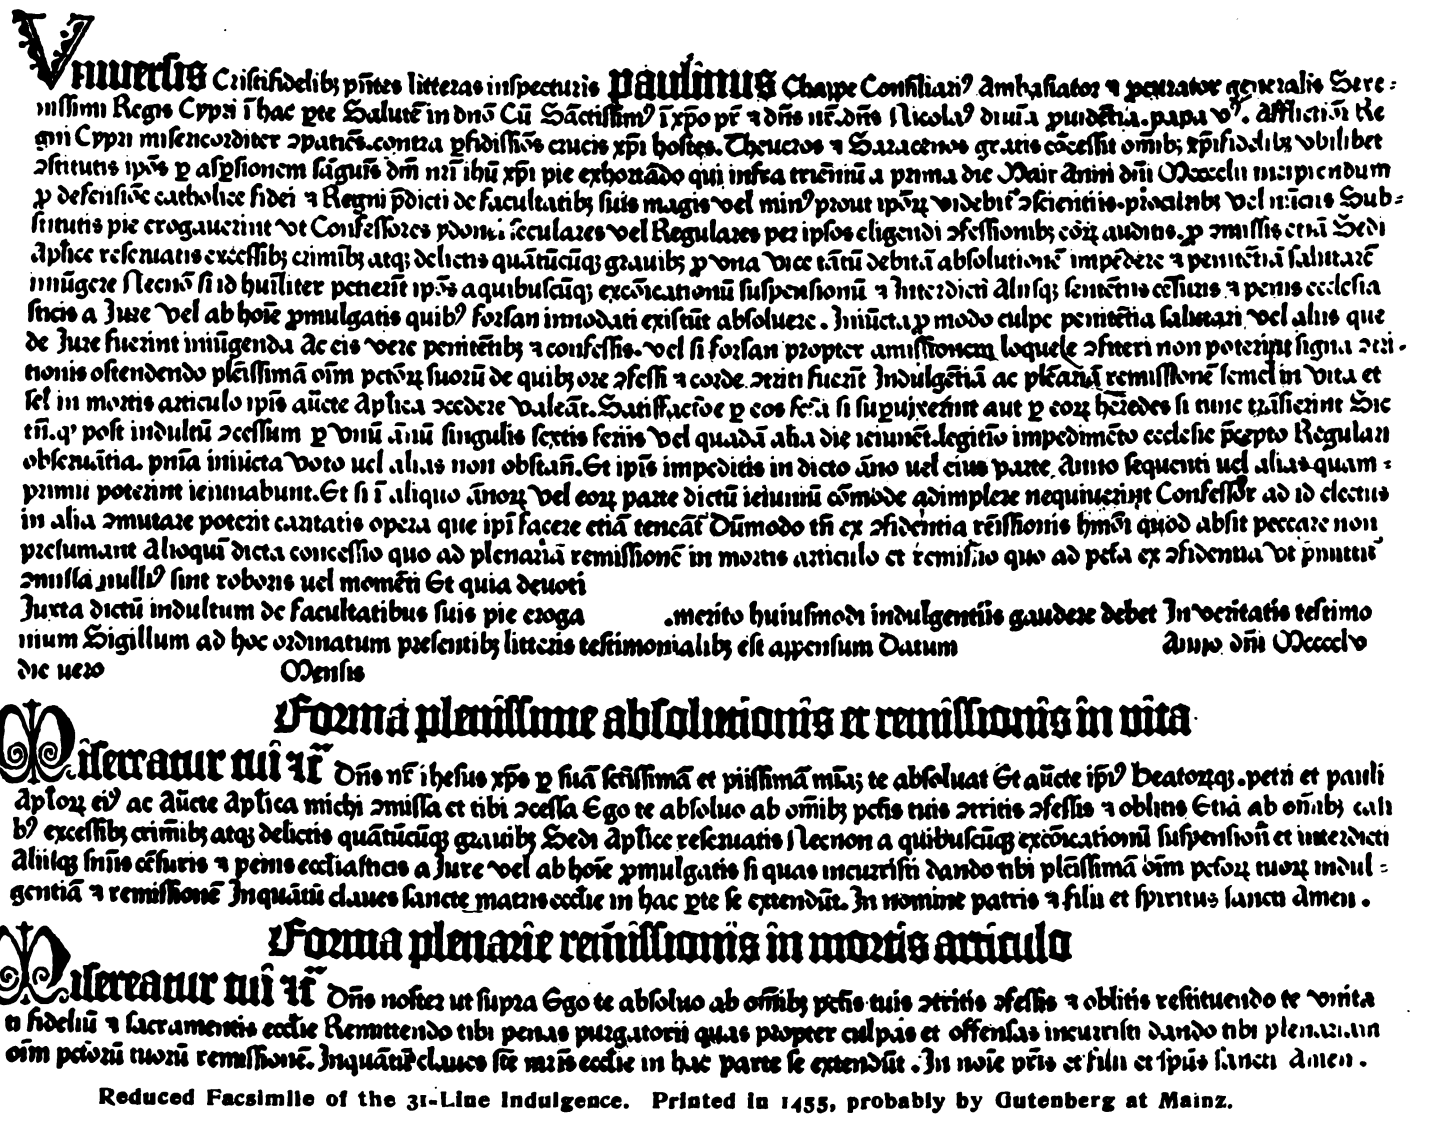
Duchy, like other Italian territories, passed into the possession of Victor Emmanuel, the first sovereign of United Italy. The decree for its suppression, however, provided that such of Bodoni's types as still survived should be sent for preservation to the public library of the city, and there, we believe, they still remain.

The Gutenberg Society, Mainz.

Its 1912-13 Report and Publications.



The twelfth yearly report of the above Society has lately been received, and no doubt the following items from it will interest our readers.

After dealing with some affairs of finance and the number of members—now just over 500—the report tells us about the different presentations made to the Gutenberg Museum, of which we may mention: (1) "Catalogue of books in the library of the British Museum, printed in England, Scotland and Ireland to 1640"; (2) "300 notable books added to the library of the British Museum under the keepership of Richard Garnett"; (3) "Catalogue of a collection of early French books in the library of C. Fairfax Murray"; (4) Woolley's photographs of early types; (5) Pollard's facsimile publication of the authorised version of the English Bible; (6) Darlow and Moule's "Historical Catalogue of printed editions of Holy Scripture"; (7) Thompson's "Frankfort Book Fair"; and some publications of the Caxton Club in Chicago. Several other volumes were purchased, and in all an amount of over £200 was spent. Some presents have been made with a view of suitably decorating the museum, including a statue of Gutenberg. The report winds up with the wish that many interested in the book trade and allied industries may follow the example of the generous donors of books, etc., and thus enrich the Society and its museum. In any case, however, the Society is in a very sound condition, having funds in hand to the amount of nearly £1,000.

The twelfth annual meeting was held at Mainz on June 22nd, when the report was duly adopted by the members present.

After the conclusion of the purely business part of the gathering, an address on the "Portraits of Gutenberg" was given by Dr. Adolph Tronnier, assistant director of the Gutenberg Museum. Those of our readers who have any acquaintance with the subject will experience no surprise at being told that the standard portrait of Gutenberg, with the familiar round fur cap and long beard, is in all probability as apochryphal as the standard portrait of Caxton, as in neither case has any trustworthy account come down to us of the personal appearance of those typographers. Some fifty portraits of the alleged inventor of printing are preserved at Mayence, in practically all of which he is represented with the orthodox beard. But Dr. Tronnier points out that there is no more warrant for the beard than for the features. He suggested that the proto-typographer's effigies may have been invested with it as the result of the once popular belief that Gutenberg was something of a sorcerer. Although he never seems to have been much blessed with this world's goods, he yet belonged to a patrician family, and in the middle of the fifteenth century it was bad form for any member of such to wear a beard. So in all probability the printer was clean shaven. Dr. Tronnier's lecture has been reprinted in the form of a 32pp. 4to pamphlet, illustrated with reproductions of several of the so-called Gutenberg portraits, and also a modern profile photograph illustrating Dr. Tronnier's idea of what Gutenberg was probably like.

In the Society's report for 1911-12 it was stated that the next annual publication was expected to be a work on the initial letters used in early Basle-printed books, by Herr Hans Koegler. Pressure of other work has, however, prevented him from completing the book, but it is hoped to issue at least the first instalment of it early in 1914. Failing this, therefore, the Society's publications for the present year (XII. and XIII. of their annual series) take the form of a monograph by Prof. Dr. Gottfried Zedler, Librarian of Wiesbaden, on the Letters of Indulgence printed at Mainz in 1454-5, with an accompanying portfolio of facsimile reproductions. Students of the history of typography will not need to be told that these Letters of Indulgence and Absolution, issued to those who chose to pay for them, by the permission of Pope Nicholas V., for the ostensible pecuniary benefit of the Kingdom of Cyprus, then lately attacked by the Turks, form the most ancient pieces of printed matter bearing authentic printed dates. The question of by whom and under what circumstances they were printed is still in large part an unanswered one, but Prof. Zedler, in his usual minutely painstaking manner, contrives to throw a good deal of light upon it. The printed Letters were preceded by MS. ones, of which Prof. Zedler gives a list of nineteen and facsimiles of three. They are dated at various times between January, 1454, and April, 1455. Towards the close of the former year (the earliest date yet recorded is November 12th), when the Cyprian Procurator-General was plying his trade of seller of Indulgences in or near Mainz, he must have heard of, or was perhaps induced to try, the then new art of printing for the purpose of multiplying these forms more neatly and quickly than they could be produced by the scribes. For "copy," the printer—whether he were Gutenberg or some other—of course took one of the original MS. forms, and followed it very closely, so much so, indeed, that the twenty-one lines of Gothic lettering which made up, in one of the written copies reproduced, the first and largest of the three paragraphs of which the Indulgence consisted, was rendered by the same number of lines of type of practically the same size and character,

Reduced Facsimile of the 31-Line Indulgence. Printed in 1455, probably by Gutenberg at Mainz.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.

It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe $5.00 per year; Canada $3.00. 64 pages weekly.

PRINTING TRADE NEWS.

a larger face being used for the two or three words which, in the MS. copy, were thrown up in much bigger lettering. The two other paragraphs in this case took up ten more lines of type, and thus we have the "31-line" version of the Indulgences, of which there were six successive editions within perhaps as many months, each differing only in some trifling typographical details.

About three months after the first of them had been put in hand, a fresh order for the printing of these forms was apparently placed with some other printer (say about February, 1455), whose types, though they had a sort of family resemblance to those used by the producer of the 31-line editions, yet differed from them in many points. This second typographer managed to get the matter into 30 lines, whence the distinctive name by which this other series of forms is known to bibliographers. Curiously enough, there were also six different editions of this, but they were possibly all run off within a couple of months, say by the end of April, 1455. This 30-line version is usually ascribed to Gutenberg's press, on the strength of the fact that the upper case letters used in it are identical with the type of the 42-line "Gutenberg" or "Mazarin" Bible, which was certainly in existence by 1455–6, and was thus in all probability passing through the press at the time the Indulgences were being printed. The precise relationships of these various early products of the art of printing will probably never be known, but one thing at least seems certain, *i.e.*, that the art in question had at that time got well beyond the stage of infancy, and was in a position to stand firmly on its feet, if not exactly to run. Dr. Zedler goes most exhaustively into the many problems that arise from a close study of the typography and bibliography of the Indulgences, and his work must take rank as the standard one on the subject.

Our illustration represents, on a slightly reduced scale, an unused copy of the fifth edition of the 31-line Indulgence, now at the British Museum. This was probably issued early in March, 1455, and sixteen other copies are known to be in existence.

The Training of Young Printers

IN LEICESTER.

Good provision is made by the Borough of Leicester Education Department for the technical instruction of youths who intend to or have already entered the printing and bookbinding crafts. Classes in typography, lithography, and bookbinding are held in the day time as well as in the evenings at the Municipal Technical and Art Schools, the secretary of which is Mr. T. Groves. The Printing and Allied Trades Advisory Sub-Committee is composed of members of the Leicester Master Printers' Association, the Typographical Society, the Bookbinders' Union, the Lithographic Artists' Society, the Lithographic Printers' Society, the Trades' Council and others, the chairman of which is Mr. W. H. Lead, of the Master Printers' Association. The scope of the school embraces three classes of students—craftsmen, general students and teachers, the object of the training of the craftsmen being "to make workmen better workmen." It is given largely through practical exercises, says the Prospectus, "and the teaching shows that beauty is the result of perfect economy of perfect means: that the artist is only real when a workman, and the practical man only practical when he is an artist in his work."

The course for lithographic artists is arranged in conjunction with the Leicester Master Printers' Association and the Lithographic Artists' Association (1) for the preliminary training of those youths who intend to become apprentices and (2) for those already apprenticed. The members of the Leicester Master Printers' Association have arranged to give preference to those who have taken the two years' preliminary training, and to give facilities whenever practicable during apprenticeship for the student to complete the course by attendance at day and evening classes. The work done during the course is considered as a part of apprenticeship training.

The classes are held each week-day, and on four week-nights, the work during the first year comprising studies for design, colour work and plant form, models, portions of buildings, studies of ornament and design, shading, lettering, etc., and geometrical drawing; the second year's work consists of lettering and design for business purposes, work on smooth stones, and chalk work on grained stones and paper, colour work, studies of plants, birds, and memory drawing, studies of ornament and design, drawing from life, and perspective. Exercises in lithography and lectures are given in both the first and second years. At the end of the first year the student serves a short period of probation in a lithographic printing office, and the advisability of continuing the course will be considered. At the end of the second year the student must be apprenticed in the office of a lithographer and continue his work at the School of Art.

The Lithographic Machine Class meets for Practical Work in the evenings only, the course being recognised by the Master Printers' and Lithographic Machine Printers' Associations as the best preliminary training for the employment.

The course of instruction for typographers has been arranged in connection with the Master Printers' Association and the Typographical Society. The course preparatory to apprenticeship consists of practical work, sketching and design, drawing, lettering, design and colour, English mathematics, and theory in typography, Grade I. Grade I. of the City and Guilds of London Institute Syllabus for typography (compositors and machine work) will be covered by this course. The classes are held every day in the week and on two evenings.

The afternoon classes for compositors' apprentices are held on Mondays and Thursdays, the work comprising design and practical exercises. Two evening classes are held in designing and theoretical typography. An afternoon class for machine apprentices is held on Fridays for practical exercises, and two evening classes in typography, machine theory, shading and colour work. These classes cover Grades I. and II. of the City and Guilds of London Institute Syllabus in Typography (compositors, press and machine work).

The school year of about 40 weeks is divided into three terms of about 13 weeks each: from September 15th, 1913, to December 20th, 1913; from January 5th, 1914, to Easter; and from Easter to the Summer Vacation. There are special reduced fees for artizans.

An exhibition of students' work will be held from September 15th to 30th.

GREECE.—According to a recent British Consular report on the trade of Corfu (Ionian Islands) for last year, about 183½ tons ofpaper were imported from Austria-Hungary. This includes notepaper, common wrapping, tissue, etc. Thirty tons were imported from the United Kingdom, and used in the manufacture of playing cards, postage stamps, etc., for the Greek Government, which has a monopoly in such articles, and manufactures them at Corfu, as well as cigarette paper booklets, etc. There is also a mill for the production of cardboard and coarse wrapping paper, and a litho printing establishment.

TECHNICAL

Instructors' Costing Conference.

INTERESTING DISCUSSION.

Whatever the ultimate result of the costing campaign may be, it has already accomplished much. The success which has attended the efforts of the Costing Committee to bring together all who are in any way interested in the uplift of the craft, is truly remarkable.

On Wednesday last, at the St. Bride Institute, there assembled about 60 instructors in typography, all the London technical institutes being fully represented. From some not a single instructor was absent, and Nottingham, Leamington, Bolton and Leicester also sent representatives.

Mr. E. R. Alexander presided, and in the course of his opening remarks, in his characteristic outspoken fashion, said how important it was that to all their pupils they should teach the general principle underlying the discovered weak points in some and good features in others. After much discussion, they devised the one shown in the charts before them, which, though it corresponded very closely in some respects with the American Standard system, differed in certain important features. The object of the system was to enable each printer to arrive at the actual cost of each process and the actual cost of every job completed in his office. It was necessary to divide a business into departments, and allocate all expenses to same as far as possible, and also to ascertain the cost of buying, storing, handling and selling the materials, and charging a percentage to cover this. Mr. Cooke then proceeded, in a remarkably clear and practical way, to show by means of the dockets, weekly return sheets and job cost statements, how the system was worked.

Mr. A. E. Goodwin, the Organising Secretary of the Costing Committee, spoke briefly as to the relation of the Cost System to the Syllabus of the City and Guilds of London Institute. He took each head of the section dealing with "General Management," and showed how it afforded the instructors an

that done by those who were below the average.

Mr. Shepperd set forth in a friendly way the practical difficulties in treating the system, and said that when they had given some of their students a good grounding in this subject he hoped the master printers would recognise their work in a practical fashion, by giving these students better positions where they could use their knowledge.

Mr. Seeley was of opinion that the Costing Committee should issue a scale to instructors omitting overhead charges, as these varied so much.

Mr. Riddell spoke of his interest in this movement, and said that he was sure all the instructors would do what they could to encourage their students to study this system, and that would be a source of encouragement to those who had spent so much time in devising and advocating the adoption of such a system. He also threw out a suggestion which was warmly greeted, that steps should be taken to form a small association to secure meetings of printing technical instructors from time to time to discuss

Trade Notes.

THE index and title-page to Volume seventy-two of the *British and Colonial Printer and Stationer* is now ready, and it being contrary to postal regulations to enclose it as a supplement to our usual weekly issue, a copy will be sent to any reader desiring it on receipt of a penny stamp.

THE *Buchan Observer*, started in 1863, has attained to its jubilee.

THE *Birkenhead Advertiser* has celebrated its diamond jubilee, the first number having been issued on September 3rd, 1853.

THE late Mr. William Blackwood, of Messrs. Wm. Blackwood and Sons, publishers, Edinburgh, has left estate of the value of £18,840.

MR. R. H. WILSON, Corwen, proprietor of *Yr Adsain*, a Welsh journal, has just died in his thirty-ninth year. He was a director of the Corwen Printing Co.

MESSRS. HUNTERS, LTD., St. Bride-street, E.C., inform us that they have been appointed sole agents for the sale of the Wesel Manufacturing Co.'s machinery for the United Kingdom. The Wesel goods are well known in the trade and cover a wide range of apparatus and machinery for stereotypers, engravers, printers, and newspaper owners generally.

THE Post Office give notice that on and from the 16th instant Press telegrams will be accepted for transmission between the United Kingdom and Belgium between the hours of 6 p.m. and 9 a.m. at the rate of 1d. a word, with a minimum charge of 10d. per telegram. The general conditions will be furnished on application to the secretary, General Post Office, E.C.

MESSRS. P. M. SHANKS AND SONS, LTD. typefounders, 31, Red Lion-square, W.C., advise us that they are now in a position to furnish the 72-point size of their Plantin O.S. face, and are ready to supply founts to printers who desire to complete this series of beautiful and extremely useful type. The italic has also been added to by the addition of 36, 42 and 48-point sizes.

THE Institute of Printers and Kindred Trades are devoting Wednesday evening, 24th inst., to a consideration of "The Printers' Cost-Finding System," which will be explained by Messrs. W. Howard Hazell, R. A. Austen-Leigh, C. Herman Lea, and other members of the Federation of Master Printers and Allied Trades Costing Committee. The chair is to be taken at seven o'clock by Mr. H. J. Goss, chairman of the Institute Council.

THE *Monotype Recorder* undoubtedly reaches a high degree of typographical excellence, and each issue appears to outstrip the previous one as regards style, "get-up," and practical value. A printer recently wrote :—"We would like four *Monotype Recorders* each month; the technical matter and high-class printing is instructive to myself and operators." The issue is sent gratuitously, and no printer receiving it can lose anything by studying its pages.

ON Monday, Sir George Reid, the High Commissioner for Australia, was the guest at luncheon of the British Press at the Trocadero Restaurant, London. Mr. Robert Donald, President of the Institute of Journalists, presided over a gathering representative of London and provincial journalism. He said the function was to say *au revoir* to Sir George, who leaves in a few days' time for a brief visit to Australia, and to return the luncheon given to the Press of the United Kingdom by the Australian Government on the arrival of Sir George Reid as High Commissioner.

CO-OPERATIVE PRINTING.—Not only are the three printing works of the Co-operative Wholesale Society doing all the printing for that institution, but they are taking a growing quantity of the work of the distributive societies which was formerly done locally, and last half-year this showed an increase of 11 per cent., amounting to £109,936. The largest of the establishments is at Longsight, near Manchester, where the work done was £84,874 as compared with £77,347 in the corresponding period of 1912, and the net profit was £2,008. At Leicester the supplies were £12,269, an increase of £1,340, and the profit was £264. At the works at Pelaw-on-Tyne the output was £12,793, an increase of £2,445, and there was a profit of £209. Wages and sundry expenses at the three works were as follows :—Longsight £37,404, Leicester £5,032, and Pelaw £5,090.

NOW THAT a majority of the objections brought forward by Germany against certain proposals in the new United States Tariff Bill have been removed, a strong agitation has been started against the proposed tariff (15 per cent.) on German in common with other foreign books. At a meeting of the Association of German Publishers and Book Dealers, held at Leipzig, a resolution was adopted asking the German Government to make a protest to Washington against the proposed tariff. The German Press generally displays barely suppressed bitterness. Discussing the tariff, it sees only another deliberate attempt to flout German culture and suppress the German language in the United States.

MESSRS. JARROLD, of Norwich and London, have had great success with their Penny Picture Puzzles, and stationers would do well to try this line for autumn and winter sales, as these puzzles are undoubtedly becoming very popular for evening parties.

DISSOLUTION OF JOINT STOCK COMPANIES.—A notice appears in the *London Gazette* for August 29th to the effect that the following companies have, as on that date, been struck off the Register of Joint Stock Companies, and thereby dissolved:—

Colonial Press and West Australian Telegraphic News Agency, Ltd.
Lisle Press, Ltd.
Lombard Press, Ltd.
Motor Finance Publishing Co., Ltd.
New Card Co., Ltd.
Northern Freemason Publishing Co., Ltd.
Nukuv Publishing Co., Ltd.

THE WORLD'S POSTAGE STAMPS.—Some interesting statistics are given in the preface to the fourteenth edition of the "Standard Catalogue of Postage Stamps," just published by Messrs. Whitfield King and Co., of Ipswich. The total number of postage stamps issued to August, 1914, is 25,909, of which 7,663 are apportioned to the British Empire and 18,246 to the rest of the world. Europe has issued 5,478, Asia 5,042, Africa 5,985, America 5,568, the West Indies 2,035, and Oceania 1,801. The catalogue is brought right up to date and is illustrated with 4,127 engravings of stamps. There is a very general advance in stamp prices over those of last year, a fact which bears striking testimony to the ever-increasing popularity of stamp collecting. The book contains 564 pages and may be had for 2s. from the publishers.

AT the Library Association's Conference last week, Mr. C. W. Berwick Sayers, of Croydon, read a paper on "The Position and Prospects of Librarians," in the course of which he said that there are some 500 posts of librarian and 3,000 posts of assistant-librarian in Great Britain. Of the 500 librarians there are not 200 who are paid more than £200 a year. It is easy to point to library authorities with less than £2,000 a year income which have two or three branch libraries as well as a central library to support. "Wonderful work done very cheaply," said the publicist, but on the reverse side of the shield was the picture of the same authority advertising for a fully qualified sub-librarian at £70 per year, or £8 less than a respectable borough paid its dustmen. No community, he declared, had a right to services for which it was unwilling to pay, and what it could not afford it ought not to possess.

TENDERS WANTED. — For the supply of printing, stationery, books, binding, and educational supplies for the Guardians of Hackney Union's establishments at Homerton, N.E., and at Brentwood and Ongar; tender forms from Mr. F. R. Coles, clerk, Homerton, N.E.—For printing and stationery required by the various departments of the Wigan Corporation; forms of tender from the Borough treasurer's office, Wigan.—For printing the burgess lists for 1913, for the Corporation of Newport (Mon.); particulars from Mr. A. A. Newman, Town Hall, Newport (Mon.).—For the supply of printing, etc., to the Wrexham workhouse; forms of tender from Mr. T. J. Thomas, Wrexham.—For three years' supply of passengers', etc., tickets, for the Liverpool Tramways and Electric Power and Lighting Committee; copies of specification may be obtained from the General Manager, 24, Hatton-garden, Liverpool.—For the supply of printing and stationery for the St. Austell Board of Guardians and Council and the St. Austell Union and Rural District Council; particulars from Mr. J. Stephens, Cross-lane, St. Austell.

PICTURE POST CARDS.—A wide variety of tastes are provided for in the latest batch of samples of picture post cards issued by Messrs. Raphael Tuck and Sons, Ltd. Admirers of brilliant military uniforms will be pleased with the two packets, "The Scots Guards" and "The 21st Lancers," by Harry Payne, the well-known military artist. The packet of "Scotch Expresses" has a pathetic interest just now, but apart from that it will find a ready sale with collectors of the firm's fine series of famous expresses. Views at home and abroad are added to with a fine series of old haunts of Hampstead, entitled "Hampstead," by Mary Hill; an excellent series of views of "Beautiful Perthshire," by E. Longstaffe; and some exquisitely reproduced views of "Picturesque Italy." Similarly, "Life in Algeria" is a realistic series beautifully reproduced. Quite different to these is a really clever and humorous series of "Oilette" designs, after original paintings, called "The Honeymoon."

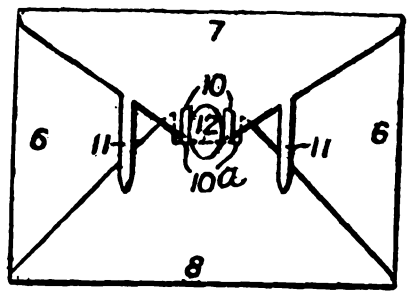
ACCORDING to *Kemp's Mercantile Gazette*, there were three failures in the printing and stationery trades of England and Wales for the week ending Friday, September 5th, the corresponding week in 1912 also showed three.

CHILE.—The imports into Iquique last year included about 16 tons of account books, bill forms, etc., 12 tons of books and magazines, etc., 9 tons of cardboard, nearly 22 tons of writing paper, 260 tons of printing paper, 8 tons of envelopes, 22 tons of wall-paper, and 20 tons of ink.

TENDERS ACCEPTED.—For printing Oxford parliamentary register, burgess roll and register of parochial electors; Holywell Press, Ltd., Oxford. For printing work for three years, for the Deptford Borough Council; Gaylard and Son, 446, New Cross-road (recommended for acceptance).

AN aggrieved citizen has shot and killed Johann Schenck, the editor of the *Sulphur Democrat*, following his refusal to eat a copy of his newspaper that contained adverse criticisms of the citizen. The latter approached Schenck, who was sitting in a buggy, and, waving a copy of the newspaper, demanded a retraction, and as a proof of the retraction, insisted that the editor should literally eat his own words. Mr. Schenck refused, and Lindsay fired both barrels of a shot gun into his body.

THE LEIPZIG EXHIBITION.—For many years past Germany has not seen an international trade exhibition of such importance, at which practically all the nations of Europe will be represented, as the International Exhibition for the Book Industry and Graphic Arts to be held at Leipzig in 1914. Austria, France, Italy, Portugal, Switzerland and Turkey have notified their official participation, and other countries, as England, Russia, Hungary, Spain, Belgium, Holland, Denmark, Sweden and Norway will not be missed. Negotiations are in progress with India, China, Japan and North and South America. Most of these countries will erect their own national pavilion, and their Governments have granted considerable supplies to this effect. This international exhibition, it is expected, will become an international show in the fullest sense of the word.



A TENDER for the printing of the voters' lists having been accepted by the Carnarvon Town Council from an office which last year became an open office, the local Typographical Association wrote to the Council to the effect that the office in question did not conform to the fair-wage clause, as required by the conditions of the contract. It was therefore asserted that the terms of the contract were being violated, and the Council was asked to deal with the matter. At a meeting of the Council Alderman Parry considered that it would be unfair, merely on the *ipse dixit* of any association, to conclude that a respectable firm of printers did not comply with the conditions of its contract. He moved that a copy of the letter be forwarded to the firm in question. Mr. Nee agreed that the letter should be forwarded to the firm, and, if the latter's explanation was not deemed satisfactory, it would be for the Council to consider what to do with the firm. The Typographical Association were no parties to the contract, and there could therefore be no cause of action between them and the printers. The proposal was agreed to.

THE LATE MR. G. D. KELLEY.—On Thursday last the Executive Council of the Printing and Kindred Trades Federation of the United Kingdom placed a memorial wreath on the grave of the late Mr. George D. Kelley (formerly general secretary) in Ardwick Cemetery, Manchester. There were present Messrs. C. W. Bowerman, M.P., Robert Barnes (secretary of the Lithographic Printers), H. Skinner (Typographical Association), A. Holmes (secretary of the National Printing Trades Federation), J. J. Atkins (Typographical Association), G. A. Isaacs (Operative Printers' Assistants), T. Sproat (Mr. Kelley's successor), James Kelly, H. Capell (Bookbinders' Society), A. Evans (Printers' Warehousemen and Cutters), J. D. French (Typographical Association), Mr. Nelson (Liverpool Typographical Association), and Mr. H. W. Howes (London Machine Minders). Mr. Howes said they were paying that tribute to a man they loved, and in recognition of his services and the good name he bore. Mr. Howes said he was sure they would always have a kind thought for George Kelley. Mr. Bowerman said they not only honoured the memory of a colleague whom they all esteemed, but they were doing an act which many thousands of their workers would gladly have them do.

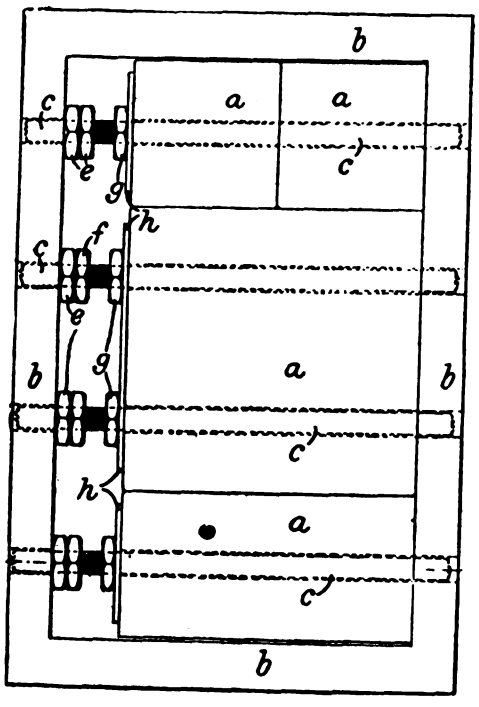
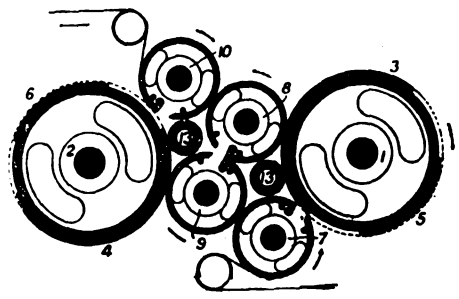
Safety Envelopes.



A safety envelope, the invention of M. L. Osborn and G. W. Harmon, comprises a bottom flap 8 having a pair of spaced non-projecting parallel tongues 10 coated with gum on the underside, and an upper flap 7 having a pair of narrow projecting tongues 11 also coated with gum on the underside. The envelope is closed by folding first the side flaps 6, next the bottom flap 8 with the tongues 10 bent backwards, and finally the top flap; the tongues 10 are then sealed upon the apex of the top flap and the tongues 11

upon the side flaps and bottom flap. A paper disc 12, coated on one side with gum and on the other side with a dye adapted to spread under the influence of steam, is finally placed over the apices of the top and bottom flaps between the tongues 10. The tongues 10 may be perforated in the usual manner at their juncture with the flap 8 in order to form a weakened line 10_a along which the tongues will tear should an attempt be made to loosen them.

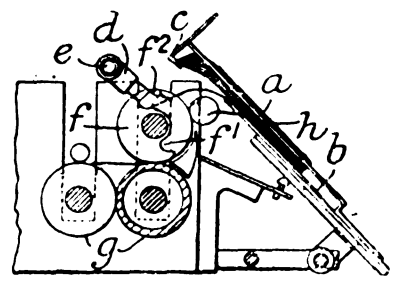
Printing and Embossing.



A mounting block for printing plates, electros, stereos, zincos, etc., invented by Mr. A. A. Dean, comprises a number of wooden blocks *a* of any suitable size mounted upon rods *c* carried by an iron frame *b*. The rods are fixed by nuts *e*, *f*, and the blocks, which are

loosely mounted upon the rods to allow them to lie quite flat on the bed of the machine, are secured by nuts *g* bearing against plates *h*. The blocks are bored across the grain to prevent warping, and are scored at the top and bottom parallel to the bore to indicate the run of the rods. The nuts are of the same depth as the frame to prevent them from working loose.

Rotary Inking Apparatus.



A rotary machine for printing on webs, as patented by Mr. J. Derriey, is constructed with two cylinders, each of which bears plates on half its circumference and coacts with two impression cylinders of half its diameter. As shown in Fig. 1, two printing cylinders 1, 2 fitted with stereos 3, 4 co-operate with impression cylinders 7, 8, 9, 10 respectively. The web passes around the cylinders 7, 9, 8, 10 in the order named, so that it receives prints alternately on opposite sides. The plates 3, 4 are inked by ordinary rollers before making their first impressions, and are again inked before the second impressions by spring-pressed rollers 13 which receive ink from plates 5, 6 of less height than the stereos 3, 4, the plates 5, 6 receiving from the same rollers that ink the

the stereos. The rollers 13 are acted on by cams to make them contact correctly with the ink-distributing plates and the stereos. In a modification, the cylinders are not all geared together, but the cylinders 1, 2 are separated further than is shown in Fig. 1. The rollers 13 are greater in this case, or two rollers may be used.

Feeding Sheets.

The Fischer and Wescher Maschinenfabrik have patented an apparatus for feeding sheets to printing, ruling and like machines, of the kind in which the sheets are removed singly by an oscillating sucker, the pile *a* of paper is supported by an inclined table *b* formed with a resilient tongue *c* for supporting the

edge of the pile. The bottom sheet is separated by a sucker *d* which oscillates about a centre *e*, and thereby delivered to a roller *f* which directs it on rollers *g*. The roller *f* is cut away to accommodate the sucker *d*, and is formed with recesses f^1 edged by resilient horns f^2, which bend the sheet round the *f*, *h*, the oller *h*. As the sheet is seized by the rollers sucker returns preparatory the feed ing the next sheet.

AMERICAN Imports and Exports of Paper, etc.

The imports of paper, etc., into the United States, and exports therefrom, during the periods mentioned, were of the following values:—

Imports.

June—	1912.	1913.
Printing paper ...	$243,940	$726,923

SPECIAL PREPAID ADVERTISEMENTS.

SITUATIONS.—Charges for Advertisements under the headings "Situations Vacant," or "Situations Wanted," are at the rate of

ONE SHILLING FOR 24 WORDS

(3 Insertions: TWO SHILLINGS),

and Fourpence for each additional Eight Words. Minimum Charge, One Shilling.

STONHILL & GILLIS, 58, Shoe Lane, London, E.C

Situations Wanted.

LETTERPRESS MACHINE OVERSEER desires berth abroad; advertiser is fully and practically conversant with the most modern methods and machinery.—Address, No. 13253, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13253

LITHOGRAPHY.—WORKING FOREMAN requires change; well up in all departments of the Trade, Colour and Commercial; specimens and references.—Litho., 20, Ferndale-road, Clapham, London, S.W. 13252

Business for Sale.

FOR SALE, on the East Coast, in a popular Seaside Town, old-established Printing, Stationery, and Publishing business (proprietors of local newspaper); price about £3,000.—Further particulars on application to Box 171, c/o J. E. May, Advertisement Agent, 68, Fleet-street, London, E.C. 13251

Machinery and Plant for Sale.

ALL ELECTROTYPERS and STEREOTYPERS should write H. Williams and Co. for their latest catalogue of machinery, and Electroline Enamel Paste, for producing fine art stereos.—Engineers, Red Lion Works, Warner-street, Rosebery-avenue, E.C. 12343

Miscellaneous.

TO PRINTERS.—For Sale, cheap, several large Body Founts of new Type, 8-point to 12-point in both O.S. and Modern Faces; portion very slightly used and remainder in founders' packets; specimens and weights on application.—Spottiswoode and Co., Ltd., 5, New-street-square, London, E.C. 13236

TO PRINTERS, PUBLISHERS and ALLIED TRADES.—TO BE LET, as a whole or in Sections, an important Block of Buildings covering an Island Site conveniently situated close to Fleet Street. They contain four well-lighted upper rooms with lofty basement. Total floor space, 12,625 sq. ft.—Rent and further particulars of Messrs. Farebrother, Ellis and Co., 29, Fleet-street, E.C. 13181

COUNTY OF LONDON.

DAY AND EVENING CLASSES IN TYPOGRAPHY

are held at the following institutions maintained by the London County Council:—

CAMBERWELL SCHOOL OF ARTS & CRAFTS, PECKHAM ROAD, S.E.
Afternoon Classes for Apprentices; Evening Classes for Journeymen and Apprentices.

CENTRAL SCHOOL OF ARTS AND CRAFTS, SOUTHAMPTON ROW, W.C.
Day Technical School for Boys Preparing to Enter the Book Production (Bookbinding and Printing) Trades. Evening Classes for Journeymen and Apprentices.

Maximum fee (evening classes), 10s. for the session for any number of subjects.

Persons under 21 years of age qualified for admission to the Schools and bona-fide engaged in the trade are admitted free.

Full prospectus may be obtained on application to the Secretaries of the respective institutions.

JAS. BIRD,
Deputy Clerk of the London County Council.

Technical Instruction and Printers' Costs.

THE Costing campaign has been in some respects a series of surprises. No one anticipated so splendid a response to the invitations issued for the London Cost Congress, and few indeed thought that 1,200 British printers could be got together to consider even so vital a problem as that of their costs. After the Congress with its remarkable display of enthusiasm and interest, many were no doubt of opinion that however praiseworthy the aims of the promoters, the costing movement would arouse little practical interest in the country. Yet everywhere printers have assembled and listened with keen attention to the exposition of the model system recommended by the Federation. Upwards of 5,000 printers are stated to have attended these various local conferences. Now, again, we meet with another surprise. In recording in this week's issue a meeting of nearly a hundred technical instructors in typography, it must be admitted that on no previous occasion have so many of these diligent and devoted servants of the craft met in conference before. A year ago who would have dreamt of such a meeting? The speakers rightly referred to this development in the campaign as one of great importance. Now that the system has been explained to the instructors, and the syllabus of the City and Guilds of London Institute has been revised, so that the system is to be taught in the printing trade classes, there will be no longer any excuse for ignorance as to cost-finding on the part of the next generation of printers. The Principals of Technical Institutes will no doubt take full advantage of Mr. Goodwin's offer to lend slides or charts, or to come himself and talk to the students on this interesting and important phase of technical education.

* * *

German Competition in the United Kingdom.

THE value of the imports of paper, etc., during 1912 retained in the United Kingdom from Germany was £1,478,856. It will thus be seen that paper of German origin is bought very extensively by British consumers, and judging by the Board of Trade statistics the demand is on an increasing scale. Packings and wrappings form an important item of export to the United Kingdom, the receipts last year amounting to £650,766 compared with £268,566 in 1908. In reel paper German mills are unable to meet successfully the competition of Norway and Sweden, and more recently Newfoundland, in the British market, the supplies for 1912 amounting to only £77,871; in the exports classified as "not on reels," Germany also shows a declining trade since 1908. Imported hangings and other printed or coated papers are mainly supplied by Germany, the trade in 1912 amounting to £238,353. Other imports from Germany last year include:—Strawboards, £8,828; mill and wood pulp boards, £93,986; and unenumerated, £167,259.

* * *

China's Paper Market.

ACCORDING to Professor Middleton Smith, of the University of Hong Kong, there is a tremendous struggle for the trade of China going on between Great Britain, the United States, and Germany. Whilst on a general tour in England recently, he interviewed the heads of several manufacturing firms who told him that they were so busy with orders for other parts of the world that they did not want the China trade. Now paper mill owners in the United Kingdom might put the question to themselves: How do we stand in China as regards our industry? We are told that a new era is dawning upon China, that the people are inclined to become westernised, and that the States and Germany are doing all in their power to cater for the needs of the Chinese markets by having representatives on the ground to ensure that there is a return for what is given by the manufacturer. Amidst all the rush for Chinese patronage we learn from the Government statistics that the exports of British paper have declined in value, that is excluding Hong Kong, Macao and Wei-Hai-Wei, but including these markets there is a reduction of £5,360 comparing 1912 and 1911, an increase of £3,707 comparing 1911 with 1910, whereas excluding Hong Kong, Macao and Wei-Hai-Wei, there is a falling off in British paper exports from a total of £70,211 in 1910 to £62,259 in 1912. Of course the revolutions in China have considerably upset trade during the past five years and left manufacturers in a very uncertain position. But these outbreaks of hostilities have enabled the United States, Germany and Japan to get the thin edge of the wedge in for their trade, and the latest advices that reach us report that Japanese owners of the Oji, Fuji, Mitsubishi and nine other leading mills are combining for the purpose of catering for the Chinese markets. Naturally, in the near future these mill owners may be classified as competitors with the United Kingdom though their trade with China has been expanding for some time. They contemplate increased production at their mills, and it now behoves British papermakers to give a little more attention to China and recover the

Digitized by Google

ground that has been lost there. If British papers can make headway in Japan there is no earthly reason why they cannot succeed in China! To enhance our trade with the Chinese manufacturers it needs push and publicity—neither very difficult in China just now—and the Japanese, in addition to the United States and Germany, have both. Only the other day correspondence appeared in the Manchester and London daily papers pointing out the chances there are for British manufacturers, and one writer, Edwin J. Dingle, Canton-road, Shanghai, has volunteered to help any British manufacturer who requires information to extend his business in China. There is no doubt trade is waiting in Chinese markets for the British manufacturer, and it only requires a good representative to be sent out to counteract the progress other countries are making in the land of the once famous Dragon with its 400,000,000 of people.

A Journalists' Protest.

At the final sitting of the Trade Unions Congress, on Saturday, after a vote of thanks to the Press had been passed, Mr. W. N. Watts (hon. general secretary of the National Union of Journalists), said he represented the only trade union of journalists in the world. Journalists had their peculiar difficulties, and one of the greatest was that they were blacklegged up and down the country by all and sundry—by Nonconformist ministers, by Government and public officials, and by trade union officials. He asked trade union officials to take to heart the fact that while some of their members—probably more from want of thought than want of heart—were blacklegging the working journalist, the journalists were at present at high-water mark with regard to unemployment. While they were paying from the funds of the union heavy benefits to their unemployed members in order that they might keep their heads above water, they were blacklegged in abominable fashion from one end of the country to the other. He hoped trade unionists would see to it that they would not encourage the wholesale blacklegging of which the working journalist was the victim.

CHINA.—The imports of foreign goods into Hankow last year included £8,931 worth of cigarette paper, £7,452 worth of packing paper, and £1,584 worth of printing paper. There was also about £60,000 worth of native paper imported, two-thirds of which was reshipped to other places.

The *Presbyterian*, the organ of the Presbyterian Church of England, appears now under the direction of a female editor, Mrs. E. Hermann, whose name is well known both in this country and Australia as a constant contributor to many religious journals. Till recently Mrs. Hermann was sub-editor of *Everyman*.

THE LINOTYPE FOR BOOK WORK.

Faces of Type, etc.	Linotype Users have the choice of over 400 faces of type; new faces are being added continually. Many of these faces have been specially cut for Book Houses. (Every Linotype User has also the choice of 84 complete borders, 73 varieties of rules, dashes, etc., and over 600 figure faces.)
Alignment.	Face alignment on the Linotype is quite automatic; no adjustment whatever is necessary. Type matter set twenty years ago would align with that set to-day on any Linotype machine.
Justification.	Line justification on the Linotype is perfect; this applies to corrected lines as well as the initial product.
Quality of Product.	The Linotype line is cast in one complete piece. This permits of slow and deliberate movement in alignment and casting, which obviously is the best way of obtaining a perfect printing surface. Incidentally it may be mentioned here that, owing to the comparatively slow movements made by the machine, the cost of upkeep is only a few pence per week.
Ease of Make-up.	The superiority of the Linotype unit of composed matter is apparent immediately the operator empties his machine galley; whether the slugs are put on a random or on a galley there is no danger of pie. Linotype matter is so easily handled that a saving of fifty per cent. is effected in makeup alone.
Electrotypes and Stereotypes.	The Linotype shoulder height and depth of strike are ideal for wax, lead, or flong moulding, with the result that the finest possible plates are made from Linotype-set matter.

A Booklet containing specimens of Linotype Faces specially suitable for Book work will be sent to anybody interested in the production of high-class printing.

58, SHOE LANE, LONDON, E.C.

WEDNESDAY, Sept. 10th, 1913.

THE supply of cash in the money market remains far in excess of current needs, and rates are still low, call loans being on offer yesterday as low as 2 per cent. The discount market became firmer yesterday on further gold withdrawals from the Bank of England and expected exports to Egypt during the week. The minimum rate for three months' fine drafts was $3\frac{5}{8}$ per cent. yesterday, and other rates were a shade firmer. Bullion movements for the week have resulted to date in a net efflux of £670,000, all of which has been taken for Egypt. In the Stock Exchange the general carry-over was dealt with yesterday, when rates were about the same as on the last occasion, the supply of money being abundant, and the speculative account a light one. The international outlook has become less clouded than of late, and in the expectation that the vast profits made during the prolonged period of trade activity may ultimately flow to the Stock Exchange, the future is looked to hopefully. Consols recovered some of their lost ground yesterday, the quotations now being $73\frac{3}{8}$ to $73\frac{1}{2}$ for money and $73\frac{1}{2}$ to $73\frac{5}{8}$ for the account.

The miscellaneous industrial market has been quiet and dull during the past week, and changes in quotations have been few and unimportant. In our list of printing, newspaper and publishing shares there are only two small changes, viz., a fall yesterday in Hildesheimer Ord. of $\frac{1}{4}$ to $\frac{3}{4}$—1, and a rise last week in Weldons Pref. of $\frac{1}{32}$ to $\frac{1}{16}$—$1\frac{1}{16}$. Business has been done during the past seven days in Amalgamated Press Pref. at 21s. 6d.; in Associated Newspapers Pref. at 20s., 20s. 3d. and 20s. 3d.; in Sir Joseph Causton and Sons Pref. at 91s. 3d., 93s. 9d., 92s. 6d. and 95s.; in John Dickinson and Co. Deb. at acc. 99½; in Ilford Pref. at 16s. 10½d., 18s. and 18s. 1½d.; in *Illustrated London News* and *Sketch* Ord. at 3s. 3d. and 3s. 3d.; in International Linotype at 73, 73 and 75½; in Linotype and Machinery A Deb. at 53, and in the B Deb. at 38; in Edward Lloyd Pref. at acc. 22s., 6d.; in George Newnes Pref. at 16s. 10½d., 15s. 9d., 16s. 6d. and acc. 16s. 10½d.; in Raphael Tuck and Sons Ord. at 19s. 4½d.; in Waterlow and Sons Def. Ord. at 26½ and 26½, and in the Pref. Ord. at 11⅞, 12 and $12\frac{1}{8}$; in Weldons Ord. at 31s. 3d., 30s., 31s. 3d., and acc. 30s., and in the Pref. at 19s. 6d.

NEW COMPANIES.

DINESYDD CYMREIG PUBLISHING CO., LTD.—Registered on August 29th, with a capital of £1,500, in £1 shares, to adopt an agreement with R. Edwards, W. Jones and J. H. Williams, for the acquisition of all rights and interests in the newspaper known as *V. Dinesydd Cymreig*, together with the business of printers, stationers and publishers. The subscribers are R. Edwards, W. Jones and J. H. Williams. Private company. The number of directors is not to be less than two nor more than three. The first are R. Edwards, W. Jones (secretary), and J. H. Williams (all permanent, subject to holding 150 ordinary shares). Qualification of ordinary directors 100 shares. Remuneration as fixed by the company. Registered office, Carnarvon.

BRITISH RIBBON CO., LTD.—Registered on August 23rd, with a capital of £800, in £1 shares, to carry on the business of manufacturers of and dealers in ribbons for typewriters and adding machines, carbon papers, inks, stencils, papers, stationery and office supplies, etc. The subscribers are H. C. Baldwin and H. F. Baselow. Private company. The number of directors is not to be less than two nor more than five. The first are not named. A. H. Hale is first secretary. Registered office, 2, Angrave-street, Haggerston, N.E.

MAGAZINE PUBLISHING CO. (MANCHESTER), LTD.—Registered on August 21st, with a capital of £500, in £1 shares, to carry on the business of publishers of magazines, newspapers and books, advertising and printing contractors, etc. The subscribers are J. H. Billinge, W. Green and J. Heslin. Private company. The number of directors is not to be less than two nor more than five. The subscribers are to appoint the first. Qualification, one share. Registered office, 3, York-street, Manchester.

ROSETTO PATENTS SYNDICATE, LTD.—Registered in Edinburgh on September 3rd, with a capital of £2,000, in £1 shares (1,000 preference), to acquire patents for stamp fixing machines from Claude Michaelson, 5, Arden-street, Edinburgh. The subscribers are J. Gillies and R. W. Yeats. Private company. The number of directors is not to be less than three nor more than five. The first are C. Michaelson, I. Rosenheim, D. Gillies, J. Rosenheim and W. Ireland. Qualification £100. Registered office, 121, West Regent-street, Glasgow.

ZERNY, LTD.—Registered in Dublin on September 5th, with a capital of £1,000, in £1 shares, to carry on the business of manufacturers of and dealers in paper of all kinds. The subscribers are R. J. Brandon and V. B. Gross. Private company. The number of directors is not to be more than five. R. J. Brandon is the first. Registered office, 7, Donegall-square, West, Belfast.

JOHNSTONE AND CO., LTD.—Registered in Edinburgh on September 1st with a capital of £1,000, in £1 shares (500 6 per cent. preference), to carry on the business of manufacturing stationers, box-makers, etc. The subscribers are A. J. Donaldson and E. W. Simpson. Private company. The number of directors is not to be less than two nor more than seven. The first are G. Wilson, A. J. Donaldson and J. Barrie. Qualification ten ordinary shares. Registered office, 3, Oliver-place, Hawick.

EMPIRE ART CO., LTD.—Registered on September 4th, with a capital of £100, in £1 shares, to carry on the business of printers, lithographers, die-stampers, stereotypers, typefounders, Christmas card-makers, photographic printers, engravers, etc. The subscribers are L. Barker and J. E. White. Private company. The number of directors is not to be less than two nor more than five. The first are L. Barker and J. E. White. Qualification five shares. Registered office, Regal Works, Manchester-road, Bradford.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

TALISMAN AND CO., LTD.—Debenture dated August 14th, 1913, to secure £500, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Effie Margaret Bathe, 241, Goldhawk-road, Shepherd's Bush.

SOLOMON BROS., LTD.—Particulars of £2,000 debentures, created August 20th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the whole amount being now issued. Property charged—the company's undertaking and property, present and future, including uncalled capital. No trustees.

ALBERT POLE AND SON, LTD.—Particulars of £750 debentures, created August 12th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the whole amount now being issued. Property charged—the company's undertaking and property, including uncalled capital. No trustees.

GREENING AND CO., LTD.—A memorandum of satisfaction in full on August 19th, 1913, of debentures dated September 30th, 1912, securing £200, has been registered.

DARWEN PAPER MILL CO., LTD.—A memorandum of satisfaction (a) to the extent of £700 on March 26th, and (b) to the extent of £700 on June 28th, 1913, of mortgage, dated July 11th, 1910, securing £35,000, has been filed.

GLOBE PUBLISHING CO., LTD.—Particulars of £10,000 debentures, created August 15th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the amount of the present issue being £6,300. Property charged—the company's undertaking and property, present and future. No trustees.

UNIVERSAL MEDICAL PERIODICALS, LTD.—Issue on August 29th, 1913, of £250 debentures, part of a series of which particulars have already been filed.

COMPANY NOTICES.

EXPERT REPRODUCTIONS, Ltd.

At a meeting of the company, held at London, on August 14th, the following resolution was passed; and at a subsequent meeting on September 1st, was duly confirmed, namely:—"That the company be wound up voluntarily, and that Harry E. Clark, 7, St. Mildred-court, E.C., be appointed liquidator for the purposes of such winding-up." Notice is given that a meeting of the creditors of the company will be held at 7, St. Mildred-court, E.C., on September 17th.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

DISTRIBUTION OF ASSETS.

PAINE, W. S., late of 150-151, High-street, Hythe Kent, printer and stationer. Claims by October 11th to the Joint Secretary, London County and Westminster Bank, Ltd., 21, Lombard-street, London, E.C., the executors.

THE BANKRUPTCY ACTS, 1883 AND 1890.

RECEIVING ORDERS.

KENYON, H. C., Post Office-avenue, Southport, stationer, picture post card dealer, etc. Date of order, September 2nd, made on a creditor's petition. First meeting of creditors, September 19th, 11 a.m., at the

offices of the official receiver, 11, Dale-street, Liverpool. Public examination of debtor, September 29th, 11 a.m., at the Court House, Victoria-street, Liverpool. Date of adjudication order, September 5th.

ADAMS, R. E., 53, Erleigh-road, Reading, stationer etc. Date of order and of adjudication order, September 3rd, made on the debtor's own petition.

WARLAND, C. F., 115, Fleet-street, London, E.C., advertising specialist. Date of order, September 4th, made on a creditor's petition. First meeting of creditors, September 17th, noon, and public examination of debtor, October 28th, 11 a.m., both at Bankruptcy-buildings, Carey-street, W.C.

NOTICE OF INTENDED DIVIDEND.

HARTNALL, A. J., The Colonnade, Ryde, Isle of Wight, newspaper proprietor. Claims by September 23rd to W. C. Black, 147, High-street, Newport, Isle of Wight.

NOTICES OF DIVIDENDS.

JONES, N., trading as Jones Bros., 64, Queen's-road, Clifton, Bristol, advertising agent and contractor. First and final dividend of 1s. 7½d., September 15th, at the offices of the Bristol and West of England Merchants' Association, 28, Baldwin-street, Bristol.

NOTICE OF DIVIDEND.

BUDGEN, W., 7, Quarry-road, Tunbridge Wells, newsagent, etc. First and final dividend of 2s. 1d., September 11th, at 12a, Marlborough-place, Brighton.

ORDER MADE ON APPLICATION FOR DEBTOR'S DISCHARGE.

ALLEN, E. B. A., and M. J., trading as Allen and Davis, 91, Chertsey-road, and Duke-street, Woking, stationers and printers. Date of order, August 2nd. Discharge suspended until a dividend of not less than 10s. in the £ be paid to creditors. The grounds named in the order for refusing an absolute order of discharge were proof of fact named in Sec. 8, Sub-Sec. 3 (B) Bankruptcy Act, 1890.

NOTICES OF RELEASE OF TRUSTEES.

SMITH, C. E., 63, Blue School-street, and Market Hall, Hereford, stationer. Trustee, M. J. G. Scrobie, official receiver, Offa-street, Hereford. Released July 21st.

BECKWITH, J. W., trading as Beckwith and Co., 15, Rutland-street, Leicester, bookbinder. Trustee, E. Barlow, official receiver, 1, Berridge-street, Leicester. Released July 24th.

RICHARDS, T. A., lately carrying on business at "Neath News" Office, Ropewalk, Neath, Glam., journalist. Trustee, H. Rees, official receiver, Government-buildings, St. Mary's-street, Swansea. Released July 21st.

PECKHAM, A. E., 202, Above Bar, Southampton, newsagent. Trustee, T. Easton, official receiver, Midland Bank-chambers, High-street, Southampton. Released July 21st.

DOLBY, G. F., Uppingham, Rutland, bookseller and stationer. Trustee, E. Barlow, official receiver, 1, Berridge-street, Leicester. Released July 7th.

KING, J., 20, Hartington-road, Middlesborough, paper merchant, etc. Trustee, H. M. Hardy, official receiver, Court-chambers, Albert-road, Middlesborough. Released June 23rd.

WILKINSON, S., 47, Oldham-road, Failsworth, Lancs., paper dealer. Trustee, H. Booth, official receiver, Greaves-street, Oldham. Released July 7th.

NICHOLSON, J. H., 16, Chapel-street, and 18, West-street, Bridlington, Yorks, stationer and librarian. Trustee, D. S. Mackay, official receiver, 48, Westborough, Scarborough. Released July 7th.

THE COMPANIES ACTS, 1890 AND 1908.
FIRST MEETINGS.

THE DAILY HERALD PRINTING AND PUBLISHING SOCIETY, LTD., Victoria House, Tudor-street, London, E.C. First meeting of creditors, September 16th, 11.30 a.m., and of contributories same day, noon, both at 33 Carey-street, Lincoln's-inn, W.C.

SCOTLAND.

SEQUESTRATION.

HAMILTON, J. AND SON, 27, Jamaica-street, Glasgow, wholesale paper merchants. Sequestrated September 1st. Meeting to elect trustee and commissioners to be held September 13th, 11 a.m., at the Faculty Hall, St. George's-place, Glasgow. J. M. MacLeod, 175, St. Vincent-street, Glasgow, agent.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Mr. George Eaton Hart, of St. Clement's Press, is confessing one of my sins.

o o o

I ought to have returned to him earlier some examination papers of the Wild-street (Drury-lane) Evening School's Printing Classes, of which he is a governor and a sort of modern St. Clement patron saint.

o o o

Well, I'm returning them now; without fuss or apology either; acting according to my working rule, "Don't make excuses, make good."

o o o

The fact is some parts of the papers almost frightened me. It's so long since you and I were at school and learnt that the equator was a "menagerie lion running round the earth"; and that Sir Walter Raleigh discovered tobacco, and said, "We have lit such a fire in England as shall never be put out."

The examination papers before me are those which the boys in the first, second and third year of these Printers' Classes had to tackle at the end of the last session.

o o o

I'll give you three minutes to answer this: "A cylinder whose diameter is 15 inches rotates 55 times per minute. At what speed per hour is a leather band placed on the cylinder moving?"

o o o

You must have ten minutes for: "Describe the Palace of Pandemonium," occurring in the English Literature paper. There are eight literature questions. A description of Milton's life and work is wanted; and you are asked what Matthew Arnold considers are the characteristics of the best poetry.

o o o

Certainly a compositor with a feeling for poetry would not repeat the adventure of the "comp" who made sense of Shakespeare's rubbish about "Sermons in stones, books in the running brooks"; altering it to "Sermons in books, stones in the running brooks."

o o o

The youngsters are required to construct sentences in which certain words may be used in different and distinct senses. They have to insert punctuation marks in a piece of Macaulay's verse.

o o o

Second year students, I see, have this passage given them to punctuate and correct where necessary:—

o o o

pompey was salling about near the coast of asia in the year b.c 66 after compleating the destruction of the pirates wnen the news reached him of the great authority which had been given him though he had been longing for it in his heart and inducing his friends to try and get it for him he pretended not to like it now that he had got it.

o o o

How many printers would like to be called upon to "describe briefly a 'Grove' or a 'Daniell' cell." Yet printers should know a little about electrotyping. They at times worried B. Dellagana's when I was with that firm by demanding that an electro should be made from a drawing direct; they wouldn't hear about any necessity to make a zinco or half-tone or wood block first.

o o o

One question in this science paper is, "In what part of the magnet is the power of attracting particles of iron the strongest? How would you show this by experiment?"

o o o

"Draw a sketch showing the lines of force when iron filings are sifted over a bar magnet lying horizontally." "Describe a 'plate electrical machine." These may indicate some of the things our budding printers are expected to know.

o o o

They are also required, I notice, to "Find the area of the piece of coloured paper given to you." "Find the circumference of your penholder, and describe the method you use."

o o o

There is a French paper, I see; it does not look formidable, even for lads.

o o o

A very sensible test for youngsters who are to be printers is embodied in questioning as to rules for forming plurals. "Buffalo, roof, penny, octavo, chief, thief, victory, valley," are some rather catchy words of which they have to give plurals.

o o o

I think it is but a very short time since these printing classes were started. Evidently the lads do their best. Here's C. W. Archer, with his 100 per cent. for arithmetic, 98 for English, 98 for Science, and 70 for French; and he's only two marks above F. Pinchon with 90 for French, 95 for Science, 90 Arithmetic, and 89 for English.

o o o

In the second year the arithmetic seems to prove more formidable, but the second year lads cotton to the French.

o o o

I am very glad that Mr. Hart is able to make leisure for the pleasure of helping in this work. But he must enlist some other master printers into the service. I daresay he'd rather do double duty himself than be bothered with missionary work among his colleagues in the craft. The keen men of the world always have to resist that temptation. It's weary work making others work. But we must do it all the same.

o o o

In view of what he has done, whether he succeeds in roping in other master printers or not, I think I'll canonise him and with a double-barrelled cannon. So I will say that the directing head of the St. Clements Press whose works are so close to the churches of St. Dunstan and St. Clement is by way of being the St. Clement-Dunstan of our time.

o o o

St. Clement was mixed up with "various schools" in his day. He wrote a book on education, all those 1,700 years ago. It deals with the qualities required in a teacher; and what he ought to teach. Of all the early fathers he was the one most practical; the "most conversant with the science of learning, the opinions and practices" of the various peoples of the day. The one thing he didn't worry very much about was dogmatic theology.

o o o

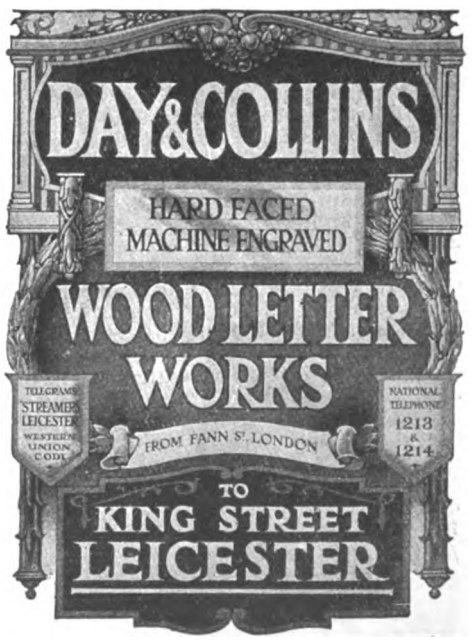
Now that hits our friend off pretty well, yet we haven't quite got him there. The patron saint, however, of the other of the two churches just about supplies what is missing. St. Dunstan delighted in "manual work." He was at it when he pinched the Devil's nose. He "indulged chimæras" and he made people believe in them.

o o o

It's all very well to call them "chimæras" in Dunstan's case, but while I'll confess for George Eaton Hart that he's got his hopes and visions of future print and the future printer, I really can't have then called by any disparaging name.

o o o

Dunstan was a man of tremendous force. What is definitely recorded of him tells us that; and the traditions imply the same thing. If a church was built slightly out of place instead of being due east, he simply put his shoulder to it and slewed it round.



o o o

There are a lot of things that are still askew in our craft and if I pay George Hart the compliment of this canonisation, I shall certainly expect him to live up to his double barrelled sainthood and give a good slew round to whatever he finds out of place and out of order; to do this with the same enthusiasm with which he has worked at these boy's printing classes.

FRANK COLEBROOK.

"THERE'S no use talkin', advertisin' is one of the greatest factors in modern enterprise," said Mike Dooley. "Me old frind, Longfellow, hit the nail square on the noodle whin he sid: 'Till me not in mournful numbers advertisin' doesn't pay, sure the man's *non compis mentis* who would such a wild thing to say.' Ads of big firms all ramind us we can make our own to pay, and, to lessen one ad writin', stale our copy day by day."

Rotary Type, Borders for Posters, Bills, Show Cards, etc., Wood Blocks, Figures for Almanacs, etc.

THE L.C.C. School of Photo-Engraving AND LITHOGRAPHY.

The valuable work carried on by this school, which is under the management of the Education Committee of the London County Council and is situated in Bolt-court, Fleet-street, E.C., will be resumed for the new session on the 22nd inst., the session ending on June 27th, 1914. The object of the School is to give instruction in the craft of producing surfaces for printing. Of the various classes held, some are concerned with the more artistic side of the work, others with the technical and scientific; there is, however, no real line of demarcation between the two, either in intention or practice, and the division is made solely for convenience of teaching. Instruction, both practical and theoretical, is given in the most important photo-mechanical processes, block-proving, technical photography, general lithography, map and plan drawing, transfer writing, design, lettering and drawing. In addition to lectures on the above subjects, there are also courses of lectures for those engaged in the paper and stationery trades.

The school is open only to those who are engaged in business in some branch of the photo-mechanical, photographic, designing, lithographic, engraving, printing and illustrating crafts; there is no provision for amateurs. The Art section of the School should be of especial service to those artists engaged upon work for reproduction, as students in these classes will have the privilege of having selected work reproduced, and every opportunity will be afforded them to obtain a knowledge of the various processes and their limitations.

The practical instruction given is not intended to replace workshop training, or merely to increase manipulative dexterity, but is preparatory or supplementary to it, and has also for its object the giving to those engaged in one particular department of a craft a knowledge of the principles of their own and allied branches which, in the ordinary course of trade, they may not obtain. The lecture courses are for the purpose of explaining more fully the scientific principles and technical details of the various processes than is convenient during the conduct of the practical classes, and it is expected that every student taking a practical class will attend the appropriate lectures.

The school is well equipped with the necessary appliances for study and practical work. It contains a photographic studio, with five cameras—four of these are the latest types by Messrs. Penrose, Hunter, Tilley and Griffin and fitted with their respective patented screen adjustment gears. The powerful electric light installation of modern design includes a large electric search light, daylight arc lamps, and open and enclosed lamps of various types. There are dark rooms, sensitising room, glass cleaning and intensifying rooms, extensive etching and printing rooms —complete with electric light and modern appliances, including three types of power-driven etching machines—a machine-room containing the latest power machinery for mounting, router, beveller, saw, etc., block proving room with electric motor driven platen machine, collotype preparation and printing rooms with press and necessary equipment, a photogravure room, a reading room and museum of specimens and examples. There is also a large floor devoted to lithographic drawing, stone preparing and proving, as well as separate studios for design, antique and life and costume drawing.

The school thus provides every advantage and facility for those who wish to improve the knowledge of their business and their dexterity as workmen. Full particulars may be obtained from the Principal (Mr. A. J. Bull) at the school, who will be glad to receive applications from parents who intend placing their sons as apprentices to any of the above trades, and who may be desirous of giving them the advantage of a preparatory day and evening school training.

THE late Mr. George Andrew Hutchison, editor of the *Boy's Own Paper*, who died last February, left estate of the gross value of £15,739.

TRADE PRINTING—Book, Magazine, etc. Monotype and Linotype Setting. Best work. Est. 1881. BIRDSALL & Co., Electric Printeries, Stanningley, Leeds. Half-tone and Tri-colour Printing a speciality.

St. Bride Foundation Institute.

The Printing School.

Exceptionally good opportunities are provided for the student of typography at the St. Bride Foundation. The new session of the Technical Printing Schools commences on September 15th and extends to April 24th, 1914. The school is divided into three departments, viz., Composing, Press and Machine, and Lithography. In the Prospectus and Syllabus of the Classes, just to hand, it is stated that subject to the approval of the Governors, the following are eligible as students, namely: Compositors, pressmen, machine minders, and lithographers, not under seventeen years of age, actually engaged as journeymen or as indentured apprentices in that branch of the craft to which the examinations refer. Apprentices from sixteen years of age will be admitted to classes commencing at 5 p.m. Candidates who present themselves for the first time at the St. Bride Foundation Printing School will be required to have (*a*) attended a Central or a Secondary School, in either case for not less than three years, or (*b*) completed a course in a Trade School, or (*c*) produce a certificate of having satisfactorily attended a two years' course of study at a Junior Institute, or (*d*) will be required to satisfy an educational test of fitness to take full advantage of the education offered.

In addition to instruction in composing, including mechanical composition (Linotype and Monotype), press and machine, and lithography, there is a special offset class for journeymen, providing sufficient accommodation is available. For all the above the School is admirably equipped.

Reporting on the work of the Printing School for last session, 1912–13, it is stated that:—"The 19th Session of the Technical Classes in Letterpress and Lithography ran from September 23rd, 1912, to April 25th, 1913. The number of entries to the Classes was 473. Of these, 335 made the necessary 20 or more attendances, several making as many as 82. The number sitting for the City and Guilds Examination was 290, as against the 303 in the previous year, of these 206 passed, *i.e.*, 71·0 per cent. of passes. In the competition for medals open to the United Kingdom and Colonies, a St. Bride Foundation Printing School Student, Robert Scheidegger, secured a Bronze Medal in Typography Composing. Ordinary Grade. This makes the total number of medals won by Students of the School 20 in Typography and 25 in Lithography. Seventy-eight employers showed their appreciation of the Classes by paying whole or part fees of 194 students. Improvements have been introduced in the working of the School to make the courses of study more convenient for students. A demy rotary offset machine has been installed in the Lithographic School by the courtesy of Messrs. Geo. Mann and Co., Ltd., a demy Art Caxton platen printing machine has also been placed in the Letterpress Machine-Room, by the courtesy of the Lanston Monotype Corporation, Ltd., the School has been provided with an equipment of Monotype keyboards.

L.C.C.

Central School of Arts and Crafts.

This school was established by the London County Council to provide instruction in those branches of design and manipulation which bear on the more artistic trades. During its existence it has done much to raise the standard of artistic production, and every opportunity is given to students to specialise in relation to their particular calling. The school is intended to supplement, rather than supersede, apprenticeship by affording to students engaged in London art industries fuller opportunities for design and practice in various branches of their craft than can usually be obtained in the ordinary routine of a workshop.

One of the groups of instruction relates to Book Production, and this department of the work is organised as a complete school of book production with all its sections working in intimate relation to one another. It includes bookbinding, tool cutting, compositors' and machine work, black and white illustration, poster design, wood cutting for reproduction, writing and illuminating, lithography, miniature painting, pastel painting, etching and mezzotint.

The school will reopen for the eighteenth session on Monday, 22nd inst., and will continue until June 27th, 1914. An exhibition of the work of the students will be held from September 15th to October 3rd.

The Trade Unions Congress.

At one of the sittings of the Congress last week, Mr. T. E. Naylor (London Society of Compositors) moved:—"That in view of the continued increase in the cost of living, and the consequent reduction in real wages, this Congress declares in favour of the trade unions taking early and simultaneous action to obtain an increase of 5s. a week for all grades of time and piece workers in both public and private employ; and instructs the Parliamentary Committee to take whatever steps may be necessary, in conjunction with the unions prepared to take part in the movement, to give effect to this demand at the earliest practicable moment."

Mr. Naylor said that this was a vital question for the workers. If wages had advanced the working men had not been able to overtake the increased cost of living. By their present methods the trade unions had not found means whereby they could get back what they had lost by the operation of economic law. They had been satisfied in the past by taking action among themselves, as single unions or through their federations. The method would be found in more effective combination amongst unions. If they acted upon the resolution, after passing it, they would have the support of the community behind them.

Mr. Rean (London Society of Compositors) seconded the resolution, and said the 5s. asked for by the resolution was nothing as compared with the present cost of living. He asserted that the condition of the workers to-day was worse than it had been for 30 years.

After a discussion of the subject by various members, a vote was taken, with the result that the resolution was declared to be carried by 1,062,000 to 626,000.

MALTHUS AND THE PUBLISHING TRADE.—The article thus entitled (by Mr. P. P. Howe) which appeared in the *English Review* for November last, has been republished in pamphlet form by Mr. Martin Secker, and forms No. 1 of the "John Street Booklets." Malthus, it will be remembered, said, "The precise reason why I think that more children ought not to be born than the country can support is that the greatest possible number of those that are born may be supported." Mr. Howe thinks that this doctrine might very well be adopted by the publishing trade, as in his opinion far more books are born every year than the reading public can possibly support. He suggests that publishers should in future stop publishing nearly any and every book that is offered them by authors—with the result that they frequently find a balance on the wrong side of the account for them in their ledgers—and confine themselves to the books that really matter. The two thousand novels published every year might, he says, be reduced with advantage to two hundred, which represents about the number of readable ones, likely to be "good sellers," and so on with the rest of the publishers' output. However attractive such an idea may be from the point of view of good literature, we fear that it will be received with scant favour, or none at all, by printers and bookbinders, who are probably not greatly interested in the alleged woes of the publisher or the "ordinary author." The latter's must be much the worst, as Mr. Howe's estimate of his living expenses is only £1 a week.

AT the final sitting of the Trade Unions Congress, on Saturday last, Mr. W. Thorne, M.P., proposed a vote of thanks to the Chairman of the Congress, and presented to him the Congress bell. The resolution was passed with acclamation, as was also a similar resolution which expressed appreciation of the services of Mr. W. Mellor (Bookbinders and Machine Rulers), who had acted as secretary to the Congress. A bell was also presented to Mr. Mellor.

The Value of Appearance.

In addition to the impressions made back of the door which leads to the press-room, there are others which cause the rise or fall of printing establishments, and incidentally bring about the success or failure of the master printer. One of the most important of these is the impression created in the mind of a prospective customer when the latter is shown samples of the work produced by the firm.

Whether this impression be favourable or otherwise does not depend entirely upon the actual merit of the work exhibited, as oftentimes its intrinsic value may not be apparent to the uninformed purchaser. In such cases the general appearance of the office, its furnishings, and even the appearance of the master printer or his representative will have much to do with the placing of the order.

An old adage has it, "You can't make a silk purse out of a sow's ear," and there are few people who expect to get the best quality of work where all indications about the office give evidence of carelessness and slovenly habits throughout the plant. On the other hand, it is also a certainty that a neat, attractive "front office," containing furniture in keeping with the requirements of the department; its walls decorated with illuminating pictures or frames containing notable examples of the product of the house, cannot help but impress favourable the prospective customer. Naturally he receives an idea that whatever may be said of the work produced by this firm, it is sure to be neat and attractive withal, and, in addition, this mental effect is brought about without argument or endeavour on the part of the solicitor, for "seeing is believing," and there, before his eyes, the customer has a most convincing argument as to the quality and class of work which the firm is able to produce.

In this connection it may also be mentioned that a most important aid is an up-to-date and well-appointed sample case. Such a case may be secured from any office supply house, and can be obtained in sectional units with a cabinet base, allowing the case to be built up to fit almost any space or location in the office.

When each compartment is properly labelled and filled with representative samples of work actually being turned out by the shop, the salesman or manager will have greatly improved chances of landing an order from the buyer who cares for quality and expects to pay for same. And even if he fails to place the order, the customer carries away a favourable impression of the shop and its products, and will be inclined to speak many a good wood for the concern in consequence. Most certainly this will not be the case if his impression is of a contrary nature.—*Printing Trade News.*

Canadian News Paper in America.

A Review of the Present Position.

A writer in the "Wall Street Journal" states that in 1912 the output of news print in Canada was increased about 300 tons daily. This year the output will be increased about 500 tons daily, giving Canada by the end of 1913 a daily output of approximately 1,500 tons of news print. Of this amount, about 1,000 tons will be shipped to the United States, which consumes a daily average of about 4,700 tons of news print. Consumption in the United States of all grades reaches about 10,000 tons daily. The total increase in production of news print in the United States in 1913, as compared with 1912, will be about 250,000 tons. An official of a leading Canadian pulp and paper company has stated his views on the situation in Canada and in the United States. He says :—"Consumption of paper is growing to such an extent in the United States that Canada is becoming an ever-increasing factor in the situation. News print enters the United States from Canada free, except that produced from Crown lands timber, so that 80 per cent. of Canadian paper enters the United States exempt from tariff tax, as that proportion is produced from privately owned lands. There is now a slight over-production of news print in Canada and the United States, probably amounting to 50 tons daily. That situation helps to knock out the old, poorly arranged and ill-equipped mills. Those mills across the border which are weighed down with a burden of over capitalisation have some hardships ahead of them in my estimation. The tariff must be reduced or prices will advance considerably. Demand will probably overtake supply this fall, resulting in some advance in prices any way. About 70 per cent. of Canadian made news print is exported, our shipments abroad including no other grade of paper. We also export annually about 20 per cent. of our sulphite, which is pulp reduced by chemical treatment, and some 250,000 or 300,000 tons of ground wood. There is some irritation among Canadian pulp makers over the proposed provision which admits ground wood pulp free but places a tax of $2 a ton on sulphite. A Berlin, N.H., paper concern is using 700 cords of wood a day, turning out some 500 tons of paper daily. This wood is brought from Canada and there is a feeling here that they have instigated the tax on sulphite."

BEFORE making a heavy cut rub the paper cutter knife blade with a cake of paraffin or a piece of soap. It will make the work easier for the operator, and will strain the machine less, besides doing a better job of cutting.

UNDER a patent by Mr. E. Fues parchment paper is produced by treating raw paper, preferably so-called artificial parchment paper such as is obtained from hard-boiled Mitscherlich cellulose, with dilute acid at a temperature of about 100 degs. C. Organic acids, acid salts, and such salts as exert a similar action by dissociation in dilute aqueous solution may be used, in some cases with formaldehyde. Sulphuric acid up to tenth-normal may be used; and aluminium sulphate together with formaldehyde is also mentioned. The paper to be treated may be finished or in course of manufacture, and may be sized or unsized.

THE BRITISH & COLONIAL PRINTER AND STATIONER

FOUNDED 1878. PUBLISHED WEEKLY.

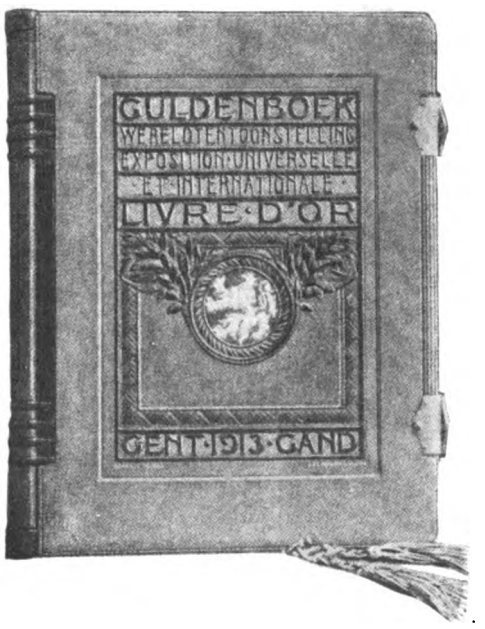
[REGISTERED AT THE GENERAL POST OFFICE AS A NEWSPAPER FOR TRANSMISSION IN THE UNITED KINGDOM.]

THIRTY-FIFTH YEAR.

VOLUME LXXIII. NUMBER 12.

LONDON: SEPTEMBER 18, 1913



EVERY THURSDAY. PRICE TWOPENCE.

Bookbinding and the Ghent EXHIBITION.

The Arts and Crafts Department of the British Section at the Ghent Exhibition is located on the north side of the machinery hall, and occupies a site of some 200 feet in length by 50 feet in breath. In all, there are just over two thousand exhibits, of which about a hundred or so—mainly distributed through five large show cases—are of bookbindings These are practically all "extra" bindings, but only a couple of ordinary "trade" houses are represented, viz., the Oxford University Press, and Messrs. W. H. Smith and Son. The former firm has about a dozen volumes, the latter an entire case containing nineteen books, all bound in morocco or sealskin, save one in calf.

Other prominent exhibitors in this branch are—in their commercial capacity—the Instructors in Bookbinding at the L.C.C. Central School of Arts and Crafts, Messrs. De Sauty and McLeish, and Mr. W. H. Green, who all send several fine examples of their work, as also does that well-known Irish amateur binder, Sir Edward Sullivan, Bart., who seems quite undeterred by the fate which overtook his former display at Brussels.

British lady binders, headed by Miss S. T. Prideaux, of London, and Miss Katherine Adams, of the Eadburgha Bindery, Broadway, Worcester, are in strong force, very many names well known in the feminine art binding world finding place in the catalogue. One of Miss Adams' most prominent exhibits is a copy of the Ashendene Press Dante, bound in pale blue pigskin, with goffered edges. The cover design is made up of roses within an heraldic border composed of the Arms of Dante and Beatrice, and of others connected with the poet and his works, together with those of Florence and Verona. The volume is enclosed in a box covered with green leather tooled with oak leaves and acorns. In addition to the bindings themselves, there are several associated exhibits, including end papers, embroidered and hand-woven book covers, repoussé leather card and pen cases by Miss N. Casella, and a blotter in stained and embossed leather by Mrs. M. Browne. A couple of church service books are also on view, one bound in unstained cowhide, cut and embossed, by Miss R. Vigers, and the other having the binding ornamented with silver on enamel, set with pearls and amethysts, by Mrs. E. Bethune. Those who are interested in seeing a list of the bookbinding exhibits will find it scattered through the 400-page catalogue just issued under the auspices of the Exhibitions Branch of the Board of Trade, for whilst exhibitors names are carefully indexed, the details of the exhibits in any particular art or craft have to be literally dug out as the result of a search through all the two thousand items, there being no index of the industries concerned! Each of these industries, however, is introduced to the reader's notice by a well compiled "Introduction," which is—like the rest of the catalogue—printed in English and French. That to the art of "Bookbinding" is furnished by Mr. Douglas Cockerell, and is mainly composed of a popular exposition of the processes of binding, which contains, however, much more of interest both to the expert binder and to the layman than descriptions of technical methods usually do. Bindings, says Mr. Cockerell, may be divided into "extra" and "those on which the binder has been forced into some compromise with the best in order to keep down the price." Even about the former Mr. Cockerell has some things to say that are well worth reading, whilst the executant of the latter comes in for mild but effective castigation on several points of workmanship. For instance, the Letchworth expert protests against the all too common practice of pressing a book into a "bricklike block." End-papers made of marbled sheets he objects to, on the score of undue thickness, nor does he have any love for the solid gilt edge, which he likens to "part of a brass bedstead," preferring—though not unhesitatingly -- trimming before sewing, and gilding in the rough. Further on there is a sarcastic allusion to "a poor relation of the head-band, worked by the yard by machinery, bits of which are stuck on to the head and tail of books." We know it well, wretched sham that it is!

The "Golden Book" of the Ghent Exhibition.

Following, we get some equally well deserved strictures on leather, in the course of which Mr. Cockerell refers to the craze for quite even colour, which the leather manufacturer injures the skin to produce. As regards the relative durability of modern leathers, he gives the preference to morocco, though he is of opinion that sealskin may ultimately prove the best for binding purposes. The one-time ubiquitous calf, as now prepared, he regards as a fine material absolutely ruined, whilst sheep is rather contemptuously alluded to as a "by-product of wool and mutton," though it is admitted that if the skins of the mountain breeds of sheep are properly tanned, they make a very serviceable binding for books not subject to hard wear. On the whole, this racy article of Mr. Cockerell's is alone well worth the shilling charged for the catalogue that contains it.

Following the example set at some previous displays of the kind, the authorities at the Ghent Exhibition have provided a "Livre d'Or," of the cover of which we reproduce an illustration herewith. The volume is 18 inches long, 14 inches wide and about 3 inches thick. It contains 100 leaves of Van Gelder's paper, t.e.g. The binding is in pigskin, embossed by hand, and the cover design is due to M. H. Thiery, a professor at the Ecole du Livre. The binding was carried out under the supervision of M. Aug. de Decker-Lemaire. The fly leaves and end-papers are of watered silk, of a golden yellow shade.

An Interesting Catalogue.

The catalogue of the British Arts and Crafts Section of the Ghent International Exhibition is a bulky volume, extending to 596 pages. Introductory articles by different writers dealing with the various arts and crafts represented in the Exhibition account for 191 pages of text, the remaining 405 pages dealing with the individual exhibits. Throughout, the catalogue is printed in English and French on alternate pages, and there is a full index at the end.

Commendatore Walter Crane writes a Foreword to the catalogue, and deals in an interesting manner with the rise and development of the Arts and Crafts movement, which he says was in some sort a protest against the accepted classification of the Arts as "Fine" and "Industrial," and against the prevailing indifference to the value and meaning of decorative art, as also against the prevailing commercialisation of decorative design generally. After crediting the revival of the artistic handicrafts to the personal zeal and practical experiments of William Morris, Mr. Crane traces the influence of the guilds and associations of artists and craftsmen in counteracting the separation of the crafts. He then explains that the Ghent Exhibition has adopted the principle of the Arts and Crafts Exhibition Society, of giving every opportunity and credit to individual designers and craftsmen, and opening the door to such manufacturing firms as were willing to give the names of their responsible executants, as designers and craftsmen, in any particular work they wished to exhibit.

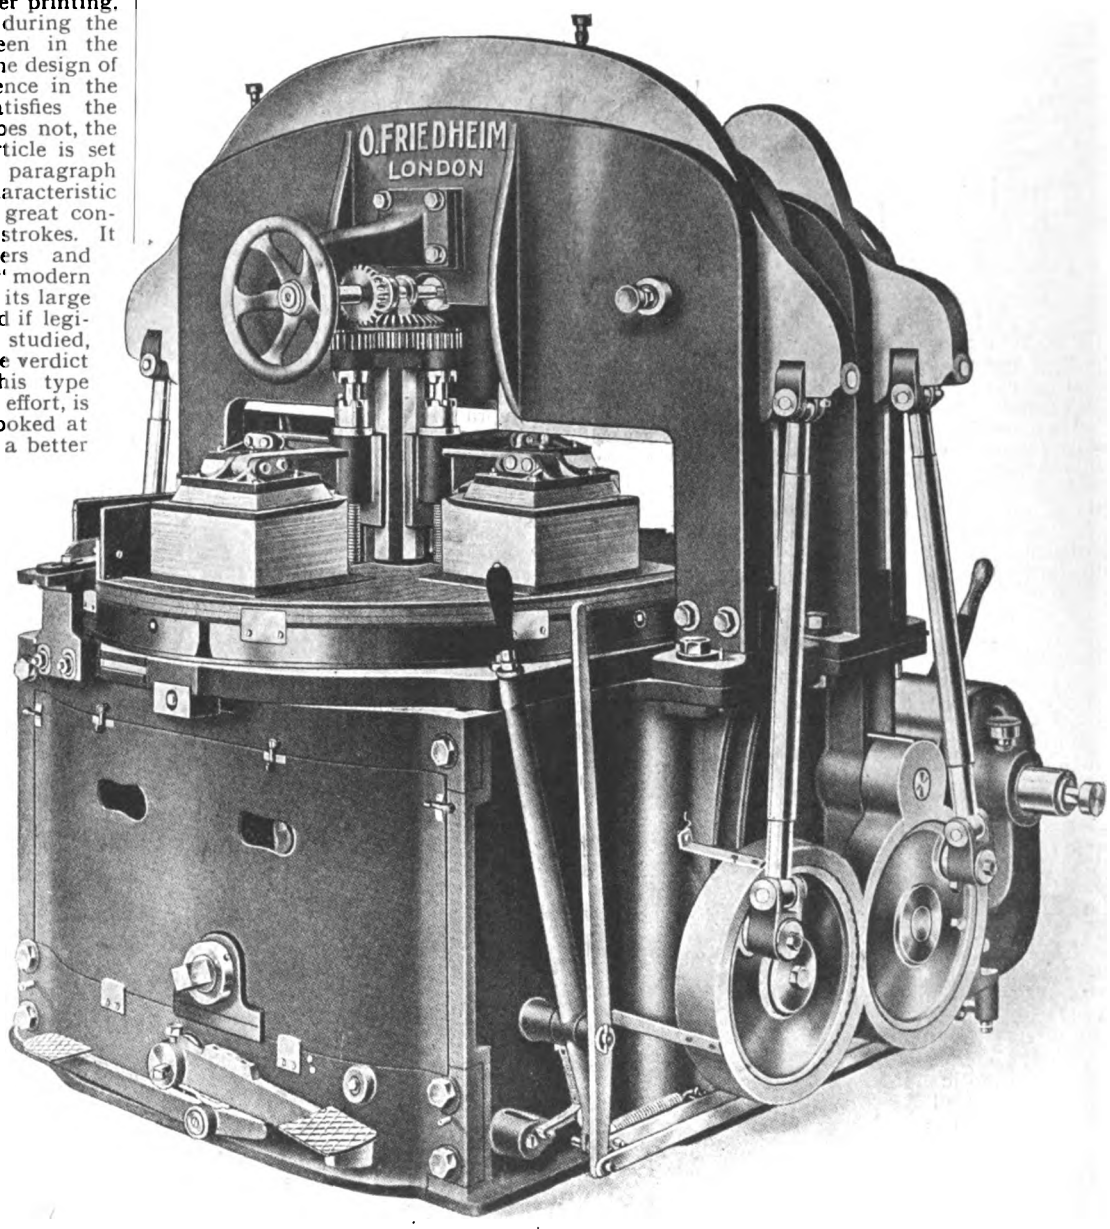
The collection ranges from pottery to printing, including wall-papers, black and white design, engraving, book illustration, calligraphy, and illumination. So varied a collection shows many different influences and sources of inspiration in design. The Morris influence, as being a peculiarly English development, is well illustrated in the exhibits from the firm which bears his name; also in the books from the Kelmscott Press. Mr. Allen Vigers, who exhibits a fine illuminated manuscript of his own handiwork, also lends drawings by Burne-Jones and Ford Madox Brown. Elaborate block-printed wall-papers are still designed by well-known artists, as the important exhibits of Messrs. Jeffrey and Co. show. The work in calligraphy, illumination (in which the fine work of Mr. Graily Hewitt holds a most distinguished place), together with fine printing and book decoration, form a very important section of the Exhibition.

Mr. Crane points out, in concluding his introductory article, that the present section of Arts and Crafts not only marks the official recognition of the British Government, through the Exhibitions Branch of the Board of Trade, of the Decorative Arts, but it also illustrates a new departure in the arrangement of such an exhibition. For the first time an endeavour has been made to unite

Digitized by Google

the various examples of Arts and Crafts in a concerted scheme, and to place the different groups of examples in more definite relation to each other than has hitherto been attempted. Thus there is grouped in a connected series such works as cartoons for stained glass and mural painting, stained glass itself, monumental sculpture and ecclesiastical design of various kinds in metal and textile, followed by the more personal arts of adornment and use. Then from the central hall, arranged as a kind of garden, the visitor is led to the Arts contributing to the beauty and pleasure of the house, such as the crafts belonging to book production, book illustration, fine printing and binding, calligraphy and illumination, etc.

The catalogue contains separate articles on book illustration and decoration (by Commendatore Walter Crane) on, printing (by Mr. Emery Walker), and on bookbinding (by Mr. Douglas Cockerell). Mr. Emery Walker states that except for the introduction of machinery for the more rapid casting and composing of types to form printed pages, and for their quicker printing, the only change of importance during the last fifty or sixty years has been in the direction of the improvement in the design of type faces. To show the difference in the "face" of the type which satisfies the critical eye and of that which does not, the first paragraph in Mr. Walker's article is set in the first-named and the last paragraph in the last-named. The characteristic feature of this latter type is the great contrast between the thick and thin strokes. It is generally used in newspapers and Blue Books, and is known as "modern face." Mr. Walker admits that "its large sizes are unquestionably clear, and if legibility were the only thing to be studied, there is little to be said against the verdict of the man in the street that this type which he reads without sense of effort, is the best. It is only when it is looked at by the side of a letter designed in a better period that the defects become apparent." Another paragraph in the article is printed in Caslon "old style," cut for Charles Whittingham in 1843, and used in the article to illustrate this fact. The development of book types is traced from the beginning of the Morris influence down to the Oresteia of Aeschylus by Robert Proctor, published in 1904. The type for this was lent to the Oxford University Press for printing the Odyssey, a copy of which finds a place in the Exhibition.



Present-day usages are critically summed up by Mr. Walker in the following words:—"Larger faces of types are used, the leading is less extravagant, and often the printing is well placed on the page. Spacing which ought, one would think, to be better when done more or less automatically on a composing machine, is rarely even tolerable, while paper which steadily gets lower in price with the introduction of new and cheaper materials, certainly as regularly gets worse. The so-called 'feather-weight' paper is a poor substitute for the old-fashioned material made from rag and sized until it is hard and enduring."

The catalogue is a decidedly interesting one and forms a valuable commentary on the development of the arts and crafts as typified in the Ghent Exhibition.

Two Machines for Binders.

Among the many appliances that are handled by Messrs. Friedheim, Ltd., 7, Waterlane, Ludgate, E.C., are two that are of special service to the bookbinder, and which, by the courtesy of that firm we herewith illustrate. The first of these is the new Four Pile Trimming Machine which possesses many advantages, among them being the high speed of output, as a pile of books is trimmed in one operation, whereas by the ordinary method a number of cuts have to be made, usually with four guillotines, so that its use practically dispenses with the work of three operatives, while a considerable saving of time is effected. The machine is constructed of great strength, the clamping arrangement being particularly strong, and the excellent work done by the machine has been even in advance of expectations, and its introduction into one London establishment was so advantageous that it resulted in the securing of orders from three other houses, whose principals saw the first machine at work. The Trimmer has a revolving table on which four piles of books are operated upon automatically at the same time, and with much saving of labour. The machine is sold at a moderate price, which should help to popularise it in the printing or bookbinding establishment.

The other appliance is Friedheim's Four Poster Blocking and Embossing Press, a machine that is of the latest and most up-to-date construction, and that embodies every

Friedheim's Four Poster Blocking and Embossing Press.

point that a long experience in the manufacture of this class of machine has rendered possible. Although of small build, the four column principle of the design adds considerably to the working pressure, and gives the machine solidity and rigidity. The automatic colouring apparatus is constructed from the same models as are used for the larger and more expensive machines, and consists of two inking rollers, each three inches in diameter, two distributing rollers, one roller with rotary and adjustable oscillating motion, one inking cylinder with oscillating motion, and one duct roller. The two inking rollers are arranged to lift alternately so that the die or block is inked by the front roller on the outward movement, and again on the return by the back roller. This arrangement is so perfect that with very few exceptions every kind of material need only be passed once through the machine to obtain a solidity of ink impression which cannot be excelled by any other method. The table, as it comes out, can be stopped without interfering with the working of the colouring apparatus, which allows the inking rollers to run over the die or block as many times as desired. The machine is suitable for colour blocking and cameo embossing of the highest class up to a medium size, but as the colouring apparatus by a simple movement can be thrown instantaneously out of gear, the machine can be used for gold blocking, blind embossing, etc., at a moment's notice without any adjustments or changing of parts. It is fitted with friction coupling for working by power, automatic table with in-and-out movement arranged for continuous running or stopping after each impression, arrangement for stopping the machine instantaneously by foot, insertion plate for type-high work, hinges for hanging plate, roller moulds for inking rollers, automatic grippers and all necessary accessories. It is arranged for gas heating with atmospheric burners, unless steam heating is specially ordered. It works quite silently without noise or vibration, and runs at a speed of 16 impressions per minute for size 1, 13 impressions per minute for size 2, and 12 impressions per minute for size 3. The machine can be supplied without automatic colouring apparatus if desired. Three sizes are made providing respectively a hanging plate surface of $10\frac{1}{4}$ by $15\frac{3}{8}$ inches, $12\frac{1}{4}$ by $17\frac{3}{4}$ inches, and $18\frac{1}{8}$ by $23\frac{5}{8}$ inches.

Particulars and prices of both of these machines may be had on application to Messrs. Friedheim, Ltd., at the address given.

A NEW monthly magazine, entitled *War and Peace*, edited by Mr. William C. Searle, is to be published from Craig Court House, Whitehall, S.W., on October 1st.

The Borough Polytechnic Printing CLASSES.

The opening night of these classes is on Tuesday, 23rd inst., when, at 8 p.m., there will be a meeting and reunion of old students in the Hall of the Institute. Mr. R. T. Lever, printing sales manager, is announced to deliver an address entitled: "Advertisement Writing for Printers," and the teachers will explain the various educational features of the classes, after which the workshop and plant will be open for inspection by new students and friends.

The instruction embraces classes in composing and printing machine work, including typographical sketching, free-hand drawing, and English composition, spelling and punctuation. Whilst dealing directly with the numerous details of each department of the printing office, the instruction prepares the students by means of question papers for the examinations in practical and theoretical letterpress printing which are conducted by the City and Guilds of London Institute, upon the results of which silver and bronze medals, money prizes, and first and second-class certificates are awarded.

For the purposes of practical instruction a large and well-appointed workshop is fitted up with every requirement in modern type, borders, ornament and appliances, to which additions are constantly being made to keep the students up to date in the prevailing styles and methods of work. Instruction in every kind of display, including advertisements, title pages, handbills, office stationery, table work and book composition, etc., will be given to students in the practical classes, thus affording them an opportunity of practising classes of work which the average compositor has little opportunity of doing in the ordinary workshop. A special feature of this instruction is the attention given to the adoption of methods on paying lines, all unnecessary labour (made apparent in the rough sketches) being pointed out to the student and eliminated before the work of composition is begun.

Valuable prizes are given for the best work done during the session, both by journeymen and apprentice students, and the new syllabus of the classes gives a list of the passes of Borough students who sat at the City and Guilds of London Institute Examinations last April.

"I UNDERSTAND you began life as a newsboy," said a friend to a prosperous printer. "No," replied the millionaire; "some one has been making a fool of you. I began life as an infant!"

ON Friday, at Birmingham, Charles Weston, James Dudley, Frank Heron and Charles Scholes were charged with being concened in the alleged theft and receiving of newspapers, the property of Henry Reginald Taylor, wholesale agent. Scholes, Weston and Heron pleaded "Guilty," and were committed for trial. Dudley was discharged.

Book Production.

The Library Association Committee's Report.

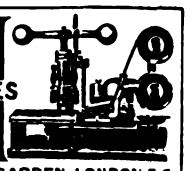
Some recommendations of interest to our readers have been published in the form of an Interim Report by the Library Association Book Production Committee, whose deliberations have extended over several years, and have resulted in some important improvements in the production of books. The scope of the inquiry for which the Committee was formed covered printing, illustrations, paper, bindings, as used by publishers, and bibliographical details of the arrangement of the contents of the book. At an early date the Committee secured the assistance of a number of expert authorities in the various branches, and various sub-committees were appointed to deal with paper, printing and illustrations, and sewing and publishers' binding. Printing and illustrations was referred to Messrs. C. J. Davenport, C. T. Jacobi, A. W. Pollard, and Emery Walker. The Committee have visited numerous establishments where the work of book production is carried on, and the object of the present report, it is stated, is not only to show how far the inquiry has extended, but also to elicit expressions of opinions and suggestions or modifications of conclusions already arrived at.

Bibliographical.

Dealing with the bibliographical requirements of a book, the Report recommends among other things that the title-page should be dated in every case, and that the dates of previous editions and impressions should be stated on the back of the title-page or on the half-title in all copyright books. Title-pages and indexes should also be included in periodicals and books issued in parts; each book should contain contents and index, and list of plates, maps, plans, etc. Blank fly-leaves should always be placed at the beginning and end of the book. Illustrations other that those in the text should bear their own titles or a distinctive mark, and the protective tissue paper should not be used for this purpose, while all plates should be guarded and not edged or tipped in. The end of a work or volume should be clearly indicated, and the headlines should be descriptive of the contents of the page unless descriptive shoulder or marginal notes are used. Signatures of the preliminary matter and the text should be kept distinct, and for the encouragement of good printing, the name of the printer, with his device, should be prominently placed either at the foot of the last page or on the first blank page following. Finally, pages should be imposed so that when the book is folded, the edges will not show inequality of the margin of particular pages or sections.

Paper.

With regard to the quality of the paper used in modern books found in public libraries, after the examination of a large number of books the papers have been roughly classified into four types, as follows:—(1) Papers of the light, spongy character known as antiques or feather-weight papers; (2) Printing papers with a moderate finish, or surface, containing not more than 15 per cent. mineral matter; (3) Highly surfaced printing papers containing 25 to 30 per cent. mineral matter; (4) The so-called "art" papers which consist of papers surfaced on both sides with mineral matter. Papers in classes 1 and 4 have little or no merit from the point of view of durability, but are employed to a very large extent in modern books. The first-named should not be used, suggests the report, in ordinary library books, and the latter should be limited to the production of the illustrations required. Heavily loaded super-calendered printing papers are used as a sort of compromise between art paper and an ordinary calendered printing paper, and make books heavy and unable to resist the wear and tear of a public library. Papers belonging to class 2 would be acceptable and certainly more suitable for the production of books calculated to last a reasonable time and to resist a normal amount of wear. The report then describes the general character of a paper suitable for ordinary purposes.



Printing.

In the printing of books, the report recommends the general adoption of the revived Old Style, and the more old-faced character for volumes of an antiquarian nature. The size of type should be chosen as far as possible according to the dimensions of the volume to be printed, and an average is given. With regard to spacing of lines, a medium degree of spacing should as a general rule be adopted. Leading when the lines are long or the fount used is small is recommended as assisting the eye of the reader, but on the score both of legibility that economy it is better to employ a large fount of type either set solid or with a medium lead. Headlines should be sufficiently large and distinct, without overtopping the page, so as to show the contents at a glance. Roman capitals of the body type, or roman lower-case of one size, or preferably two sizes, larger of the same series of type is advised. Graduation of the surrounding margin is recommended, so that when the book is open the two pages may show a pleasing proportion. As to the title-page, simplicity is advocated, both as to limited wording and one character of type face in as few sizes as possible. In the matter of illustrations, it is recommended that line blocks should be designed with a regard to the type to be employed, or the type should be selected in keeping with the artist's work; whereas half-tone blocks should if possible be grouped into full-page plates and arranged to fall at the end of the volume.

Dealing with book illustration, the report briefly describes the characteristic features of the various processes, and points out the paper most suitable to each. The recommendations as to binding are dealt with in our Bookbinding Section, and this completes a very interesting and useful little compilation which should be read by all engaged in the production of books.

ACCORDING to *Kemp's Mercantile Gazette*, there were two failures in the printing and stationery trades of England and Wales for the week ending Friday, September 12th, the corresponding week in 1912 also showed two.

THE New York Chapter of Pica has received the following letter from Mr. Harry A. Cochrane, of the National Printing and Allied Trades Exposition, which is to be held in the New Grand Central Palace, New York, next April:—"At this coming exposition, April 18th to 25th, 1914, we are arranging to provide your association with a booth free of charge, all fitted up with the necessary railings, posts, signs, lights, etc., for the use of your members and friends as a reception room. All that you will have to provide will be such furniture as you need and your literature. We cannot very well supply the furniture, because as a rule each committee has a different idea as to what they want, and in most instances they would rather take the furniture from their own club-rooms. It is, of course, understood that nothing can be exhibited by your members in this booth, as this would injure our chances of selling space, which, after all, is the basis on which we maintain the exposition." This offer will likely be accepted officially when the New York Chapter gathers at its first meeting in the fall. It will provide a great convenience for the great number of visiting Pica men who will undoubtedly be present at the 1914 show, which is expected to be the greatest Graphic Arts Exposition ever held.

"The Editor and Publisher."
Leading Weekly Periodical of the United States devoted to the Newspaper and Advertising Fields.
Presents the Important News of the daily and weekly publications, their editors, managers and staffs. Gives lists of new papers, new incorporations and changes in interest. Prints articles on newspaper management, the latest improvements in printing machinery and methods for increasing circulation. One of its most valuable features is the department devoted to the subject of advertising. Each week it contains "Tips for Business Managers," in which is given the names of new advertisers, lists of old firms that are making new contracts for space, and general news concerning the entire field. Some publishers have secured thousands of dollars worth of advertising through the information thus furnished.

THE PRINTING ART.

An Illustrated Monthly Magazine of the Art of Printing and of the Allied Arts Issued by The University Press, Cambridge, Mass., U.S.A.

THE PRINTING ART is the most beautifully printed periodical in America. It is entirely different from the other printing magazines, in that it does not go into the technical details of the crafts it represents, but gives **actual examples** which are of service to the publisher, printer, advertising man and book lover. It is full of suggestion for Typography, design, colour of ink and selection of paper stock, and will be found invaluable by those desiring to improve the quality of their work. PRICE 21/- per year. Single copy 2/-. Send this amount for sample copy to—

23. ABCHURCH LANE, LOMBARD ST., E.C

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.
It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe $5.00 per year; Canada $3.00. 64 pages weekly.

The New Typographical Display

AT THE

BRITISH MUSEUM.

During the last few weeks, the permanent Exhibition of Printed Books in the King's Library at the British Museum has been completely rearranged, the result being a much more instructive display than before, it being now of very distinct educational value to all those interested in the rise and progress of the art of Printing. Several exhibits of small importance in this connection have been removed, and their place taken by a number of others of greater interest to students. Some of the most prominent of these changes are mentioned below.

Only three of the earliest Block Books are now shown, the later ones, from 1470 onwards, being regarded rather as curiosities than as links in the chain of events that led to the invention of printing. Amongst the early-printed Mainz books, Fust and Schoeffer's "Durandus" of 1459, the first book printed in small type, is now included, as well as a vellum leaf from an edition of a "Donatus," probably printed by Gutenberg about 1450, which is most likely the earliest piece of European typography in the Museum. Included among works of later date is a copy of the "Alcinous" of 1472, Koberger's first dated book, and a very fine example of that Nuremberg printer's work. Close by is a beautiful copy, printed on vellum, of Ptolemy's "Cosmographia," printed by Holle at Ulm in 1482, one of the finest books produced in Germany during the fifteenth century.

The case containing Spanish-printed books now includes a copy of the New Testament in the "Complutensian Polyglot" edition, printed at Alcula in 1514, under the auspices of Cardinal Ximenes; as worthy companions to it, the "Gospels" volume from the Plantin Polyglot Bible of 1571—perhaps the finest of that famous typographer's work—the Quincuplex Psalter printed by the first Henri Estienne at Paris in 1509; and the first edition of Erasmus' New Testament in Greek (Basle, 1516) are likewise exhibited near by. The Estienne family are further represented by Robert's fine "Virgil" of 1533, and his Greek New Testament of 1550. A couple of books by Simon de Colines, another well-known Parisian printer, dating from 1536 and 1544, are also shown.

The exhibit of English printed books has been considerably improved. It now includes a copy of Gryphus' "Oratio," printed by Pynson in 1509, which is the first book produced in this country with roman type. Later works newly brought in comprise Tonson's edition of Addison, 1721, a typical piece of good class early eighteenth century English printing; Pine's celebrated edition of Horace, 1733, all the pages of which, text and illustrations, were engraved on copper; the Glasgow Foulis Press edition of Gray's Poems, 1768 (apparently included by mistake amongst specimens of Later *English* Printing); Bulmer's equally well printed Shakespeare Press edition of Goldsmith and Parnell's Poems, 1795, and the Chiswick Press "Aeschylus" in Greek, produced for the late Robert Proctor in 1904. The former group of five Kelmscott Press books has now been reduced to one, the "Godfrey of Boulogne," 1893, and Fell's and Caslon's type specimens have been omitted altogether. Though the Museum is still without an example of the work of the first Scottish printers, a Sarum service book produced for one of them (A. Millar), at Rouen in 1506—the year before Scottish typography began—is shown, and bears the fine rebus device of Millar. A copy of the first Glasgow-printed book, the "Protestation" of 1638, is also now on view.

Case Xb houses an entirely new series, *i.e.*, examples of "English Provincial Printing, 1478–1585." Two or three books produced by the Oxford and St. Albans Presses have been shown before, but now we have specimens of the work of the early sixteenth century printing establishments at York, Cambridge, Ipswich, Worcester, and Canterbury, as well as one from the second St. Albans Press, 1534.

Another new series has also been inaugurated, *i.e.*, Early Book Illustrations, and fills four cases, occupied respectively by pictorial German, Italian, French, and English books. Looking at the former, the writer experienced something of a shock on noticing that the famous "Nuremberg Chronicle" had been turned out, though no one who understands the true value of the once much-praised woodcuts it contains will be surprised at this. For the rest, a good selection has generally been made.

Owing to this extensive re-arrangement the old "Guide to the Exhibition in the King's Library" is now out of date, and therefore a new (1913) edition has just been published by the trustees, at the former price of sixpence. It too has been considerably improved and increased in bulk, containing 180-pp. in place of the 149 of the old guide. The "Introduction" remains practically unaltered, save that we are now told that the Library of Printed Books consists of "over three million volumes," instead of "over two million" as in the last edition. The prefaces introducing the visitor to the exhibits in each successive case have been in most instances rewritten, and considerably lengthened and improved in the process. The latest theories and discoveries with regard to the invention and early progress of typography have all been drawn upon to furnish the new material so that the "Guide" is now not merely a catalogue of exhibits, but a comprehensive and trustworthy account of the rise and development of the arts of Printing and book illustration both on the Continent and in the British Isles. In this, as well as in the new arrangement of the contents of the cases, we think we can recognise the influence of Mr. Alfred W. Pollard, a well-known member of the staff of the Printed Books Department, and an enthusiastic and indefatigable student of Incunabula and the history of Typography. Many fresh illustrations have been prepared for this new edition of the "Guide," including several taken from items enumerated above. On the whole, the authorities at the Museum are to be congratulated on the excellent manner in which they have carried out their task, and when we add that the services of a competent guide to the Printed Book Exhibits are available to the public, free of charge, at certain times, we feel that nothing reasonable has been left undone by them to provide instruction in the History of the Art Preservative.

The Office Boy on Salesmen.

The boy was telling the new kid "all about it." "Salesmen! Why, I could do the job myself, easy! Take the Lino. men for instance. They *have* got a creamy soft job! 'Cos why? 'Cos Linos. don't want no selling—they sell theirselves. All as they have to do is to call on a man what prints, send in their card to show as how they're from us, and in a jiffy they are busy booking orders for what is called two-revolution Linos. It's as easy as shelling peas! A bloke came in the other day: said he wanted to buy a Lino. I was a bit fresh then, like as you might be now. So I says would he take it with him or should we send it home. He was a funny one, he was. Said he fancied a multiplied magazine one, or somefink like that. As a matter of fact I didn't tumble to his lead, so I laid low a bit and just suggested casual like that if he fancied one from the window he could have it. He looked sort of funny at me; but I would have taken his order if a sales fellow hadn't swanked along and took him over. That fellow talked a lot of rot about pikers and thousands of hens, and wasted no end of time afore he closed the deal. I suppose they have to make a show of some sort else they would blow the gaff what an easy thing their job is! Hullo, there's my bell again. So long; tell you more some other time."—*Linotype Notes.*

"WHAT wages do you pay here?" asked the tramp printer as he put his head through the window of a country printing office. "I will pay you whatever you are worth," was the quick reply of the overworked proprietor. "I've never worked for as little as that," said the tramp. "Good day."

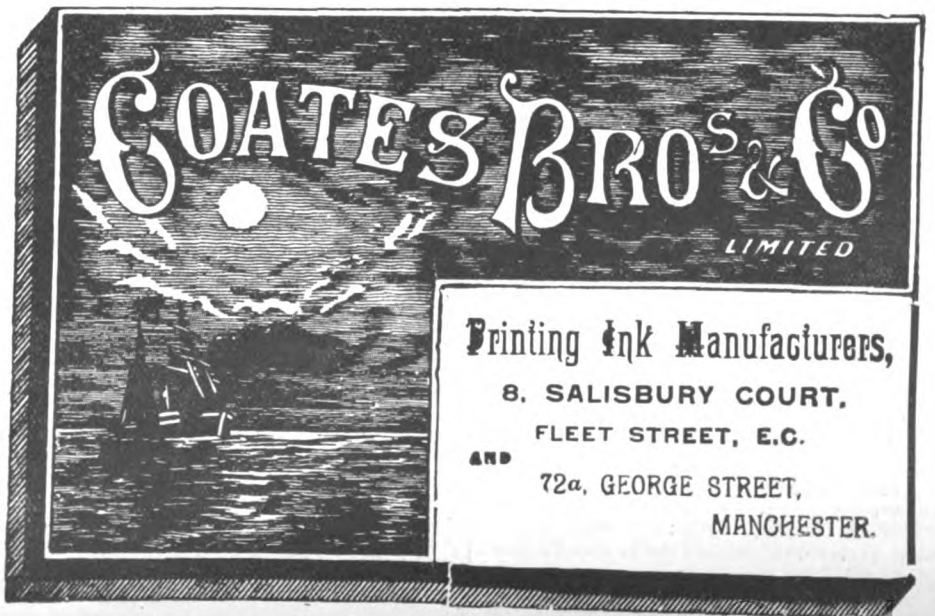
THE commercial value of good taste, to buyers of printing, is marked by the rising demand for advertising managers, keen in their sense of appropriateness and expert in their knowledge of the harmonies of subject-matter with paper, type, form and colour.



¶ Of two catalogues, the same in purpose, but differing in quality, the one built on the laws of good taste will win by a margin big and decisive. Tests have proved this—and the truth of it is spreading.

¶ With this recognition has come an insistent call for men of good taste, and with the vision of its possibilities, who can plan, lay out, and put through the printing campaigns of high-grade houses.

¶ To such houses and to such men *The Graphic Arts* comes as a magazine full of suggestions, and educational features that stimulate good taste in all the factors that make for good printing.

¶ Send 30 cents for a sample copy.

THE GRAPHIC ARTS, 530, ATLANTIC AVENUE, BOSTON, U.S.A.

Trade Notes.

THE index and title-page to Volume seventy-two of the *British and Colonial Printer and Stationer* is now ready, and it being contrary to postal regulations to enclose it as a supplement to our usual weekly issue, a copy will be sent to any reader desiring it on receipt of a penny stamp.

THE death is announced from Budapest of Professor Vambéry, the famous Orientalist, at the age of 81 years. His works mostly dealt with Asia and its future.

OUR readers may be interested to know that Messrs. Linotype and Machinery Limited have an L. and M. Rotary (quad-demy) at work printing sheets of music on the stand of Messrs. Lowe and Brydone (Park-street, Camden Town, N.W.), at the Music Exhibition now being held at Olympia.

THE meeting of the Costing Committee with the members of the Institute of British Printers at St. Bride Institute on Wednesday next, should be of a specially interesting character, and will be the last opportunity for some time of hearing Mr. Howard Hazell speak on this subject which he has mastered so thoroughly, as he sails for the States early in October.

THE Printers' Managers and Overseers Association at Manchester have arranged for a special meeting, to discuss the Cost-Finding System with members of the Costing Committee. Mr. J. E. T. Allen, Mr. R. A. Austen-Leigh and Mr. A. E. Goodwin are taking part. The meeting is to be held at the Victoria Hotel, on Saturday, September 27th. At the Liverpool Centre a meeting is to take place on October 4th, when Mr. Harry Cooke, Leeds, and Mr. Cecil Johnson, of York, will represent the Committee.

THE forty-first half-yearly report of the Leicester Co-operative Printing Society, Ltd., shows a trade of £8,781, an increase of £1,207 over the corresponding period of 1912. There was a balance profit of £204 after providing for interest on share and loan capital £315, and depreciating fixed stock and buildings by £426. The workers had been given a bonus of 4d. in the £ on wages. Land is being taken for extensions, and the cardboard box factory removed to a separate factory in Belgrave-gate, Leicester.

THE *Daily Herald* of Monday states that in the Bank of England "there are rumours of strikes and other signs of war in that seat of capitalism. The Governors of the Bank are still untouched by the wave of discontent. . . . . But the people who do the hard work, the printers of banknotes, and so on, are being driven harder and harder, in the interests of economy, until the "speeding-up" is bringing them to the breaking point. A strike to a finish in the very midst of the gold sacks will be an invigorating pleasure."

THE first issue of the *Jewish Times* appeared on Sunday last. Mr. Morris Meyer, the editor, sets forth his programme in these words:—"To improve the cultural and intellectual standard of the Jewish masses, acquainting them with the most interesting topics and questions of the day as affecting their own people. To improve the economic standard of Jewish life, especially among the working classes. To inform Jews of the laws and institutions of this country and to publish good Jewish literature." The *Jewish Times* is sold at ½d., and consists of four large pages, 28 columns. No sporting news is given, but space is devoted to chess and dominoes and draughts.

NEWCASTLE-ON-TYNE.—Arising out of the efforts of the committee of the Newcastle Typographia and Guild of Allied Trades to have technical classes established for apprentices and journeymen, a meeting of those concerned was held last week, at the Rutherford College, Newcastle. Mr. C. F. Bowes, who presided, dwelt at some length upon the desirability of technical training. To encourage the apprentices to give some time to studying the technicalities of their trade, he said the master printers had passed a resolution recommending all members of the Masters' Association to give extra money to their apprentices attending the technical classes and passing the examinations. Mr. C. L. Eclair-Heath, principal of Rutherford College, said that as the outcome of a lengthy consideration of the matter with the prospective students, he would arrange for a two nights per week course during the winter months, at the Rutherford College, to consist of mathematics, mensuration, hand sketching, and English typography.

TENDERS ACCEPTED. — For printing and binding burgess lists, etc., for the Corporation of Swansea; C. Wilkins and Co., S. Williams, J. R. Davies, Thomas and Parry, Ltd., Albert Davies, Albert E. Wright, E. R. Serle, J. Thomas and Sons, Ltd., S. Stephens and Swansea Printers, Ltd. (all of Swansea).—For the supply of printing and stationery to the Romford Union; Messrs. Wilson and Whitworth, Ltd.—For the supply of printing to the Whitechapel Board of Guardians; Mr. G. F. Furby.

TENDERS WANTED.—By the London County Council for the supply of exercise books and papers, drawing books, school stationery, etc.; forms of tender from the Clerk to the Council, County Hall, Spring-gardens, S.W. —For the supply of books, printing and stationery for the Town Council of Stoke-on-Trent; forms and condition of tender from the Borough treasurer's office, Town Hall, Stoke-on-Trent.—For the supply of account books, bookbinding, printing, stationery, etc., for a period of five years, for the Manchester Corporation; forms of tender from Mr. J. Robinson, stationery manager, Town Hall, Manchester.

New Companies.

KING PUBLICITY, LTD.—Registered on September 11th, with a capital of £3,000, in 2,794 ordinary shares of £1 each and 4,120 founders' shares of 1s. each, to acquire any advertising businesses and advertising and other appliances and machinery of all kinds, and particularly cinematograph and moving picture business, whether for the purpose of advertising or otherwise, etc. The subscribers are A. Sanker and S. G. Ballard. Private company. Table "A" mainly applies.

G. Mann. The subscribers are A. E. Chatterson and J. G. Mann. Private company. The number of directors is not to be less than two nor more than seven; the first are A. E. Chatterson and J. G. Mann. Qualification, one share. Remuneration as fixed by the company.

JOHN WILLIAMS AND SONS (MERTHYR), LTD. —Registered on September 5th, with a capital of £2,500, in £1 shares, to take over the business carried on by Mrs. C. Williams, administratrix of the late D. D. Williams at Merthyr Tydfil, Glamorganshire, as "Joseph Williams and Sons," and to carry on the business of printers, publishers, booksellers, stationers, newspaper proprietors, colporteurs, etc. The subscribers are Rev. J. Jones, D. Bowen, W. Thomas, E. Thomas, S. Sandbrook, J. M. Berry and B. M. Thomas. Minimum cash subscription, £2,000. The number of directors is not to be less than five nor more than nine; the first are Rev. J. Jones, B. Bowen, W. Thomas, E. Thomas, S. Sandbrook, J. M. Berry and B. M. Thomas. Qualification, £100. Remuneration as fixed by the company.

"MACCLESFIELD TIMES," LTD.—Registered on September 5th, with a capital of £10,000, in £1 shares, to adopt an agreement with J. Heath, D. Heath, Walter Heath, G. Heath, William Heath and H. Heath, for the acquisition of the business of newspaper proprietors and publishers and the copyrights connected therewith carried on by them at Macclesfield. The subscribers are C. E. Churchill and A. J. Hill. Private company. The number of directors is not to be less than two nor more than eight; the first are W. B. Brocklehurst, M.P., P. M. Oliver, H. W. Whiston, W. Frost, T. H. Hamilton and R. R. Brown. Qualification, 400 shares. Registered office, 3, King Edward-street, Macclesfield.

J. B. HALL AND CO. (HANLEY). LTD.—Registered on September 5th, with a capital of £500, in £1 shares, to take over the business of a letterpress printer carried on by J. B. Hall at Waterloo-road, Burslem, Stoke-on-Trent The subscribers are A. Barley, T. Curwen, H. Beech, G. Stanway, W. Smith, W. E. Bourne and G. Hargreaves. Private company. The first directors are J. B. Hall (managing and permanent director) and one other to be appointed by the company. Qualification, 25 shares.

H. AND C. GRAHAM, LTD.—Registered with a capital of £5,000, in £1 shares, to take over the business of printers, lithographers and engravers carried on at Denmark Works, 42, Denmark-hill, S.E., as "Weller and Graham, Ltd." The subscribers are G. E. Harding and A. S. Hollinson. Private company. The number of directors is not to be less than two nor more than five. The first are J. Graham, S. H. Graham, C. A. Graham and E. J. Brewer.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help and an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Have you treated yourself to the latest edition of Mr. C. T. Jacobi's book "Some Notes on Books and Printing?" My cloth boards book, demy 8vo., sells at 6s. net, or, rather, it does not sell. It stops on my shelves, if you please. Don't even ask me to lend it you.

o o o

Mr. Jacobi is a past master in the production of books about printing. He incarnates in himself something of old Dibdin and something of the late William Blades; but the man whom he chiefly embodies is Charles T. Jacobi himself. and that is more than we can always affirm about anyone.

o o o

He wrote "Printing," a practical treatise on typography as applied more particularly to the printing of books; and he gave with this nearly two hundred illustrations and a glossarial index of technical terms and phrases. This has reached its fifth revised edition.

o o o

He wrote "The Printer's Handbook of Trade Recipes, Hints and Suggestions relating to Letterpress and Lithographic Printing, Bookbinding, Stationery, Engraving," and things related thereto. (5s. net.)

o o o

"The Printer's Vocabulary" (3s. 6d.) was another thing he gave us; but in case anyone should be pricking up his ears in alarm, I hasten to say that the two thousand "terms, phrases, abbreviations, and other expressions" are of a technical sort. They are not explosives.

o o o

They don't come into that category of language as to which the cabman said to the old lady who demanded, "Where did you learn such language?" "Yer carn't learn it, mum. No use yer trying. It's a gift."

o o o

"Printing" was a small post 8vo.; the other two were crown 8vo.; and he came out with a little foolscap 8vo., at what might be called the crown folio price of 2s. 6d. This fourth work was "On the Making and Issuing of Books."

o o o

That, alas, like the "Printer's Vocabulary," is out of print.

o o o

Another of his productions was "The Printing of Modern Books," a paper read before the Bibliographical Society; a post 8vo., sewed. This was reprinted for presentation.

o o o

"Gesta Typographica, or a Medley for Printers and Others," is a foolscap 8vo.; rubricated throughout; it sells at 3s. 6d.

TRADE PRINTING—Book, Magazine, etc. Monotype and Linotype Setting. Best work. Est. 1881. BIRDSALL & Co., Electric Printeries, Stanningley, Leeds. Half-tone and Tri-colour Printing a speciality.

Digitized by Google

An imperial 16mo., sewed, and selling at 1s., embodies "A few suggestions of Plain Letterings for Artists and Others." It furnishes some type models of capital letters adapted for designers.

o o o

And, of course, he has produced the valuable work first mentioned, "Some Notes on Books and Printing, a Guide for Authors, Publishers and Others. This work is an amplification of his "On the Making and Issuing of Books." All that are not "o.p." are obtainable from the Chiswick Press, Took's-court, W.C.

o o o

Don't tell any system-mad man whom you may run against about the different formats he has given to his publications.

o o o

He will have it that everything Mr. Jacobi or anyone else has ever written should have been printed in 7 by 4 or 9 by 6 or some other size taking his fancy. "They would have ranged up so conveniently then upon your shelves."

o o o

There is no converting the system-mad man and there is no converting Mr. Jacobi either. One of the first things he has to tell you is that books are not just like other books as peas in a pod are said quite wrongly to resemble other peas.

o o o

A book has as entity of its own. As he writes:—

o o o

"A volume devoid of all decoration may be made quite an artistic piece of work if a discriminating care is bestowed on all the different points that go to the making of a well-designed book.

o o o

"The precise choice of a suitable fount of type of the right size should be largely determined by the nature of the work, the size of the page, and the desired length of the volume."

o o o

The very first paragraphs of the book have an alluring complexity and withal simplicity. No words are wasted; everything helps the reader. I am inclined to say "helps the reader be he who and what he may."

o o o

I take it the man or woman who has chiefly been kept in mind is the literary worker, whose task may be greatly facilitated and certainly may be made much more interesting by his or her possessing some bowing acquaintance with the technical conditions of publishing what that worker has written for the world.

Municipal School of Technology.

Printing Craft Classes.

The work of this fine school, whose avowed object is "to produce men of character, wide knowledge and practical experience, and so to foster the development of the industrial arts," includes, in addition to the chemistry of paper manufacture, evening and part time (apprentices' day) classes in photography and the printing crafts. The former embraces pure photography, photographic print making, negative making, retouching of negatives, industrial photography, photo-mechanical processes, line engraving, process negative making, half-tone block making, half-tone and colour block making; the latter includes practical composition, typography, estimating, the linotype machine, machine and press-work, lithography, lithographic printing, and bookbinding. In addition to the part-time classes, this department includes day classes in photography, photo-mechanical processes, colour and tri-colour blockmaking.

It may be noted that the fourth year course in typography includes lectures on costing and estimating, and the syllabus of these comprise: "Analysis of cost of production in composing and press-rooms, estimating for and casting-up work, selection of paper for various classes of work, average time value of composition and press-work, prices of process blocks, warehouse work, practical estimating." There is a similar syllabus in the third year course in machine and press-work.

In addition to the above-named classes there is a class in typography (composition) intended primarily for compositors engaged on night duty, another estimating class to meet the needs of estimate and order clerks, overseers, buyers and warehousemen, and a class in the mechanism of the linotype machine, which aims at giving operators a practical knowledge of the construction of the machine, so as to enable them fully to supervise linotypes placed under their charge.

The part-time (evening and apprentices' day) courses will begin on Monday, 22nd inst. The director of the photography and printing crafts department is Mr. Charles W. Gamble, M.Sc. Tech. (Manchester).

Late Bookbinding Notes.

Employment in the bookbinding trades last month is reported to have been good, and better than in July, or in August last year, except at Manchester and Dublin, where a decline was reported, and work was consequently slack. In London, out of a total of 3,352 Trade Unionists, only 2·6 were unemployed at the end of last month, as compared with 3·2 in July, and 4·3 in August last year. In the Provinces the percentage was slightly higher, viz. 3·0, against 3·2 in July, and 2·5 in August, 1912. With fancy and morocco leather finishers in London employment continued bad. With other fancy leather workers it was generally fair, and slightly better than a month ago, though at Manchester a slight decline was reported. In Germany, during July, a slight decline in employment in the bookbinding trade was reported. In Norway, however, there was no change.

In addition to the classes for instruction in bookbinding which are held at the well-known Technical Institutes in London and the larger Provincial towns, and have been referred to in previous bookbinding numbers of this journal, a class in Bookbinding is held on Tuesday evenings, from 7.15 to 9.15, at the Technical School, Batley. One in Forwarding has been formed at the City of Dublin Book Producing Schools in Bolton-street, and meets on Monday and Wednesday evenings, from 7.30 to 9.35. The Syllabus is on the lines of the programme arranged by the City and Guilds of London Institute, and a suitable equipment for practical work has been provided. The fee is 5s. for the Session. At the Central School of Art in Margaret-street, Birmingham, the Bookbinding Class, which is in charge of Mr. Garrett, meets on the evenings of Monday to Thursday each week, inclusive, from 7 to 9. The fee, in the case of students under 18, is 5s. per term, and for others 7s. 6d. The School year consists of two terms.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

A Printer's Printing.

THE old saying about the smith's horse being often the worst shod might be taken to heart by the great majority of printers when they take a look at their own printed work in the form of letter-heads, invoice and account forms and general office stationery, of which a considerable assortment is required. There is here abundant opportunity and scope for the display of taste and good workmanship, and that it would be profitable there can be little doubt, as the average customer, when he sees a bit of fine printing in the form of a letter-head, circular, or other commercial form, often feels prompted to get something in the same style for his own use. We have before us as we write a few examples of printers' printing, that is printing for their own use, and some of the specimens would disgrace the business of a costermonger. Bad display and ugly types printed in a slipshod manner on poor paper is not the way to give customers a good impression of one's abilities in turning out good work, and sad to relate many of the worst samples emanate from London offices, where, situated as they are in the very heart of things, there is but little excuse for a display of bad work, all materials being easily procurable. It is often a different matter in the country office that is far from the sources of supply and where the plant offers but little variety, and yet some of the best specimens of printed matter that reaches us in the form of printers' stationery is produced in these provincial workshops. It is a comparatively easy matter in these days to turn out tastefully printed stationery. Many beautiful designs are offered for printing in plain or coloured inks for the ornamentation of letter-heads, cards, circulars, etc., and many of these are extremely artistic and effective, while their cost does not exceed that of much poorer material. The papers used, too, should be of a good quality, and there are plenty of excellent surfaces to be had from the paper-makers, who vie with each other as to who will produce the most excellent makes. The printer is known by his work, and therefore let him use the best of paper and the highest class of printing that his establishment can produce for his own use, and the result of such advertisement should lead to profitable business.

Printers' Managers and Overseers ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

The opening general meeting for the winter session was held at the Crown Hotel, Booth-street, Manchester, on Saturday last, when President Thos. Kirkwood occupied the chair.

After the minutes of the July meeting had been read and confirmed, the hon. secretary read correspondence from the Municipal School of Technology on the facilities placed at the disposal of the students, and preliminary arrangements of the special general meeting to be held at the Victoria Hotel, on the 27th inst., under the auspices of the Federation of Master Printers; and also, the Council's recommendations for the meeting of representatives of the Letterpress and Lithographic Unions on the question of "Trade Customs."

Mr. S. A. Moorby, overseer, composing and letterpress departments, *Staffordshire Sentinel*, Hanley, was duly admitted to membership.

Mr. George E. Shirra resigning as per custom, Mr. W. E. Dalby was elected as co-auditor with Mr. George E. Shearsmith, on the motion of Mr. McVay, seconded by Mr. J. Albinson.

There being no further business the members and their good ladies settled down to a musical evening under the direction of Mr. Wm. Teer, Mus.Doc.

PROGRAMME.

Pianoforte Solo		Mr. GEO. KERRIDGE.
Song	The Sargeant of the Line	Mr. MARSHALL.
Song	The Valley of Laughter	Miss CRICK.
Humorous Song	How We Played Julius Cæsar	Mr. CAREFULL.
Song	The Shipwreck	Mr. DAVIS.
Song	Flight of Ages	Miss HARWOOD.
Elocutionist	Lasca: An Old Cowboy's Story	Mr. STANLEY HARROWER.
Song	Gone to Buxton on the 10.30	Miss CRICK.
Song	The Veteran's Song	Mr. MARSHALL.
Song	Tit for Tat	Miss HARWOOD.
Elocutionist	Musical Monologue—Baby Bill	Mr. HARROWER.
Humorous Song	Travesty on the Village Blacksmith	Mr. STANLEY CAREFULL.
Song	He's Been a Long Time Gone for the Wood	Mr. DAVIS.
Song	Let's Make a Night of it To-night	Mr. GEO. KERRIDGE.
Song	Briary Villas	Mr. STANLEY HARROWER.
Song	I Wish You Belonged to Me	Mr. G. KERRIDGE.

GOD SAVE THE KING.

Mr. Edward McVay, when moving a vote of thanks, spoke strongly in favour of technical education for the person who wished to excel in business or profession. The artistes that evening had excelled themselves, and if they had attempted to stand up before such a critical audience without having been trained he was sure all would have been disappointed. Everyone who undertook singing, pianoforte playing, elocution, or other entertaining subjects had to devote many hours in training so that they might become as nearly perfect as

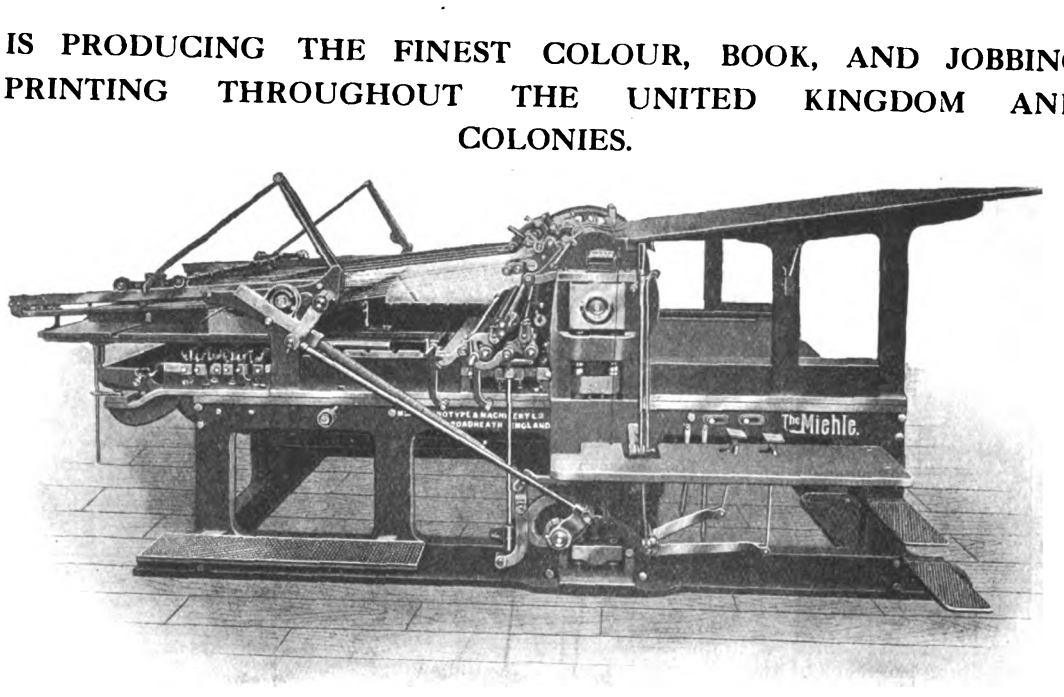
Digitized by Google

human powers would allow, and if those who were connected with the printing and allied trades would give up a few of their leisure hours for technical training they would, later in life, reap the benefit of so doing. He knew that the members of the P. M. and O. A. took a great interest in the Municipal School of Technology, and he would press upon them to take still greater interest in its work. By the syllabuses that they had received that week they would find that great strides had been made over past years' experiences, and the student for the session 1913-14 would find very little to complain of. Every manager and overseer might enquire of his apprentices or those under his charge whether or not they intended joining the trade classes, and if so willing, they should endeavour to see that no obstacle, such as overtime, would be placed in their way on class night. Mr. Teer and Mrs. Teer were technical enthusiasts, otherwise they would not be able to bring forward such clever artistes as they had done that evening. Mr. Carefull had excellently combined acting with his action song, and Mr. Stanley Harrower's elocutionary powers were well represented in his grave and gay stories. At such gatherings as those it was not always wise to particularise certain individuals, yet on that occasion it was necessary to do so in order that those present might see the advantages to be derived from technical instruction and training.

Mr. Thos. Rignall heartily endorsed Mr. McVay's remarks, and added that without a pianist there would have been a blank in the evening's entertainment, and when such a gentleman as Mr. Geo. Kerridge came amongst them he delighted the audience and helped the artistes in their work of love.

Mr. Fred Burnett (vice-president), and Mr. Thos. Kirkwood (president), added a few words of praise.

When Mr. Wm. Teer rose to reply on behalf of the artistes the company also stood up and sang, "For he's a jolly good fellow," and this so effectively acted upon Mr. Teer's good nature that all he could say was hearty thanks and willingness to again oblige the Manchester Centre.



"God Save the King" closed a successful evening.

WEE MACGREGOR.

QUICK DRYING INKS.—Sunlight is a powerful drier of printing inks, as may easily be surmised, but how many printers realise the fact? Remember then, that inks dry more quickly by day than at night and that the autocatalisation of linseed oil is considerably hastened by sunlight. So inks to dry quickly should not only contain drier and be exposed to heat as in a drying-room, but should also be exposed to full sunlight, supposing that the ink is fairly permanent. Speaking of drying-rooms brings to mind one mistake some users of them make—the lack of provision for free ventilation. The air should not only be hot but frequently changed, and also the room should not be dark, but so windowed as to receive as much light as possible.

The Miehle
TRADE MARK

IS PRODUCING THE FINEST COLOUR, BOOK, AND JOBBING PRINTING THROUGHOUT THE UNITED KINGDOM AND COLONIES.

In half-tone work, the Miehle reproduces every gradation of tone contained in the blocks—from soft high-lights to heavy solids.

Its reputation for perfect colour printing (which includes efficient rolling power and the features which make for dead register) is embraced by the standard phrase "Miehle Quality," which means essentially Miehle printing.

The Miehle is fitted with two deliveries, which at will deliver the product printed side up or printed side down.

The inking equipment provided on this press consists of sixteen rollers and a large ink table; of these, four are forme rollers with reciprocating riders and rollers over them (nine in all, arranged in pyramid form). The other seven rollers distribute the ink on the table before it reaches the forme rollers.

This press is built in six sizes; the smallest size takes a sheet up to 26-in. by 39½-in. and the largest size 46-in. by 66-in.

Miehle presses are also supplied in tandem, so arranged that the units may be disconnected and used as single machines.

The Miehle is Manufactured and Sold by

LINOTYPE AND MACHINERY LIMITED

who have the sole and exclusive right to manufacture and sell The Miehle in the United Kingdom and Colonies (except Canada).

Head Office: 188 & 189, Fleet Street, London, E.C.

DUBLIN: 17, Crow Street. MANCHESTER: County Buildings, 4, Cannon Street. GLASGOW: 197, Howard Street.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Sept. 17th. 1913.

ALTHOUGH the demand for money has shown some easement during the week and the India Council has called in a fair amount, the supply of cash in the money market is still superabundant, and loan rates are no firmer. The Continental demand for gold and the exports to Egypt have made the discount market firmer. Bullion movements for the week have resulted in a net efflux to date of £580,000. Stock markets are adversely affected by the labour developments, speculation being discouraged and outside business checked, the Home Railways section particularly suffering. Consols, however, are firm, and quotations are higher than a week ago, at 73 11/16 to 73 13/16 for money, and 73 3/4 to 73 7/8 for the account.

The miscellaneous industrial market remains quiet, but firm. In the section relating to paper and print Amalgamated Press Ord. have risen 1/2 to 7 15/16—7 15/16; Associated Newspapers have gained 6d. to 23s. 6d.—24s. 6d., and Mansell, Hunt, Catty and Co. Ord. are up 1/8 to 1 7/8—2 3/8, while *Illustrated London News* Deb. are down 1 to 62—67, and International Linotype have fallen 1 to 72—77. Business has been done during the past seven days in Amalgamated Press Pref. at 21s. 9d.; in Associated Newspapers Pref. at 19s. 6d.; in *Financial News* Pref. at 15s. 6d.; in Ilford Ord. at 14s. 6d., 14s. 3d. and 13s. 9d.; in *Illustrated London News* and *Sketch* Ord. at acc. 3s. 6d. and 3s. 6d., and in Deb. at 62 1/2; in International Linotype at 73 1/4 and 75 1/2; in Linotype and Machinery A Deb. at 53 1/4, and in the B Deb. at 38 1/4 and 38; in Edward Lloyd Pref. at 21s. 10 1/2d.; in Mansell, Hunt, Catty and Co. Ord. at 43s. 1 1/2d.; in C. Arthur Pearson Pref. at 7 3/8s. 9d.; in Spicer Bros. Pref. at 8 7/8; in Raphael Tuck and Sons Pref. at 99s. 4 1/2d.; and in Weldons Pref. at 20s. 6d.

DIVIDENDS AND REPORTS.

EDWARD LLOYD.—The directors have declared an interim dividend on the ordinary shares of 1s. per share, free of income-tax, placing £20,000 to reserve.

C. DAVIDSON AND SONS, LTD.—The directors of Messrs. C. Davidson and Sons, Ltd., paper manufacturers, Aberdeen, recommend writing off for depreciation the sum of £1,000, and the paying of a dividend for the year of 1 1/4 per cent. on a capital of £88,000.

WINTERBOTTOM BOOK CLOTH, MANCHESTER.—Interim dividend of 10s. per share, free of income-tax, on the ordinary £10 shares—the same as last year.

MILLAR AND LANG.—The directors of Millar and Lang, Ltd., intimate that the dividend on the preference shares due at this time will not be paid. No dividend was paid on the preference shares in the previous half-year. For the financial year 1911-12 the preference share dividend was paid, but no dividend on the ordinary shares.

AIRD AND COGHILL.—The annual meeting was held in Glasgow recently. Mr. William C. Coghill presided, and in submitting the report stated that the accounts, after meeting the full 5 1/2 per cent. on preference shares and placing a further sum of £800 to the reserve, permitted of a dividend of 5 1/2 per cent on the ordinary shares, carrying forward £406. The report was adopted.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

E. AND F. N. SPON, LTD.—Debenture dated September 2nd, 1913, to secure £2,000, charged on leasehold premises at 57, Haymarket, S.W., and the company's undertaking and property, present and future, including uncalled capital. Holders—Century Insurance Co., Ltd., 18, Charlotte-square, Edinburgh.

JOSEPH BATCHELOR AND SONS, LTD.—Particulars of £1,000 debentures, created August 28th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908; the whole amount being now issued. Property charged—the company's undertaking and property, present and future. No trustees.

W. H. IRLAM AND CO., LTD.—A memorandum of satisfaction to the extent of £310 on August 30th, 1913, of debentures, dated August 15th, 1903, May 21st, 1904, October 25th, 1905, and March 31st, 1906, securing £320, has been filed.

VACUUM TRANSFER SYNDICATE, LTD.—Debenture dated September 4th, 1913, to secure £6,000, charged on the company's undertaking and property, present and future. Holders—London County and Westminster Bank, Ltd., 41, Lothbury, E.C.

COMPANY NOTICES.

RECKARD ENGRAVING PROCESS Co., Ltd.

At a meeting of the company, held at London, on August 21st, the following resolution was passed; and at a subsequent meeting on September 5th, was duly confirmed:—"That this company be wound up voluntarily, and that Henry C. Howard, 70A, Basinghall-street, E.C., be appointed liquidator." The creditors of the company are required, on or before September 22nd, to send the particulars of their debts or claims to Henry C. Howard, 70A, Basinghall-street, E.C., the liquidator of the company.

COMMERCIAL INTELLIGENCE.

THE "DAILY HERALD" PRINTING and PUBLISHING SOCIETY, Ltd.
Official Receiver's Report.

Under a compulsory winding-up order made last June against this company, described as of Victoria House, 21, Tudor-street, E.C., the report of Mr. W. J. Warley, official receiver, has been issued to the creditors and shareholders. The statement of affairs shows unsecured creditors £9,912 15s. 5d.; a partly secured creditor, £6,067, holding security valued at £85 2s. 6d.; and preferential claims, £66 0s. 3d. The assets are valued at £1,659 4s. 6d., and consist of cash, £167 19s. 1d.; goodwill and copyright, £50; stamps on unused cheques, £1 5s. 5d.; and book debts, £1,440. The estimated deficiency of assets to meet the liabilities of the company is returned at £8,319 11s. 2d., and the account with the contributories discloses a total deficiency of £24,532 5s. 2d. The failure of the company is attributed by the directors and secretary to want of capital. "Partly secured creditors £6,067" in the statement of affairs are W. V. Bowater and Sons, Ltd., for paper supplied, their security being office furniture seized in execution, which has realised £85 2s. 6d. "Unsecured creditors £9,912 15s. 5d." in the statement, are:—

W. V. Bowater and Sons, Ltd., balance of debt unsecured	£5,981 17 6
Victoria House Printing Co., Ltd., printing	3,826 15 10
Other trade creditors for goods supplied and services rendered	104 2 1
	£9,912 15 5

TELEPHONE: 2595 CENTRAL.

Robert H. Ruddock,

Auctioneer, Valuer and Fire Loss Assessor

TO THE

Printing Trades.

Valuations for Fire Insurance and other Purposes.

71, FLEET STREET, LONDON, E.C

In addition, Mr. Lansbury claims to be a creditor for about £700 advanced to the company. The preferential claims for wages (£66 0s. 3d.) have been discharged since the winding-up order was made, and the cash in hand and at bank (£167 19s. 1d.) have been brought to credit. The goodwill and copyright of the paper have been disposed of by the official receiver, with the approval of the principal creditors, for £50. Of the book debts, estimated to produce £1,440, up to the present £471 has been realised.

Mrs. S. E. GREENHALGH,
Stationer, etc.

At the Bolton Bankruptcy Court, before Mr. Arthur T. Holden, registrar, the affairs of this debtor came up for consideration. Debtor carried on business at 159, Market-street, Farnworth, and 145, Bridge-street, Bolton, as a photographer, stationer and fancy dealer, trading as Peter Greenhalgh and Sons. In her statement of affairs gross liabilities were given at £647 12s. 10d., and expected to rank at £600 8s. 1d., the assets being estimated to produce £76 7s. 1d. From this latter sum must be deducted eight creditors for distrainable rent and preferential tax and wages (per contra) £47 4s. 9d., thus leaving a deficiency of £571 4s. 11d. Debtor is a widow, and 75 years of age. Owing to illness she did not attend court, and Mr. Winder, official receiver, said he did not think there was any necessity to call Mrs. Greenhalgh. Mr. Holden stated he would consequently dispense with examination, and the proceedings closed.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

LAWFORD, P., and BILLING, P. W., trading as A. S. Wilson and Co., 25, Victoria-street, London, S.W., drawing material stationers. Debts by P. W. Billing, who will in future carry on the business under the same style. August 28th.

DISTRIBUTION OF ASSETS.

BERRYMAN, W. E., late of Holwell House, Blackheath-road, Greenwich, London, S.E., stationer and printer. Claims by October 31st, to Spencer and Arnold, 82, London-street, Greenwich, S.E., solicitors for the executors.

HILLS, D., late of 2, Bayer-street, London, E.C., fine art publisher. Claims by October 15th, to Goldberg, Barrett and Newall, 2 and 3, West-street, Finsbury-circus, E.C., solicitors for the executors.

IN THE MATTER OF A DEED OF ASSIGNMENT for the benefit of creditors, dated July 8th and executed by A. Hairby, 12, St. Bride-street, London, E.C., wholesale bookseller and stationer. Claims by October 9th, to H. J. Burgess, 14, St. Mary-axe, E.C. the trustee.

THE BANKRUPTCY ACTS, 1883 AND 1890.
RECEIVING ORDERS.

BROOKMAN, A., lately trading at 237A, Abbott-road, Poplar, London, E., newsagent, etc. Date of order, and of adjudication order, September 12th,

Digitized by Google

made on the debtor's own petition. First meeting of creditors, September 25th, noon, and public examination of debtor, October 29th, 11 a.m., both at Bankruptcy-buildings, Carey-street, W.C.

EVANS, E., 31, Colherne-road, Earl's-court, London, S.W., journalist. Date of order, and of adjudication order, September 9th, made on the debtor's own petition. First meeting of creditors, September 24th, 11 a.m., and public examination of debtor, November 6th, 11 a.m., both at Bankruptcy-buildings, Carey-street, W.C.

FIRST MEETING AND PUBLIC EXAMINATION.

ADAMS, R E., 53, Erleigh-road, Reading, stationer, etc. First meeting, September 25th, noon, at the Queen's Hotel, Reading. Examination, October 23rd, 2 p.m., at the Assize Courts, Reading.

NOTICES OF DIVIDENDS.

AINSCOUGH, J. W., Harehills-corner, Roundhay-road, Leeds, bookseller and stationer. First and final dividend of 1s. 10d., September 29th, at the official receiver's office, 24, Bond-street, Leeds.

RAWLINGS, H. W., 13, Wellington-street, Luton, stationer. First and final dividend of 2s. 6d., September 22nd, at the official receiver's offices, The Parade, Northampton.

ORDER MADE ON APPLICATION FOR DEBTOR'S DISCHARGE.

WHITE, M. R. L., 44, Bedford-row, London, W.C., lately carrying on business at 145, North-end, Croydon, publisher. Date of order, July 15th. Bankrupt discharged subject to the following condition to be fulfilled before his discharge takes effect, viz.: Bankrupt shall, before the signing of this order, consent to judgment being entered against him in the King's Bench Division of the High Court by the trustee, for the sum of £250, being part of the balance of the debts provable in the bankruptcy which is not satisfied at the date of this order, and £1 10s. costs of judgment; and that, upon the required consent being given, judgment may be entered against the bankrupt in the King's Bench Division of the High Court for the sum of £250. Note.—£250 paid to trustee in lieu of entering up judgment. Public examination concluded July 9th, 1912. The grounds named in the order for refusing an absolute order of discharge were that the bankrupt's assets are not of a value equal to 10s. in the pound on the amount of his unsecured liabilities; and that he had contracted a debt provable in the bankruptcy without having at the time of contracting it any reasonable or probable ground of expectation of being able to pay it.

The Bookbinders' Strike.

No Settlement Yet.

Since compiling the notice on this subject that appears in the Bookbinding Section of this week's issue, there have been several fresh developments. The efforts of the Union to induce Messrs. Burn's female staff to come out have proved very successful. Many of these recalcitrants have joined the Society of Printers' Warehousemen and Cutters, from which they receive special strike pay of 2s. 6d. per week, as well as 8s. 6d. from the Bookbinders Union. Efforts have also been made, but hitherto without much success, to "convert" the female staff at the Esher works. Now that there is a possibility of the autumn novels and other books being "held up" by a general strike of bookbinders, the Publishers' Association is bestirring itself. On Friday last there was a private meeting of that body at Stationers Hall, but no details of what passed were allowed to transpire. It is stated that 43 publishing houses are in the habit of patronising Messrs. Burn and Co., and thirteen of these have obeyed the Union's order to send their work elsewhere for the present. Though a continuance of the dispute will thus mean more work for the other firms in the trade, those others are naturally desirous of avoiding anything in the way of a general strike, for more reasons than one. A conference was therefore held on Tuesday between Messrs. J. B Mercer and H. Morgan, of Messrs. Burn and Co. and Mr. Ernest Straker (Straker and Sons), Mr. Robt. Leighton (Leighton, Son and Hodge), and Mr. C. Nevett, Chairman of the Bookbinding Section of the London Chamber of Commerce, in order to try and come to some amicable arrangement whereby Messrs. Burn and Co. might fall into line with the other Union houses in the trade. Nothing definite was then decided, but a further conference between representatives of employers and employed is not improbable in the near future. In the meantime, the situation is practically unchanged. Mr. S. Stubbings, secretary to the Federated Committee of the National Union of Bookbinders, states that their investigations into the conditions of labour at Esher showed that men of 23 and 24 years of age were being paid no more than 14s. weekly. "Since we commenced our agitation against this state of affairs last June," he said, "Messrs. Burn have granted a few rises of two and three shillings a week, promising further a cash Christmas box to those employees who remain faithful. While we are not pressing these to strike, there are signs of their being influenced by our efforts. Already a number have joined the union secretly and are recruiting from within. Two important points about this strike are these. First, the strike is confined to the men employed at Kirby-street, who, although they were being paid in accordance with Mr. Stewart's award of 1903, have come out as a protest against the conditions at Esher. Secondly, their attitude in the matter has the endorsement of the master bookbinders, who suffer equally with us so long as Esher remains what it is. That Messrs. Burn are aware of the strong position we hold is clear from the fact that they last week summarily dismissed 120 of their female staff, many of them with over 20 years of service, because they found them attempting to organise themselves."

Following upon this latter incident, most of the remaining workers at Kirby-street came out in sympathy. Messrs. Burn and Co. are thus reduced to working with a very limited staff of non-unionists, who mostly dine on the premises and are followed by a not exactly admiring crowd when they quit work at night. Police, pickets and strikers throng Kirby-street all day. So far, however, there has been very little actual trouble, except that at the Mansion House Police Court, a few days since, a man named Olrest was committed for trial, but allowed bail, upon a charge of using threats of intimidation against Arthur W. Jackson, an inkman in the employ of Messrs. Burn.

Interviewed by a *Daily Telegraph* representative, the manager of Messrs. Burn and Co. denied that the employees at Esher were underpaid, and added that the girls made very good wages. During the strike all the Esher employees had remained loyal, not one having responded to the overtures of the union. It is perhaps significant that such a pronounced Union organ as the *Daily Herald* admitted yesterday that several publishing firms who are supporting Burn's have cancelled their binding orders to other concerns, and transferred them to Kirby street.

The Bookbinders' Union is asking that at Esher the rate of pay for male employees shall be 33s. for a 50 hours week, as compared with the standard London rate of 35s. for 48 hours.

The Bookbinders' Section of the London Chamber of Commerce state that no extra charge is likely to be made by master bookbinders if Messrs. Burn come into line, and it would not be necessary for any member of the section to raise prices to publishers under present conditions. Consequently there is not likely to be any rise in the price of books to the public. The Union's order not to handle any work belonging to publishers who patronise Burn's has been put in full force. It is said that about 250,000 volumes are being bound every day in London just now, in anticipation of the coming autumn publishing season, so that anything in the nature of a general strike would react disastrously on the output of books, though whether, from a literary point of point, the general public would be a penny the worse for a shortage in the usual outpouring of fiction is greatly to be doubted.

St. Bride Foundation Institute.

Prize Distribution.

The prizes and certificates gained by the students of the St. Bride Foundation Printing School during the session 1912-13 were presented in the Large Hall of the Institute, on Friday evening last, Mr. I. Salmon, L.C.C., making the presentation. Mr. C. J. Drummond, J.P., occupied the chair, and was supported on the platform by Mr. I. Salmon, L.C.C., Mr. E. R. Alexander, Mr. F. Gillett, and Mr. J. R. Riddell (principal).

In some preliminary remarks, Mr. C. J. DRUMMOND, chairman of the Governors and Printing School Committee, welcomed the students on behalf of the Governors. He could not help thinking, he said, that those of them whose privilege it had been to be associated with St. Bride Foundation must feel proud of the work that was being done. The members of the Printing School Committee had had some anxious times since the last meeting. They had recognised that if the School was to maintain the position it had hitherto held it must be kept up-to-date, and that could hardly be done without a considerable expenditure of money. Their income from all sources was very meagre, and they had as much as they could do to make both ends meet. They were assisted, so far as education was concerned, by the London County Council and the Education Department, but in order to get that assistance the money had to be earned. They had during the year considered this matter very seriously, and had done something already in the direction of developing the School. One of the latest things the Governors had done was to ear-mark another room in the building for the purposes of the Printing School, and in order to do that they had had to make a sacrifice of £150 a year, the sum which that room had formerly brought in as income. He thought they would agree the Governors were endeavouring to do all in their power to develop the School. They had completed the nineteenth session, and they had 473 students in the classes, 335 of whom made the necessary 20 or more attendances, several making as many as 82. 290 sat for the City and Guilds Examinations, 206 passed, and one of their students obtained the bronze medal in the ordinary grade, composing, in the competition open to the United Kingdom and Colonies. In addition to that a student had also obtained the Company of Stationers' silver medal and a prize of two guineas. So he thought the School had something to be proud of in that direction. This made the total number of medals won by students of the School 20 in typography and 25 in lithography. Mr. Drummond then drew attention to the improvements in equipment that had been made in the School, specially mentioning the negotiations that were in progress for considerable developments in the letterpress machine department, and to the supplementing of the linotype machine—which had been most useful in enabling a number of students to take positions which under other circumstances they could not have done—by an installation of the monotype machine. In the litho department they had installed an offset press, which would very much improve the tuition hitherto received in the School, and enable a number of craftsmen in that particular branch of the industry to learn something about that machine, which they might not be able to do in the particular offices in which they worked. Then, owing to some of the classes having been larger in the past than they should be, it had been proposed to split them up, and for this purpose they would have to have additional instructors. There had been included in the syllabus this year special practice classes for journeymen which should be much appreciated. Such developments had taken place in the trade since many journeymen learned their trade, that the Governors of the Printing School Committee thought an opportunity should be afforded to those journeymen who desired to bring themselves up-to-date for studying modern methods in this institution. It was proposed to treat these classes as somewhat distinct from the others, because there was a natural objection on the part of journeymen to be associated too closely in classes with apprentices, and it was thought that by adopting this course they would be doing the trade some service. Concluding, Mr. Drummond referred to the loss of their former principal in the person of Mr. Newton, and his replacement by Mr. Riddell, whom they all wished God-speed in his work. (Applause.)

The prizes and certificates were then presented to the successful students by Mr. Isidore Salmon, on the completion of which a cordial vote of thanks was accorded him on the motion of Mr. GILLETT, seconded by Mr. ALEXANDER. The prize list will be found on the next page.

In replying, Mr. SALMON said he hoped, with all his ignorance of the intricate subject with which the students were engaged there, he might be allowed to offer his sincere congratulations to the governing body, to the principal and to his excellent staff for the splendid work they had accomplished during the past year. Technical institutes had always excited his admiration. As one who had been brought up from boyhood in business, he derived considerable pleasure from seeing young men and women studying to get the very best effects in the business or trade they had adopted. When a young fellow spent a part of his spare time in studying the theory and practice of his craft, it was self-evident that he was getting some intellectual satisfaction from his work. Notwithstanding the fact that they were very poor, as their chairman had observed, they had been enabled to enlarge certain of their rooms, to improve their equipment, and to lessen the size of their classes. These were very commendable things, and were bound to have an excellent effect on their work. He felt sure they would not have to be content with the successes achieved in the past, fine as their work had been, but would try and make the Institute even greater. He was sure that the London County Council would be only too pleased to assist an institution that was worked on such practical lines. If all the technical institutes of London were worked on the same scientific and business-like principles as this Institute,

Digitized by Google

he felt sure the technical education of this country would be infinitely better than it was to-day. He believed the trade took an interest in the work of this Institute, and he felt sure it could only be by the loyal co-operation of the employers on the one hand and the employees on the other that any technical institute could be a lasting success. Although, as stated in their annual report, there were not as many students in the School as the high water-mark reached a few years ago, he hoped that by the great improvements that had been and were being made in the Institute, they would, as the years go on, become more and more important and useful to the trade and themselves. It had afforded him very much pleasure in being there that evening to distribute the prizes and certificates, and he thanked the proposer and seconder of the vote of thanks for their kind words, and the audience for the enthusiastic way in which they had received him.

A Students' Club Concert.

An enjoyable concert followed, given by the members of the St. Bride Students' Social and Athletic Club, which was started a year ago. It now numbers 41 members, and has had a very encouraging and successful year.

The chair was occupied by Mr. C. J. Drummond, who has shown his interest in the Club since its formation. A first-class programme was given, and was thoroughly appreciated from start to finish. The Male Voice Choir, one of the features of the Club, gave evidence of their ability, excelling in a part song, "Comrades in Arms," which was very finely rendered. Other items, equally well rendered, included songs by Miss Winifred Grey (soprano), "The Reason" bringing a well merited encore; Mr. F. C. Scorgie (bass), Mr. A. E. Saxton (tenor), and Mr. W. J. Pittham (baritone); a duet by Messrs. Woodcock and Major, and two quartettes by members of the Choir elicited much applause. Miss Whiskin and Mr. J. H. Golder acted as accompanists, the first-named very ably rendering two pianoforte solos.

The concert proved as great a success as on a former occasion, and the result achieved must be very gratifying to Mr. P. H. Whiskin, the energetic secretary of the Club, to whom must be accredited the organisation of the Club as a portion of the social side of the Institute.

Examination Results.

The accompanying are the examination results for the session 1912-13 of the technical classes held at the St. Bride Foundation Institute:—

Typography.

FINAL GRADE (HONOURS).—First Class: William S. Barker, ‖*¶John C. Brocklehurst, Percy F. Cook, Stanley F. Collins, George T. Etheridge, †John Fuller, George H. Harris, Henry A. McLeod, Wilfrid C. Petley, Percy Rose, Robert W. Russell, Walter E. Sanford, Stanley B. Scott, William Stenhouse, Archdale H. Wilson. Second Class: William G. Bull, Maurice B. Copleston, William H. Corden, Frederic R. Croker, ‡Herbert Dawson, Horace E. Fincham, Harold F. Garton, George Gibbs, ¶Sidney L. Grubb, **Ernest F. Hunnings, Alexander McKillop, Douglas C. Quick, William Raine, ¶William P. Robson, §George F. Seager, Harry R. Staples, Walter Stewart, George C. Taylor, John Walsh, Robert S. Walsh.

*40s. and St. Bride Institute Silver Medal for the best Student taking a First Class Certificate.
†10s. for the second best Student taking a similar Certificate.
‡10s. for the best Attendant obtaining a pass
‖Messrs. Walker Bros.' Prize for the Student gaining the highest position in this Class.
¶Special Prize presented by Mr. W. S. Wilson.
**5s. for second best example of Bookwork Composition.
§10s. the Master Printers and Allied Trades' Association Prize, for the Student producing the best result in Theoretical Work.

COMPOSING. GRADE II. (Ordinary).—First Class: Edward G. Baker, William Boulter, Horace F. Bradding, †Albert W. Bruce, ‖William Dickens, Henry J. Harris, ¶Harry T. Harrow, Ernest W. Hobbs, Duke Knowles, Ethelbert Malsher, William G. Mason, William L. Maton, B. Puttaiya, John Prince, Seth Rivett, °*Robert Scheidegger, Thomas E. Shepherd, F. M. Simmons, Bernard F. Varney, Arthur W. Vesey, Charles G. Walker, Victor E. Watts. Second Class: Douglas G. Allen, Arthur H. Barnard, George B. Behn, George Biddle, Isaac Blumenthal, William Burge, W. R. Burton. William H. Cheesman, Walter Colley, Aaron Cooper, ‡Horace Early, Robt. T. S. Greenaway, Albert A. Giles, John Harrison, Charles Holles, Alfred E. James, Ernest P. R. Johns, Edwin G. Jones, George W. King, Albert E. Monger, William Oxford, Harold H. Petts, Alfred H. Pilkington, Cuthbert Riley, Leonard P. Rowles, John W. Simmonett, F. W. Simmons, Charles Shapley, Harold Slingsby, Benjamin Smith, George H. Todd, Alfred G. Weston, Leslie H. White.

*City Guilds Bronze Medal, and 20s. and St. Bride Institute Bronze Medal, for the best Student taking a First Class Certificate.
†10s. for the second best Student taking a similar Certificate.
‖10s. for the best Attendant obtaining a pass.
¶5s. Special Prizes presented by Mr. W. S. Wilson.
°10s. for the best example of bookwork.
‡10s. the Master Printers and Allied Trades' Association Prize, for the Student producing the best result in Practical Work.

COMPOSING. GRADE I. (PRELIMINARY).—Benjamin J. Adams, Henry Alabaster, Davis Aronheim, Arthur R. Bansor, Harold S. Barrett, Leslie F. Bernal, Frank V. Bryant, †Robt. T. Chamberlin, William A. Collett, Thomas A. Cuss, A. R. Elliott, Robert E. Ferry, Edgar J. Fletcher, Harry Friedlander, Samuel Frost, *Thomas H. Isles, Herbert G. Lewington, John T. Moloney, Frank E. Mansfield, Ernest F. Martin, †Louis E. May, §James McKenzie, James A. Nicholes, Henry A. W. Painter, Frederick E. Parkins, Frederick G. Parsons, Claude H. T. Pearse, Albert E. Petherick, Albert E. Pritchard, Matthew Pyne, W. Quilter, Leonard W. Raper, James E. Russell, Charles H. Salter, Frederick C. Scorgie, Harold J. Scraggs, §Frederick Summers, Frederick A. Webb, ‖Charles H. T. Wildey, Alfred E. Wilmot, Samuel Wootton.

*10s. for the best Student in order of Merit.
†5s. for the second best Student. (Prize divided between two Students who were equal).
‖10s. for the best Attendant obtaining a pass.
§5s. the Printers' Managers and Overseers Association Prize for the second best Attendant obtaining a pass. (Prize divided between two Students making equal number of attendances).

LINOTYPE.—Result of Essay Competition: There were 13 competitors, the first three in order of merit being *W. C. Petley, †W. Dickens, and B. Puttaiya. Result of Answers to Questions Competition: 17 competitors, the first three in order of merit being ‡S. Storr, ‖¶R. W. Melvill and §A. C. Oastler.

Prizes given by Linotype and Machinery, Ltd.
*20s. for the best Original Essay on the Theory, Construction and Working of the Linotype Machine.
†10s. for the second best Original Essay.
‡20s. for the Student giving the best answers to a series of questions on the Theory, Construction and Working of the Linotype Machine.
¶10s. for the second best Student.
§5s. for the third best Student.
‖10s. for the best Attendant obtaining a pass.
*5s. for the second best Attendant obtaining a pass.

MACHINE AND PRESS. GRADE II. (ORDINARY).—First Class: ‖¶Leonard W. Clarke, John Clerx, Stanley E. Gadsby, William F. Gotts, Joseph Hall, †Charles Hepworth, John G. Keene, *Leonard C. Smith, ‡Richard Stanton. Second Class: Leslie H. Broughton, Charles A. E. Carr, Walter Carrick, Harry C. Forward, Roy Guthrie, Wilfrid Hamblin, William E. Howard, Sidney F. Jagelman, William J. Pittham, Robert T. Tomlin.

*20s. and St. Bride Institute Bronze Medal for the best Student taking a First Class Certificate.
†10s. for the second best Student taking a similar Certificate.
‡10s. the Master Printers and Allied Trades' Association Prize, for the Student producing the best result in Practical Work.
¶10s the Master Printers and Allied Trades' Association Prize, for the Student producing the best result in Theoretical Work.
‖10s. for the best Attendant obtaining a pass.

MACHINE AND PRESS. GRADE I. (PRELIMINARY).—‡Edward H. Ambrose, *Bertram C. Bassett, Charles A. E. Carr, Henry Dent, Harry C. Forward, William F. Gotts, Joseph Hall, ‖Bertrand E. Harratt, Leslie J. Hedges, John D. Johnston, Sidney R. Kearey, John G. Keene, Ernest W. Lea, Robert A. Skinner, †William C. Sparks, Albert E. Spencer, Clement J. West.

*10s. for the best Student in order of Merit.
†5s. for the second best Student.
‖10s. for the best Attendant obtaining a pass.
‡5s. the Printers' Managers and Overseers Association Prize for the second best Attendant obtaining a pass.

ESSAY ON PRINTING INKS (Open to all Students).—Twelve competitors. Names of first three in order of merit are *J. H. Quinn, ‖W. E. Sandford, and W. Stewart.

Prizes given by John Kidd and Co., Ltd.
*40s. for the best Original Essay on the Use and Care of Printing Inks.
‖20s. for the second best Original Essay.

Lithography.

FINAL GRADE. (HONOURS).—First Class: J. C. Hart, A. Peacock, *W. J. Smith, †R. R. Wilson. Second Class: ‖A. E. Binns, R. A. Gray, T. Huson, H. McDermid.

*40s. and St. Bride Institute Silver Medal for the best Student taking a First Class Certificate.
†10s. the Master Printers and Allied Trades' Association for the second best Student taking a similar Certificate.
‖10s. for the best Attendant obtaining a pass.

GRADE II. (ORDINARY).—First Class: °C. Fay, G. W. Gridley, J. B. Hall, B. S. Iyengar, *F. A. Judd, A. R. McChlery, J. S. Milsted, E. T. Newham, G. F. Pead, A. Peary, ‖‡A. E. Priseman, F. E. Small, T. J. K. Wignall. Second Class: A. E. Burling, J. Garcia, G. H. Harrison, ‖H. T. Hawkridge, E. A. Johnson, A. E. Molden, J. V. T. Statham, W. J. Young.

*20s. and St. Bride Institute Bronze Medal for the best Student taking a First Class Certificate.
°10s. for the second best Student taking a similar Certificate.
‡10s. the Master Printers and Allied Trades' Association Prize for the Student producing the best Practical Work during the Session and obtaining a pass.
‖10s. for the best Attendant obtaining a pass. (Prize divided between two students making equal attendances).

GRADE I. (PRELIMINARY): W. H. Barrass, †‖G. Blake, ¶S. C. Clark, ¶§S. G. Haggar, W. Herbert, *B. S. Iyengar, A. Knight, A. G. Mulligan, C. W. Searson, ¶E. G. Sparrow.

*10s. for the best Student in Order of Merit.
†5s. for the second best Student.
‖10s. for the best Attendant obtaining a pass.
¶5s. The Printers' Managers and Overseers Association Prize for the second best Attendant obtaining a pass. (Prize divided between three Students who made equal attendances).
§Mr. Crawford's Prize of Palette Knives to the best Student in Practical Work.

ROLLER COMPETITION. (Arranged in Order of Merit): A. E. Binns, G. F. Pead, W. J. Smith, A. E. Priseman. Messrs. F. Horsell and Co., Ltd., Prize of Hand-Press Roller.

THE death has taken place at Barnet of Mr. James Gordon, late manager of Messrs. Shaw and Sons, printers and publishers, Fetter-lane, E.C.

YOU, in the Paper Trade

There are many points in this trade that you are not quite sure of.

If you knew these particular points you would be of greater service to your employers and hence a larger wage-earner yourself.

Get hold of these missing points by joining the course on the

Testing of Paper

which is being given at the

GEORGE WILLIAMS COLLEGE of the Y.M.C.A.,

TOTTENHAM COURT ROAD, LONDON, W.C.,

BY

Mr. R. W. SINDALL, F.C.S,

The Paper Testing Expert,

Commencing THURSDAY, OCTOBER 9th at 8 p.m.

The FEE is 7/6.

IT'S WORTH YOUR WHILE.

BOOKBINDING SECTION.

Bookbinding Notes and News.

The strike at Messrs. Burn and Co.'s London works still drags its slow length along, and there are no signs of a settlement at the time of our going to press. The firm still adhere to their intention to turn the London establishment into a non-union shop, and thus bring it into line with their country works at Esher. The National Union of Bookbinders and Machine Rulers also ask that both places be brought into line, but in quite another way, *i.e.*, they wish them to be run as union shops. At the end of last month the Bookbinding Section of the London Chamber of Commerce invited the union secretaries to come and place their views before the members of the Section, which they did on August 27th, but nothing in the way of negotiation for a settlement was attempted. On September 4th some of the non-union hands manifested sympathy with the strikers, and their services were in consequence dispensed with by Messrs. Burn and Co. The following day a demonstration of the disaffected workers was made in front of the firm's premises in Kirby-street, but the police prevented any trouble arising. Those premises are still strongly picketed, and the Federated Committee of the Bookbinding Trade Associations has issued an appeal to publishers, asking them to see that their binding work is carried out only by firms complying with the agreement made between the employing binders and the Unions in 1893 and confirmed by the Board of Trade in 1903. This appeal, which was accompanied by a statement of the dispute from the trade union standpoint, was followed up on Friday last by a further manifesto, addressed to the London publishing and bookbinding houses, pointing out that no members of the Union will be allowed to handle any binding work emanating from publishers who give out orders to Messrs. Burn and Co. during the continuance of the dispute. This led to an emergency meeting of the Bookbinding Section of the London Chamber of Commerce being held, and in pursuance of representations then made it was expected that the putting into force of this ukase would be postponed for at least a few days, in order to allow the employing binders to discuss the points at issue with the publishers. If no agreement is reached, a general strike of London operative binders might be resorted to, but it is hoped that this may be averted.

Writing to the *Daily Citizen* a short time since, Mr. Geo. W. Knecht, a member of the N.U.B.M.R., said, with reference to the Burn dispute, that certain "cheap editions" can be, and are, "produced under conditions that we as bookbinders consider fair. But there are others that do not come under that category, and it is against that that 190 journeymen and apprentices are on strike in London at the present moment. They do not complain of the conditions under which they themselves work. It is the system of cheap labour at a branch establishment that is objected to. Not only because of the conditions there, but because of the fact that such firms compete so cheaply with the publishers for their work, that the other master binders have to cut their prices, and that makes it bad for everybody concerned."

The dispute between the Scottish master bookbinders and their unionist employees, on the question of female labour, has revived again. A ballot was taken last month as to whether a strike should be declared to force a settlement on the point, and the voting (706 to 120) was strongly in favour of such a step being taken. This result was considered by the Scottish District Council of the N.U.B.M.R. at Perth on August 30th, when it was decided to proceed to put the vote into force. The matter was therefore referred to the Executive Council of the Union, and it is understood that it was fully discussed at their meeting in Manchester a week or two ago, but the nature of the decision then arrived at has not yet been made public.

A writer in the *Daily Citizen*, early in this month, had something to say about the advantages of the popular series of cheap reprints so much in favour with publishers just now. Some unionist binders have since pointed out, in the correspondence columns of that journal, that these books are not always produced under what the union considers proper conditions. In one of the letters it was stated that the National Union of Bookbinders does not stand in the way of those who have a hunger for cheap books. "There is a large publishing firm that exists for business purposes and not for philanthropy, that does a very large amount of its own bookbinding while it puts another large part out to be done by binding firms, as is usual with publishers. The interesting feature in the matter is that they do, on their own premises by exclusively trade union labour, an immense amount of the cheap 'seven-pennies'! And the irony of it is that if any firm could do it more cheaply by cheap labour conditions they could get the work! It may be that 'cheap labour' is 'dear labour.'"

According to a recent Government return, the National Union of Bookbinders and Machine Rulers had 7,263 members at the end of 1911, and the total expenditure during that year amounted to £14,763, viz., £4,824 on unemployed benefit, £2,388 on dispute benefit, and £7,551 on other benefits and general working expenses. It has long been felt desirable to have a central office for the four London branches—which were formerly separate organisations—of the Union, and the idea will shortly materialise, as the Union has taken over a four-storey building at 21, John-street, Bedford-row, W.C., close to Gray's-inn-road, and at the corner of Henry-street, adjoining the John-street Chapel. Some necessary alterations are in progress, and as soon as these are completed the Union will enter into occupation. This new arrangement will necessitate a certain reshuffling of offices, and it is probable that in future there will be one general secretary with a staff of assistants to look after the different sections.

Mr. W. Mellor, well known in the Manchester bookbinding trade, and treasurer of the Health Insurance Section of the N.U.B.M.R., acted as secretary of the recent Trade Union Congress at Manchester. His services in that capacity were much appreciated, and at the close of the proceedings he received a vote of thanks and a present of a "Congress Bell."

Employment in the bookbinding trade was fairly good during July, the percentage of out-of-works, amongst 6,399 trade unionists in that line, being only 3·2, as compared with 3·6 in June, and 4·8 in July last year. At Glasgow and Dublin it was rather flat. With fancy and morocco leather finishers in London it continued bad, and worse than a year ago; with other fancy leather workers no change was reported.

On the occasion of the visit to Berlin of H.M. King George V., in May last, the British colony in the German capital presented him with an address, an illustration of the cover

Cover of an Address presented to George V. at Berlin; Binding by W. Collin.

of which we reproduce herewith from the *Archiv für Buchbinderei*. The work was executed by Herr W. Collin, the Court binder at Berlin, and is an excellent example of the cut and embossed leather decoration for which his establishment is famous.

Light leather manufacturers and merchants have lately been remonstrating with His Majesty's Stationery Office for pursuing a policy of economy that they declare is having an injurious effect upon their trade. Those of their number who have had contracts with that Goverment Department have recently experienced a remarkable diminution in the number and variety of the orders coming from it. Inquiries have brought them the rather unwelcome intelligence that the use of leather for the binding of books is being abandoned in favour of cloth, which has been found more durable and much cheaper for the purpose. They have, therefore, through the London Chamber of Commerce, protested against the decision, and are urging that when new contracts are being arranged the Stationery Office should give due consideration to the fact that the practice is seriously injuring their trade. It may be pointed out, however, that the binding of books in linen cloth is no innovation at the Stationery Office, as it has been practised for many years. Most of the books issued by the Department to ships and barrack libraries at home and abroad have for a long period been linen-bound, and the experience, it is claimed, is that, although subjected to rough wear and tear and varying climatic conditions, they are in a sounder condition than they would have been with leather bindings. It is officially contended that the almost complete substitution of cloth for leather binding will, in the course of a year, result in a saving to the Department that is not altogether to be ignored. The extension of the method may entail a loss to the tanners at Bermondsey, but it will result in a gain to the linen industry of Dundee and Belfast.

The imports of book cloth into the United Kingdom during July amounted to 36,619 yards, value £904, as compared with 18,040 yards, value £506, in the corresponding month of last year, and 18,780 yards, value £486, in July, 1911.

It is stated that at the forthcoming marriage of the Duchess of Fife and Prince Arthur of Connaught a special marriage register will be used, which is now in course of preparation. The covers are of purple morocco, with the Imperial crown embossed in the centre and the joint arms of the bride and bridegroom in each corner.

We are always glad to draw attention to special library bindings, and have pleasure in stating that many of Messrs. G. G. Harrap and Co.'s books and series are now obtainable in such. In their pamphlet relating to these bindings is the following specification, which is identical in many respects with that of the library edition of the "Oxford Books for Children," published jointly by the firms of Henry Frowde and Hodder and Stoughton:—Style I. Quarter pigskin, Bancroft cloth sides. Style II. Quarter morocco, Bancroft cloth sides. Style III. Whole Bancroft cloth. The principal features of these bindings are:—(1) The books are bound from quires and will therefore prove far more durable than rebound volumes. (2) The larger books are carefully sewn by hand with linen thread on the "all along" principle, on four or five tapes, which are firmly secured between split boards; each section is firmly secured at the head and tail of the book by the thread being sewn through the tapes at these portions. For the smaller books machine sewing has been found satisfactory. (3) The first and last sections are lined in their folds and the illustrations guarded with jaconet. (4) The books have French joints, which, while giving freedom at the hinges, allow thicker leather to be used than in the case of ordinary joints. (5) The boards are good quality millboards (not strawboards) of suitable thickness, and the corners are blunted. (6) The pigskin and the morocco are guaranteed to be free from injurious acids.

In our last Bookbinding Number, when drawing attention to the three prizes offered by the *Librarian* for the best article on Library Bindings, the best Glossary of Bookbinding Terms, and the best Bibliography of Bookbinding respectively, we expressed the opinion that the prize of one guinea for a bibliography was a very inadequate reward. An editorial note in the September issue of the *Librarian* states that "The smallest prize was given to the bibliography because this is largely the outcome of work on the other two. In other words, anyone doing anything in the study of bookbinding literature must unconsciously learn something of the bibliography of the subject, and anyone compiling a glossary—we do not think a glossary is quite so simple a matter as the *British and Colonial Printer and Stationer* contemplates—must learn quite a lot about the bibliography. The glossary in 'The Business of Bookbinding' is one of the fullest, but it is not by any means complete. There is no reason whatever why the winner of either of the other—or both—prizes should not win that for the bibliography. In fact there is every reason why the winner of the prize for the essay should win both the other prizes." We still adhere to our statement that unless one drags in the terms of allied industries the compilation of a glossary of bookbinding is a comparatively easy matter as compared with the compilation of an exhaustive bibliography of bookbinding.

Although it is stated that the glossary in "The Business of Bookbinding" is not by any means complete, we consider that it, and also that in the "Manual of Library Bookbinding," by Messrs. Coutts and Stephen, contain most of the bookbinding terms in general use. The former book contains more than the latter, chiefly because its scope includes the terms used in leather and cloth manufacture, and the descriptions of the various materials are included, whereas in the "Manual of Library Bookbinding" they are given in the chapter on materials; it also contains a number of terms which we do not consider strictly germane to the glossary, such as papyrus, palimpsest, passe-partout, pirate, polyglot, psalter, review copies, remainders, etc. In our opinion, if the glossaries in the above-mentioned two works and the one in Zaehnsdorf's "Art of Bookbinding" were amalgamated, very little extra work would be needed to produce a really satisfactory glossary. With regard to the Bibliography, we are quite certain that the competitors for the prizes for the Essay and the Glossary would not, in compiling those, be brought into contact with more than a small portion of the literature of bookbinding. By the published remarks on our comment we are afraid that the *Librarian* does not realise the extent of the literature of bookbinding. There are several bibliographies in existence, but there is still needed one that is comprehensive, up-to-date, and well arranged. The guinea that is offered as a prize would not be too much remuneration for the mere work of transcribing and arranging by subjects the bibliography of 42 pages in Miss Prideaux's "Historical Sketch of Bookbinding," published in 1893; the work of tracing and recording the literature omitted from that bibliography, and of bringing it up-to-date, is surely worth several guineas more.

The permanent exhibition of bookbindings in the King's Library at the British Museum has been rearranged during the last week or so, with the result that many of the volumes are displayed to much better advantage than before. Several examples not previously shown have now been placed in the cases, including a fine specimen by Roger Payne, in dark blue morocco, executed for and bearing the arms of the Rev. C. M. Cracherode; and characteristic examples of the work of Payne's successors and imitators, C. Kalthoeber and C. Lewis. One side of a case is filled with typical specimens of Irish and Scottish binding, but curiously enough, the new catalogue of the exhibits which has just been published does not make the least mention of any of these! There is also one of the so-called "Etruscan" bindings, attributed to Whitaker of Westminster, almost identical in style with the one illustrated in our Bookbinding Number of June, 1911, in an article on Edwards of Halifax. This exhibition should be visited by all who take an interest in fine binding and in the history of that art.

The Technical Education Committee for the County Borough of Dublin recently appointed a sub-committee to visit various technical institutes in England where instruction in book production was given, with the view of gathering information that would be useful in connection with the proposed establishment of a School of Book Production in the Irish capital. In their report the sub-committee state that a class in bookbinding for twelve to fifteen students should be fully equipped for £150. There does not, however, seem to be any demand for such a class from the local Bookbinders' Society.

The usual annual exhibition of the work of the students of the L.C.C. Central School of Arts and Crafts, Southampton-row, W.C., is now open there, and will remain so until October 3rd, from 12 till 9 daily, except Saturday. Amongst the exhibits are a number of finely executed bookbindings. Students of the bookbinding classes at this school obtained no less than a dozen passes in the recent City and Guilds of London Institute Examination. In Grade I. Forwarding, Messrs. Toseland, Middleton, Benkoski (first) and Cole (second), whilst Mr. Reynolds passed in the final. In Grade I. Finishing, Messrs. Wickman and Vaughan (first) and Woodley (second) passed, and in the final examination Messrs. Giffard and Hackman (first) and Gaiger (second).

The late Mr. G. Houghton, of Liverpool, retired bookbinder, connected with the Liverpool Printing and Stationery Co., left estate of the value of £2,489.

Bookbinding for women is a subject that appears to have an attraction for the Press, as every now and again there is an article upon it in some paper or other. The latest was from the pen of Hilda M. K. Nield, and appeared in the *Daily Chronicle* for August 21st. It was short, illustrated, and mostly on the usual lines, stress being laid on the fact that almost the only chance of the woman art binder finding a market for her work lies in the extent of her personal connection. The text of the article was based upon an interview with "one of the best renowned of present-day women bookbinders," Miss M. Marshall, of 5, Bloomsbury-square, W.C. It appears that 80 guineas is the average fee for a years tuition in art binding, and few women attain any degree of proficiency in less than six months, though Miss Marshall had one clever pupil who, by reason of rigid study, became an accomplished bookbinder after having only half-a-dozen lessons. "When a woman is competent, she can either take a situation as assistant to an establisher binder, or start bookbinding on her own account. The former positions are necessarily fairly limited in number, but no woman can start for herself without a certain amount of capital. The plant, for instance, costs about £20, and it is necessary to have the money to pay running expenses while laying the foundations of a connection."

A similar article appeared recently in one of the New York papers, and was based upon an interview with Miss Sarah J. Freeman, instructor in binding, etc., at the Pratt Institute and elsewhere in that city, who has a little shop installed in her flat on West 112th-street. She learned the craft in Paris, where they have the apprentice system in force, feeling that she could learn much more when surrounded by apprentices than when alone with a teacher. The clientele of the woman art binder consists of the same elements in America as in this country, viz., of the binders own personal friends and *their* friends, and so on, mere advertising being of little or no use in this connection. There are at present in New York City, Miss Freeman says, only five or six women that she knows of who are making an occupation of binding books by hand. They are Miss Edith Diehl, Miss Emily Preston, Mrs. Helen Haskell Noyes, Miss Fannie Dudley, Miss Mary A. Davis and Miss Freeman herself, the last two working together. There are only one or two men following the same career, and the number of fine binders is not likely to increase, because the modern spirit makes the workers impatient to do a thing and commence earning a living by its means, before they have learned how to do it properly. There are, of course, exceptions to this rule. "A girl I knew," said Miss Freeman, "who has the rare combination of business and artistic ability, took some of her work to one of the large book firms. They could not give her work in their New York shop, because it is a union shop, but they placed her at $30 a week to begin with in their shop

in Massachusetts, and there she has steadily gone ahead. She fills special orders." The woman who has the best chance in this line is the one who is willing to carry out her clients' ideas in their own way, instead of trying to get them to adopt her notions of how the work should be done.

The imports of book cloth during August amounted to 61,698 yards, value £1,847, as compared with 43,841 yards, value £1,359, in the same month of last year, and 32,186 yards, value £766, in August, 1911.

Messrs. Bailey Brothers, of Clarendon-buildings, Highbury, N., have acquired the bookbinding business carried on for the past thirteen years by Messrs. G. and J. Brodie, at Spencer-road, Hornsey, and are prepared to undertake any further orders entrusted to that firm. Mr. G. Brodie, who was formerly an apprentice with Messrs. Bailey, will for the future give them the benefit of his assistance.

At the recent sale of the Cheramy Library at Paris, there were a couple of volumes said to be bound in human skin. One was "Bien qu'on dit des femmes," by Emile Deschanel; the other, bound in the skin of a negress, was "Poesies d'Anacreon," Paris, Jouaust, 1885. The fact that these books were actually covered with human epidermis is, however, much doubted by local journalists.

There was was a slight falling off in employment in the German bookbinding trade during July, the percentage of unemployment rising from 3·0 to 3·2. In Norway also the same was the case.

According to the current year's issue of the "Grafisk Kalender," of Sweden, which has just been published at Gothenburg, there are no less than 411 bookbinding firms carrying on business in that country. This is a very large number for a population that probably does not reach five millions, much larger than that of London, which, though having perhaps a greater population than the whole of Sweden, cannot support more than about 300 bookbinders. Stockholm, with a population of about a quarter of a million, has 72 bookbinding establishments; Gothenburg, with rather more than 100,000 persons, has 35; Malmo, with some 50,000 people, has 15; whilst the University cities of Lund and Upsala support 14 and 11 respectively.

During the year ended June 30th, 1912, no less than 438 foreign bookbinders went out to the United States of America. Forty-two of them were classed as non-immigrant aliens, *i.e.*, persons whose last permanent residences were in the United States, or who went there temporarily.

Mr. John J. Pleger, late Superintendent of the United States Government Bindery at Manila, to whose departure from the Philippines we referred in last month's bookbinding number, has accepted the post of Secretary-Treasurer to the Pacific Photo-Engraving Co., San Diego, California.

In order to overcome the difficulty of controlling quality of work and time of operation when outside binders are used, the St. Louis Public Library (U.S.A.) opened, in February last, a bindery of its own in the Central Building, states the last annual report of the St. Louis Public Library—which covers the period May 1st, 1912, to April 30th, 1913. "Up to the present time (May 1st)," says the Report, "3,104 books have been bound and 64,960 repaired here, and 1,517 more are in process. The cost has been about 49 cents (2s.) a volume, which it is expected will be considerably reduced. Besides this, 8,446 volumes were bound outside the Library before the opening of the bindery, and 1,973 since. Some work will continue to be sent out. The number of persons employed in the bindery proper is 11, making altogether 17 engaged in the work of the department. The bindery-room is in charge of a competent foreman, who works under the direction of the chief of the department."

At the 35th annual meeting of the American Library Association, held at Kaaterskill, N.Y., during the last week in June, the Report of the Bookbinding Committee was submitted. The following extracts have been made from the Report, as published in the (American) *Library Journal*. "In last year's Report it was stated that a special collection, showing the kind of work done by library binders, had been started by this Committee. During the past year this collection has been materially increased by samples submitted by different binders; it now includes work from 34 binders, covering the entire country from the Atlantic Ocean to the Pacific. The collection was formed so that when librarians write to ask about the work of specific binders, the work itself can be examined and intelligent answers given." The Report goes on to state that it is not the purpose to print criticisms of the work of different binders, or to grade them in any way. Librarians will not be advised, when writing for information, to desert one binder and employ another, nor will the work of one binder be compared with that of another. The Committee reported that its protest to the publishers of the "Encyclopædia Britannica Year Book," against the printing of it on India paper only, had no effect whatever until letters protesting against the use of India paper had been sent to the publishers by fifty librarians of the larger libraries. The sole concession that the publishers made was to agree to bind 750 copies on ordinary paper, provided that the American Library Association guaranteed a sale of that number. The Association was endeavouring to obtain the requisite number of promises from librarians at the date of the Report. The Committee's specification for binding the new editions of the "Standard Dictionary," and "Appleton's Cyclopædia of American Biography," were submitted to the respective publishers; the publishers of the "Standard Dictionary" adopted practically all of the specifications, and the publishers of the other work have them under consideration. The Report concludes by stating that the publishers of reference books are not only giving studied attention to binding processes, but they also realise more fully than they did a few years ago the necessity of using leather which is free from acid, which leather is now obtainable in America.

A writer in an American contemporary recommends the use of carbon paper instead of printing ink for the purpose of blacking-in designs on leather, etc., previous to gilding. The rolls or tools are heated as for gold, then rolled or stamped on the carbon surface, and afterwards on the book. This will not smear like ink, and can also be used for stamping.

Another writer points out that the bevelling of boards can be done just as well, if not indeed better and quicker, on an ordinary cutting machine as on a bevelling machine, if one knows just how to set about it. The knife does not come down on the flat board, and consequently does not dull to any appreciable extent, but it does play havoc with the cutting stick, and so it is better to first put in an old stick. "Now put a block under the clamp (if automatic) about an inch high. After holding the board at an angle of about 45 degrees, pointing upwards towards your-

self, insert that portion which you wish to cut off, laying the lower edge evenly into the cutting mark. Pull the lever, and let the board fall towards you as the knife cuts through, and you will have a perfect rounded beveled edge."

The binding illustrated herewith is that of a folio altar service book in the possession of the Right Rev. Mathew Harkins, Roman Catholic Bishop of Providence, R.I., U.S.A., whose name, title and arms appear in the

A Modern American Binding,

central ornament. The volume is bound in blue levant morocco, the solid silver mounts being designed in appropriate Gothic style by Mr. Theodore B. Hapgood, of Boston, a well known American art worker.

In the United Typothetae of America Standard Price List, the preface says :—"It may be asked how the pamphlet binding prices were arrived at. The experience, covering a period of many years, is that the average girl will make but about 500 single folds per hour when working by the week. Girls can hardly be secured who are at all experienced under 12½ cents an hour—a sum giving them a weekly wage of $6. It costs then 25 cents per 1,000 folds in wages, so that, when we add overhead charges, it will be seen that our low rate of 50 cents per 1,000 folds is perilously near the cost line. Inserting is done about as rapidly as folding; gathering about a third faster. Two girls on a wire stitcher will not average, on 6 by 9 pamphlets of 32 pages and cover, to exceed 700 books per hour. Their pay, as they must have considerable skill to average that quantity, will not be less than 15 cents per hour each. This means a wage cost of 45 cents. per 1,000. When the overhead charges are added, and when the lost time due to the machine balking while the work is in process is considered, it will be seen that the total cost is easily $1, so that on this item we will make perhaps 25 per cent. profit. Millions of pamphlets are trimmed on the most modern cutters, using three splits in the gauge so that a bunch of books complete is trimmed at each cut, it is our experience that on pamphlets of 32 pages and cover, 6 by 9, the average will not exceed 1,200 books per hour. This gives, if we figure a cost of $1 per hour for a man and machine, a cost of 83 1-3 cents per 1,000 books (3s. 6d.). It may be said that when work is done in quantities so large that it can all be done by the piece, the employees will double, and even treble, the amounts given. But few, indeed, are the printers who have a sufficient volume of business to put bindery operatives on piece work—so few, in fact, that they very seldom enter into competition with those who have. And these prices are figured out for the average office working under average conditions."

During last year, £43,100 worth of bookbinders' cloth was imported into Japan, as compared with £31,400 in 1911, and £40,000 in 1910. Most of it, *i.e.*, 1,573,334 yards, value £28,802, went to Yokohama, and 80 per cent. of this went from the United Kingdom.

The Printing Trades Arbitration Court at Sydney, New South Wales, recently had an application from the bookbinders to fix a "pic-nic day," and to order double time to be paid if any of the hands had to work that day. The master printers, however, seem to think that the binders have too much feeding time as it is, as they have protested to the Court against the continuance of the one-hour lunch interval allowed them, as the workers in other sections of the printing trades only get three-quarters of an hour.

In our Bookbinding Number of February last we referred to the dispute between the New Zealand Bookbinders and Paper Rulers' Union and the employers. At a recent hearing, the representative of the workers' union stated that the Employers' Association had filed the Auckland Conciliation Council's recommendation in a similar case as a counterclaim, which, it was stated by the Employers' Association, would be accepted. The recommendation referred to had a minimum wage of £3 2s. 6d. for a week of forty-eight hours, whereas the Wellington Bookbinders' Union claimed to have £3 10s. fixed as their minimum wage. Evidence was given by several witnesses called on behalf of the workers' union, in the course of which it was urged by one witness that some of the recommendations of the Conciliation Council in respect of the Auckland dispute would not work in Wellington. The employers put in a list of the wages paid by the firms affected in Wellington. It was desirable, they urged, that there should be uniformity in the different centres in regard to wages, hours, etc. The hearing of the case was adjourned, to enable further evidence to be taken in other centres.

THE GRIEVANCES
OF THE
London Account Book Binders.

The Union's Demands.

The account book binders of London are again pressing their grievances and claims on the notice of the employers. For nearly three years the London Joint Committee have been trying to prevent the lower wages and longer hours of the account book binder from being a menace to the letterpress binder unionists in the trade. In the *Daily Citizen* of the 8th inst. appeared a letter from Mr. E. Friend, secretary of the Committee in question, from which we take the following extracts:—

"As a national union we cannot any longer permit two rates of wages and hours to exist for union members in the same trade. In Leeds, Manchester, Bradford, and other towns of the United Kingdom the same remuneration for the labour of the binder is paid on all classes of books, therefore the central executive of our union is determined to secure for London similar working conditions for all operatives on the same work in different houses. The danger of cheap unindentured labour must be tackled for a definite settlement or must be eradicated altogether. This fact is realised by the whole of our branches in the United Kingdom, whether it is inside the town or outside in the suburbs or provincial isolated districts. The account book binders now desire and have decided to obtain recognition of their local rules in the same manner as other towns in order to obtain uniform conditions of working. We insist on the fair house principle bsing maintained and the proportion of apprentices to journeymen being observed. The piece-work system to be regulated, whether private or contract work is concerned, by the recognition of the official scale of prices. Trade shops to come into line with the general conditions, and no fair house to support them unless the union conditions prevail in accordance with the local rules. Stationers who do not employ binders direct, but give work out, to patronise only the fair houses on the federation list of the firms fair in the printing and allied trades. We are asking for a 2s. rise. The cost of living has gone up more, and we have had no wages advance for over 20 years, though we have been over three years talking about it." The letter concludes with an appeal to all non-union binders to join the national organisation.

THE
Library Association's
NEW
Specifications for Binding.

The Report of the Library Association's Book Production Committee, which has been promised for some years, has at last been published. The Report (called the Interim Report), which deals with bibliographical description, paper, printing, book illustration and binding, was submitted to the Association at its annual conference, held at Bournemouth during the first week of the present month. The members of the Committee are Messrs. Douglas Cockerell (Examiner for the City and Guilds of London Institute, and Controller of Messrs. W. H. Smith and Son's Letchworth Bindery), H. T. Coutts (Branch Librarian, Islington Public Libraries), Cyril J. Davenport (late Superintendent of Bookbinding in the British Museum, a well-known writer on Bookbinding), E. W. Hulme (Librarian, H.M. Patent Office Library), C. T. Jacobi (of the Chiswick Press, an authority on Printing), A. W. Pollard (of the British Museum, an authority on Bibliography), W. Powell (City Librarian, Birmingham), R. W. Sindall, F.C.S. (a paper expert), G. A. Stephen (City Librarian, Norwich, a well-known writer on Bookbinding), H. R. Tedder (Librarian and Secretary, The Athenæum), Emery Walker (an authority on Printing and Engraving), L. C. Wharton (of the British Museum), and A. J. Philip (Librarian, Gravesend Public Library, and Secretary of the Book Production Committee).

In this place we propose to confine our attention to the section on Binding, leaving the other subjects for treatment elsewhere. In the introduction it is stated that a circular sent to the principal London publishers was exceedingly well received, and that the "Library Binding" in its present form is the outcome of the work of the Committee and its individual members. During the course of their deliberations, "The Committee paid special visits to binderies, as well as to the workshops of firms making machines for book work, and visited numerous establishments in which the whole of the work of book production is carried on. The Committee at one time held the generally accepted belief that hand sewing was better than machine sewing for book work. After these visits, however, they unanimously arrived at the decision that machine sewing for edition binding, when executed under the best conditions, was preferable to hand sewn work except in special cases." This decision must evidently have been made during the early work of the Committee, because as long ago as April, 1908, Mr. Geo. A. Stephen introduced the subject of machine book-sewing at a monthly meeting of the Library Association, and gave it as his opinion that machine-sewn

work executed under the best conditions is quite satisfactory for edition work, and has several points to recommend it. This, and other items in the Report suggest that its publication has been delayed for an unreasonable time, and that the Association is less enthusiastic or less business-like than the American Library Association, which published its binding specifications for commercial work in June, 1909. However, the Report under notice is fuller and more comprehensive in scope than the American one, and we are glad to take this early opportunity of giving it publicity in our columns.

The Binding section commences by enumerating the features of some present-day bindings to which the Committee takes objection :—

1. Sewing by machines that slit the heads and tails of the sections.
2. Sewing "two sheets on," except in the case of extra thick volumes printed on very thin paper.
3. Sewing with wire, except under the following conditions :—The wire to be of a rust-proof alloy ; the books to be sewn on a strong, open fabric ; and the lining to be of strong fabric in the case of small books and of leather in the case of large and heavy books.
4. Stabbing with wire or thread.
5. Flat back bindings.
6. The use of white and cheap metal foils.

With these condemnations we emphatically agree, and we hope that the trade will pay due regard to them. We have referred to Mr. Stephen's illustrated article on "Modern Machine Bookbinding" in the Journal of the Royal Society of Arts (vol. 59, 1911, pp. 339–360) and we find that he also condemns the following practices, which the Book Production Committee might consider with the view of including them in its final report :—(1) Sewing with thread to which insufficient tension is imparted, thereby resulting in "loose" sewing. (2) Fixing the back lining of mull to the book prior to the rounding and backing operations. This practice frequently results in many of the strands of the mull being severed by the rounding and backing machine ; and if the backing plate of this machine is not properly adjusted the paper at the folds is crushed and broken. (3) Paper illustrations and paper titles on the covers. (4) General looseness of the book, due to insufficient pressing in the standing press.

The Committee presents its recommendations in the form of specifications. "In giving these specifications," says the Report, "the Committee would point out that the mere specification in bookbinding is not everything. As in almost every mechanical art or craft, the excellence of the result depends to a very large extent upon the workmanship ; and the specifications are given more with a view to indicate the result to be aimed at. The following is the first specification, which is intended for cased work generally :—

Publisher's Binding.

Books to be sewn with strong thread.

Books to be sewn "one sheet on" on strong tapes ; at least three tapes to be used for crown octavos, four for royal octavos, and an increased number of tapes for books of larger size. Two of the tapes to be placed not more than one inch from the head and tail of the book, and the slips to be of good length.

All single leaves and plates to be guarded round the adjoining section and sewn through ; or, when the plates are few, they may be pulled on paper with the inner margin extra wide, in order to allow the paper to be folded round the adjoining section.

End papers to be of good quality.

Flexible glue to be used in glueing up.

The lining to be of strong, open fabric.

Good quality cloth of fast colour to be used.

The fast colour referred to in the last paragraph is understood to be "fast" to light as well as to moisture. This is pointed out because there are cloths which although fast to light are not fast to moisture, and, on the other hand, there are fabrics fast so far as moisture is concerned, but liable to fade when exposed to light. Both of these terms, however, are relative, as it is obviously impossible to obtain a cloth which will not bleach when exposed to fierce, concentrated light ; there are others from which the colour may be washed by the use of various acids, etc. Under ordinary conditions, however, it is possible to obtain cloth which satisfies both these requirements without any appreciable loss of strength.

Books to be lettered on back with title and author's name at least ; although it is desirable that the back of the book should show either the name of the publisher or place of publication, together with the date at the tail.

The second specification, given below, is designed for publisher's cased work for special library use. This is that binding now described as "reinforced," but must not be confused with "Library Binding."

Publisher's Binding for Libraries.

Books to be sewn with strong unbleached thread.

It is with intention that thread is not specified as to be of linen or cotton, because it is possible to get a good quality of the one which is better than a poorer quality of the other, and it would be invidious to mention any particular make or standard, but in all cases it is understood that the best quality possible, in view of the conditions of each publication, should be used for all material.

Books to be sewn "one sheet on" on unbleached linen tapes ; at least three tapes to be used for crown octavos, and a proportionate increase in the number of tapes for books of larger size. Two of the tapes to be placed not more than one inch from the head and tail of book, and the slips to be of good length.

All single leaves and plates to be guarded round the adjoining section and sewn through ; or, when the plates are few they may be pulled on paper with the inner margin extra wide, in order to allow the paper to be folded round the adjoining section.

The first and last sections guarded with linen ; fine cambric for books printed on thin paper.

End-papers with cloth joint sewn as a separate section.

Flexible glue to be used in glueing up.

The lining to be of strong open fabric.

Good quality boards with a strip of strong liner glued over the slips inside the case.

Good quality cloth of fast colour to be used. (See note on corresponding item in previous specification.)

Books to be lettered on back with title and author's name at least. (See also corresponding item in previous specification.)

With regard to the decoration of library bindings, the Report states : "While the Committee feels that any additional expenditure on books for library purposes should be in the direction of improved quality in the material, it is not in any way opposed to, in fact it rather welcomes, increase in artistic design for books in use in general libraries, both public and semi-public, in the belief that everything tending to increase the respect which the ordinary reader, and, in fact, any reader, should have for books is of advantage. Where the covers of books are printed, and not lettered in gold or blind in the ordinary way, the ink used should always be of a fast nature."

The third specification which the Com-

mittee offers is that which it prepared when the Cambridge University Press agreed to adopt the specification of the Library Association for the binding of the "Encyclopædia Britannica." This specification was printed in the April, 1911, Bookbinding Number of the *British and Colonial Printer and Stationer*. The Binding section of the Report concludes by giving another specification "of considerable interest," which it is stated "is in use for reinforced library bindings." For the moment we cannot recollect which publishing firm adopted the specification in question, but we incline to the view that it is the specification which was originally used in 1909 for the library bindings of the Oxford Books for Children, published jointly by the firms of Henry Frowde and Hodder and Stoughton. If our surmise is correct, the specification was withdrawn in 1910 and the books were subsequently bound in accordance with a much better specification, which was published in our Bookbinding Number for January, 1911. In any case, we think that publicity and commendation should have been given to the present library bindings of the Oxford Books for Children, and also to the cloth and leather library editions of Everyman's Library.

By setting forth objections to some of the present methods of edition binding, and by formulating the three specifications, the Book Production Committee of the Library Association has done a piece of sound work in the interest of better trade binding, which should meet with the keen approval and warm support of all those who desire well-produced books. We cordially hope that the greatest possible success will attend the Committee's efforts to improve modern book production. Those who desire to assist the Committee should accept its invitation to send expressions of opinion and suggestions regarding the conclusions already formulated. The Report is published at one shilling at the offices of the Library Association, Caxton Hall, Westminster, S.W.

Some English Binderies,

FROM

AN AMERICAN POINT OF VIEW.

A few months back, an Anglo-American binder, Mr. Holloway, who had considerable experience of the trade in this country during the early part of his career, crossed the Atlantic once more, and looked up many of his old friends in the bookbinding business, both in London and elsewhere. Some of his impressions are conveyed in a letter to an American periodical, *Bindery Talk*, thus:—

To the metropolis I went promptly—it seems a sort of Newton's law for humanity to gravitate toward London—and of course my old friend William Rutt, superintendent of the finishing department for Messrs. T. W. Morell and Co., Dean-street, was good for an early call, and really glad to see me he seemed. A clever draughtsman, excellent on execution, and particular to obtain nice detail, he has long held his responsible position with this important firm, for Morell's is one of the three or four London binderies that stand out above the nundreds of others in that prolific publishing centre. Their French levants, vellums and calfs are distinctive because of beautiful original designs—hand-tooled, the work of artists upon the premises—and the greater part of them find their way to the American side of the Atlantic. Mr. William Morell, smart business man that he is, short of speech, and quick of decision, met me warmly, and as we renewed our old acquaintanceship I found him keen for items on American trade conditions. In the employ of his firm I once spent three years—but time slips by too stealthily; I hate to think how long ago that was, for I left them to enlist in the Boer campaign in South Africa—and I might add that many times during that mix-up I wished I could immediately avail myself of Mr. Morell's implied promise in his parting words: "If you get through, your job will be waiting for you." I did get through and claimed the job.

Next my call was upon H. K. Judd and Co., of Clerkenwell-close, London, prominent publishers' binders, and distributors of British and American authors in all parts of the English-speaking world. Their plant occupies several buildings, one of which was formerly used by Oliver Cromwell as a palace—so Mr. Judd informed me—and the equipment consists of very modern, high-speed machines, prominent among which I recognised one of American make, the Crawley rounder and backer. On this trip I was indebted to Mr. Judd for assistance in the selection of some machinery I desired—and to land which in America, I may add with a not too faint sigh, cost us forty-five per cent. *ad valorem* in duty!

In Letchworth, proudly spoken of as England's premier garden city, I was shown through the plant of Messrs. Dent and Sons, where Mr. Williams, the manager, kindly offered me a place on his staff. I have not yet made quite sure whether he was in earnest, or only testing my perhaps too boastful "California talk." At any rate I found Dent's interesting and instructive, as they have a special equipment for making enormous quantities of cheap edition books, utilising the latest labour-saving devices. They also have a department for the production of "service binding" for library use, taking the publishers' sheets and strongly binding them in half pigskin and other durable materials.

Also in Letchworth—city of quaint Elizabethan style houses, each with a garden front and back—I visited the firm of W. H. Smith and Sons, managed by that well-known master of the bookbinding art, Douglas Cockerell. As is familiar to many Americans, that particular type of fine bookbinding which gives England to-day a foremost rank in this art is distinctively the creation of the poet and artist, William Morris, his close friend, T. J. Cobden-Sanderson, proprietor of the Doves Bindery, London, and of a few of their most gifted pupils, as Douglas Cockerell and Charles McLeish, of London. Mr. Cockerell very kindly showed me throughout the works, explained the various processes employed, and finally presented me with a photo which I prize very highly, a panoramic view nearly three feet wide. This picture shows the interior of the workshop, which is considered one of the best planned of its kind in the United Kingdom. Located entirely on one floor, its great expanse is ideally lighted from above; the business offices extend across one end, slightly elevated above the rest, and separated by glass partitions; the various departments are grouped for the most efficient work; rails in the cement floor bear cars for the rapid handling of stock; machines and appliances are of the best; and near the centre the works-superintendent has his desk in a slightly elevated, glass-enclosed office, from which he has practically the whole of the staff under his eye.

Their output may be described as miscellaneous, comprising great quantities of popular class books and much extra work prepared according to their own particular ideas. They maintain news agencies in all principal towns of the United Kingdom, and these serve as collecting stations for gathering many small orders which in the aggregate assure a great output.

I should not close this letter without making mention of the firm of Charles McLeish, referred to above, C. McLeish and Son, of Swallow-street, Piccadilly, London. Mr. McLeish is probably as well known by name in America as any other English bookbinder, due to the fact that so many pupils from this country took instructions from him as head finisher for Cobden-Sanderson. In truth his pupils—past and present—are to be found in many parts of the world; the last time I called upon him, who should come in but a swarthy, turbaned Indian, with a book under his arm which he proudly displayed to me, his own binding under Mr. McLeish's instructions. I understood that he was preparing to return to India, there to teach a select class of high-caste pupils of the craft. One of the somewhat original customs at McLeish's is that of serving visitors at tea-time a cup of good tea brewed in the workshop. Mr. Peter McLeish, the eldest son, has attained the distinction of being appointed instructor of bookbinding in the Central School of Arts and Crafts, by the London County Council, a position formerly held by Douglas Cockerell.

The Handling of Bindery Work.

In the ordinary bindery department of a large printing plant little attention is given to the proper sequence of operations, or the matter of having one operation leave the material in the most convenient form for the next operation.

After studying the whole question of progress of work in one bindery it was found that there was an extra handling of the material between each two operations practically all along the line. On a given publication job it was found that the sheets from the press-room were first jogged and restacked before going to the automatic folders. The folders delivered the work into box trucks, from which the gatherers helped themselves after walking half way across the department. The stitchers secured the inserted magazines from the gathering tables, a load at a time. When the stitching tables became clogged with stitched magazines the cutter's boy was summoned to carry them, one lift at a time, to the bench back of the cutting machines; another cutter's boy carried them to the mailers after trimming. This system—or lack of it—meant that the entire edition was handled four times between operations in armful lots. Some of this carrying was done by girls who were certainly not qualified for a freight handler's job.

By perfecting the jogging devices on the presses it was found possible to eliminate hand jogging on all ordinary work. By using box platforms, which could be moved by running flat trucks under them and releasing a clutch, the four-hand haul of the entire edition was changed to simple handling of truck load lots.

Before starting a given job the route of all the material was definitely written out and given the boy in charge of the trucking. At the delivery end of each folder space was allotted for two empty box platforms. The girl attending the folder was required to place in one of these boxes a definite number of signatures piled in a prescribed way. The manner of piling was such that the material would be in the most convenient position for the gatherers. When this box was filled she started on the next. The truck boy took the full truck to a prescribed position for the next operation. The gatherers thus had at hand the different signatures required without leaving their positions. They in turn were required to deliver their work into box platforms in like manner, and the same truck boy carried the filled trucks to the stitchers.

No tables were used by the stitchers, who worked directly from one truck into another, leaving the work in exact lifts convenient for the cutter. The cutter's bench was removed and the trimming done directly from a full truck to an empty one, the truck boy doing the hauling between operations. Thus the mailers received full trucks of magazines, each containing a definite number of copies.

Among the advantages of the new system may be mentioned these:—All hand carrying between operations was eliminated. Work on the different operations was uninterrupted, and hence a larger output resulted. If at any time it was desired to know the number of copies finished through different stages of production, it was easily found by counting truckloads—for all contained specified quantities. Part of an edition should not be "lost." There was no possibility under the new system of having a hundred or two extra sheets of one signature turn up a few weeks later and solve the "mystery" of short copies.

The effect on the workers of having a definite place and a definite manner in which to place their work was noticeable in the increased order and skill of operation.—*The American Printer.*

British or American?

SIR,—Referring to an article in your issue of the *British and Colonial Printer and Stationer* on "Typical Modern American Binderies," in which it is suggested that the reproductions of photographs of bindings contained in a pamphlet entitled "Bib-li-op-e-gis-tic" are taken from bindings executed by the Trow Press, we should like to point out that no less than 10 of these are from photographs taken from bindings executed by us, and will be found on pages 2, 4, 6, 8, 12, 13, 14, 20, 22. Your illustration No. 2, you will notice, is one of them, and the bindings which you state in your article are on the lines of "Cosway Bindings" are actually Cosway Bindings, and also executed by us. It is superfluous for us to comment on such illegitimate advertising, and we think you should show up in your paper such methods of endeavouring to obtain business.

Yours faithfully,

ROBT. RIVIERE AND SON.

29--33, Heddon-street, W.,
August 25th, 1913.

MANY and varied are the uses of paper, and now it is stated that an American inventor has patented a method of producing raincoats which can be sold for about fivepence each, the cost of production being half that for each coat. The garments are made from waterproofed paper, and it is claimed that they can be used on more than one occasion. This coat has a material advantage over the present cloth variety, for it can be folded up and carried in one's pocket. Dullness and monotony in pattern will not prevail, for the paper coat can be made in colours to match one's suit, the only apparent drawback to the garment being that no pockets are provided.

In AMERICA

There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—

Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.
It is pre-eminently the trade journal English machine builders should use to make their product known in America.

We have good mechanics. Let us have good business men. Let the **NEWS** come to **YOU** every week. Europe **$5.00** per year; Canada **$3.00**. 64 pages weekly.

The Printing Trades Exhibition

AT AMSTERDAM.

From our Special Correspondent.

The Kingdom of Holland is celebrating the centenary of its independence, and no less than thirty exhibitions and special festivities have been held in connection with this celebration. The most important of these, from our readers' point of view, is naturally the Internationale Graphische Tentoonstelling, or International Exhibition of the Graphic Arts, which has been held in Amsterdam during the months of July, August, and September. This exhibition occupied the Paleis voor Volksvlijt, a building which, with its annexes, is rather larger than our Agricultural Hall, and is modelled on the style of the nave of the Crystal Palace. The arrangement of the main hall merits special notice. A false roof of gauze has been put in about 30 feet from the floor, and the space then divided up into stalls by wooden frames covered with a light brown cloth. Each stall is therefore self-contained, and the cloth makes an admirable background for specimens of printing or bookbinding. The effect is artistic, and compares very favourably with the rather haphazard methods adopted at some of our exhibitions. The main purpose of the exhibition is to educate the public, or, rather, the best way to put it is that it is in the main an exhibition of printers' work rather than of machinery and tools for the use of printers, although, as will be seen, the latter are by no means wanting. We will deal first with the General Section, and describe the principal exhibits of the most important Dutch offices, which by the way generally cover both letterpress and litho work.

Messrs. Ellerman, Harms and Co., of Amsterdam, show some effective poster work in chromo-lithography, which showed up much better than their letterpress.

Messrs. Emrik and Binger, of Haarlem (London office, 379, Strand), a firm established as far back as 1829, are fine art printers, and had some fine specimens on view of their chromo-litho, collotype, and three-colour work.

Messrs. J. Enschedé en Zonen, who date as printers from the very early years of the eighteenth century (1703), show many specimens from their general printing office. They have been newspaper owners for about 200 years, the *Haarlemsche Courant*, one of the oldest living European papers, being their property. Their typefoundry, started when the Wetstein foundry was acquired in 1743, in addition to the excellent founts cut by the firm, possesses the matrices of many of the finest types of the sixteenth and seventeenth centuries, and from these types are cast to-day in order to print works which require to appear in antiquarian dress. These types are not sold to other firms, but are only used in the Enschedé office. Their general letterpress and block work is of a high order. There is no Bible monopoly in Holland, but a considerable proportion of the copies of the Dutch Bible in circulation have been issued by the Enschedé press. In conjunction with a few other firms they issue the official Church hymn-book. These works, shown as they are within a short distance of the world-famous productions of the Oxford University Press, bear the somewhat trying comparison remarkably well.

One of the few German firms exhibiting is Albert Frisch, of Berlin, who show some good specimens of collotype in colours, including some facsimile work. Collotype is not much practised in Holland, owing to the climate, and the excellent work of this firm should draw some Dutch work to Berlin.

The firm of Lankhout and Co., of The Hague, specialises in commercial chromo work, and shows some effective specimen sheets.

The Amsterdam firm of Van Leer and Co (who have a London office at 62, Ludgate-hill) have a good collection of prints in chromo-lithography and three and four colour work. Their chromo-photo-litho prints are specially to be commended.

The Drukkerij Levisson, of The Hague, produce fine printing of all kinds, but their booklets for commereial purposes, posters and colour work call for special mention.

It is natural to expect good half-tone work from a firm which preserves the name of Meisenbach, and Messrs. Meisenbach, Riffarth and Co., of Munich, have some fine specimens in black and colour.

Messrs. Mouton and Co., of The Hague, are general colour and letterpress printers, and have a good line of their productions on view.

The Map Department of the Dutch War Office, corresponding to our Ordnance Survey, has an interesting show of specimens of maps and the litho stones from which they are printed.

It is unnecessary to describe the exhibit of the Oxford University Press, which is of the usual excellence, although the show case is almost too crowded to permit of the individual items being properly appreciated.

Messrs. Roeloffzen-Hübner and Van Santen, of Amsterdam, show some fine specimens of their copperplate printing, and give practical demonstrations of copperplate engraving and printing. Their book work is also on show, a striking example being a Missal for the use of the Old Catholics, modelled on the early printed Missals, even to the extent of having a plate of the Crucifixion, in the style of the fifteenth century, in front of the Canon.

Atlases and maps for schools form the principal exhibits of Messrs. Smulders and Co., of The Hague. Their school maps have every quality necessary for such work, especially simplicity and strength of line and lettering.

Messrs. G. J. Thieme, a firm having establments in Arnhem and Nijmegen, was founded as far back as 1792. They are general printers, book, news and litho. One or two books printed with decorated borders show a harmony of decoration and type which is often wanting in such works.

These are the principal exhibits of commercial specimens. They occupy the main hall, and each printer has his own alcove in which his productions can be shown without clashing with those of his neighbour.

A note may be added on the State Printing Office. Holland, like most other countries, excluding our own, has an official printing plant, but it appears to be restricted to the printing of Parliamentary papers, official notices, etc. Several books on show at different stands in the Exhibition are printed for the Government, and the art, scientific and other books compiled for or issued by the various Government Departments all seem to be given out to various firms for execution.

Paper.

The paper trade exhibits are not numerous. There are very few papermakers in Holland, most of the paper used coming from Germany and England. The most important stall is that of Messrs. P. Proost en Zoon, of Amsterdam. They show all the materials of papermaking, bales of esparto, logs of pulp wood, barrels of china clay, etc., and specimens of the various periodicals and books produced on paper supplied by them. The only paper they make themselves is a hand-made, which is gradually creeping into favour for printing the increasing number of old style books on. Another part of the stall shows the various machines used in testing paper, and there is a case of books showing the manner in which the paper of various periods has lasted to the present day. The most horrible example is a paper trade journal (!) the front page of which has turned quite brown owing to the action of light.

Messrs. G. H. Buhrmann, of Amsterdam, are the sole agents for the Strathmore Paper Co., a well-known American papermaking firm, and other firms, and show a good line of varieties.

The firm of Miliani, an Italian house specialising in watermarked papers for bank-notes and share certificates, have an interesting exhibit of their best watermarks, some of which are quite striking. These papers are handled in Holland by Messrs. Geuze and Co., of Dordrecht, who show bills, certificates and similar work produced in letterpress colour work on Miliani papers.

Finally, as regards the paper section, there is the Marshall miniature papermaking machine, so familiar at trade exhibitions in this country. It is excellently shown, having a raised gallery behind it for the spectators, and is much appreciated, generally being surrounded by an eager crowd. We now turn to the

Machinery Section,

which is housed in a separate hall. There are no Dutch printing machine manufacturers showing, presumably for the very good reason that there are none, and the English, German and American exhibits are shown by the Dutch agents of the manufacturers. The one real novelty in the show is the "Heureka" machine of the Heidelberg Schnellpressenfabrik. This is a flat-bed machine for printing newspapers from type, but two rubber cylinders are placed between the paper carrying cylinder and the type, with the result of transforming it into a typographical offset machine. The daily paper, *I.G.T.A.*, which has been issued in connection with the Exhibition, has been printed on it. There is a curious dullness about the appearance of the journal, which is not accounted for until the method of printing is seen. The machine is a perfector, the inking rollers and rubber cylinders being duplicated to print the second side of the paper. It can print an 8-page paper, but I cannot say at what speed. It is said that the 4-page *I.G.T.A.* has only been printed at the rate of 6,000 per hour, but this may be owing to exhibition conditions.

The English Linotype Co. is not represented, as Holland comes into the domain of the German company. The latter has three Linos on show: the "Ideal," a single magazine machine, which looks rather old-fashioned; a two-magazine machine, and a

Digitized by Google

fine three-magazine, which is the last word in line-casting machines. The Mergenthaler Casting Machine is also on view. This will cast founts for printers from the ordinary Lino matrices. The L. and M. Offset, and the latest modification of the Miehle, are shown at this stand.

The Lanston Monotype Co. have a caster and two keyboards, and their stand has had a great deal of attention. The only new point to be noticed was a keyboard that perforated two rolls at once, either in the same measure or different, as desired, so that a novel might be set up in the 6s. and 7d. forms simultaneously.

The only other typesetting machine in the Exhibition was the Typograph, which seems to be making its way on the Continent.

The Jury which inspected the exhibits and apportioned the awards was under the presidency of Mr. M. Mouton, of the Hague, the vice-presidents being Mr. H. J. D. Enschedé, of Haarlem, and Dr. Nicholas, of Berlin. Amongst the thirteen jurors were Mr. M. J. P. van Santen, Mr. A. van Leer and Mr. A. Meisenbach, whose firms were thus also *hors concours* and so could not participate in the awards.

Amongst the recipients of Diplomas of Honour (the highest award made in the Exhibition) were Messrs. Berger and Wirth, printing ink manufacturers, Leipzig and London; Messrs. Brehmer, of Leipzig and London, manufacturers of wire stitching, book folding and other apparatus for the printing and allied trades; Messrs. Emrik and Binger, fine art printers, of Haarlem and London; Messrs. Karl Krause, of Leipzig and London, etc., manufacturers of machinery and plant for the printing and allied industries; the Linotype Co.; Messrs. Ch. Lorilleux and Co., printing ink manufacturers, of Paris and London; the Oxford University Press, London; Messrs. Penrose and Co., Ltd., manufacturers of plant and materials for process engraving, etc., London; Messrs. Proost and Son, paper merchants, Amsterdam; M. Ch. Smautz, litho roller manufacturer, Paris; Messrs. Smulders and Co., scholastic publishers, The Hague; and Messrs. Albert and Co., of Frankenthal, Bavaria, manufacturers of rotary and other printing machinery.

Gold medals were awarded to, amongst others, the exhibits of the Babcock Printing Press Manufacturing Co., New York; Messrs. Ellerman, Harms and Co., letterpress and litho printers, Amsterdam; Wm. Crosland, Ltd., manufacturers of machinery and plant for the printing and allied trades, Bredbury, near Stockport; the Drukkerij Levisson, printers, the Hague; Messrs. Geuze and Co., printers, Dordrecht; Messrs. A. Gutberlet and Co., of Leipzig, manufacturers of book folding machines; the Heidelberg Co., manufacturers of printing machinery; Messrs. Lankhaut and Co., lithographers, the Hague; the Mergenthaler Typesetting Machine Co., Berlin; the Lanston Monotype Corporation, Ltd., London; the Strathmore Paper Co., Mittineague, Mass., U.S.A.; Messrs. G. J. Thieme, letterpress and litho printers, Arnhem, etc.; and the Typograph Machine Co., Berlin.

The firms to whom a silver medal was awarded included Mr. Emil Kahle, of Leipzig, manufacturer of perforating and stereotyping plant and platen presses.

The exhibit of Messrs. C. L. Lasch and Co., of Leipzig, manufacturers of wire stitching and eyeletting machines, gained a bronze medal.

ACCORDING to the *Board of Trade Journal* the number of organisations connected with the printing and allied trades represented at the late Trade Unions Congress, at Manchester, was eleven, sending to the Congress 23 delegates, representing a membership of 68,954. The figures for the 1912 conference were: Organisations, 11; delegates, 23; members, 65,715. This year showed an increase in the membership of 3,239.

TECHNICAL

Instruction in the Printing Trade.

Opening of the Session 1913-14.

Printing now forms a subject of instruction in many of the provincial technical schools, as is shown by the numerous syllabuses for the new session 1913-14 that have come to hand. By the end of this month most of the classes will have started, and some of them with increased facilities and accommodation. The following has been summarised from the information relating to the printing craft appearing in the new prospectuses that have been issued by institutions outside of London.

Batley Technical School.

This School is under the management of the Education Committee of the Batley Town Council, and is a fine modern building, erected in 1893, but subsequently extended and improved on more than one occasion. Typography is taught under a certificated teacher of the City and Guilds of London Institute (Mr. Chas. E. Roberts), and the syllabus consists of a preparatory course and a technical course, the latter including in the fourth year lectures on cost for composing, machine, binding and warehouse departments. The School is equipped with type, press, and other appliances for good practical work. Visits are made to centres of interest to the trade on Saturdays during the session, which commences on Monday, 22nd inst. The fee per session is 7s. 6d.; students under 16, 5s.

Birmingham School of Art.

The new session of this School commenced on Monday, 15th inst. The subjects taught include book illustration, in two sections, namely, moving model and design. The teacher of both is Mr. Eggison, and the class meets on Tuesday, Thursday and Friday mornings. The fee for a term is £2 10s. for those over 16, and £2 for those under 16, for three mornings a week.

Blackheath School of Arts and Crafts.

Among the subjects taught at the Blackheath, Lee, Lewisham and Greenwich School of Arts and Crafts, Lee-road, Blackheath, S.E., are bookbinding and book illustration. The latter comprises black and white illustration, drawing for fashion plates and lettering, there being a special class for black and white reproduction and lettering. The instructor is Mr. Harold Nelson, the class meeting on Wednesday evenings. Fashion plate and fan painting is taught by Mr. Leighton on Thursday evenings. Bookbinding and decoration is under the tuition of Mr. E. Green, the class meeting on Monday and Wednesday evenings. The session opens on the 29th inst. The fee for preliminary evening course is 5s., and for evening School of Art courses 10s. per term.

Bolton Technical Schools.

The Bolton Town Council issues an Education Directory of 354 pages, the present one being the ninth issued under its direction, which gives in convenient form information respecting the primary as well as technical and secondary education taught in the educational institutions in Bolton, for the maintenance of which the Council, through its Education Committee, is responsible. Typography is taught in the Municipal Secondary School, the lecturer being Mr. J. R. Linton. In addition to imparting information of a thoroughly practical character, samples of material, diagrams of machinery, and specimens of modern display work are exhibited. At convenient times Mr. Linton gives papers on "Advertising from the printer's standpoint," by which it is hoped to arouse a deep and abiding interest on the part of young printers in an essential feature of their technical education. The instruction is divided into three grades, the examination in the first grade consisting of a paper of questions only, while in the second grade, in addition to a paper of questions, there is a practical examination for compositors to be held in a printing office. One of the items taught in the final grade is "Cost generally of plant, material, paper, etc." These classes began work on Monday, 15th inst.

Bradford School of Art.

The new session of the City of Bradford School of Art began on Monday, 15th inst. There are evening classes in typography for compositors, the theory and practical work being combined into one course and the course is divided into three years, certificates being given for each successful course. Lecturer, Mr. H. Lister; instructor, Mr. W. H. Wray. Similar classes are held in typography—machine and press, with the same lecturer, the instructor being Mr. J. H. Kane. A course of instruction is also given in the art of chromo-lithography, so planned that it will serve both for the apprentice and for those who have passed through their apprenticeship. All the necessary material, including a large selection of stones, is provided for the use of students. Practical lithography, machine printing and photo-lithographic printing is taught to students engaged during the day time as apprentices or journeymen. The department is equipped with hand and power litho presses, copperplate press, and flat-bed litho machine. An up-to-date rotary offset machine has been acquired for this session. A stock of lithographic stones, aluminium and zinc plates, and the various chemicals employed in their treatment is also provided, as well as the necessary black and coloured inks, oils, varnishes, etc., and the various transfer and printing papers. The lecturer and instructor is Mr. W. E. Learoyd. In order to meet the requirements demanded by the changes and advancements constantly taking place in the printing trades, and to meet the difficulties that every apprentice or learner finds in the workshops on account of the specialisation and sub-divisions of work incident to such a highly-skilled craft, arrangements have been made for a class dealing with photo-reproduction work. The instruction is so arranged as to deal with photo-engraving and photo-lithography. A photographic studio has been arranged containing exposing room and dark room, fitted with the necessary apparatus. The instructor of this class is Mr. M. O'Keefe.

Brighton Municipal Technical College.

Evening classes in typography are held at this institution, which is under the management of the Education Committee for the County Borough of Brighton. The new session commenced on the 15th inst. and it is divided into two terms, the first ending in the third week of December, and the second, commencing about the beginning of the second week in January, ends about the middle of April. Mr. E. C. Tomkins is the teacher, and there are three courses—preliminary, ordinary and honours, the latter dealing with the knowledge necessary for the duty of estimating. The fee is 5s. for either course.

Cork Technical Institute.

The Crawford Municipal Technical Institute, Sharman Crawford-street, Cork, was opened in January, 1912. The classes reopened for the session 1913-14 on Monday, 22nd inst., and will continue until about the end of May. Typography is taught by Mr. J. Harvey, and comprises composing, press and machine in Grades I. and II., and a final examination course (Honours) on two evenings a week. Also machine composition, the instruction relating to both the linotype and monotype. In addition to the money prizes and medals offered by the institute, prizes of £1 are awarded by the Printers' Managers and Overseers Association to the winners of the first prizes at the final examination, and in each

section of Grade II., and prizes of 5s. to the winners of the second prizes in each section of Grade II. The sessional fee is 5s. for a course of study in any two subjects.

Dublin Technical Schools.

The City of Dublin Municipal Technical Schools began the new session on Tuesday, 16th inst. Book-producing classes are taught at the Bolton-street School, and comprise instruction in typography, lithography, lithographic drawing, photography, photo-mechanical processes, bookbinding and art applied to these crafts. Typography is divided into theoretical and practical instruction, the instructors being Messrs. C. W. Clarke and P. Maher. There are also special classes for journeymen, typography being under instructor P. Fogarty, and linotype machine work under R A. Latchford. There is a note in the prospectus to the effect that it is hoped that instruction in monotype work will soon be added. The foregoing classes are held in the evenings on different days in the week. There are also afternoon classes in typography, intended for newspaper hands, covering compositors' work, elementary and advanced; practical instruction in the use of the linotype machine; technical calculations and workshop arithmetic; English, and technical drawing, such as should be serviceable to compositors. The usual fee for the entire session is 5s.

Glasgow School of Art.

Craft classes connected with the production and illumination of books are held at the Glasgow School of Art Central Institution. Lithography, block cutting, colour printing, posters, and black and white processes are taught, as regards design, by Mr. Allan D. Mainds, assisted by Mr. Archd. E. H. Miller, and, as regards printing by Mr. Joseph Hamilton. Instruction is given on Monday, Wednesday and Friday evenings, and also on Friday afternoons. The various processes followed in reproduction will be dealt with, together with colour and colour processes. Also wood block cutting, Japanese methods, etc. Illumination and lettering are taught by Mr. Allan D. Mainds (design), and Mr. Wm. G. Morton (lettering). Professor R. Anning Bell, R.W.S., R.B.C., is the director of studies, and the session extends from September 16th till June 12th, 1914. The fee for craft students at the evening schools (three nights weekly) is 10s. 6d., and the afternoon school fees are £4 10s. per session for five afternoons weekly, and £3 3s. per session for three afternoons weekly.

Harrow District Technical School.

At this School, which is situated in Station-road, Greenhill, Harrow, there are classes in lithography or photo-mechanical process work and in typography, the instructors being Mr. F. Hurwitz in the former, and Mr. Ernest N. Wimhurst in the latter. The instruction in both will be arranged to cover the syllabus of the City and Guilds of London Institute. Special attention will be given to the offset process in the litho class, which commences on Tuesday, 30th inst., the typography class commencing on Wednesday, October 1st. The fees in both cases are 5s. for the full course.

Newport Technical Institute.

An evening class in lithography is held at this Institute under the tuition of the Headmaster, Mr. W. Bush, F.C.S. This Class is intended for lithographic apprentices and draughtsmen engaged in the printing trade. The instruction will be of a practical nature, from grinding stones up to printing the finished work. Students will be taught to design, make transfers, and pass through the whole of the stages required for a complete knowledge of the art. The methods of obtaining transfers by means of photography and colour printing will be included in the course. The class is held on Monday evenings. On Wednesday evenings a class is held in drawing in black and white for the Press, or reproduction for printing processes, by Mr. J. R. Lloyd Roberts. It is exclusively for advanced students. Day classes in both subjects are also held. The session consists of two terms, extending over a period of 30 weeks, the first having commenced on the 18th inst.

Nottingham University College.

Evening classes in printing are held here, the session having commenced on Monday, 22nd inst. The instruction given follows the lines laid down in the syllabus of the City and Guilds of London Institute, and visits, when possible, are paid to local works. Process and machine work are taught by Mr. A. Pike, and compositors' work by Mr. H. W. Everard. A small plant is provided in the class-room. The fee for the session is 5s.; a composition fee for two printing classes being 7s. 6d.

Oxford City Technical School.

While not primarily intended to teach special trades or businesses, the chief object of this School is "to prepare students for commercial, industrial, artistic, or domestic occupations, and to enable mechanics, artisans and all who have to get their living, or who help others to get it, to learn such branches of science, or of other education, as are of practical application to their work." Among the technological and manual subjects taught appears typography, elementary and advanced classes being held on Friday evenings, for apprentices only. The fee is 5s. per session.

Preston Harris Institute.

The aim of the Council, in arranging the work of the evening classes at this institution, is to provide systematic instruction in the scientific principles applicable to the leading trades and industries of Preston and the district. The session of the evening classes commenced on 22nd inst., and includes a class in typography on Monday and Wednesday evenings. The teachers are Messrs. R. Austin (medallist), R. C. Pye (Honours) and W. H. Austin (Honours). The fee for the session is 7s. 6d.

The Newspaper of the Future.

By H. Drummond.

Ther ar, or shud be, sum feeteurz ov the neuzpaiper ov the feuteur which Mr. Robert Donald, ov the London *Cronicl*, haz not indicaited. Mai we look for a neuz-sheet without startling hed lienz? When we reed that sertain ietemz ar held oever for lac ov spais, and at the saim tiem see hed lienz filing an eighth or one-sixth ov a column, it iz dificult tu mezhur the sens or valeu ov economi in the editorial room. Whot purpos for good duu larj hed lienz serv? We feer nun. Thai sertainli beget a feeverish, unbalanst miend—an improper fraim ov miend—tu reeseev eni kiend ov neuz, and calceulaited tu creait fols impreshonz and tu prodeus eroeneus concluzhonz befor a singel lien ov neuz haz been red. Thoez epigramatic colum hedz tuu often giv prominens tu meer triefelz and the sensaishonal. Whi shud organz ov public opinion foster and cultivait such shaloenes?

Meni reederz hav veri eroeneus iedeaz about Advertizments. Sum ar foolish enuf tu dezier thair entier ecscluzhon, ignorant ov the reveneu thai prodeus; on the uther hand advertiezerz hav a poor concepshon ov the art ov efectiv advertiezing. How often duu publisherz, when anounsing neu books, giv copius ecstracts conserning them, aul printed in smaul tiep? Not wun person in a hundred, nai, posibli not wun in a thouzand, ever atemts tu reed the testimoniz so cramd and crouded intu a smaul cumpas.

Az advertizments cannot be abolisht in the jurnal ov the feuteur, iz it tuu much tu ecspect that thai duu not entrench upon ordinari neuz columz? Iz ther not a groing tendensi tu rezerv boeth the left-hand and the riet-hand columz for advertizments? Even the senter ov the paij haz tu pai hoestaij tu the advertiezer, however objecshonabl tu the ie such obtruuzhonz mai be. Then the botom, and the botom cornerz ov the paij, ar often fild with advertizments. But the wurst ov aul anounsments ar thoez which alternait neuz on wun sied and advertizments on the uther. This iz a veri objecshonabl intruuzhon, espeshali on the part ov weekliz which ar kept and bound. Thai ad tu the bulk, and duu not serv eni purpos after the iseu in which thai apeer. Advertizments in weekli sheets aut tu be so printed that thai mai be withdrawn without los ov mater. Wil the neuzpaiper ov the feuteur set a good ecsampl in this respect?

Corespondens iz variusli treeted bi the diferent editorz. A few alot liberal spais tu leterz from thair reederz; and not oenli ar several columz devoeted tu voluntari contribeushonz, but thai reeseev speshal atenshon, az from the editorz ov the *Yorkshire Post*, *Manchester Guardian*, *Glasgow Herald*, and *Spectator*. The *Yorkshire Post* taiks a speshal deliet in comenting upon leterz apeering in its columz. Whielst the editor mai not win over his corespondents tu hiz vewz, he sertainli adz tu the powr and cosmopolitanizm of hiz jurnal bi drawing reederz ov everi faiz ov thout tu hiz sheet. It is liekli that this feeteur wil reeseev moer atenshon and spais in the neuz-sheet than it duz in the curent jurnalz. Woz it not the lait Mr. Stead hu conseevd ov a neuzpaiper (?) compoezd ov nothing but leterz? Wil a jurnal ov this tiep apeer and be wiedli suported? Mr. Donald did not dreem that it wud; yet within reezonabl limits it mai cum tu pas.

Amid aul the chainjez "that ar shuer tu cum" in the jurnalistic wurld Mr. Donald'z vizhon did not forsee a chainj in the speling ov the neuz-sheet. Masheenz for this and that for the rapid producshon ov neuzpaiperz hav crouded intu the printing-room, which the groeth ov competishon amongst jurnalz haz begot. Proprieetorz hav vied with eech uther in the ecspenditeur ov thouzandz upon thouzandz ov poundz in the erecshon ov neu masheeneri for the economi of tiem, tu be erli in the feeld with the laitest neuz; yet how feu hav venteurd tu efect economi without tue ecspenditeur ov a singl shiling, bi omiting the printing of sielent leterz? A feu munths ago the *Times* sujested the enlarjment ov the alfabet bi the adishon ov tuu neu leterz, wun for "th" and wun for "ng." It estimaited a saving ov £350,000 a yeer in English printed jurnalz, ecsclusiv ov mateerial saivd. If this larj sum ov muni cud be saivd bi euzing tuu simbolz insted ov foer, whot a heuj sum wud be economiezd by the omishon ov iedel leterz!

In a wiedli spaist colum ov the *Times* 110 leterz cud be dropt, and in an ordinari colum the number ov eusles printed leterz reech 166, wheilst thai toetal 210 in a colum ov the *Yorkshire Post*, or an agregait ov 1,500 redundant leterz on a paij! Wher wer Mr. Donald'z powerz ov vizhon that he did not dreem, or maik himself dreem, ov newzpaiperz ov the feuteur that wud not burden proprieetorz, compositorz, proofreederz, printerz, and reederz with an armi ov redundant leterz? He wox candid tu confes that he woz not an edeucaited man, but pozest informaishon; shuurli hiz noellej iz wied enuf tu be cognizant ov the fact ov the needles waist ov tiem, laibor, muni, and material which eusles leterz entail upon printerz ov neuzpaiperz. Ar jurnalists waiting for sum boeld editor hu wil "bel the cat" bi riding hiz jurnal ov aul redundant leterz, or wil ther be a jineral advans against the printing ov simbolz which mai be saifli dropt without mateerialy afecting the apeerans ov the paij?

"Cordelia" Cover Papers.

Messrs. John Dickinson and Co., Ltd., Old Bailey, E.C., have introduced a new and attractive line in cover papers, to which they have given the title of "Cordelia," and the range of colours is so pleasing and the texture of the surface so charming that printers will find them adaptable for a wide section of their work. The essentials of a good paper are great strength, good folding qualities, and dainty attractiveness, and in the "Cordelia" covers these essentials are strongly in evidence, while the linen facing is surprisingly real, both on the surface and in the look-through. The firm says in making this new paper at their Croxley Mill they have endeavoured not only to produce a strong, good folding choice paper, but have introduced the "kindliness" found in a good printing quality, and have avoided the harshness so destructive to type that is often present in cover papers.

The paper is stocked in medium, royal and double crown, 504 sheets to the ream, and in six colours: maize, lobelia, gorse, mint, mistletoe and lilac. Although these papers are made primarily for cover purposes they may be used for quite a variety of purposes, such as folders, booklets, programmes, menus, cards, tickets, post cards, envelopes, etc., and the fine character of the facing, together with the artistic colour basis, renders it possible for such productions to be got up in a strikingly attractive and unique manner. An excellent series of samples is sent out and printers should apply for a set. Among the examples is one that contains some excellent advice to printers, which we reproduce as follows:—

Always use high-grade stock.

Remember that the use of too many colours and too much decoration militates greatly against the production of artistic printing.

A better result would be obtained by reducing the number of colours, and employing the money thus saved for the purchase of better stock.

It is seldom necessary to use more than two colours on any job of printing.

It is quite possible to produce effective printed advertising by means of simple typography, flawless presswork, good black ink, and cover stock of the best quality.

In the majority of cases a high-grade stock should be the medium selected, in order to produce advertising that is effective in every way.

The Condition of the Labour Market

IN THE

PRINTING AND ALLIED TRADES.

HOME.

According to the Labour correspondents of the Board of Trade, whose reports appear in the *Board of Trade Labour Gazette* for the current month, employment with letterpress printers declined last month, as is usual in August, and at the end of the month was slack on the whole. With lithographic printers employment continued good. As compared with a year ago there was a general improvement, as shown by the Table below :—

Districts.	No. of Members of Unions at end of August, 1913.	Percentage Unemployed at end of			Increase (+) or Decrease (—) on a	
		August, 1913.	July, 1913.	August, 1912.	Month ago.	Year ago.
London	21,637	7·4	4·6	9·2	+ 2·8	— 1·8
Northern Counties and Yorkshire ...	5,943	3·8	2·1	4·6	+ 1·7	— 0·8
Lancs. and Cheshire	7,121	5·1	3·9	4·7	+ 1·2	+ 0·4
East Midland and Eastern Counties ..	2,832	3·9	2·3	3·3	+ 1·6	+ 0·6
West Midlands	2,767	4·9	1·6	5·7	+ 3·3	— 0·8
S. and S.W. Counties and Wales ...	3,999	3·0	1·7	3·9	+ 1·3	— 0·9
Scotland	6,071	1·9	1·9	3·4	...	— 1·5
Ireland...	2,497	6·3	6·6	8·1	— 0·3	— 1·8
United Kingdom	52,867	5·4	3·5	6·5	+ 1·9	— 1·1

In London, employment was slack with letterpress printers and good with lithographic printers.

In other centres, employment with letterpress printers declined generally, and was slack at most centres, except in Scotland, where it continued good. In the Eastern Counties and at Derby and Bristol it was fair, though not so good as a month ago; while at Oxford and at Cardiff it was good. With lithographic printers employment was good, and better than a month ago and a year ago, except at Edinburgh and Belfast, where it was slack.

FOREIGN.

In France, during July, employment in the printing trades showed a slight falling off, the percentage out of work being rather higher in Paris than in the Provinces. From Germany no change was reported; in Norway there was a slight increase in employment.

A Newspaper Hoax.

One of the most barefaced, deliberate fakes of recent years was perpetrated upon the people of New York, Newark, Philadelphia, Atlantic City, Wilmington, and suburban towns, the other Sunday, by some persons whose identity the police are trying to discover. The fake consisted in the publication of an eight-page newspaper bearing the title of the *Sunday Telegram* and dated Philadelphia, August 31st, on the front page of which in 2½-inch heavy black letter type appeared the headline, "Harry Thaw Shot Trying to Escape." Following this was a three-column paragraph set in large type and reading as follows :—

"An unconfirmed report this afternoon states that Harry K. Thaw, the millionaire murderer of Stanford White, who created a sensation by escaping from Mateawan Asylum on August 15th, and fled to Canada, was shot and instantly killed by guards while trying to flee in an automobile from the jail where he was placed when caught. It is also reported that his lawyers, who were with him, and the chauffeur driving the machine, whose names are as yet unknown, were also killed or injured."

Thousands of copies of the paper were sold on the streets of the above mentioned cities at five cents a copy. That the alleged news of Thaw's death created a sensation is putting it mildly. The news travelled fast. The local newspaper offices were kept busy answering inquiries of additional information made by telephone. It was the sole topic of conversation on all sides.

It did not take the newspaper editors long to telegraph to Sherbrooke for confirmation of the truth of the story. Correspondents wired back that the report was a fake as Thaw was still alive and in jail.

An examination of the *Sunday Telegram* showed that the issue was No. 1, Vol. I. The only clue to the publisher or publishers of the paper was the name "J. A. Lazar, editor and publisher," which appeared at the head of the editorial page. No street address in Philadelphia was given for the office of the paper.

The name of "J. A. Lazar" does not appear in the Philadelphia city directory. Members of the local typographical union declare that the union label used in the paper was a fake because it carried no number.

The most of the paper was filled with "boiler plate" articles. A small amount of news matter taken from the newspapers of the day before, and a few editorials composed the only set matter appearing in the eight-page sheet.

Investigation shows that 10,000 copies of the fake newspaper were sold in New York, 5,000 copies in Philadelphia, 5,000 in Newark and fully 5,000 in Atlantic City. It is estimated that the publisher cleaned up $2,100 on the issue.

THE Actiengesellschaft für Schriftgiesserei und Maschinenbau, Offenbach, a/M. sends us an excellent example of printing in colours that has been executed on their "Universal" printing machine. The sheet is 36 by 26 inches, and in the centre is a fine picture of a girl, entitled "Ein Kind der Berge," which is printed in a very effective style, four colours only being used. The picture is surrounded by a heavy border in green and red, and the perfect register and equal inking show that the press in question is capable of doing very high-class work. A specimen sheet of types supplied by the same firm accompanies the picture, and shows a large and varied selection of faces.

The Monotype at Bristol.

An Arts and Crafts Exhibition is being held at the Coliseum, Bristol, at which the Lanston Monotype Corporation, Ltd., has a stand where they show a Monotype caster equipped with a display type attachment, which latter casts display type from 14 to 36-point. The function of the caster alone is for casting and setting type from 5 to 18-point. The "DD" keyboard (with a maximum of 30,000 ens per hour) and the "D" keyboard are also being shown. A Harris Two-colour Letterpress machine (working on an actual job) and a Boston Stitcher completes what should be an interesting exhibit to printer visitors. The Corporation are sending out a batch of literature drawing attention to their Bristol display; it consists of blotters, post cards, tickets, etc., all relating to the exhibit and inviting the inspection of printers. The whole of the type used in getting up these examples of printing was cast on the Monotype, and the result is an excellent advertisement for the machine. Printers who can visit the exhibition should apply for tickets—which will be sent free—to the Lanston Monotype Corporation, Ltd., 43, Fetter-lane, E.C.

Husbands and Wives in Trade.

In the City of London Court, on Thursday, *Home Words*, Ltd., 11, Ludgate-square, E.C., claimed £3 13s. 2d. against Mr. H. A. Gregory, printer, Sawbridgeworth, Herts, for magazines and periodicals supplied. Plaintiff said he did not owe the money. It was due from his wife. Six years ago he got into difficulties, and everything he was possessed of was taken from him. His wife had carried on the business since, and he had acted as her manager at £1 a week. He had nothing. His wife would pay the plaintiffs' account if they would agree to her terms. Judge Rentoul: But you are living with her. Defendant said he was bound to do so. Judge Rentoul said that in Sawbridgeworth those husband and wife cases might be rare. In London, where many people were very tricky, the cases of men running businesses in the names of their wives were enormously frequent, and he never believed in a case of that sort. It was a cover for running a business in the wife's name. Defendant said he had never tried to deceive anyone. It was absurd for wholesale stationers, publishers, etc., to be coming down on him. Mr. Piesse, plaintiffs' solicitor, said that defendant had written offering to pay soon. Judge Rentoul said he had no doubt it was a juggle merely, but there were the documents which were rather in defendant's favour. Plaintiffs no doubt thought they were sending goods to the defendant. Defendant: Because I work for her. Judge Rentoul: If you or she do not pay this bill they are being "done" out of their goods through you being her manager. Defendant: But it is very awkward to me for firms to be coming down like this. If I pay this I will have to pay the lot. It seems the firms have laid their heads together. Judge Rentoul: I have the means to make you pay, and ultimately to order imprisonment for six weeks if you do not pay. No matter in whose name this business is carried on. It is all the same. There is no difference whether it is in the wife's name or the husband's, if they are living together, one concern supporting the two. Mr. Piesse added that some letters were written by the wife and others by the husband. Judge Rentoul said he would find for the plaintiffs, with costs.

Diaries for 1914.

Their carefully compiled and well-finished Export Diaries for 1914 have been published by Messrs. Cassell and Co., Ltd., La Belle Sauvage, London, E.C., who inform us that they have received increased demands for them from all parts of the world. The Rough and Commercial Series are old and well-established favourites both at home and abroad. They are all ruled one way, *i.e.*, feint with feint blue cash lines, and are provided with one, two, or seven days on a page, or with a week in an opening. No. 31 is a handy folio diary, measuring 13 by 8 inches. The Australasian edition is prefaced with a detailed calendar for 1914 and other calendar information, sun rising and setting, bank and public holidays, foreign moneys and their English equivalents, Australasian governors, chambers of commerce, New Zealand cabinet, Australian and New Zealand rates of postage, time standards, inter-state telegraphic rates, Australasian stamp duties, Australasian Government offices in London, leading Australasian banks, governors of the British Empire, and much other useful general information, concluding with a Concise Directory of houses in the principal trades and professions. Then follow the usual diary leaves, well printed on a good quality paper. No. 33 is a similarly arranged quarto diary, measuring 10 by 8 inches, and the one before us is arranged for the Indian and Colonial edition, in a similarly useful manner to the former. Both sizes are produced in three styles, a plain diary with paper boards to sell at 1s. 6d. for the folio and 1s. 4d. for the quarto size; interleaved with blotting and with paper boards, at 2s. 6d. and 2s. each; and in cloth boards, interleaved with blotting, at 4s. 6d. and 3s. 6d. each.

Amongst a selection of "Scribbling Diaries," No. 47 is an inexpensive and serviceable octavo diary ($7\frac{3}{4}$ by $5\frac{1}{4}$ inches) with a week in an opening and interleaved with blotting. The Australasian edition is arranged similarly to the above and sells at 1s. No. 102 is another octavo diary (8 by 5 inches) with a week in an opening, and printed on better quality paper and strongly bound in best cloth boards, it retails at 2s. A still better quality diary is No. 11, octavo ($7\frac{1}{2}$ by $4\frac{3}{4}$ inches) with a week in an opening, printed on the highest quality cream wove paper and handsomely and very strongly bound in dark green cloth with red lettering piece. It contains a large mass of valuable information, and is priced at 4s.

There is a remarkably large variety in Letts's pocket diaries, all printed on the best paper, specially made, and betokening much care in their manufacture. No. 22 is a post 18mo. ($4\frac{3}{4}$ by 3 inches), having a week in an opening, and bound cloth limp. A long upright diary in the same series, No. 24, measures 7 by $3\frac{1}{4}$ inches and has a pencil in a loop at the back. Both are neat little books, strong and well finished. The former sells at 1s. and the latter at 1s. 6d. No. 81 (5 by $2\frac{5}{8}$ inches) is a choice little diary in the Morocco Grain Leather Cases and Diaries series, having a week in an opening and a back-loop pencil. It is a 2s. line.

High quality and reasonable prices, with ample variety to suit the taste of everyone who uses a diary, are maintaining for these diaries a high reputation.

H.M. Stationery Office.

Some August Contracts.

PRINTING, BINDING, ETC.

Binding, etc., 4,000 Copying Letter Book "D. 458"; 6,000 Skeleton Guard Book; printing, binding, etc., 1,500 books England No. 1; 1,250 Army Book 194.—Drake, Driver and Leaver, Ltd., Rosebery-avenue, E.C.

British Imports and Exports Last Year.

British type founders enjoy a good export trade, while the imports from foreign sources are showing very little advance. The following were the total imports for the past five years:—

1912	56 tons	£9,616
1911	58 „	11,693
1910	54 „	8,605
1909	73 „	10,673
1908	58 „	9,181

The following were the imports during 1912 compared with 1908, five years ago, and the countries of supply:

	1908.		1912.	
	Tons	£	Tons	£
Germany	21	3,700	14	3,201
U.S.A.	35	4,352	36	5,663
Other Foreign Countries	3	1,139	6	842
British Possessions ...	—	—	—	—
Total	58	9,181	56	9,616

The exports of British type during the past five years were as follows:—

1912	518 tons	£77,161
1911	507 „	77,552
1910	469 „	72,873
1909	416 „	61,751
1908	533 „	72,915

The countries supplied are as follows:—

	1908.		1912.	
	Tons	£	Tons	£
France	30	3,680	26	4,368
U.S.A.	4	1,184	19	3,152
Argentine...	11	888	4	1,391
Other Foreign Countries	53	4,464	39	6,665
Cape of Good Hope ...	23	3,201	67	5,657
British East Indies ...	164	21,782	170	25,539
Australia	101	15,111	59	9,583
New Zealand	58	8,391	25	3,877
Canada	52	7,446	64	8,768
Other British Possessions	37	6,767	45	8,241
Total	533	79,915	618	77,161

In 1912, £15,576 worth of type was exported to foreign countries, as compared with £10,216 in 1908, and £61,585 worth to British possessions, as against £62,699 in 1908. France and America have during the past five years been the largest consumers of British type amongst foreign countries.

Trade Notes.

THE index and title-page to Volume seventy-two of the *British and Colonial Printer and Stationer* is now ready, and it being contrary to postal regulations to enclose it as a supplement to our usual weekly issue, a copy will be sent to any reader desiring it on receipt of a penny stamp.

THE death has taken place at Wellington of Mr. John James Gosnell, late editor of the *Wellington Weekly News*.

THE death occurred last week of Mr. Harry Quelch, the prominent Socialist. When *Justice* was started in 1884, he became a contributor, and he acted as its editor from 1886 to 1889, and from 1891 until his death.

DURING the fiscal year 1912-13 Muscat, the principal port of the Sultanate of Oman, south-eastern coast of Arabia, imported from the United Kingdom £4 worth of stationery and £69 worth from India, the only countries of supply.

LEAD POISONING. — Four cases of lead poisoning were reported from the printing trades to the Home Office during August, making a total of 16 since the commencement of this year, as compared with 21 in the corresponding period of 1912.

SIR T. VEZEY STRONG has presented to the Corporation of London, as a souvenir of his mayoralty, a quarter-size reproduction in silver gilt of the King's coronation chair. On the back of the chair are engraved the words of the speech his Majesty made at the Guildhall shortly after his coronation.

NORWICH.—A hoist accident occurred the other evening at the Castle Meadow Printing Works of Messrs. Fletcher and Son, Norwich. Frank Farrow, a printer's labourer, was on the third storey of the building when his head got caught with the descending cage and the top of the door. The cage had to be lifted off with levers. Farrow when extricated was taken to the Hospital.

MEMBERS of the various departments of the *Manchester Courier* spent a pleasant day on Saturday, when the *Courier* Bowling Club played a final handicap for the silver cup and gold medal, which the president had put up for competition, and for seven other prizes given by officers and members of the staff. Mr. Parker, of the composing department, carried off the president's prize.

THE Board of Trade Labour Exchange, during the four weeks ended August 15th, received 1,355 applications for employment in the printing, stationery, book and paper trades, of which 671 were from women. The number of vacant situations notified in those industries during the period in question was 581, but 372 of them were for women. The number of places actually filled through the Exchanges was 421, of which 276 were taken by women. In the Juvenile Branch 673 vacancies were notified, of which 413 were for girls, and 500 filled, 318 of them by girls.

A SPECIAL general meeting for managers and overseers in the printing and allied trades will be held at the Victoria Hotel, Deansgate, Manchester, on Saturday evening, September 27th, at 6.30 for 7 o'clock sharp, when Mr. Thos. Kirkwood, president, will be in the chair. By the courtesy of the Federation of Master Printers and Allied Trades the evening will be devoted to the consideration of "The Printers' Cost-Finding System," and the speakers will include the following gentlemen: —Messrs. R. A. Austen-Leigh, J. E. T. Allen, A. E. Goodwin and J. C. B. Percy. It is hoped that every member of the Printers' Managers and Overseers Association will make an effort to attend, and the local council will welcome managers and overseers holding positions in printing establishments who are not members of the association. Tickets may be had from the hon. secretary, Mr. F. J. Hughes, 424, Moston-lane, Manchester.

TENDERS WANTED. — For the supply of school stationery and apparatus required by the Chorley Education Committee; forms of tender from the Education Office, Town Hall, Chorley. For the supply of books, forms, and stationery for the use of the Warwick county constabulary. Tender forms can be obtained at the Chief Constable's Office, Warwick. By the Aberdeen Harbour Trustees for books, stationery, and printing; particulars from the Harbour Engineer's Office, Aberdeen. For the supply of 160 reams of blotting paper for the Metropolitan Asylums Board. Forms of tender may be obtained at the office of the Board, Embankment, E.C. The Leicester Tramways Committee invite tenders for the supply of passenger tickets with advertising rights. Specifications and conditions may be obtained on application at the Tramway Offices, Humberstone-gate, Leicester.

ACCORDING to *Kemp's Mercantile Gazette*, there were no failures in the printing and stationery trades of England and Wales for the week ending Friday, September 19th, the corresponding week in 1912 showed three.

THE Christmas Catalogue issued by Messrs. Stanley Paul and Co., contains particulars of an excellent selection of literature for the coming season that includes something to suit every taste. There is a fine list of historical and other interesting works, including the Victor Hugo—Drouet Love Letters; a new series of books for boys and girls; technical library manuals, new novels, etc. The catalogue should be in the hands of all interested in the book world.

ABOUT two years ago the General Post Office began the issue (at face value) of 2s. books of penny and halfpenny stamps. Originally, when these books were issued, at the cost of one halfpenny to each purchaser, about one million were sold yearly, since when the sales have increased to nearly eight millions per annum. The latest issue is specially interesting, as it contains, it is believed, the first advertisement printed in colours ever accepted by the Post Office, for this or any official publication.

PAPER BOX-MAKING.—The term of office of the paper box-making Trade Board established on July 29th, 1910, having expired, the Board of Trade, established on August 22nd, 1913, for the period of three years from that date, a new Trade Board for the making of boxes or parts thereof made wholly or partially of paper, cardboard, chip or similar material in Great Britain, constituted in accordance with the Regulations of April 27th, 1910. The Trade Board consists of sixteen representatives of employers and sixteen representatives of workers, in addition to the following "appointed members," namely, Mr. E. Aves (chairman), Mr. Alderman T. Smith, J.P. (deputy chairman), and Mrs. M. Beer.

TENDERS ACCEPTED. — For printing the burgess lists for 1913, for the Corporation of Newport (Mon.); Mullock and Sons, Ltd., Austin Friars, Newport, Mon.; F. D. Biddle, Dock-street, Newport, Mon. For the supply of stationery and printing from October 1st to September 30th, 1914, for the Epsom Rural District Council; W. Pile, Ltd., Sutton. For the supply of blank cards for railway tickets for the years 1914 to 1917, for the Egyptian State Railways; A. Beer, Cairo. For the supply to the Portsmouth Union of newspapers, Mr. Moore, St. Mary's-road; paper bags, Mr. Williams, Commercial-road; printing, the Portsmouth Publishing and Printing Co.; printing agenda papers, Humby and Son, Church-road; stationery, W. H. Barrell and Son, High-street; sundry printing, A. Dart and Son, Charlotte-street.

PROFIT-SHARING IN 1912-13.—According to the *Board of Trade Journal*, an enquiry has been made with regard to firms practising the profit-sharing system, with a view to bringing up-to-date the particulars which were published in the Report on Profit-sharing and Labour Co-partnership issued by the Board of Trade in 1912. From the results of this enquiry it appears that there were, at June 30th, 1913, 141 firms practising Profit-sharing, as compared with a total of 136 firms at the corresponding date in 1912. The latter number includes two firms which have amalgamated since June, 1912, and which are consequently only counted as one in the total for 1913. In addition to the foregoing there are three schemes as to which the Department has been unable to obtain information to show whether they are still in existence or not. Among the firms adopting profit-sharing in 1912 were:—The Solicitors' Law Stationery Society, Ltd., printers and stationers, 350 employees; Samuel Jones and Co., gummed papermakers and paper merchants, 250 employees; E. S. and A. Robinson, Ltd., printers, bag-makers, and manufacturing stationers, 2,100 employees; and Robert Martin, Ltd., printers, 16 employees.

UNDER the title of "Paper Trade" Specialised Correspondence, Sir Isaac Pitman and Sons, Ltd., have just published a useful little book for the use of shorthand writers in the paper trade, or to help those who intend entering it. The importance of phraseology is well known to all good stenographers, and Messrs. Pitman are supplying a long-felt want by devoting their attention to such subjects as reproducing letters, estimates, market reports, etc.—which all paper men know are full of trade terms and technical phrases—to enable shorthand writers to become proficient and take their proper place in the mill or agents' offices. Messrs. Pitman have published a series of these trade compendiums, and it must be admitted that the one on "Paper Trade" is conducive to alleviating the difficult task a young stenographer may experience in his early business connection with the paper mill. He has letters taken from business life set forth for his perusal and study, and all the intricacies appertaining to the production and sizes of paper are carefully presented in the work, which extends to 46 pages, pocket size. The price is only sixpence.

THE late Mr. John William Grundy, of Higher Broughton, Manchester, print-seller, publisher, etc., has left estate of the value of £13,777.

THE library of the Royal Colonial Institute, which already contains 100,000 works relating to all parts of the Empire overseas, has received an addition in the collection of books relating to Cyprus, presented by Mr. C. Delaval Cobham, who was for many years Commissioner at Larnaca.

"PUBLIC OPINION," the twopenny weekly review which surveys at once so concisely and comprehensively all that is occupying the minds of intelligent men and women, began its 53rd year with last Friday's issue. Its first number was published on October 5th, 1861, and its title was suggested by Sir Robert Peel to George Jacob Holyoake when he said that "England was Governed by Opinion." It has been prized by leading men, from Carlyle down to those of our own day, and now it launches on a new year with a permanent enlargement of eight pages and an issue of 75,000 copies of the last number, which was a remarkably interesting and stimulating one.

TRADE SCHOLARSHIPS FOR BOYS.—Courses of instruction are provided in London at day trade schools for boys who intend to enter skilled trades with a view to becoming skilled workers, foremen and managers. The instruction is specialised to prepare boys for entry into particular trades, to give a knowledge of the underlying principles of the trade, a practical training in trade methods, and to improve their general education. The Council offers 219 scholarships tenable at these schools, and by means of these boys may secure free education (with a maintenance grant), to prepare them on leaving school to take up either apprenticeships or employment in skilled trades. Among the institutions at which these scholarships are tenable is the L.C.C. Central School of Arts and Crafts, for book production, for which there are ten scholarships of three years' duration; and the L.C.C. School of Photo-Engraving and Lithography, for which there are six scholarships of two years' duration. In respect to both schools there is a maintenance grant of £6 for the first year, and £15 a year subsequently. It is for boys less than 16 and not less than 14 years of age, on March 31st, 1914. The last day for receipt of application forms is October 18th. The next school year in the trade schools will commence on April 20th, 1914.

The De Vinne Press.

One of the best known of American printing offices is the De Vinne Press, in New York, where an immense output is handled, and a considerable amount of book and magazine work carried through, amongst the latter being the *Century Magazine*, *St. Nicholas* and *Young Folks*, three excellently printed monthlies. The De Vinne Press employs 300 workpeople, and have adopted the Union day of eight hours. It has its own bindery and electrotype foundry, and has thirty-two cylinder presses, each equipped with an automatic feeder, and one rotary press.

Mr. Theo. L. De Vinne is one of the great master printers of America, and an acknowledged high authority on printing. Though eighty-five years of age, he keeps in close touch with the work produced, and is the author of several books for printers on the practice of typography, one of the best known being "Plain Printers' Type." The best traditions, pertaining to artistic typography, high grade half-tone printing, and fine book work are maintained by this house.

The *Century Magazine*, which probably stands at the head of American magazines for typographical excellence, is printed from Linotype bars, in common with general books, and with many of its highly praised, attractive and limited editions de luxe. Some fine specimens of American book-work have been composed on Linotype machines by the De Vinne Press. The "Toledo Museum of Art," "Greek Refinements" and "Japanese Colour Prints" are especially worthy of note,

TRADE PRINTING—**Book, Magazine, etc. Monotype and Linotype Setting. Best work. Est. 1881. BIRDSALL & Co., Electric Printeries, Stanningley, Leeds. Half-tone and Tri-colour Printing a speciality.**

Digitized by Google

and copies of these may be seen at the offices of Messrs. Linotype and Machinery, 188, Fleet-street, E.C.

Mr. T. B. De Vinne, the active head of the De Vinne Press, said recently, while conducting a visitor through his printing house, that quality and service were the corner stones of its success, and that they did 90 per cent. of their book composition on their Linotype machines.

The Bookbinders' Strike.

No settlement of this dispute has yet been arrived at, although twenty of the publishing houses have agreed to the conditions of the National Union of Bookbinders and Machine Rulers not to give any work to Messrs. J. Burn and Co. during the present strike, or at least until a settlement has been arrived at. The bookbinders' committee are receiving letters from publishers inviting them to an interview, as great difficulty is being experienced by outstanding houses who are not giving the guarantee, for the moment, in getting their work done. The London letterpress bookbinders are so completely organised that work can be stopped at nearly every shop if necessary. At the same time they are anxious to point out that they are not making an attack on the publishers, as such. The unionist claims to be really fighting for the fair employer.

Last Thursday, a meeting arranged by the National Union of Bookbinders was held outside the Esher works, when Mrs. Despard was the principal speaker. Mr. G. Fenshin, one of the Kirby-street employees, was in the chair, and said the object of the trade unionists was to improve the conditions of employment at Esher—they in London would not receive any increase in their rate of pay because of the strike. They had made progress in the fight, and they were determined to continue and to win. Mrs. Despard dealt with the history of trade unionism, and urged the Esher employees to join the trade union. If the workers were to get that which they were entitled to they must combine.

The women workers in the bookbinding industry held a mass meeting at the Holborn Hall, when a resolution pledging the women to stand by the men on strike and to organise themselves into a trade union was carried with much applause. Over 1,600 women attended.

Information of the strike has been sent to the International Bookbinders' Secretariat, whose secretary has written from Berlin to state that the news has been passed on to their colleagues in Amsterdam and also to the Labour Press in Germany. A circular-letter has also been issued to all unions connected with the International Secretariat with a request that it be published in the various countries. This means that the comrades will not agree to go to London as strike-breakers.

At a meeting of the London Printing and Kindred Trades Federation, held the other evening, the following resolution was passed:—"That this meeting endorses the action of our fellow-members, the bookbinders, in fighting the evil of cheap and non-union labour, and records its determination to recommend all its executives to assist in every possible way." A deputation of the Federation was appointed to wait on the Master Printers' Association in connection with the resolution, and to urge them to bring their influence to bear on Messrs. Burn and Co. to bring about a settlement.

We understand that the London Master Printers' Association have taken action and are endeavouring to bring about a settlement of the dispute, as it will ultimately affect a good many members of that body.

The National Insurance Act.

SIR,—On June 4th, as President of the Employers' Parliamentary Association, I addressed a letter to the Press calling attention to the very unsatisfactory working of the National Insurance Act, and pointing out that experience had amply verified the forecast of the Employers' Parliamentary Association with regard to that measure. The letter had a very wide circulation through the Press, and the proposal it contained for the appointment of a Special Commission of experienced men, of all parties and of none, to inquire generally into the subject of National Sickness Insurance has received a large measure of approval.

A further letter which appeared in the Press on August 7th, directing attention to the same subject, also received a very large circulation. The first letter was forwarded to the Members of both Houses of Parliament, and the second letter was sent to the members of the Cabinet.

Now, I notice that Dr. Macnamara, M.P., in a recent article in the *Contemporary Review* on the "New Insurance Act," gives an exposition of the amendments embodied in the Amending Act recently passed. I do not wish to discuss his article in detail, especially as a number of the amendments remove grievances to which I, along with others, had directed public attention. It is a matter of small importance to me to whom the credit of reform is given, so long as practical results are achieved. In the closing lines of his article, however, Dr. Macnamara admits that many further amendments and changes in the National Scheme will have to be effected before it can be regarded as satisfactory or complete, and I heartily agree with him in that. Where I differ from him and from the Government for which he speaks, is in the method to be adopted to bring about those necessary alterations required to make the Act more equitable and beneficial to all concerned. He apparently thinks that a national Insurance Scheme costing nearly £30,000,000 per annum may be left to the politicians to deal with as party exigencies suggest or permit, whereas I claim that it is high time the scheme was lifted out of the political cockpit and dealt with as a non-party and National question. Dr. Macnamara thinks the best way is to amend the Act bit by bit, from time to time. That involves with every change the creation of new machinery, which another change may render obsolete, but which cannot be "scrapped" because the said "machinery" largely consists of men acting as officials at great expense to the country. My view is, that instead of tinkering with this great problem in sections by instalments, the better, and the common-sense course, is to appoint a thoroughly representative Special Commission to consider the question as a whole. Such a Commission would have access to all available experience and data both here and abroad, and would have ample time—which clearly Parliament has not—to fully consider the facts, and to make comprehensive proposals for improving the scheme. Every section of the community is agreed in wanting material amendments. The only question now is—Which is the best *modus operandi?* Some have said that the proposal involves the humiliation of the Government, but that I cannot see. It may well effect the salvation of the scheme. Is it the right course and the one best calculated to promote the national welfare? If so the Cabinet will be lacking in courage, in public duty and in wisdom if they do not adopt the course proposed.

Yours truly,
CHARLES W. MACARA,
President,
The Employers' Parliamentary Association.

PATENT rights worth millions of dollars are at stake in an infringement suit brought against the International Typesetting Machine Co., by the Mergenthaler Linotype Co. in the United States District Court. This is the second suit by the Linotype Co. against the Intertype manufacturers. In his complaint Philip T. Dodge, president of the Mergenthaler concern, says that his company owns the patent rights on the Linotype machine now in general use. He declares that Ottmar Mergenthaler and John R. Rogers secured these rights in March, 1890 and 1898, and turned them over to the Mergenthaler Co. in 1894 and 1898. The International Co., he says, now has on the market a duplicate of the Mergenthaler device for rapid typesetting. Herman Ridder is president, and his son, Joseph E. Ridder, secretary of the International Typesetting Machine Co. Mr. Ridder denies that Mergenthaler and Rogers are the original inventors of the Linotype or that the International Co.'s machine, the Intertype, is a copy from the Mergenthaler Typesetting machine.

"HOW TO FORM A COMPANY," by Herbert W. Jordan (managing director of Jordan and Sons, Ltd.), has attained to a sixth edition, in which the matter relating to the formation of limited companies is brought quite up-to-date, including the important alterations in the law relating to private companies affected by the Companies Act, 1913, which came into operation last month. The book is an interesting and indispensable work for all interested in the formation of new companies.

TO PRINTERS.

Tenders for General Printing.

PRINTERS willing to TENDER FOR PRINTING the required number of the several Articles, specified in a list prepared by me, for the alternative terms for One or Three Years, from the 1st November, 1913, are requested to send in Tenders, sealed and endorsed "Tenders for General Printing, to my Office at Chelmsford, on or before the 11th day of OCTOBER NEXT.

Particulars relating to the work can be obtained at my office. The work to be done from time to time during the before-mentioned period as and when required by me.

Portions of the work will sometimes be required to be completed on the day the order for the same is given.

The tenders are to include all proofs and revised proofs which may be required by me in the course of the printing, and all expenses incurred in forwarding the proofs to me and in returning the same to the Printer, should his printing works not be situate in Chelmsford, are to be borne by him, and no charges for extras are to be claimed or allowed.

The Finance Committee of the County Council will not engage to accept the lowest or any Tender.

JOHN H. GOOLD,
Clerk of the Council.
Shire Hall, Chelmsford,
20th September, 1913.

PATENTS FOR SALE OR LICENSE.

THE Proprietor of the Patent No. 23,573 of 1910, for "Method of Making a Glucose-like Product from Cellulosic and Ligneous Materials," is desirous of entering into arrangements by way of license and otherwise on reasonable terms for the purpose of exploiting the same and ensuring its full development and practical working in this country. All communications should be addressed in the first instance to:

HASELTINE, LAKE & CO.,
Chartered Patent Agents and Consulting Engineers,
28, Southampton Buildings,
Chancery-lane, London.

Why not English?

THERE has grown up of late a pernicious habit of thrusting foreign words into English matter, which it is high time writers and printers used their influence to stop. We speak now of those too familiar phrases which could be equally effectively expressed in our own language, and for which, therefore, there is simply no excuse. Many writers guilty of this adulteration do it from pedantry alone, in the hope that they will be taken for learned men. Others fall into the habit from sheer slovenliness. A stereotyped Latin quotation comes glibly to hand, so it is pressed into service forthwith, without a thought for the libel it involves on the sufficiency of English for all purposes. Half the people who stuff their copy with these makeshifts merely proclaim their ignorance of their mother tongue without gaining any compensating admiration for their knowledge of other languages, which evidently consists in the main of hackneyed quotations. Printers could nine times out of ten substitute a good terse Saxon equivalent for the borrowed plumes of the text if authors would condescend to have their copy properly Englished. It ought to be a matter of pride to dispense with foreign stilts and crutches, whereas we seem fast subsiding into contentment with this humiliating patchwork.

British Trade with Switzerland.

SWITZERLAND is a market that appears to be neglected by the British manufacturer, notwithstanding the fact that the United Kingdom is a large purchaser of Swiss goods. Mr. J. C. Milligan, our Vice-Consul at Zurich, states that the share of the United Kingdom in the imports into Switzerland has not only been insignificant as compared with the total imports from all countries, but has remained almost stationary for some years past. Year by year the Swiss imports of paper, books, etc., increase, the value for 1912 standing at £1,771,800, as compared with £1,613,500 in 1911. The receipts from the principal countries are given for the latter year, and it is evident that Germany has the lion's share of the trade, the value standing at £1,097,400, France coming next with £283,000. The small sum of £33,500 represents the imports from the United Kingdom, and the supplies from other countries amount to £199,600 The total imports of paper into Switzerland in 1911—the latest return given—amount to £719,600, the United Kingdom participating to the extent of £27,000.

* * *

Paper from Papyrus.

PAPYRUS has been dangled before the eyes of speculative papermakers for many years past, several projects having been mentioned by interested parties as likely to revolutionise the paper trade. Early in 1907 Mr. J. Smedley Norton promised shipments of papyrus from the Nile Delta, and predicted that wood pulp would be subjected to considerable competition. The scheme, apparently, fizzled out. More, however, is likely to be heard of sudd (papyrus) for papermaking purposes in the future. Capt. Benett-Dampier, the managing director of the Sudd Fuel (Suddite), Ltd., has devoted considerable attention to the commercial feasibilities of converting papyrus into pulp, and exporting the material to the British market. Even on an annual production of 3,000 tons, a profit is mentioned of £9,000 per annum, and suggested developments cover the formation of a subsidiary company with ample capital to carry on manufacturing operations on most extensive lines. The Sudd Fuel (Suddite), Ltd., was formed early last year for the purpose of exploiting the sudd resources of the White Nile. Subsequently a factory was erected at Khartum for the production of briquettes from sudd. The discovery of immense papyrus-growing tracts in the Soudan points to an economical raw material for pulp manufacture, and whilst papyrus will be used exclusively at the outset experiments will later on be made with sudd, either with or without papyrus. That papyrus is an excellent papermaking material is fully recognised, and the progress of the Sudd Fuel (Suddite), Ltd., in the field of pulp production will no doubt be watched with considerable interest.

Printers' Managers and Overseers ASSOCIATION.

NEWCASTLE AND DISTRICT.

At the September meeting of the above Association (which was open to friends of the members), Mr. Philipson, jun. (of Messrs. Philipson and Son, process engravers, Newcastle-on-Tyne), gave an interesting lecture on the "Art of Illustration."

There was a good attendance, and the lecturer's remarks were followed with interest by those present. The lecturer gave a very comprehensive history of illustration from its earliest days, when the woodcut with its slow and tedious method was the chief process, and while acknowledging the beauty of effect obtained by the artists of early days, claimed that modern methods were producing work quite as wonderful, both in execution and effect. Mr. Philipson described several methods—collotype, photogravure, line and process engraving, photo-lithography, etc., and exhibited several specimens of work prooduced by the various methos, and described the means of their production, showing them in various stages of manufacture.

Mr. Philipson showed some excellent specimens of half-tone work produced by his firm's

Digitized by Google

special process for lithography. One sheet of 60 by 40 showed the possibilities of this new process, which is quite a departure from usual methods of photo-litho work, lending itself to a multitude of uses in modern illustration.

At the close Mr. Philipson invited questions relating to the subject, and useful information was obtained respecting the printer's method of giving instructions to the process engraver. He pointed out that these were often vague, and assured those present that with the assistance of the printer, the engraver could often obviate the trouble caused by blocks not being correctly made. Quality of work could be produced which would give the best results, if those responsible for the price to be paid, would recognise that excellence was often a matter of £ s. d., and would therefore when ordering state the quality of work required.

A vote of thanks was passed to the lecturer for his excellent exposition, and all present felt that they had learned something which would prove useful in their business experience.

Practical Printing by Students.

A very interesting volume of specimens of students' work, produced in the St. Bride Foundation Practical Printing Classes during the session 1912–13, was distributed at the annual prize distribution on the 12th inst. It contains examples of all the usual styles of composition to be met with in a modern printing office, as well as half-tone and line blocks printed in monotone and colours, some on rotary offset machines. The work is of a high-class character throughout, and testifies to the sound, practical, common-sense kind of instruction that is given at St. Bride's. Particularly noteworthy are the examples of lay-out sketches by typographical students at the end of the book, showing that the correct method for the display compositor, of roughly sketching out his work beforehand, is rightly appreciated. The original lay-outs for these letterpress specimens, drawn by the students, are preserved at the School, and may be seen on application, together with proofs of most of the unpublished jobs. The St. Bride Foundation Printing School is certainly going ahead, and the new session is being entered upon auspiciously, for not only is the equipment being increased, including a Monotype installation, a Linotype machine being already possessed, but extra room is being allotted for carrying on the work, and the number of instructors has been increased, so that the students will be divided up into smaller classes, and will thus secure more thorough supervision.

The Distress Committees appointed under the Unemployed Workmen's Act, 1905, found, during the year ended March 31st last, that 197 of the applicants for assistance connected with the printing, bookbinding and allied trades were duly qualified in terms of the Act. Ninety-nine of the applicants resided in London, but the total number was only equal to 0·7 of the whole body of applicants from all trades during the twelve months in question.

THE LINOTYPE FOR BOOK WORK.

Faces of Type, etc.	Linotype Users have the choice of over 400 faces of type; new faces are being added continually. Many of these faces have been specially cut for Book Houses. (Every Linotype User has also the choice of 84 complete borders, 73 varieties of rules, dashes, etc., and over 600 figure faces.)
Alignment.	Face alignment on the Linotype is quite automatic; no adjustment whatever is necessary. Type matter set twenty years ago would align with that set to-day on any Linotype machine.
Justification.	Line justification on the Linotype is perfect; this applies to corrected lines as well as the initial product.
Quality of Product.	The Linotype line is cast in one complete piece. This permits of slow and deliberate movement in alignment and casting, which obviously is the best way of obtaining a perfect printing surface. Incidentally it may be mentioned here that, owing to the comparatively slow movements made by the machine, the cost of upkeep is only a few pence per week.
Ease of Make-up.	The superiority of the Linotype unit of composed matter is apparent immediately the operator empties his machine galley; whether the slugs are put on a random or on a galley there is no danger of pie. Linotype matter is so easily handled that a saving of fifty per cent. is effected in makeup alone.
Electrotypes and Stereotypes.	The Linotype shoulder height and depth of strike are ideal for wax, lead, or flong moulding, with the result that the finest possible plates are made from Linotype-set matter.

A Booklet containing specimens of Linotype Faces specially suitable for Book work will be sent to anybody interested in the production of high-class printing.

Financial.

Offices of the *British and Colonial Printer and Stationer*,

58, SHOE LANE, LONDON, E.C.

WEDNESDAY, Sept. 24th, 1913.

THERE has been a stronger demand for money in Lombard-street this week, and although the supply still keeps abundant rates are firmer. The discount market is very firm, partly due to monetary conditions and partly because of the demand for gold from Germany. In the bullion market Egypt has taken a good deal of gold again this week, and movements to date have resulted in a net efflux of £868,000. In stock markets the general tone has been more satisfactory, the settlement of the railway dispute having removed a serious anxiety from the Stock Exchange. Movements generally have been of small importance, but there is a firm undertone. Consols are fractionally higher than a week ago, the quotations now being $73\frac{3}{4}$ to $73\frac{7}{8}$ for both money and the account.

Things have continued very quiet in the miscellaneous industrial market this week, and prices have shown small and irregular changes. In the section relating to paper and print the following fractional reductions have occurred :—In Amalgamated Press Ord. $\frac{5}{16}$ to $7\frac{1}{8}$—$7\frac{3}{8}$; in Linotype and Machinery A Deb. 2 to 51—56, and B Deb. 1 to 35—40; and in Raphael Tuck and Sons Ord. $\frac{1}{32}$ to $\frac{7}{8}$—1. There have been no rises this week in our list of shares. Business has been done during the past week in Amalgamated Press Pref. at 21s. 3d.; in Associated Newspapers Pref. at 20s. 3d.; in Cassell and Co. at 87s. 6d., 88s. and 92s. 6d.; in *Financial News* Pref. at 15s. 6d. and 15s. 9d.; in S. Hildesheimer and Co. Ord. at 15s.; in Ilford Ord. at 13s. 9d. and 13s. 9d.; in International Linotype at $73\frac{1}{4}$, 75 and 75; in Linotype and Machinery B Deb. at 35 and 35; in Edward Lloyd Pref. at 22s. 6d.; in Mansell, Hunt, Catty and Co. Ord. at 43s. 6d.; in George Newnes Pref. at 16s. 9d.; in C. Arthur Pearson Pref. at 74s. $4\frac{1}{2}$d.; in Raphael Tuck and Sons Ord. at 19s. $4\frac{1}{2}$d., 18s. 6d. and 18s. 9d., and in the Pref. at 98s. $1\frac{1}{2}$d.; and in Weldons Ord. at 30s.

DIVIDENDS AND REPORTS.

WATERLOW AND SONS, LTD.—An interim dividend has been declared of 5 per cent. (10s. per share), free of income-tax, on the deferred ordinary shares.

NEW COMPANIES.

WILLIAM WILLMOTT, LTD.—Registered on September 15th, with a capital of £600 in £1 shares (400 "A" and 200 "B"), to take over the business of wholesale stationers carried on at 3, Bolt-court, Fleet-street, E.C., as "Wm. Willmott," and to adopt an agreement with William Willmott and Wm. H. Walbrook. The subscribers are W. H. Walbrook, and W. Walbrook. Private company. The number of directors is not to be less than three nor more than five; the first are W. H. Walbrook, W. Willmott, and P. G. Lang.

THOMAS LUMB AND CO., LTD.—Registered on September 13th, with a capital of £10,000. in £1 shares, to carry on the business of paper merchants, stationers, manufacturers of paper, cardboard and similar substances, packers, packing case and box makers, etc., to acquire the business carried on at Coach-street, Skipton, Yorks, as "Thos. Lumb and Co." and to adopt an agreement with T. Lumb. The subscribers are T. Lumb, and Mrs. E. Lumb. Private company. The first directors are T. Lumb (governor or managing director), and Mrs. E. Lumb (both permanent, subject to holding £300 shares each).

SALTER AND CO. (WOKING), LTD.—Registered on September 13th, with a capital of £1,500, in £1 shares, to take over the business of a printer and stationer carried on by Sarah A. Salter, at Duke-street, Woking. The subscribers are A. H. Salter, and C. R. Drake. Private company. The number of directors is not to be less than two nor more than five; the first are A. H. Salter (permanent and governing director), and C. R. Drake. Registered office, Duke-street, Woking.

HARRIS AND WALFORD, LTD.—Registered on September 12th, with a capital of £6,000, in £1 shares (2,000 preference), to adopt an agreement with Florence W. Walford for the purchase of the business of a printer and lithographer carried on at Redditch. The subscribers are Mrs. F. W. Walford, and D. G. Peterson. Private company. Mrs. F. W. Walford shall be one of the first directors, and may retain office while holding 100 shares. Qualification of other directors 50 shares. Remuneration as fixed by the company. Registered office, Wellington Printing Works, Park-road, Redditch.

GEORGE SHERIDAN AND CO., LTD.—Registered on September 12th, with a capital of £500, in £1 shares, to carry on the business of typewriters and duplicators, and dealers in typewriting supplies, etc. The subscribers are E. B. Smith and S. H. Burles. Private company. Table "A" mainly applies.

SIMPLIFIED SYSTEMS CO., LTD.—Registered on September 11th, with a capital of £3,000, in £1 shares, to carry on the business of manufacturers of and dealers in stationery, paper, printed matter, bound and loose leaf account and record books, office appliances and systems, publishers, office furnishers in steel and wood, etc. The subscribers are H. Byrne and S. C. Byrne. Private company, The number of directors is not to be less than two nor more than five. The first are H. Byrne and S. C. Byrne. Registered office, 2. Gresham-buildings, Basinghall-street, E.C.

"GROCERS' GAZETTE," LTD.—Registered on September 10th, with a capital of £10,000, in £1 shares (5,000 preference), to take over the business of the *Grocers' Gazette and Provision Trades News*, carried on at 71, Eastcheap, E.C., and the copyright of the said journal. The subscribers are J. N. Butler and Mrs. A. M. Harrison. Private company. The number of directors is not to be less than two nor more than five; the first are J. N. Butler (chairman and permanent director) and E. H. Lee. Registered office, 71, Eastcheap, E.C.

J. SLACK AND CO., LTD.—Registered on September 6th, with a capital of £1,000, in £1 shares, to take over the business of a general printer, bookbinder and paper and bag merchant carried on by J. Slack at 32, Eyre-street, Sheffield, as "J. Slack and Co." The subscribers are J. Slack and J. R. Slack. Private company. The number of directors is not to be less than two nor more than five; the subscribers are to appoint the first. Qualification, £5. Remuneration as fixed by the company.

INOGRAPH CO., LTD.—Registered on September 5th, with a capital of £2,000, in £1 shares, to carry on the business of photographers, photographic artists, inographers, lithographers, engravers, advertising agents, film makers, etc., and to adopt an agreement with R. B. Nixon. The subscribers are G. Adams and J. Adams, jun. Private company. The number of directors is not to be less than three nor more than seven. The first are G. Adams, J. Adams, jun., and R. B. Nixon. Qualification £100. Remuneration as fixed by the company. Registered office, 82, Heaton-road, Heaton, Newcastle-on-Tyne.

TELETAB (PARENT CO.), LTD.—Registered on September 11th, with a capital of £5,000, in £1 shares, to acquire the benefit of certain existing inventions relating to memorandum tablets, to adopt an agreement with Albur Jose-Le Vey, and to carry on the business of manufacturers of and dealers in stationery goods, hardware, memorandum tablets, ironmongery, sundries, paper, etc. The subscribers are J. H. Croft, W. G. Swadling, A. A. Lindo, J. Jackman, F. G. Browne, C. W. Tallamy and W. R. M. Woolf. Minimum cash subscription seven shares. The number of directors is not to be less than two nor more than seven. The first are Sir George W. Kekewich, K.C.B., A. Jose-Le Vey and E. S. Johnson. Qualification £100. Registered office, 35, Glasshouse-street, Piccadilly-circus, W.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

MANCHESTER BILLPOSTING CO., LTD.—Mortgage dated September 10th, 1913, to secure £1,600, charged on land with premises thereon known as 2 and 4, Albert-place, Manchester. Holders—Manchester and County Bank, Ltd, 55, King-street, Manchester.

CLARKE AND SHERWELL, LTD.—Mortgage dated September 5th, 1913, to secure £6,000, charged on certain land with premises thereon in main road between Northampton and Market Harborough, together with right-of-way. Holder—A. P. Hawtin, Northampton.

COMPANY NOTICES.

SEARS PRINTING and PUBLISHING CO., Ltd.

Notice is given, that a meeting of the company will be held at London, on October 25th, for the purpose of having the liquidator's accounts, showing the manner in which the winding-up has been conducted and the property of the company disposed of, laid before such meeting, and of hearing any explanation that may be given by the liquidator

COMMERCIAL INTELLIGENCE.

Re GEORGE FREDERICK WALL, Sealing Wax Manufacturer.

At a sitting of the London Bankruptcy Court, held recently, before Mr. Registrar Linklater, this debtor, described as of 2 and 4, Warburton-road, Hackney, N.E., attended for public examination upon accounts showing total liabilities £1,002 16s. 1d. (unsecured £894 9s. 9d.) and assets valued at £154 16s. 1d., after deducting £8 6s. 4d. for payment of the preferential claims. In reply to Mr. Egerton S. Grey, official receiver, the debtor stated that for many years prior to December, 1905, he was employed by his father, a sealing wax manufacturer. The latter died in that month and witness continued the business on behalf of his brother (who was trustee of the deceased's estate) until 1909, when he entered into an arrangement with a Mr. Ward, who commenced a similar business at 6, Chalgrove-road, Mare-street, Hackney, and appointed witness as manager at a salary of £3 per week. For many years the name of "Wall" had stood "high" in the sealing wax trade, for which reason witness gave his employer

Digitized by Google

permission to use it, and the business was, therefore, carried on under the style of Geo. Wall and Co. Witness managed the practical part and Mr. Ward looked after the finances of the business. In March last Mr. Ward intimated that he had had enough of the matter and witness then entered into an agreement to purchase the business as a going concern for £600, payable in instalments of £10 a month. He had no capital to start with, but borrowed a sum of £37. An attempt was previously made to sell the business to a company, but the public did not bite, and witness accordingly took it over "lock, stock and barrel," and assumed responsibility for the outstanding liabilities, which amounted to about £300. A document was drawn up and duly signed by witness, but although he read it through he did not appreciate the fact that he was assuming the liabilities. In his view he was merely purchasing the business and effects for £600. The effect of that purchase agreement was to make him hopelessly insolvent, and he only kept the business going by means of borrowed money. He was only able to pay one instalment of the purchase money; shortly after he acquired the business creditors began to press for payment, and as the pressure became more severe and he had no means of meeting it he filed his petition on July 15th. Witness attributed his failure and insolvency to want of capital, to the expenses of the removal of the business, and to the exceedingly high price which he agreed to give for it. Certain books of account had been kept, but they were admittedly incomplete in several particulars, and the amount of his drawings was not recorded. Asked when he realised his insolvent condition, the debtor admitted that he had never been in a position to discharge all his debts since he took over the business from Mr. Ward. The examination was concluded.

Re FRANKLIN CORNELL, American Guide Books.

Under a receiving order made at the London Bankruptcy Court against this debtor, described as of 60, The Haymarket, W., and 77, Carter-lane, E.C., a sitting for his public examination was held before Mr. Registrar Linklater. The accounts showed gross liabilities £414 (unsecured £364); assets, £5; and a deficiency established at £359. Questioned by Mr. E. Leadam Hough, senior official receiver, the debtor stated that he was an American citizen who came to this country in 1909, with £200 capital. He had since, under the style of the American Guide Publishing Co., published "The American Tourists' Hand Book," which he distributed free of charge at hotels, relying for his profit on payments received for the advertisements inserted therein. The book was an English edition of a Tourists' Guide which he had previously published at St. John's, New Brunswick. Till April last it was published at 77, Carter-lane, E.C., and subsequently at 60, Haymarket, W., at both of which addresses he had been allowed office accommodation. Witness had charged his rights in the book to secure a loan of £50. The compilation of the book entailed quite a lot of travelling, and recently the earnings had been scarcely sufficient to meet the general and personal expenses. Witness now valued the book at £55, which was subject to the charge of £50 upon it. He attributed his insolvency to ill-health during the past three years, in consequence of which he had been unable from time to time to attend to his business; to loss in connection with a motor touring agency which he attempted to establish last September, at 166, Piccadilly, W., and to loss on the sale of a diamond ring obtained from the petitioning creditor in September, 1912. The examination was concluded.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records. Ed.]

ENGLAND AND WALES.

DISTRIBUTION OF ASSETS.

HALDEN, W. E., late of 4, Eastgate-street, Stafford, printer and stationer. Claims by October 16th to H. H. Speakman, 26, Cooper-street, Manchester, solicitor for the executor.

THE BANKRUPTCY ACTS, 1883 AND 1890.

NOTICES OF INTENDED DIVIDENDS.

LOTINGA, W., lately trading at 161a, Strand, London, W.C., journalist. Claims by October 7th to A. H. Partridge, C.A., 2, Gresham-buildings, Guildhall, E.C.

HAKE, W. H., lately trading as the South Coast Emporiums Co. at 23, Sea-road, Boscombe, Hants, stationer. Claims by October 4th to T. Easton, official receiver, Midland Bank Chambers, High-street, Southampton.

NOTICES OF DIVIDENDS.

VIGERS, T. W., and FORD, A. G. N., trading as the Standard Photographic Co., Hampden House, Kingsway, London, W.C., and 1, Queen Elizabeth-street, Bermondsey, S.E., manufacturers of photographic paper. First and final dividend of 1s. 9½d., September 30th, at the offices of Saker and Davis, C.A., 95 and 97, Finsbury-pavement, E.C.

LAWRENCE, G., formerly carrying on business at 91, London-road, St. Albans, Herts, as a letterpress printer. First and final dividend of 4s. 11d., September 27th, at the official receiver's offices, 13, Winckley-street, Preston.

SEARLE, G., 45, Magdalen-road, Mount Radford, Exeter, newsagent, stationer, etc. First and final dividend of 1s. 1d., September 30th, at the offices of the official receiver, 9, Bedford-circus, Exeter.

THE COMPANIES ACTS, 1890 AND 1908.

FIRST MEETINGS.

FORWARD, CHAS. J., AND SON, LTD., 27, Sayer-street, New Kent-road, London, S.E. First meeting of creditors, October 30th, 11.30 a.m., and of contributories same day, noon, both at 33, Carey-street, Lincoln's-inn, W.C.

A New Cover for "Punch."

An item of considerably more than usual literary interest is the announcement that on October 1st, for the first time for nearly seventy years, there will be a change in the well-known cover design of *Punch*. The celebrated drawing by "Dicky" Doyle will still continue to be used, but it will in future be printed in two colours. The addition of the second colour is part of a scheme for the general improvement of the external appearance of *Punch*. The cover will be printed on better paper than hitherto, and it will be produced on the finest Art printing presses—a method of printing which it is impossible to employ for the body of the paper owing to its large circulation and the consequent necessity for the use of fast-running rotary printing presses.

Few now living recollect *Punch* in any other cover than his familiar garb. He has, however, as a matter of fact, had a number of coats, not less than seven to be precise. For the first three years of his existence it was the custom to change the cover design of the weekly issue with each half-yearly volume.

The first number of *Punch* was issued on July 17th, 1841, in a cover design by A. S. Henning. The founders of the paper were greatly elated when the whole edition of 5,000 copies was sold out on publication, and their satisfaction was increased when a reprint order for an additional 5,000 was sold out on the following day. A sale of 10,000 copies of the first number of a threepenny humorous periodical was no mean achievement in those days.

The second cover was a graceful design containing many figures by Hablôt Knight Browne ("Phiz"), a contributor to *Punch* for a long number of years.

The third design was a delightfully pretty one by William Harvey, the Shakespearean illustrator. Mr. M. H. Spielmann, in his interesting "History of *Punch*," tells of the consternation in the office when a charge of £12 12s. was sent in with the design—"nearly half the total capital with which the engraver Landells a year before had begun the concern!"

Sir John Gilbert was commissioned to draw the next cover; a fine design, which was subsequently used for a great number of years as a wrapper for the *Punch* monthly parts.

Six months later Kenny Meadows produced the fifth cover, which was followed by a first design by Richard Doyle—a drawing in essential respects the forerunner of the now familiar design, which latter was produced by him for the beginning of the next volume, and was used for the first time in January, 1849. It is of interest to note that the first issue of this cover contained an advertisement of Part 3 of Thackeray's "Pendennis." Thackeray was at that time one of *Punch's* principal contributors, and the firm of proprietors, under its then style of Bradbury and Evans, were the publishers of his works, as well as those of Dickens, both of which were issued first in monthly parts, the one published on the 1st and the other on the 15th of each month.

It is safe to say that there is no better-known cover design in the whole world than the famous drawing of Doyle's which has now been in use for more than 64 years. The addition of the second colour now proposed is said to greatly enhance Doyle's design, making the delightful figures which it contains stand out with greater clearness and vividness.

The superior paper and the much finer printing employed in its production will add greatly to the appearance of "Mr. Punch," and his first issue in his new dress will be looked forward to with the greatest interest by his numberless admirers.

The development now announced is indicative of the virility with which the paper has been conducted during recent years, which has raised the sale of *Punch* to a figure largely in excess of 100,000 copies per week, and which has assured for it an unassailable position as "the foremost humorous journal of the world."

ESTABLISHED 1840.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help a..d an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Concluding my notes on the latest edition of Mr. Jacobi's work, "Some Notes on Books and Printing,"

o o o

Whoever Mr. Jacobi may have especially envisaged as the typical reader of the book, I will say that I find myself learning something all the time as I turn over his pages and I think many a printer will say the same. It may be merely reviving a half or almost wholly obliterated memory. That comes to much the same thing as learning for the first time.

o o o

The very first pages are most interesting and suggestive. Many printers would save themselves a lot of trouble by putting this work into the hands of some of their customers.

o o o

For instance, here is Mr. Jacobi's hint early in the book that as a general rule for all works up to and including octavo sizes it is better to use a large fount with little or no leading than to employ a small type with the lines too much leaded out.

o o o

For quarto and folio books where the width of the page is increased in proportion Mr. Jacobi advises that the lines may be spaced further apart with leads, which will render the reading less fatiguing and assist the eye in taking up the sequence of the lines.

o o o

"As an architect plans a house," the author urges, "so should a book be planned before its construction is attempted. Good type, careful presswork, or even a fair quality of paper will not redeem a work that has not been properly designed in the first instance."

o o o

These counsels are in the foreword.

o o o

The first chapter deals with the author's manuscript, which should be written on quarto paper, "copybook size," as Mr. Jacobi puts it, preferably on ruled paper and on alternate lines if the ruling is at all close, and with a good inch blank margin from the left hand. Of course only on one side.

o o o

Useful abbreviations are given. Most we may be familiar with, but how many write the word extraordinary "xtry," or further "furr," or even every "evy," or circumstance "circe," or opinion "opn," or together "togr."

o o o

Our friend is an optimist regarding an author's typewriter. "It is no exaggeration to say that, with ordinary attention, at the end of the first month, after writing each day for an hour or more, the speed will more than equal that possible with the pen."

o o o

Well, I prefer to typewrite; but I think our author has hardly realised how some of us slip along with the pen. Of course the speed of typing is commonly exaggerated. Every young girl believes she types her forty words a minute, while something like fourteen a minute is nearer what you are likely to get.

o o o

The greatest of American editors, Horace Greeley, ought to have had Mr. Jacobi's book. A letter from him was once sent to a certain printing office. They could make nothing of it starting right end up, but turning it roundabout and beginning to read "Yours truly" as "Dear Sir," they managed to make a characteristic epistle of it; and, although Horace Greeley quite correctly affirmed that not a word of it was right, still he could no more disprove it than anybody else. For, I believe, he would never undertake to read his own writing.

o o o

Dean Stanley was another such. He used to say that it was very little use bringing to him any manuscript of his own that was more than a fortnight old; he could never read it. "Dagonet," according to his own statement, probably exaggerated, would seem to be in much the same hard case. He even once made an appeal to his readers for suggestions as to what he really should try to do.

He had only found one typist who could confidently tackle his fist. He might dictate of course; but he found, as most find, that dictated matter tends to be very wooden and dull.

o o o

Sir Walter Scott was the most wonderful dictator. According to the testimony of a man, himself observant and cultured, who at one time wrote at the dictation of the Wizard of the North, Sir Walter kept up two trains of thought on parallel lines so to say. He had a section clearly in his mind which he dictated at a good rate. Simultaneously with this he was framing the section that was to follow.

o o o

"What caused me to realise this," his amanuensis has told us, "was the fact that every now and again he would let out some word which had no fitness, no relevance to the passage he was dictating, and he would withdraw it, leaving me wondering, until a minute or two afterwards the section which he had already framed in his own mind was dictated, and in the midst of it came this word which somehow had prematurely slipped from his mouth." I am giving the passage as best I can from memory of Lockhart's "Life."

o o o

But I must come back to Mr. Jacobi's book.

o o o

It embodies as an exceedingly useful feature specimens of just such book founts and other types as the typical reader is likely to find serviceable to him. The pages of this section are left uncut with very great advantage. Each type has three panels or sections on a page. The top panel in each case is thick leaded, the middle panel thin leaded, and the bottom one set solid without leads.

o o o

In this way we have Old Face in Great Primer, English, Pica, Small Pica, Long Primer, Bourgeois, Brevier and Nonpareil. We have next Old Style in Great Primer and the series as before. But we have Minion in this instance as well, and we have Old Style Pearl. Then we have Antique Great Primer, Pica, Long Primer, Brevier and Nonpareil.

o o o

We have Modern Great Primer, English, Pica, Small Pica, Long Primer, Bourgeois, Brevier, Minion, Nonpareil and Pearl. Similarly we have Old Face and Old Style Roman Capitals, a page for each, Modern Roman Capitals, Old French Roman Capitals, and Plantin Roman Capitals, and many Italic and Text pages. Samples of various papers for book printing are given. Mr. Walter Boutall has contributed matter on illustration, a subject he is so peculiarly competent to deal with.

o o o

This work in cloth boards, demy 8vo, is obtainable at 6s. net from the Chiswick Press, Tooks-court, W.C.

o o o

I am asked at times a number of questions as to how to get into the Colonial and foreign market with goods of an engineering or other character intended for the service of the printer. Well, an indulgent editor allowed me a page in the current 6d. Special Colonial Edition of this journal; and with that fairly ample "room to turn round" I have tried to say a few things *in re* that might be interesting and serviceable. But somehow I didn't manage any allusion to South Africa.

o o o

South Africa is a country of which one writes with peculiar caution, and perhaps without very much pleasure. Amid the many things which seem uncertain, amid its many disappointments, and some things one would only too gladly forget, a few other matters of a satisfactory kind emerge. The general buying power of South African newspapers, speaking of newspapers more particularly, would appear to be quite considerable. The first tubular rotary newspaper printing machine being made at Broadheath by Linotype and Machinery Limited, was bought by the Johannesburg *Star*; that enterprise being promptly followed by the installation of the same type of machine in a Manchester office.

o o o

What Johannesburg thinks to-day Manchester thinks to-morrow!

o o o

South Africa does not always buy wisely, by my experience; but it buys spiritedly, and it pays for what it buys. Though, to be sure, with "cash in London against documents," there ought to be no serious financial trouble in regard to foreign trading.

o o o

When Fleming's about fifty years ago, had been running their Edinburgh printing ink business for just about a year they were on the very point of giving it up altogether as a bad job, but the same day brought an order from the London *Times* and an order from the Melbourne *Argus*. Since then they have never looked back. *Prosit omen.*

o o o

But one could go on multiplying instances of encouragement and profit from stretching out one's hands across the sea.

o o o

Shaw's, of Honley, might be mentioned. Their "striker" rulers are installed in the Government printing offices in South Africa, in New Zealand, in India, in Cyprus, and I dare say all over the world.

o o o

They call one of their machines the "Imperial," and the confidence with which they challenge comparison of this with any French or German machines, is a kind of imperial spirit to which, perhaps, no one is disposed to take exception.

o o o

Not that one is quarrelling about terms. The difference between a "big Englander" and a "little Englander" is only the difference between a big fool and a little fool.

o o o

The true antithesis is not in any way concerned with acreage—save as it is concerned with wiseacres. The true antithesis is as between merry England and dismal England, prosperous England and England unsuccessful and depressed; well breathed, well nourished, well leisured and well pleased England as against an England that cannot claim those attributes.

o o o

We may be trading for no other conscious purpose than to make a fortune; but ordinarily one cannot make a fortune in trading without being willy nilly a useful employer of the community. That is, we cannot so long as we conduct our business on humane and reasonable lines.

o o o

I think Dr. Arnold, of Rugby, was right in his pronouncement that hardly any occupation that a man could aspire to might more rationally or more fully satisfy honourable ambition than to be a successful business man. Especially—I think he would have agreed—to be one of those successful business men who deal with the four corners of the earth, and there maintain the good name and fame of British products.

o o o

Napoleon, at Waterloo, was beaten not only by Wellington; he was beaten by Northampton manufacturers. His soldiers in great numbers stood up at Waterloo in British boots; notwithstanding the embargoes that he had placed upon any trading with Great Britain.

o o o

Grandfather was not a fool. Indeed I doubt if the grandfather of common complacent phrase ever existed. It is we who are apt to be a sort of dotards in our occasional silly talk about these slow easy-going old times.

o o o

When was that time? Was it during the railway mania?

o o o

Grandfather was alive enough? What about his grandsons?

FRANK COLEBROOK.

A Stereo Plate-Making Machine.

(Continued from our issue of September 4th.)

Having described the mechanism for lifting the stereotype into the dome of the arch and shaving its ribs, I will now describe the riser separating and bevelling mechanism and means for conveying and ejecting the riser from the machine, reference being had specially to Figs. 20 to 25.

For the trimming operation I employ a planatory mechanism in which is operatively mounted a revolving circular saw 200, having one of its edges bevelled for the purpose of forming a bevel on that edge of the stereotype plate from which the riser has been separated.

This planatory mechanism comprises a bracket 201 fixed to the main shaft by an extension 202 at one end. The other portion is formed into a convex-concave shell with both ends closed. Extending through the shell and mounted in suitable bearings is a short shaft 203, at one end of which is attached the bevelled facing adjacent to the lower end of the stereotype plate supporting arch. Facing that closed end it is shaped so as to pass outside of and over the end of the arch. To the opposite end of the shaft 203, which extends through that end of the shell, is keyed a gear wheel 204, which meshes with a gear 205 mounted on a stud 206 fastened in the bracket 201. Mounted on the main shaft is another gear 208, which in turn meshes with the gear 205. Also mounted on the main shaft is a chain drive gear 209. Beneath the frame is a bracket 210' in which is mounted a shaft 211, having a chain drive gear 212, fastened on each end and in brackets 213 at the back and aligned with the frame is the driving shaft 158, which through the chain connections operates the two sets of chain gear devices and the bevelled edges saw at a high rate of speed.

A portion of the shell of the saw bracket 201 is made loose and attached by hinge joints 215, to the fixed part of the said shell and to the loose edge of the hinge part of the shell is connected a flat piece 216 of steel having its extending edge formed into short teeth 217 (Fig. 1) for the purpose of holding the riser after it has been separated from the stereotype plate as hereafter shown.

Fastened on the main shaft 158 is a semicircular riser support 220, which is so positioned that when the shaft turns it will pass under the riser of the stereotype plate, and support the riser after it is separated by the saw from its plate. During the operation of sawing away the riser from the stereotype plate, the planatory shell 201 passes over the surface of the riser until the saw has finished the cutting operation when the separated riser now resting on the support begins to turn with said support and planatory shell, but as the revolution continues the loose riser has a tendency to slip ahead, which slipping engages the teeth in the hinged portion of the shell. As the turning continues, the weight of the riser is transferred from the support to said teeth of the hinged portion of the shell and is carried ahead by said shell until the pivot point of the hinge has been passed, when the said shell tips over on its hinge and allows the riser to drop free from its conveying mechanism.

It will be seen that the concavity of the saw bracket 201 serves the purpose of a saw-dust receiver. The dust is carried along between the shell and the riser until the said riser is ejected by the opening out of the hinged shell whereupon the sawdust escapes.

Mounted upon the saw bracket opposite the saw is a plate-supporting roller 221. Aligned with the rollers on that side of the machine and mounted in the frame opposite is a similar roller 222, which with the rollers within the arch and upon the main shaft form conveying means for the discharge of the stereotype plate directly on the cooling saddle 270, the end of which is in alignment with said rollers.

Having described the construction and operation of the shaving and trimming mechanism, I will now describe the mechanism shown for operating the same. See Figs. 26 and 32.

Keyed to the lower end of what I call the main shaft, that is, the main shaft of the finishing device, is a large worm gear 225, which, for the purpose of preventing accident is made in two parts, one of which is a toothed rim 226 mounted upon a hub 227, which has a broad flange 228 facing the said ring. The rim and hub are made to travel together by a breaking pin 229 positioned in a hole through both members. The reason for making the gear in two parts is to prevent accident in case the main shaft should for any reason be prevented from moving with the gear, in which case, as constructed, the pin 229 would be cut in two and no other damage done.

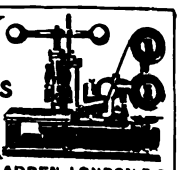
Positioned below the worm gear and loosely mounted on a cross shaft 231, so as to mesh with the gear teeth is a worm 232. One end of it is formed with a clutch jaw 233. Mounted on the same shaft and facing the jaw 233 of the worm is a sliding jaw 234 which is made to revolve with the shaft. Pivoted below this jaw on a stud 235 fastened in a leg of the frame is a shifting yoke 236 carrying projections 237, which engage in a groove 238 made around the sliding jaw member. One of the arms of the yoke extends upward, and mounted on a stud 239 in said extension is a small roller 240. To the face of the worm gear 225 is pivoted a latch 242 positioned so that after each revolution of the worm gear it will engage the roller 240 and force the jaws of the sliding clutch out of engagement with the jaws of the worm, and hold them disengaged until the latch is moved on its pivot out of engagement with the yoke extension roller 240. The yoke at all times is held toward the engaging position by a compressed spring mounted on a rod 244 operating through a bracket 245 on the frame, the rod being attached to the yoke extension 236.

A trip mechanism for disengaging the latch 242 is located so as to push the said latch up and free from the yoke extension roller which consists of an upright rod 248, operating in bearings on a leg of the frame and carrying on its top an extension 249 with a bevelled side 247. This extension when pushed up a short way engages with a pin 250 on the side of the latch which raises said latch and releases the yoke. Then a spring 251 will move the same which in turn advances the sliding jaw into engagement with the jaw on the worm.

It must be understood that the cross shaft 231 is revolved continuously by the driving shaft 252 to which it is connected by bevelled gears 255. The driving shaft is driven by any suitable source of power and connection, the motor K belt, and pulley 254, on the shaft 252 being shown for this purpose.

The means employed for operating the trip rod 248 consists of a short lever 256, fast on a rod 257, operating in bearings and extending lengthwise of the machine and located at the back side but beneath the frame. To the opposite end of this rod is fastened an arm 258, which extends toward the front side of the machine. To the base C of the casting mechanism is pivoted on a stud a foot pedal 259 having an extending arm which engages the arm on the aforesaid shaft.

By this mechanism the operator by pushing the pedal down can force the pawl out of engagement with the yoke extension and thereby start the machine, but in case he wishes to stop the machine for any reason before the trip acts, a second push downward will force the bevelled edge of the extension of the cam 249 up into engagement with the yoke extension roller 240 and force the jaws of the clutch out of engagement. A spring 260 is mounted on the upright trip rod for the purpose of holding the said rod down and out of the path of the latch when the machine is in operation, and returning the pedal to its normal raised position.



Having explained the casting and finishing of the curved stereotype plate I will now describe the improved flexible cooling and drying mechanism employed, and explain how by controlling the contraction of the stereotype plate during the cooling process I am able to produce plates of both less or greater diameter from the same casting chamber, also how by the control of the cooling water I can produce the plate dry and ready for the press cylinders.

Curved stereotype plates, such as are used in producing newspapers, are of a semi-circumference equal to the length of the printed matter of a newspaper page, and vary in diameter from 13—½ to 16½ inches.

It is often found that although the printing faces of two different makes of web perfecting presses are the same, yet the cylinders may vary in diameter an eighth of an inch, more or less, the difference being in the margins or space between the two printing halves of the circumference of the cylinders which form the top and bottom blank space or margins of the paper.

Owing to this variation it has heretofore been necessary to cast the plates in machines for each size, and again owing to there being a large variety of sizes of presses between the 13—½ and 16—½ (about 20) it has been considered impracticable to keep casting and

finishing machines in stock. These difficulties I am now able to overcome.

I find that an average sized curved stereotype plate will suddenly contract about ½ inch in diameter when the cooling water engages its concavity, and as the cooling advances from the concave through to the exterior the plate will slowly contract on the outside and counteract the interior contraction, and if left perfectly free the plate will resume its normal curvature. However, if the curved plate is supported in a manner so its straight edges are held against the axial contraction during the cooling of the interior surface it will nevertheless contract on the exterior, and through this contraction cause the straight edges of the plate to draw away from its axis and thereby becomes of a larger diameter than when cast. By utilising and controlling this contraction I am able to produce plates of all sizes from four sizes of stock machines.

To accomplish this control of the contraction I have made the cooling saddle 270, with flexible sides or wings 271, arranged so as to contract or expand with the plate during the cooling operation, the wings 271, are composed of spring metal, and are normally of a curvature slightly smaller, than the diameter of the concave face of the finished ribs P¹ on the interior of the stereotype plate P. They are fixed to the sides of an overflow outlet 273 of a water distributing chamber 274 which is supported by pivots 275 on the frame G. The water chamber 274 is connected by a flexible tube 276, to a supply pipe 277 and a water controlling valve 278.

At each straight side of the wings are mounted rollers 280 for supporting the stereotype plate as it is delivered by gravity from the finishing mechanism. Also mounted on each straight side of the wings are brackets 281 which extend beneath the edges of the stereotype plate and have a lip 282 extending up so as to engage the outside edge of the stereotype plate. Beneath the wing brackets and supported by the frame are adjustable stops 283 which engage grooves 284, in the underside of the wing brackets when the stereotype has contracted or expanded the required amount as hereafter described.

The pivoted cooler, plate rollers, and brackets are normally held on the same angle as the main shaft of the finishing mechanism by a spring 286 attached to an arm 287 fast to the pivot 275, and a pivoted latch 289, is arranged to hold it at that angle during the delivery of the stereotype plate, but as the said plate positions itself by sliding down over the rollers from the finishing mechanism the bevelled end of the plate engages the said latch and lifts it up. This releases it from engagement with the cooler, whereupon the cooler and plate will turn to horizontal position owing to the greater portion of the stereotype plate being beyond the pivot point.

The balanced valve 278 is positioned in the water connections so that its plunger 291 can be operated by a lever 292 attached to the pivot 275 of the cooler. To one end of the plunger is fastened a rod 294, operating in a bearing. It is provided with a spring actuated latch 295 in the path of a pin 296, positioned upon the lever 292 so that when the cooler turns on its pivot the pin engages the latch and opens the valve allowing the water to flow up into the cooler water distributing chamber and overflow between the hot stereotype plate and flexible wings. As the outlet for the water is confined to the space between the wings 271 and concave face of the stereotype plate, which space is less in cross section than the inlet, the water will be held under pressure against the stereotype plate and drive ahead any steam that may form, thereby causing very quick action in cooling the stereotype plate. A stop 299 limits the rocking of the saddle.

For the purpose of stopping the flow of water before the stereotype plate is entirely cold and allowing it to drain free from the plate so that the heat remaining will evaporate any moisture remaining, any desired construction can be used, as for instance, a valve which opens automattically in a given time, but I have shown a friction driven timing mechanism composed of a wheel 300, mounted on a stud 301 on an arm 302. This arm is pivoted on the frame G, by the stud 303. This wheel is intermittently driven by a small pin 304, axially mounted on the end of the worm cross shaft 231. Normally facing this pin is a recess 306, formed across the face of the wheel. To the side of the wheel is fixed a pin 307 which is engaged by a projection 308 formed on the lower end of the arm 292, and positioned so that the cooler turns to horizontal position it will cause the said projection to engage the pin and turn the wheel ahead so that pin 304, normally revolving in the recess 306 engages the face of the wheel 300, and causes said wheel to make one revolution. At the end of the revolution a second pin 310 engages and trips the valve plunger latch 295, which action causes the valve to close and the flow of water to stop. A drip opening 311 is positioned near the overflow of the cooler which allows all water above the said drip to escape so that when the stereotype plate is being lifted (which action allows the cooler to be turned by its spring into alignment with the main shaft and in position to receive the following stereotype plate), there is no danger of splashing the stereotype which is now cooled and dried.

By this combination of water control I not only require less water, as by actual test a plate can be sufficiently cooled after a water contact of three seconds, and a draining and evaporating lapse of three seconds more, but also I succeed in cooling the stereotype plate so it can be removed from the cooler by the bare hands. This regulation of the water dispenses with brushes or any other means of wiping the plate dry as has been the practice heretofore.

During the cooling operation, as stated, the stereotype plate contracts first on the interior and then, as the cooling advances through the plate, on the exterior. This is due to the cooling water engaging the concavity of the stereotype only.

The means employed for controlling the contraction as previously stated comprises adjustable stops 283 which engage the brackets 281 attached to the flexible wings of the cooler, the stereotype plate being held against the wings by projections 282 on the bracket overlapping the straight edges of the stereotype plate. So if it is desired to reduce the curvature the adjustable stops are axially removed to the diameter desired so when the hot plate rolls down over the cooler and trips the latch 289 the cooler turns on its pivot until the groove 284 of the bracket 281 engages the top of a lip 317 (Figs. 28 to 30) of the adjustable stop. The act of tipping the cooler having opened the valve, the water rushes into contact with the concave side of the stereotype plate which causes the inside of the stereotype plate to contract, thereby reducing the diameter. This causes the wings carrying the grooved bracket to move axially inward until the groove 284 is over the lip 317 of the adjustable stop, whereupon the weight of the stereotype plate causes the cooler to turn on its pivots. This allows the lip to enter and engage the groove thereby holding the stereotype plate and wings against any further flexing of the stereotype plate in either direction, and thereby leaving the stereotype of a less diameter than when cast. To cause the stereotype to be of a greater diameter after cooling than when cast, the adjustable stop 283 is moved axially out to the desired diameter. If the full limit of expansion is required the stop is moved so it will engage the projection 319 on the lower side of the bracket 281, which will prevent any interior contractions, but as the exterior cools the contraction on the outer side will cause the stereotype plate to open out until the lip of the adjustable stop engages the groove in the opposite operation. However, if a lesser expansion of the diameter is desired the stop should be moved out less, then the action will be, first, an interior and closing in contraction, which will cause the projection 319 on the bracket to engage the stop 283, and upon the exterior contraction taking place the stereotype plate will expand until the lip of the adjustable stop enters the groove of the bracket and resists further expansion of the diameter of the stereotype plate. If the plate is cooled on the exterior instead of on the interior the process will be modified accordingly.

Beneath the cooler a sink 230 is formed for catching the waste water, which sink is provided with a pipe 231 for carrying the water away.

The following are the inventor's claims:—

1. An apparatus for producing stereotype plates characterised by the combination of a plate casting mechanism, a plate finishing mechanism, a plate cooling mechanism, and

means for conveying the plate from the casting mechanism to the finishing mechanism and from the latter to the cooling mechanism.

2. In an apparatus according to claim 1 a bottom member adapted to close the bottom of the mould cavity of the casting mechanism, and to assist in supporting the movable core and the cast plate.

3. In an apparatus according to claim 2 a construction whereby a bevel is cast on one end of the plate close to the type face of the matrix, so as to avoid the necessity of mechanical finishing thereof.

4. In an apparatus according to claim 1, means whereby the casting box and core are cooled during casting, and the cooling of the core continues while it is being swung to the open or delivery position.

5. In an apparatus according to claim 1, means whereby matrix clamps on the back can be swung out and in at the proper time so as to clamp the matrix when the casting operation is to be performed, and to unclamp it when required, said means being so constructed that the matrix is released before the cast plate move out.

6. In a matrix clamp such as referred to in claim 5, a spring pressed plunger adapted to engage the edge of the matrix.

7. In an apparatus according to claim 1, a tail sheet pivoted to the core, and adapted to overlap the bolster of the matrix and prevent the metal from entering behind the latter.

8. Means whereby a tail sheet, according to claim 7, can be turned away, from the top of the core when the core is turned out of the casting box.

9. In an apparatus according to claim 1, automatic locking means for preventing turning of the core unless the tail sheet and its ring are in casting position thereon.

10. In an apparatus according to claim 1, means for guiding the core to and from its position in the back, comprising guides fixed to the cores so as to operate along the outside face of the core tracks.

11. In an apparatus according to claim 1, means for supporting the core near its centre of gravity so balanced that the thick top end of the stereotype plate cast on it will overbalance it and assist in turning it out of the casting box to its horizontal position, but without a stereotype plate the core will have a tendency to turn by gravity to the vertical position in the back.

12. In means for supporting and balancing the core, according to claim 11, means, comprising rollers and levers, for assisting the result.

13. In an apparatus according to claim 1, the means for locking the core of the casting mechanism in the casting position, comprising a cam mounted upon a rotatable shaft, and a roller adapted to engage with the cam, and mounted upon the lower end of the core-turning bracket, the cam being so shaped as to move the core from the casting position, and also to move it to the casting position and retain it in such a position.

14. In locking means according to claim 13, a construction such that the core can be guided into or out of the casting position, and that after it is in the casting position the operating means can be further operated to open the matrix clamps without further moving the core.

15. In a matrix clamping device according to claim 5, matrix clamps with pivoted jaws which automatically open and close.

16. In a matrix clamping device according to claim 5, means operated by the movement of the core to positively operate the matrix clamps to release the matrix and swing out of the path of the sides of the stereotype plate on the core.

17. In an apparatus according to claim 1, means whereby when the core of the casting mechanism is moved into the back the side bars are forced solidly against the edges of the matrix supporting back, and for positioning the core and aligning the edge of the plate lifters in the casting chamber, with the edges of the matrix holding jaws of the matrix clamps.

18. In a matrix clamping device according to claim 5, means within the control of the operator for closing the matrix clamps and for opening them without turning the core.

19. In an apparatus according to claim 1, means for preventing the core being turned into casting position while the matrix clamps are open and for automatically releasing this means when they are closed to casting position.

20. In an apparatus according to claim 1, the combination of means for receiving the plate from the casting mechanism; instrumentalities for finishing the plate, comprising a driving shaft, a main finishing shaft, a gear on the finishing shaft consisting of two parts, a toothed rim and a hub united by a breaking pin and means connected with the driving shaft and meshing with said gear for driving it; and means for releasing the plate and allowing it be fed by gravity to a final cooling mechanism.

21. In apparatus according to claim 20, means for moving towards or from the axis of the main shaft the rollers supporting the riser and the plate.

22. In a device according to claim 20, a lip for retracting the plate from the arch.

23. In a device according to claim 20, a clutch and means for enforcing the jaws thereof out of engagement with each other after each revolution of the finishing shaft and for holding them disengaged.

24. In a device according to claim 20, the arrangement of a shaving arch, a longitudinal shaft therein, means for supporting for stereotype plate in the arch, means whereby the shaft will rotate through a complete revolution and a cutter connected with the shaft will cut off the riser of the plate, after which the shaft will automatically stop while the riser will be supported until it revolves beneath the supporting means and will then be delivered from the mechanism.

25. In a device according to claim 1, a cooling mechanism having roller supports, mounted on an incline in position to receive the edges of a plate delivered from an adjacent finishing device and adapted to be moved into a horizontal position by the weight of the plate supported thereon.

26. In a device according to claim 25, means whereby after the plate is located on the cooler a valve will be opened automatically to allow the water to flow into the cooler.

27. In a device according to claim 26, a trip mechanism for cutting off the flow of water before the plate is entirely cooled.

28. In a device according to claim 25, the arrangement whereby the water is directed against the concave side of the plate.

29. In a device according to claim 25, flexible wings adapted to contract or expand with the plate during the cooling operation and having means for limiting the motion of the wings with the contraction of the plate.

30. In an apparatus according to claim 1, the method of cooling curved cast plates to control the diameter thereof, which consists in applying a cooling fluid to one curved surface of a plate and preventing its contact with the other curved surfaces thereof, and positively controlling the contraction and expansion of the plate by limiting the motion of the straight edges of the plate towards or from each other.

A Handsome Book.

To commemorate the twenty-first anniversary of the Leicester Co-operative Printing Society, Ltd., a handsome book has been prepared as a souvenir of the occasion, and as the whole of the work in connection with it has been done in the Society's workshops it gives an excellent impression of the resources and workmanship that is there available. The book, which is 10 by 7½ inches, is bound in white watered cloth with green back and corners, and title in gold, contains a history of the Society, which is most interesting reading, a description of the coming of age celebrations on July 12th last, and a deal of information regarding the resources of the plant, including a description of the Monotype installation in the Leicester works. The book is profusely illustrated with portraits, views of the various departments, and examples of illustrative work done, including a fine colour picture in tri-chromate half-tone, entitled "The Cornish Coast." Most beautifully produced the book shows workmanship of the highest class, and it is evident that an attempt has been made to reach the "Ideal," which is expressed as follows on one of its pages:—

Our Ideal.

To do the right thing at the right time in the right way. To do some things better than they were ever done before. To work for the love of the work. To anticipate requirements. To act from reason rather than rule. To develop resources. To be satisfied with nothing short of perfection.

LOOSE LEAF DEVICES.—The Twinlock Catalogue Number Six, issued by Messrs. Percy Jones and Co., 15, Little Sutton-street, E.C., contains particulars of a very extensive range of loose leaf books for all purposes of the office, warehouse or other departments of any business, as well as files and binders of a useful character. The catalogue is profusely illustrated, each separate design being shown and full particulars given concerning it. Every office need seems in fact to be catered for, and stationers who can push the loose leaf business will find it profitable to obtain a copy of this excellent and up-to-date catalogue.

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

A CENTURY in the PAPER TRADE.

Some Notes on the Firm of A. M. PEEBLES & SON, Ltd.

IN that portion of the square mile known as the "City" of London there is a section on the side next to the Thames that has for its boundaries east and west, New Bridge-street and King William-street, and north and south, Cheapside and the river, and within these limits all, or nearly all, the firms manufacturing paper in this country have their London offices or their warehouses. Thames-street, Cannon-street, Queen Victoria-street and their tributaries have been selected for their location, and the district well deserves the name of Paperdom that is sometimes applied to it. In the district referred to, at 151, Queen Victoria-street, is situated the head offices of the house with which this brief notice deals, and here is established the firm of Messrs. A. M. Peebles and Son, Ltd., one of the largest houses engaged in the manufacture and sale of paper of every description, whose connections are of such an extent that they have branches in New Zealand, France, Holland, South America, and Japan, and who are possessed at their Rishton Mills of up-to-date plant, worked on methods that enable them to compete for business to the greatest advantage.

A Hundred Years Ago.

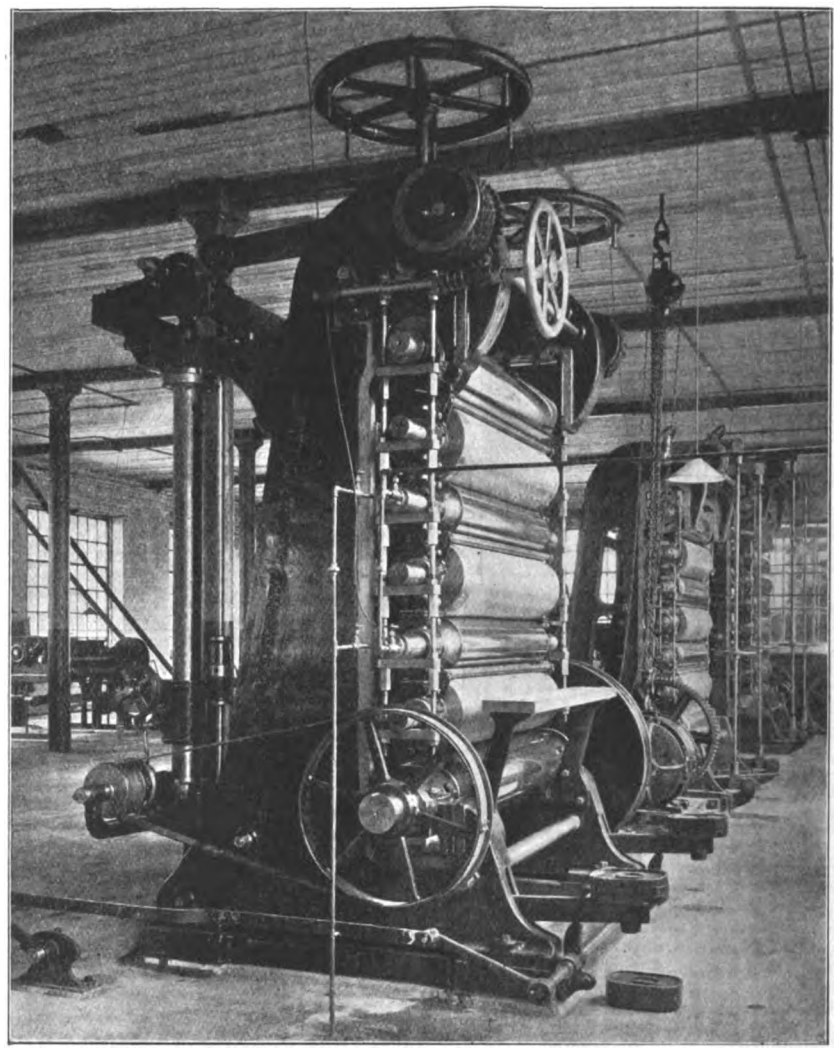
It is now over a hundred years since the foundations of the firm were established at 1, Tower Royal, E.C., by Mr. Alexander Marshall Peebles, who began business as a paper agent at that address, in what, at the present day, would perhaps be looked upon as a small way, but times have changed greatly since that period, when with a tax on paper, and with a comparately small demand for paper as compared with to-day, businesses and stocks were necessarily on a much smaller scale. Mr. A. M. Peebles was, however, full of push and enterprise, and conducted his young business on a sound, commercial policy, with the result that it prospered, and at the time of his death was showing promise of the coming necessary expansion. Mr. A. M. Peebles' demise threw the burden of proprietorship on his son, Mr. Philip Cadell Peebles, who was at the time very young in years to take upon himself such responsibilities, being

Only Seventeen Years Old, but, young as he was, he soon showed a determination and an ability to succeed, and displayed great energy and foresight in developing the business which, under his regimé, rapidly grew and expanded. His success was due no less to his business acumen and abilities, than to his personal qualities which won him popularity amongst his customers and helped greatly towards the increase of trade that the firm enjoyed. All kinds of papers were handled and Peebles' qualities were so much appreciated, especially in "news," that Mr. P. C. Peebles determined on possessing a paper mill, and in 1875, he acquired one that had been previously worked at Rishton, in Lancashire, and there entered upon the making of "news" papers of a quality that met with a ready sale among newspaper proprietors. We may here note that before Mr. Peebles took up the manufacture of paper he was associated in partnership for some years with the late Mr. Robert Slight at Chirnside Paper Mill, Berwickshire, so that he had a considerable insight into the technicalities of the business. It was after a dissolution of this partnership that the late Mr. Peebles bought the Rishton Mill. As paper-makers the firm of A. M. Peebles and Son had now much prosperity, and to-day they rank among the leading manufacturers of the country. "News" printings, however, did not long remain the only make turned out, for another mill was acquired at Church, in the vicinity of Accrington, and there was begun the manufacture of super-calendered, imitation art, and other high-class printings which are to-day a speciality of the business, and are in great demand for illustrated and other fine printed work. Just about the time that the firm began to make these papers the method of dry printing on a hard-packed cylinder or platen came into prominence, and as previously all papers were damped before printing, the needs of the new method demanded quite a different surface and quality, and this the firm set themselves out to supply with marked success.

At this period, in 1895, when everything was prospering and the business rapidly increasing there came the sudden and unexpected death of the head of the firm, and Mr. P. C. Peebles passed away, leaving

For Index to Advertisers, see page 20.

Digitized by Google

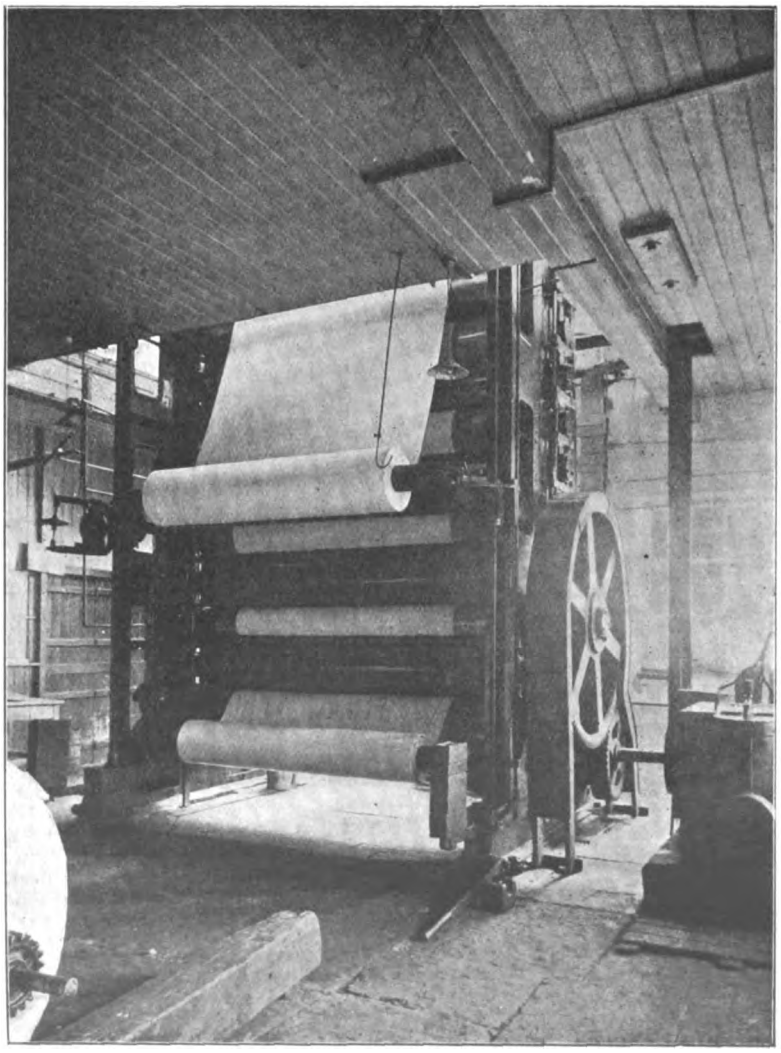


a widespread feeling of loss in the trade of which he was such a prominent and well-liked member. His demise, however, did not affect the prosperity of the business, as it was carried on by his son, Mr. Howard Maxwell Peebles, and a loyal staff that had helped to build up the prosperity of the concern. In the year following Mr. P. C. Peebles' death it was decided, as the business had now attained to such importance, to form it into

A Limited Company,

and accordingly, in 1896, it was incorporated under the style of A. M. Peebles and Son, Ltd.. and it is worth noting in this connection that it was the first occasion of the kind on which the Bank of England consented to receive subscriptions, thus showing that there was every confidence in financial circles as to the firm's stability. The family interest was still retained, and Mr. Howard Maxwell Peebles became, and is now, the managing director, giving the company the advantages of his practical knowledge and experience. With Mr. H. M. Peebles there were on the original board of directors Mr. John H. F. Walter, of Taverham Paper Mills, Norwich; Mr. Mason Jackson, a director of the *Illustrated London News;* Mr. George Maddick, manager of the *Illustrated Sporting and Dramatic News;* and Mr. E. W. F. Hopewell. Of this original directorate Mr. Peebles, Mr. Walter, and Mr. Maddick still remain in office, Mr. Maddick being chairman of the company and Mr. Walter vice-chairman. The present directorate includes Mr. Herbert Ingram, Mr. Robert Gilroy, and Mr. A. St. G. Mcadam Laurie, the secretary of the company being Mr. W. S. Pasmore, F.C.I.S., who is one of the late Mr. P. C. Peebles' executors, and who has taken an active part in the business both before and after the formation of the new company.

Further Prosperity.

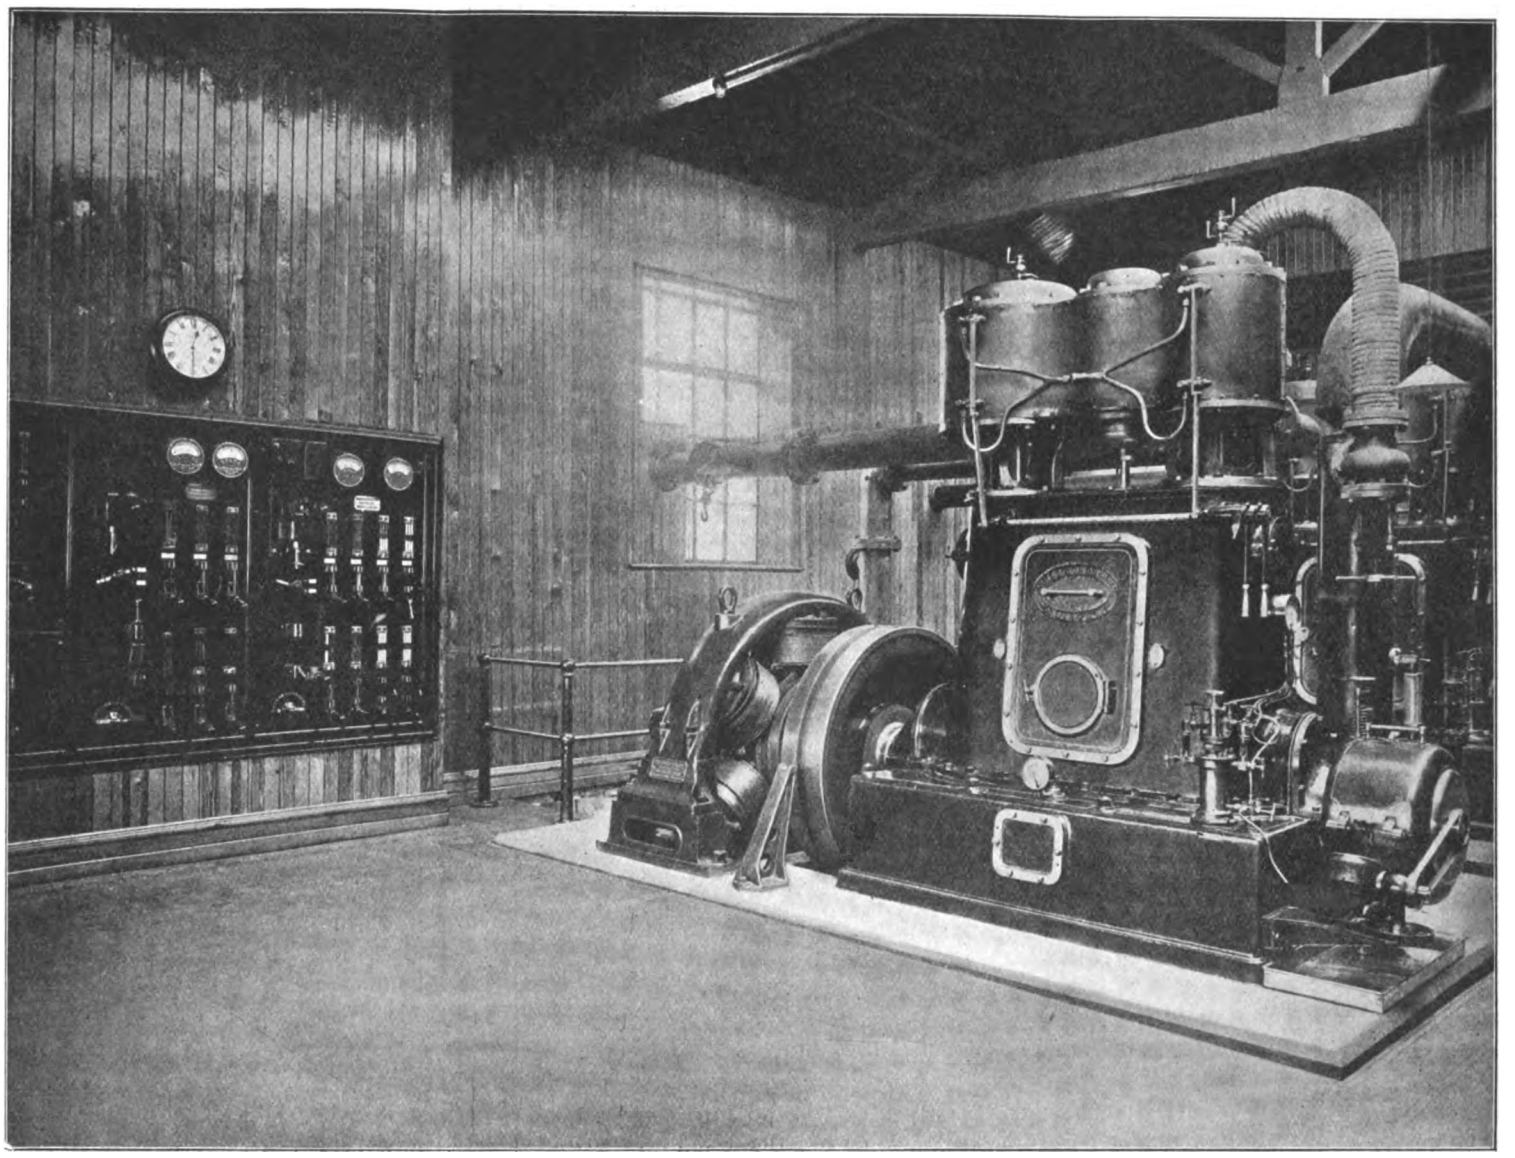


Shortly after the formation of the company fresh developments began, and at both the Rishton and Church Mills considerable alterations and improvements were carried out. The buildings were re-planned and brought quite up-to-date, and the machinery and equipments of both mills were brought to the highest state of efficiency, under the supervision of Mr. R. Gilroy, who brought his store of technical knowledge and his organising powers to bear on the alterations, and in conjunction with Mr. H. M. Peebles brought the mills at both places up to a very high standard of efficiency, and a considerable amount of money has been expended. The most modern appliances have been introduced and everything possible has been done to secure a rapid output of paper.

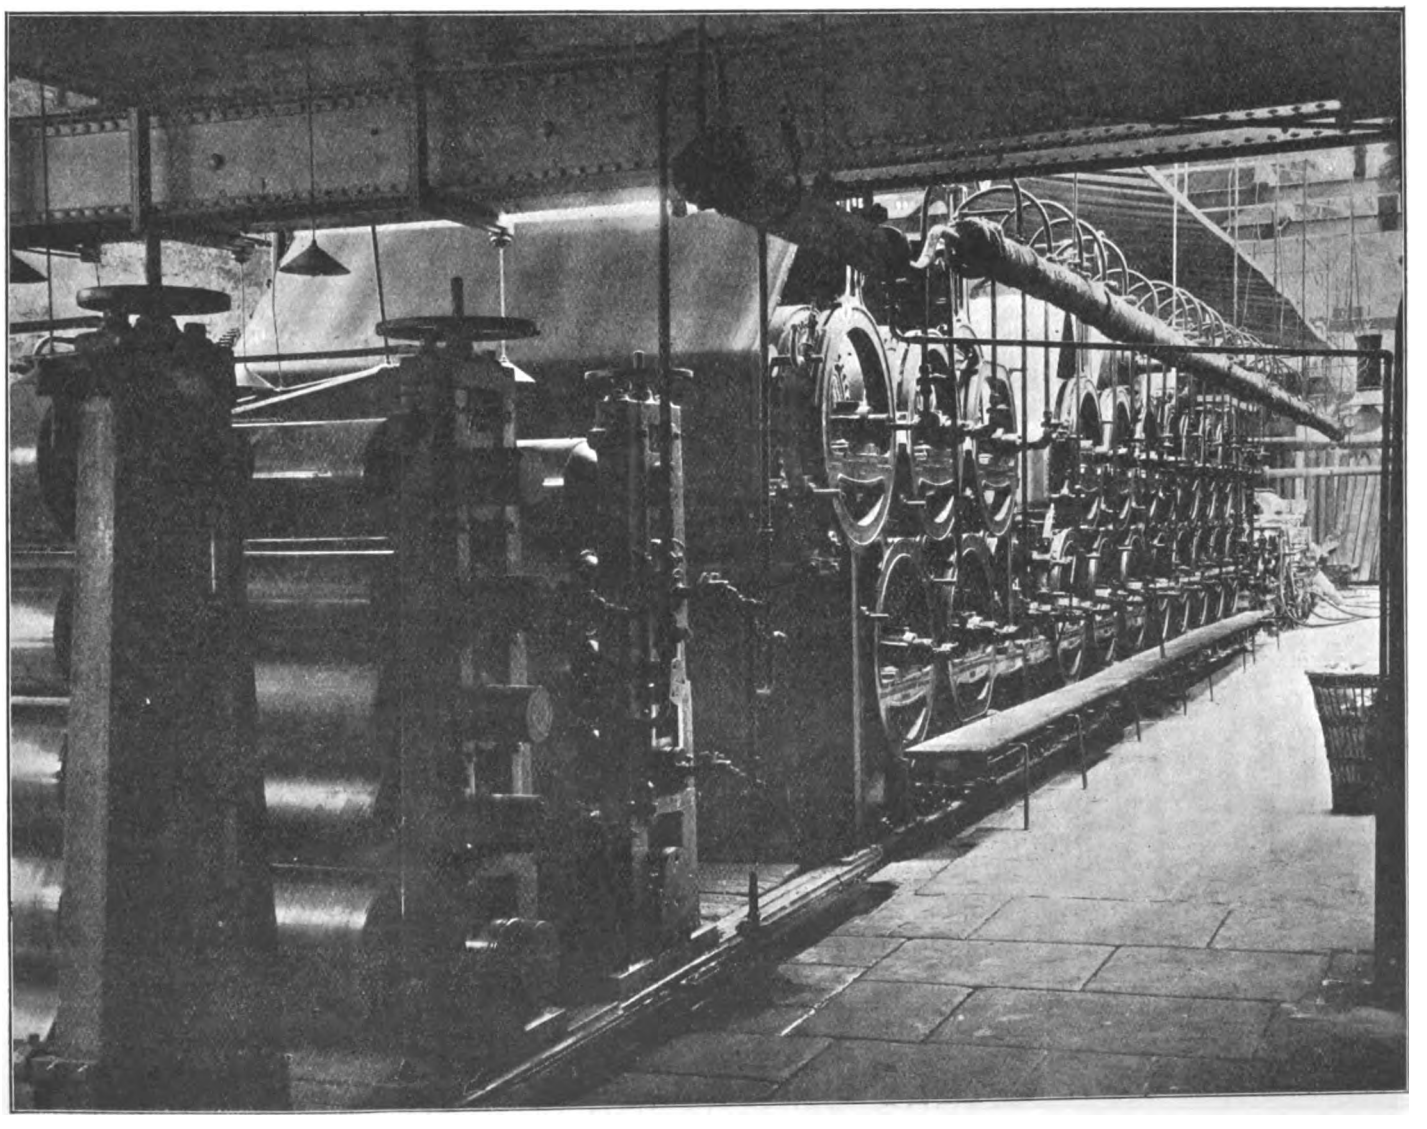
Art and Chromo Paper Calender.

The Power Plant

at Rishton Mill was thoroughly modernised three new boilers being put in, each 30 feet in length with a diameter of 8 feet 6 inches, and to ensure economical working super-heaters were attached. One boiler was utilised for the production of super-heated steam from a 280-h.p. engine, coupled direct to a dynamo that supplied the electrical energy required for some thirty motors in different parts of the mill. New potcher engines and pressepâte machines, super-calenders, cutters, and other appliances were installed, individual electric motors being used for driving. An inverted vertical steam engine of 800-h.p., working under the high pressure of 160 lbs. was coupled to the beating engines. Even this machinery was found shortly to be too little for the increasing requirements, and in 1906 another boiler was added to the existing three, while forced draught was installed to supply all the boilers with a specially arranged hot air supply, and another high-speed engine and dynamo were put in. In the same year, 1906, the management decided to introduce the manufacture of art and chromo papers, in addition to the already wide range of papers, and so an extensive building of four floors was erected adjacent to Rishton Mill, that provided an additional area of nearly 70,000 square feet, and here plant was put down for the manufacture of the new lines in papers, with a result that the demand that arose so far exceeded the supply that at the end of the first twelve months the original plant had to be doubled to keep pace with the orders received. This particular plant is now one of the finest art paper plants in the kingdom, and is thoroughly modern and up-to-date in character.



10-Bowl Super Calender with Electrical Drive.



The Progressive Policy

that has been responsible for the remodelling of Rishton Mill was now brought to bear on the Whiteash Mill, which in 1909 it was decided to remodel. This mill had a high reputation for producing papers suitable for illustrated journals and other fine printing work, and it is interesting to record here that it is to-day actually making the same papers as it did when it started, over twenty-eight years ago, a fact that demonstrates the high quality of its productions. Here, as at the other mill, the old steam boilers were replaced by new ones similar to those at Rishton, and a 500-h.p. inverted vertical steam engine was put down to drive the dynamo generating the current for the many motors throughout the mill. Two high-speed engines for driving the papermaking machines were also introduced, and the whole of the plant overhauled. The result of the new machinery at both mills was to reduce the cost of production to such an extent that the firm was placed in a position in which they had

Digitized by Google

High-Speed Engine and Electrical Generator.

Papermaking Machine.

Digitized by Google

not to fear even the keen competition in prices.

Doubling the Output.

A special feature of Messrs. Peebles and Son's output is the production of high-class boards for post cards, the leading brands of which, the "Rosyth," "Excel," and "Sceptre" are well and favourably known in the trade, and are in great demand for general artistic printing. The extension of the Whiteash Mill has now permitted of at least a doubling of the output, and it is satisfactory to know that the demand for the Whiteash makes, both in boards and papers, continues to increase, and that the firm have a large and growing Colonial and foreign connection, in addition to their extensive British trade, while they also hold contracts for supplies to H.M. Government.

Finishing House, Rishton Mill.

The Brains of the Firm.

The foregoing brief notes on the mills of Messrs. Peebles and Son may well be supplemented by some reference to the men at the head of affairs, to whose acumen and judgment are due the expansion and increasing prosperity of the firm. Mr. G. J. Maddick, the chairman of the company, is a prominent figure in the journalistic and publishing world; he is managing director of the *Illustrated Sporting and Dramatic News*, and the *Illustrated London News*, and is co-trustee, with Mr. Pasmore, of the estate of the late Mr. P. C. Peebles. Mr. J. H. Walter, the vice-chairman, is a member of a family whose name is well known in connection with the *Times*. He takes a keen practical interest in all that concerns the company, and is a director of the Norwich Union Insurance Co., and a Justice of the Peace for the county of Norfolk. Mr. H. M. Peebles, who continues the family name and tradition of the founder of the firm, is saturated with papermaking knowledge, having been in it all his life and making the practical details the interest of his business life, while his circle of papermaking friends and acquaintances is so large that we may safely say that very few possess the facilities he does for a thorough acquaintance with the trade's ramifications. Another of the directors bears an honoured name and one that is well-known in journalistic circles: that is Mr. Herbert Ingram, the eldest son of Sir William Ingram, Bart. He is a director of the *Illustrated London News*, the *Sketch*, and other publications, and also of Messrs. C. Arthur Pearson, Ltd., the periodical and magazine publishers. Another director, Mr. A. St. G. McAdam Laurie, is a well-known member of the Stock Exchange, being a member of the firm of Laurie, Millbank and Co., stock-brokers; he is also a past master of the Saddlers' Company.

The resident director at the mills is Mr. Robert Gilroy, a gentleman who has been largely responsible for the modernising of the plant. His initiation into the art of papermaking took place at the Esk Mills, Penicuik, and in 1895 he transferred his services to Messrs. Peebles and Son, and shortly afterwards was appointed manager of the mills. It was under Mr. Gilroy's supervision that the Rishton establishment was transformed into a first-class mill for the production of fine writings and printings, and the Whiteash Mills are also indebted to Mr. Gilroy for their being brought to a thoroughly up-to-date condition. That gentleman, too, has been also responsible for the planning and furnishing of the auxiliary mill to which we have referred as being specially constructed for the production of high-class art and chromo papers and boards.

As regards the metropolitan supply of papers the ample space in the firm's warehouse in Queen Victoria-street provides for the storage of a large stock that fully meets the requirements of their London customers, and from the same premises an export business is also carried on under the supervision of Mr. P. S. Porteous, the London manager, a gentleman well known in connection with the Stationers' Social Society, an association of which he has had the honour of occupying the presidential chair.

That the business is still growing is evidenced by the fact that at the beginning of 1911, it was found necessary to secure additional and extensive premises in Fetter-lane, E.C., where also a large stock of the firm's papers is held ready for the supply of the most exacting of customer's requirements.

It will be seen from the foregoing brief notes that with a trained and capable staff, under efficient management, and with the traditions and experience of a century's existence the house of Messrs. A. M. Peebles and Son stands quite in the front rank of papermaking concerns, and is well qualified to supply the needs of the paper consumer, both at home and in our Colonies.

Uniformity in Sizes of Paper.

At a recent meeting of the German Papermakers' Association, reported in the *Wochenblatt*, Herr Geheimrat Ostwald, in a most interesting lecture, put forward an urgent plea for international uniformity of sizes of paper. He has calculated that the paper trade has to deal with about 500 different sizes at the present time, and he points out that business life would be considerably relieved if by international agreement these various haphazard sizes would be reduced to a mere dozen and a-half. Two principles are laid down as essential in the foundation of any scale of international sizes: First the unit of measurement must be on the metric system, and secondly each size must be a simple multiple of the size below it, preferably double in superficial area. Thus the sizes of all papers from the postage stamp to the poster would be calculated in the same geometrical proportions. The proportions proposed are those of the side of a square to the diagonal of the same square, and would be expressed throughout by the formula 1 : V2 or 1 : 1·414. Taking the centimetre as the unit, the smallest size would be 1 by 1·41 cm., the second would be 1·41 by 2 cm., No. 3 would be 2 by 2·83, No. 4, 2·83 by 4, and so on. The number of sizes would total 17, the largest being 256 by 362 cm., at which the limit of modern paper machines would be reached. The proposed sizes are supposed to represent those of trimmed paper, and it would be left to the trade to determine how much should be allowed for trimming. The business sheet would be size No. 10, 22·6 by 32 cm., and most books and circulars would be No. 9, 16 by 22·6 cm., slightly wider than the present octavo. Size No. 8 would be pocket-size 11·3 by 16 cm., and the standardisation of pockets would be felt as a boon by the public. The work in all lines of business activity would be lightened: for instance the work of the Post Office, the work of filing letters and circulars. The stock carried by stationers and paper mills could be reduced and the paper machines, being standardised, could be built and worked more cheaply than at present.

Paper Cups.

An impetus to paper cup manufacture has been given recently in America and Canada by the medical profession and others, who have recommended its adoption in place of any other article in hotels and public places where water is supplied, and even in private residences. In Ottawa the Medical Officer of Health has insisted on the abolition of the common vessels, and recommends the issuing of paper cups to all school children and residents. In America some places were slow in adopting the paper cup, but Dr. E. F. Campbell, Secretary of the State Board of Health, has issued stringent instructions to his subordinates to see that the rules regarding the use of paper cups and towels are strictly enforced in future. These recommendations emanating from the medical profession will add considerably to encouraging an increased consumption of paper, and at the same time open up a wider sphere of industry for the manufacture of cups and towels, which from a hygienic point of view are becoming universally adopted.

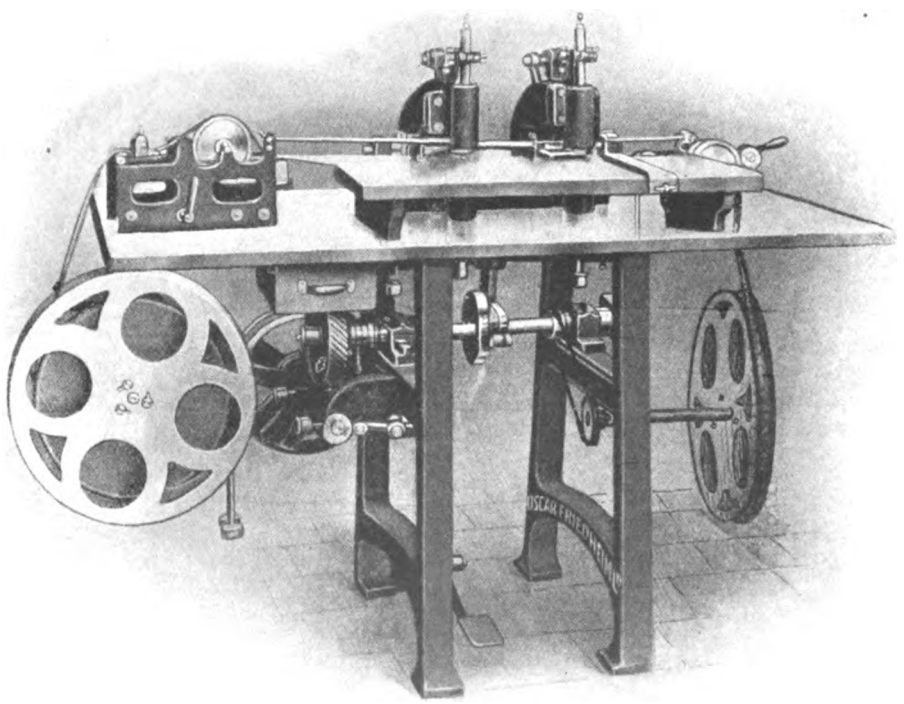
Labour-Saving Machinery.



The labour-saving appliances that are handled by Messrs. Oscar Friedheim, Ltd., 7, Water-lane, Ludgate, E.C., are many, and we hereby invite our readers' attention to a few of them. The firm has a large range of folders, and in Folding Machine K 30 we have an appliance that will meet the most exacting requirements of the printing and allied trades, and that is a valuable adjunct to any letterpress or newspaper establishment, while in binderies it is found most useful and is running in most of the principal binding works in the kingdom. The machine has special features which are highly appreciated by the trade, one of the most prominent being the arrangement for the prevention of creasing in the folding, which enables the machine to fold not only ordinary paper, but also the highest glazed art papers without any creasing in the third or fourth fold, an achievement not obtained by hand folding. A further point which recommends these machines is the simplicity of the adjustments, which makes it possible to change within a few minutes from one size to another or one fold to another. Furthermore they can be fitted with a special arrangement whereby the third or fourth fold can be folded either to the right or left, this being specially valuable to trade binders who have to deal with a variety of impositions. Other special points are, the register is exact and suitable for the highest class of book-work, the folding rollers automatically regulate themselves to every thickness of paper, the output is only limited by the speed of the operator in laying on. The machines are built in several sizes and in various models, for the ordinary cross folding or for parallel folding, with upper or lower points, or without points.

Another appliance is the Adjustable Double Washering Machine, to be worked by power, and specially constructed for affixing two pairs of washers simultaneously on carrier bags, large labels, etc. The punching boxes are adjustable sideways from 2-in. up to $7\frac{1}{8}$-in. centre distance, and the depth which they can be regulated is from $\frac{5}{8}$-in. up to $3\frac{1}{8}$-in. measuring from the edge to the centre of the hole. The machine can be arranged so that it is adjustable sideways up to $15\frac{3}{4}$-in. The material is fed on a wooden table with adjustable gauges, and the feeding mechanism of the reel is provided with a scale so that a change can be effected quickly and easily, if desired. Although this machine has only been on the British market for a short time, it is being taken up very largely by the leading houses, to whom it appeals very strongly. The appliance is of first-class workmanship and is easy to manipulate.

Another piece of mechanism worth notice is the Machine for Lining Envelopes with Tissue Paper, which can also be adapted for making window envelopes; arranged for various sizes. This machine works entirely automatically. The punched out envelopes and the punched-out tissue linings are placed in piles on the table, and the machine puts the gum on the envelope blanks and then transports the tissue lining to it. The blanks thus lined, are carried to the drying arrangement at the back of the machine. The output is about 45 to 50 per minute, and very little horse-power is required, about $\frac{1}{8}$ to $\frac{1}{4}$-h.p. would be sufficient. The floor space required is about 6-ft. by 10-ft. The machine is easy to work, and any unskilled operator can manipulate it. It is very substantially built and finely constructed, and can be relied upon in every respect. It is equally suited for thin and thick paper, and it can also be used for several sizes, the changing from one size to another being very simple, as only a few parts need to be exchanged. All the above machines are to be seen at the Water-lane showrooms, where there is always on view the latest things in machinery for the allied trades.

Friedheim's Folding Machine—K 30.

Friedheim's Adjustable Double Washering Machine.

JAPAN.—Amongst the imports last year there was a large increase (about 20 per cent.) in paper, but in printing ink and in pencils the effects of local manufacturer are beginning to make themselves felt. As regards pens, however, notwithstanding the efforts of the Tokio manufacturers, British goods more than hold their own. The export of paper has been disappointing. One would have expected the Japanese mills to make a great bid for the China trade, whereas the figures for printing paper are less than usual, and it is only in certain special classes of Japanese paper such as "renshi" that there has been any gain. The following table gives details of the import trade in paper, etc.:—

	Tons.	Value.
Paper—		
Drawing	796	£25,200
Imitation Japanese ...	7,500	132,800
Pasteboard or cardboard...	2,426	42,200
Photographic	—	26,700
Printing	16,257	302,000
Writing	1,700	47,400
Books	—	68,000
Other paper, etc.	—	199,200
Total	28,679	£842,500

A very large proportion of the writing and printing paper went from the United Kingdom.

BRITISH PATENT No. 3,551, 1912.

WRITE FOR PRICES AND TESTIMONIALS.

Over 2,000 of the MOST PROGRESSIVE COMPOSING ROOMS in the STATES USE

☛ A PRINTERS' TOOL, designed on lines suggested by the Practical Printer, that will Saw, Trim, Mitre, Bevel, Drill, Rout, Mortise, inside and out, Jig-Saw, Grind, and Plane Type-high—every operation to point measurement. . .

The Miller Saw and Trimmer

Among British Users—

Messrs. Thos. Nelson and Sons, Edinburgh, 2 Machines.

Messrs. the Amalgamated Press, London, 2 Machines.

Messrs. Tillotson and Sons, Ltd., of Mealhouse Lane, Bolton, write:

"**The Saw and Trimmer which you supplied us with early last year has proved a veritable acquisition to our Composing Department. It is one of the best investments we have ever made: there seems no limit to its usefulness.**"

Messrs. the Arthur Cox Illustrating Co., Ltd., of Ludgate Hill, Birmingham, write:

"**After submitting the Miller Saw Bowler and Trimmer to exhaustive tests, we are pleased to say it has proved itself to be just the tool we have been seeking. It fulfils all your claims as regards accuracy and universal utility, and we find it indispensable for the various out-of-the-way jobs that are continually cropping up in a mounting room. It certainly is a big step in front of any other squaring machine we know of for the accurate handling of big numbers of small or medium sized blocks.**"

Messrs. Turner and Dunnett, of Liverpool, write:

"**Your favour of the 22nd instant is to hand. We have now had the Miller Saw in use for over 12 months and have proved it to be a most useful machine both for the stereo and Composing Departments. For cutting and mitreing brass border rules, squaring half-tone blocks, routing for two-colour work and the numerous little jobs that require quick and accurate execution, it has more than fulfilled our expectations.**"

Messrs. Jas. Broadley, Ltd., of Gutenberg Works, Accrington, write:

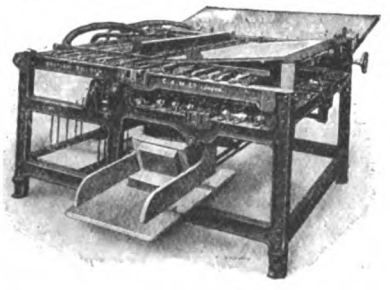
"**We have now had the Miller Saw Trimmer, Jig Saw and Router running sufficiently long to be able to speak to its value. We have tested the machine in every possible manner and have found it will do all that you claim for it with a degree of accuracy which has been a revelation to us. We are at a loss to know how we got along without it in the past. . . .**"

FURTHER TESTIMONY TO OUR JOB FOLDER.

Messrs. Garside and Jolly, of Warrington, write Sept. 12th, 1912:

The Quad Demy Folding Machine purchased in June is doing the work required in a very satisfactory manner. Though of the ordinary pattern, it is being used with accurate results for an awkward sheet of which one dimension is under the minimum size limit guaranteed, viz., a sheet 34½ in. by 14 in., folded to long 12mo (11½ in. by 3½ in.). The quotations from other makers for a machine to fold this special size sheet were quite prohibitive, being two, three, and four times the price of your machine. The miscellaneous folding done has also been very true and even.

Yours truly, (Signed) F. GARSIDE.



Messrs. Henry Detloff, Ltd., 26, Sun Street, Finsbury Square, write:

"The Combination Newspaper and Job Folding Machine recently installed by you for us, is proving in every way satisfactory. It is running at a good speed, yet is so easy to feed that the output can be confidently relied on. The quantity and quality of the machine's product is excellent."

THE BRITISH FOLDER.

Lithographic Presswork Difficulties

One of the principal items in lithographic presswork is register, and the causes to which poor register may be attributed are various and many. In the first place, the condition of the paper must be considered, and its proper storage and handling certainly come within the province of the pressman's care. A good register is more easily obtained by the use of a fairly good quality of paper, properly kept in an even temperature, and I suggest a room heated to about 75 to 80 degs. at all times—not warm during the day and cold at night.

If the paper to be used is laid in racks in layers of about from twenty to one hundred sheets, according to the quality and weight of the stock, and winded or aired twice a week, the chances for good register are very materially increased. To be well seasoned, the paper should remain in an even temperature for two or three weeks, at least.

It has been my experience that paper placed in hangers, over a concrete floor, is affected by moisture arising from the concrete in damp or rainy weather, and it will have a tendency to curl, which is detrimental to good register. But if the paper hangers carry their loads high up, near the ceiling, the results will be more favourable; also, the paper in the hangers should be occasionally reversed, so that both edges get proper airing and dry evenly. No doubt putting paper in hangers is faster work, and perhaps many think it is more up-to-date, but if damp weather sets in it is liable to be more easily affected than if placed on racks.

Of course, some may differ with me in this matter, but I am telling you what I know to be a fact. There is a concrete floor in the shop I work in, and I know what paper troubles mean to the pressman.

There are times when the sheets, if run through the press with a blank plate or stone and a very little water carried, will be found to register better for the operation, but if too much water is carried, the sheets will be worse than if they had not been run through the press at all.

When stretching sheets in the manner I have just suggested, the sheets should be laid out in racks again. Not stacked, because if this is done the moisture all stays in the paper and that is something that should be avoided.

All these things help to make a good register. Now for the contrary. Above all things do not think that paper run right out of the case is in good condition simply because it does not wrinkle. It may do for some jobs, but for a close register it will never do.

A stiff breeze blowing from an open window, or the breeze from the fly of a nearby press, will sometimes cause a poor register, and very porous slip sheets, such as newspaper, may absorb enough moisture in damp weather to cause the printed sheets between them to swell enough to throw the register out. The grippers may also throw the sheet out of register the instant they seize it. The feedboard being flat and the cylinders round, when the grippers seize the sheet they bend it slightly to the round cylinder, and the greater the bend the greater the danger of a non-register.

If there should happen to be anything under the gripper, say a little piece of dirt or a small piece of paper, your register is likely to be lost. I have seen this very thing happen to a pressman when the boys were careless in washing the blanket. That reminds me of an instance where a pressman came near losing his position through a job being spoiled on account of poor register, and this is how it happened: On the previous job he had a blanket sheet, and the fly boy, being a new hand, made a poor job of cleaning the blanket. Some way, a piece of paper formed itself into a lump under one of the grippers and stayed there. The pressman, thinking everything was all right, went ahead and ran his first colour. The paper under the gripper made some of the sheets kick out a little and others a good deal more, and when Mr. Pressman started colour No. 2 he found something wrong, and on investigation discovered the cause, but then it was too late, for the first colour was on, and the result was that the job had to be printed again.

Another thing that frequently helps to make a poor register is an old "Box," as some presses are called. If the press is in poor condition no good work can be expected from it. A pressman can help along a great deal, to put the press in better shape and keep it there, but an old, worn-out press is a mighty poor machine with which to do register work.

Never forget that machine oil is cheaper than repairs any day. Better use too much oil all the time than too little once. When the bearings run dry it only takes a little time to put your press out of commission, and then comes the repair man, and the wait for him to get the machine to running again. Don't spare the oil.

Keep an eye on the grippers. See that they are all set right before you start up. Each gripper should have an equal pressure on the sheet. If this is not strictly attended to you will sometimes find that the sheet will be wavy and wrinkled—all of which leads to a lack of register. Too much care cannot be taken when setting grippers, and, above all, see that they are even. I have seen it happen that a pressman has from a quarter to three-eighths of an inch more gripper on one side than on the other, and that is pure carelessness. That is about the first thing I do when getting my lay—see that the grippers are even.

Have you ever been up against a proposition where you could not make a certain piece of work hold? After trying to polish it in with palm oil, tusche and other dope, and where even a hard lead pencil fails? After you have tried everything else, try this: When either a solid patch of work or the lettering does not hold, take a small camel hair brush or sable pencil brush and some good Japan dryer, and go over the weak spots very lightly. Give the dryer a good chance to dry, and then daub up those parts that you have gone over with the colour on the press. Do not wash it out, for if you do your work will have been for nothing.—*The National Lithographer.*

Exports of British Paper.

Ports of Shipment.

The following figures show the quantities and values of paper exported at the ports mentioned during the year 1912 as compared with 1908:—

ENGLAND.

Quantities.—Cwts.

	1908.	1912.
Folkestone	3,161	5,069
Harwich	6,501	14,226
Liverpool	386,390	889,074
London	818,372	1,369,709
Manchester	35,172	130,902

Values.		
Glasgow	£310,121	£573,940
Leith	58,056	117,188

SORT CASES.—Racks of pigeon-holes six inches deep, slanting slightly downward, and large enough for the hand to be inserted, are great savers of time, as against the old method of putting sorts in boxes, drawers or cases. The supply can always be plainly seen, and there is no necessity for running to the property man for a sort.

German Paper.

Large Imports into the United Kingdom.

Germany is a powerful competitor of the British papermaker. More paper comes into the United Kingdom from Germany than from any other country. We give the following total values of the imports during 1912 and the four preceding years:—

	Total Imports.	Retained in the U.K.
1912	£1,485,600	£1,478,856
1911	1,356,421	1,310,607
1910	1,293,569	1,241,090
1909	1,094,700	1,047,399
1908	1,130,881	1,098,054

In the following classification account is taken only of the goods retained in the United Kingdom:—

PRINTINGS AND WRITINGS.

On Reels.

1912	113,417 cwts.	£77,871
1911	196,108 ,,	114,503
1910	143,396 ,,	83,882
1909	125,549 ,,	76,106
1908	158,996 ,,	93,752

Not on Reels.

1912	253,584 cwts.	£245,650
1911	273,121 ,,	247,130
1910	445,993 ,,	393,802
1909	446,948 ,,	413,834
1908	469,961 ,,	437,679

PRINTED PAPER.

1912	107,754 cwts.	£234,496
1911	107,668 ,,	239,589
1910	106,730 ,,	245,859
1909	110,054 ,,	236,050
1908	104,821 ,,	231,994

PACKINGS AND WRAPPINGS.

1912	789,686 cwts.	£650,766
1911	621,999 ,,	514,617
1910	422,761 ,,	354,748
1909	314,411 ,,	259,988
1908	328,616 ,,	268,526

STRAWBOARDS.

1912	27,012 cwts.	£8,828
1911	20,278 ,,	6,671
1910	13,313 ,,	4,468
1909	21,313 ,,	6,756
1908	26,066 ,,	10,796

MILLBOARDS AND WOOD PULP BOARDS.

1912	148,193 cwts.	£93,986
1911	115,040 ,,	78,201
1910	111,993 ,,	78,251
1909	80,611 ,,	54,665
1908	72,277 ,,	55,307

UNENUMERATED AND ARTICLES OF PAPER.

(Prior to 1910 included with "paper for printing and writing" and "goods manufactured, unenumerated.")

1912	53,417 cwts.	£167,259
1911	36,537 ,,	109,896
1910	29,289 ,,	80,080

Germany holds premier position amongst competing countries in the supply to the United Kingdom of printings or writings not on reels, printed paper (including hangings), and boxes and cartons of paper or cardboard, whilst shipments of packings and wrappings are only exceeded by Sweden.

Stationery Exports.

The following are the exports of stationery, other than paper, from the United Kingdom for the month of August, compared with the corresponding month of the two previous years:—

	1911.	1912.	1913.
To Germany ...	£6,887	£9,354	£10,004
„ France... ...	2,962	4,212	2,896
„ United States of America...	5,692	10,090	7,555
„ British India...	11,776	20,256	19,585
„ Straits Settlements ...	1,952	3,945	5,575
„ Ceylon ...	1,490	2,500	1,985
„ Australia ...	15,545	27,296	27,776
„ New Zealand	7,501	12,293	9,589
„ Canada ...	8,422	13,031	8,846
„ Other Countries... ...	58,501	87,418	75,990
Totals	£120,728	£190,395	£169,801

For the six months, ending August, the total exports reached £1,229,736, a decrease of £218,076 over the same period of 1912, and an increase of £201,671 over the corresponding period of 1911.

A Sheet Feeding Device.

The International Wrapping Machine Co. has patented a sheet feeding device of the kind in which the sheet is released by a suction device and separator and fed forward by a rotary feeding segment, applicable for feeding wrappers to a wrapping machine described in Specification 16,866, 1911, comprises a hopper 104, 105, from the bottom of which the bottom wrapper is released by a suction separator 117 and a plate 126, and fed forward by friction feed rolls 80 to the rolls 82, 83. The bottom plate 104 of the hopper is recessed at the rear end to accommodate the sucker 117, and centrally for the feed rolls 80. A bridge piece projects between the rolls 80 and slightly lifts the front end of the pile above the surface of the plate 104. Above the pile is a follower plate 107, with ears threaded on to U-shaped members 109 so that the plate can be turned over to rest on a support 110.

The front standards 106 are undercut to form a guide through which the bottom sheet may be fed. The feed rolls 80 are formed with smooth projections 115 which lift the pile prior to the engagement therewith of the elevated friction segments 114. The sucker 117 is carried on a shaft 118, which is rocked by a cam 121 on the shaft 79, and is connected by a flexible pipe to a pump worked from a cam or eccentric. As soon as the sheet has been drawn down, the plate 126 is inserted above the bottom sheet and lifted to raise the remainder of the pile. The plate 126 is carried on a bell crank 125 pivoted at 127 and connected by a link 135 to a lever 130 rocked by a cam 133. The pivot 127 is located on a standard 128 normally held down by a spring 134. As the lever 130 commences to rise, it first rocks the crank 125 until an adjustable stop 138 thereon contacts with a projection, after which, continued motion of the lever 130 raises the standard 128 and lifts the pile. At this stage the suction is broken and the sheet is fed forward by the rolls 80 into the bite of the rolls 82, 83.

Coated Papers with Dull Finish.

In the specification of a patent issued to Mr. Samuel S. Sadler, of Flourtown Pa. U.S.A., assignor to Mr. Ellis W. Bacon, Philadelphia, a description is given of a new method of coating paper with a dull finish. In the manufacture of paper for use in the making of books, magazines and other publications, its surface is usually coated, and when calendered is given a glazed and lustrous finish. Coatings formerly consisted exclusively or substantially so of glue or rosin sizing, but they now consist largely of compounds comprising casein or a similar albuminous substance as an ingredient.

The object of the invention, says the inventor, is to provide a method of treating what are known as casein coated papers, or paper coated with a compound comprising a similar albuminous substance having a high finish and lustre so as to remove such lustre or glaze.

One of the difficulties has been to find a method and means of accomplishing the desired result as set forth without injuring the paper. The patentee not only accomplished this result, but has found that the method employed by him for this purpose does in fact improve the quality of the paper in certain respects.

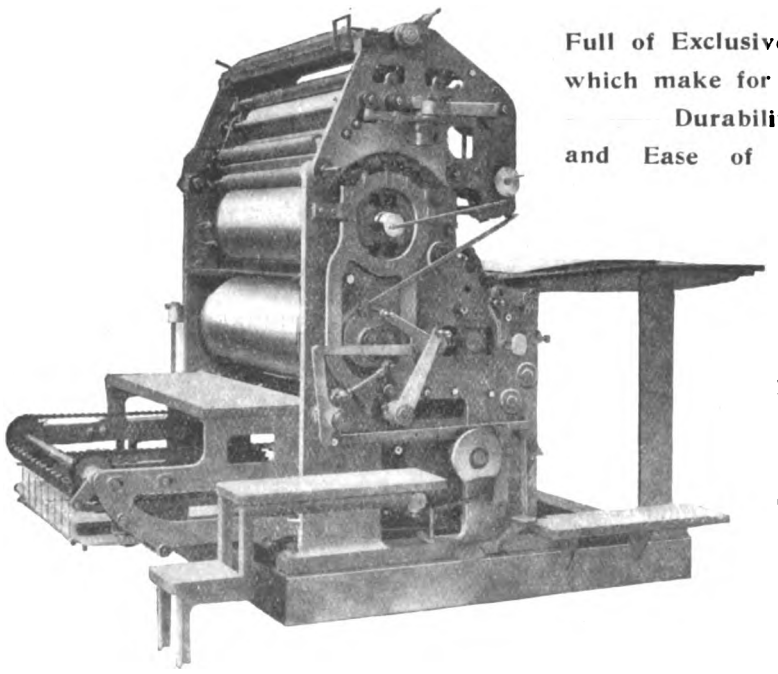
In most cases it is preferable that the printing of books, magazines and other publications shall be in the first place upon such coated papers as have a high finish produced by the calendering process, or by finishing machines which give a high finish to the papers.

The method employed by the inventor for removing the lustre from papers having a coating comprising casein, or a similar albuminous compound, and having a high finish causes a slight thickening of the paper sheet and increases its opacity, whereby he is enabled to use a slightly thinner sheet than could be used if the paper were not to be subjected to his method of treatment after being printed upon.

The method consists in treating the paper with a solution of a chemical salt or base or mixture of them, which acts upon the casein or similar albuminous substance of the coating compound or sizing of the finished paper, and form new compounds on the surface of the paper which produce a surface having the desired non-lustrous or non-glazed appearance. Treatment of paper coated with such compounds also increases the thickness or bulk and opacity of the sheet.

Although his invention is not limited to any one base, salt or mixture thereof, he has found that salts of lime in solution and also lime water accomplish most satisfactorily the result desired.

He has found that magnesium salts in solution, also milk of magnesium may be used, and that such solutions satisfactorily accomplish the desired result, as does also cream of alumina, alum and various other salts of alumina, and other metals such as barium in solution.



After the paper is treated with any one of the solutions referred to above, any excess of material used and any soluble substance that is formed by its action on the albuminous coating or sizing employed in the manufacture of the paper may be washed off with water, though with care the paper may be so treated as not to leave an excess of said substance, and also so that it will not be necessary to remove the soluble substance or substances which may be formed. It will be understood that washing will not remove the insoluble substance or substances, and that such substance or substances will remain upon the paper after it is washed, and that it is the formation of these new substances which destroys the lustrous or glazed finish.

In the carrying out of his process or method, the solution employed may be contained in a receptacle and the paper dipped therein by hand or otherwise to be acted upon by the solution, and the paper, if necessary, may be subjected thereafter to a washing action.

Any other suitable means or apparatus for applying the solution to the paper and for thereafter washing the same, may be employed as desired by the workman or operator.

The inventor has found that printed papers may be treated according to his method and by any of the solutions of salts or bases above indicated without injury to the printing.

Printed Advertising Tape.

For the tying up of parcels, etc., tape is in many cases being used instead of string, and as it lends itself to the advertising of the business or the goods of the seller it should prove of considerable profit to the user, as his name and address being neatly printed on its flat surface, keeps the purchaser reminded of his existence. To supply the demand for this advertising tape is the object of Mair's Printed Tape Co., 1, Lime-street-square, Lime-street, E.C. This firm is now supplying parcels of tapes that are made in this country by British labour. It is made of cotton in any colour, or colours, and any printing may be done on it, either name and address, or particulars of goods or special lines. Among its advantages are:—It looks and is neat, and beig flat does not injure the contents of parcels. It advertises goods and soon repays its cost. Being on reels it cannot become entangled, so there is no waste. It is a dumb talker for the retailers' business. This printed tape is supplied in reels of 500 yards each, and the tape itself can be one or two colours, or three if one is white. Unprinted tapes may also be had if required, and the printing may be done on both sides of the material. The prices of these parcel tapes are low, depending upon the extent of the order, and compare favourably with the cost of twine. Gun metal holders are also handled, and one of these is given with every twenty reels of tape ordered. Those interested in neat parcelling should apply for particulars at the address given.

"Koparines."

This is the name given to a new window advertising invention that has been introduced by Messrs. W. and G. Baird, of Glasgow and Belfast, and that is manufactured at their factories, 10, Parsons-green, W. The material is exactly like stained glass for purity of colour, appearance and transparency, and is fadeless. It can be had in any design; simple or complex; in any scheme of colour, and in from one to a dozen or more printings, in litho, half-tone, or three colours. The colour is same on both sides, and is brilliant by day, transparent by night. It can be fixed in a few seconds outside windows without skilled labour, and the price is very reasonable. The material may in fact be called flexible stained glass, and, judging from the samples we have seen, is most effective in appearance, while the transferring to glass is simplicity itself.

Printing on Celluloid.

Many printers do not care to take a job that includes printing on celluloid, and yet it is a material that, in spite of its inflammability, is being increasingly used, especially in connection with Christmas or other cards. Mr. Eugene St. John, writing in the *American Printer*, says:—"The handsomest celluloid novelties, from which the ink cannot be rubbed off, are made by printing on any sort of paper, cardboard or other material used with an alcohol-proof ink, and then treating afterwards with celluloid varnish. This is the better method, as a better print is obtained, and the work endures under handling, as in the case of celluloid playing cards. A printer can undertake such work with safety. Printing is done in the regular way, but with ink that will stand an alcohol varnish, which may be obtained from the principal ink makers. The work should be sent for varnishing to a concern specialising in this line. If the printer takes an order to print on celluloid he may get from the ink-maker an ink for printing on celluloid. The press must be washed perfectly clean, so that no grease may get into the ink. A very hard impression with somewhat more squeeze that in regular printing, is used, and a rather heavy supply of ink. The best printing is secured running at speeds of from eighteen hundred to twenty-five hundred impressions an hour. The ink does not print well at slow speed. The sheets cannot be piled, as this would cause smearing, but must be laid out singly on trays, and allowed to dry overnight before handling. The ink should be bought in tubes to avoid waste from rapid drying. This ink may be had from a New York celluloid manufacturing concern, as well as from the principal ink makers.

Three recent Letters following VALUATIONS of Printing Plant by FRANK COLEBROOK, Printers', Newspapers' and Plate Makers' Valuer, 146, Fleet Street, E.C. (Phone Holborn 2288).

An important northern provincial firm writes: Herewith cheque with compliments and thanks; it only remains for us to add how thoroughly satisfied we are with the way you have completed the work.

An Irish printer writes: I was greatly struck with the very thorough and business-like way in which you went about the work; giving my staff so little trouble and not interfering with the routine of the office. Had I anticipated that the valuation could have been made with such expedition and exactness and under such pleasant conditions I would have availed myself of your services long ago. (August, 1913.)

A South of England printer writes: Enclosed is cheque. We have pleasure in testifying to the promptitude and care with which you carried out our valuation of plant and to thank you for doing so without cessation of work. (August, 1913)

And this *re* a fire settlement from a London firm: Now that the Fire Office has settled my claim I have to thank you for your prompt and untiring attention, which has secured such a satisfactory result.

The I.T.U. Course.

We have at various times referred to the excellent work that is being done among printers in the United States by the I.T.U. Course of Instruction, which is conducted by the *Inland Printer* Technical School, Chicago, under the direction of the I.T.U. Commission on Supplemental Trade Education, a commission which includes amongst its members many well-known members of the American printing trade, including A. H. McQuilkin, W. B. Prescott, Robert E. Darnaby and James M. Lynch. The I.T.U. Course is being taken by printers all over the United States, and even in this country, and is doing much to raise the technical ability of the workmen who attend to the instruction given by the teaching experts. The course is a correspondence one and is so arranged that in a series of well designed exercises the pupil is trained in the up-to-date methods of the trade.

The special purpose of the I.T.U. Course is to give to the printer the principles on which printing depends Printing, like all arts into which design enters, is subject to the rules of the principles of design. The arrangement of type on the page, the shape of the type, the strength or lightness of the face of the type—all are parts of the art of design. To make printers better printers is the purpose, not to make printers pen or pencil artists. The pen or pencil is used merely as a more convenient tool to express the idea than the inconvenient type, though it is to the use of type—the intelligent and artistic use of type—towards which all the effort of the course is directed.

Students are taught the principles underlying typography, and are then required to apply those principles to jobs of the character that the first-class compositor meets in his every-day work. This is done under the eyes of instructors who have earned a world-wide reputation for their capacity as instructors and ability as compositors. Students who do not wish to learn lettering are permitted to take a series of lessons on rudimentary English, in which the general rules governing punctuation and capitalisation are taught and instruction given in the use of type. This group of lessons is furnished separately if desired.

Started in March, 1908, the course has enrolled more than 4,300 students in five years and four months. They are to be found in every country in which English is spoken. Having requested and secured permission to do so, the State of New South Wales, Australia, adopted the I.T.U. course and abandoned old educational methods.

Those in charge of the course understand the value of advertising its advantages and issue a considerable amount of printed matter setting out its benefits; we have just received the latest booklet issued, and as a specimen of the printers' art it takes a high place, as one would expect of any price of printing that is executed at the works of the Henry O. Shepard Co., of Chicago, at which it was printed. The handsome embossed cover design in black and red is by Mr. F. J. Trezise, the illustrations by Mr. J. T. Nolf, and the composition by Messrs. J. Stanesco, M. Kramer and Noble Coolman. The paper and printing is of the best, and the whole job is creditable to all concerned in its production.

Any of our readers desiring full particulars of the I.T.U. Course should enquire at the I.T.U. Commission, 632, South Sherman-street, Chicago, Illinois, U.S.A.

Photo-Engravers Troubles.

Shall photo-engravers guarantee their plates for life, or shall they go a step further and furnish accident policies with each plate, offering to reimburse the buyer of the plate for the full amount paid in the event it is damaged by any cause whatever during its guaranteed life? The above question sounds foolish perhaps, but it is not as far-fetched as it appears to be. Cast your eyes over the following extracts from a letter received from one of the best-known photo-engraving concerns in the country, says the *Photo-Engravers' Bulletin*:—

"We have had quite a little experience in this line, all of it costly and aggravating as well. It occurs something like this. Anywhere from two weeks up to six months after the plates have been made—and in some cases two years after—either the printer or the customer calls up and states that some of 'those plates you made for me' are no good. When pressed for an explanation, the answer is, 'They are too shallow.' The pressman is authority for the remark. An engraver is sent to the press-room and he finds that anywhere from 10,000 to 100,000 impressions have been made and he usually finds the make-ready poor or worn, the plates are receiving too much pressure in certain parts of the form; they are not washed frequently enough; the paper sheds lint and dust, which is grinding the plates smooth, the same as an equal amount of emery would do; or it is any one of a number of things, all of which have nothing to do with the quality of the plate when it left the engraver.

"Generally, in such cases, the engraver is the goat and he gets his horns in the following interesting manner. At first the pressman, having the trouble with the plates, becomes abusive. The engraver takes the defensive in the argument—always. He stands between the devil and the deep sea. If he tells the customer the truth, he is in the position of 'knocking' the printer—his alleged friend and business-getter. If he agrees with the printer he convicts himself as maker of 'poor' plates. He argues as well as he knows how under the circumstances, and finally, when the anger of the printer, pressman and customer subsides somewhat, all agree that the plates in question must be made over. The engraver receives an order for plates and makes them. He sends the bill to the printer, who promptly refuses to pay it because he did not order them. He credits the printer with the amount and sends the bill to the customer. He refuses to pay it because in the first place he did not order them, and in the second place they were used to replace plates bought and paid for, but defective. Back goes the bill to the printer, who says he'll be d—d if he'll pay for anything he didn't order and, besides, he will render the engraver a bill for holding his press while the engraver was replacing the 'rotten' plates he made for the customer. What's the use of going any further into this subject? You know the answer. The engraver has his trouble for nothing, because finally the printer threatens to 'never send another job' to him, and the customer says he will stand suit before he pays the bill, generally not a large one.

"Here is the 'clincher' that always settles the argument. The engraver has made twenty plates for the customer, all of them are locked up in one form, or, let us assume in two forms. Supposedly, every plate, being made and handled all the way through with all other plates in the order, is receiving the same treatment that every other plate gets in that form. Lo and behold! Here are ten plates that 'wear fine.' They look as good after the fifty-thousandth impression as they did in the beginning, and here are five plates that are 'soft' because, although printed right in the same form, they are showing wear; but here, look at those five plates over there on the edge of the sheet, see how they are worn? 'These plates are shallow and you made them on soft copper.' After that, fire and brimstone.

"This is not intended as a technical article on engraving and press-work. It is intended to bring to your notice a condition that results in a great deal of annoyance and brings with it considerable loss to the photo-engravers. Will someone suggest a method of dealing with this problem?"

For long Runs use N.S. Black

N.S. Black **never** dries on forme, rollers or slab.

N.S. Black **does** dry well on any paper where drying is by absorption; *i.e.*, on all except hard ledger and similar papers.

N.S. Black never skins in the tin, so that you can use all the ink.

N.S. Black is a Non-Stop Ink as well as a Non-Skin Ink, because you need never stop to wash up right through a long run unless the ink gets clogged with dust or paper fluff.

N.S. Black will do capital half-tone work on art paper.

Many jobs come your way where N.S. Black would be a real help in profit-making. Place an order for a dozen pounds to-day. Price 1/9 per pound.

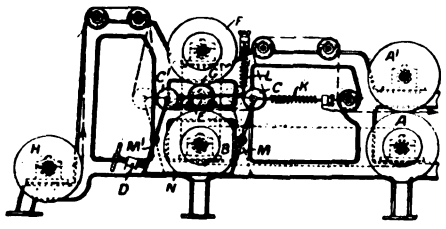
NEW INVENTIONS AND IMPROVEMENTS.

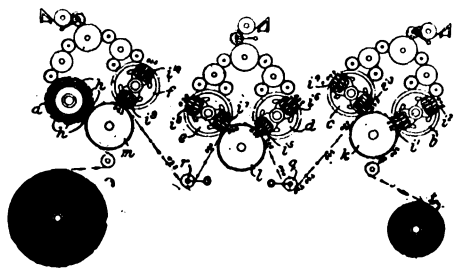
Printing and Duplicating Machines.



A printing or duplicating machine, patented by C. F. Green, is so constructed that the impression roller is held clear of the printing cylinder except when a sheet is fed into the machine; the front edge of the sheet acting to operate a stop which operates to release directly a lever controlling the application of the impression roller to the cylinder. As shown, the impression roller *a*, Fig. 2, is mounted at each end in arms or plates *b* freely mouted on a rock shaft *c* supported in side frames 1. These plates *b* are connected by a transverse rod *d* loosely supported in the plates, and the roller *a* is moved to printing position by the action of a pin c^1 on the shaft *c* on the centre of this

rod. The shaft *c* is moved to allow the impression roller to assume the printing position by a spring e^2 acting on an arm *e* on the shaft *c*, but the arm *e* can be raised only when it is not acted on by a cam *h*, which normally keeps the roller *a* depressed for part of a revolution of the printing drum. A projection j^2 on the arm *e* is adapted to encounter a stop j^1 on a shaft *i* if this shaft has not been rotated by the passage of a sheet. The front edge of the sheet acts on an arm i^3 on the shaft *i* to raise the stop j^1 and allow the roller to be raised when the sheet is fed correctly. If no sheet is fed, the roller *a* is not raised.

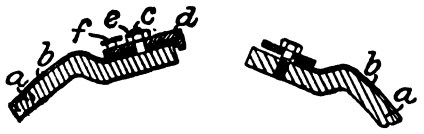
Rotary Machines.



A rotary machine for printing on webs of fabric or paper, the invention of Elmore's Metall-Akt.-Ges. and P. E. Preschlin, is so constructed that prints in correct register may be obtained from engraved or other printing cylinders varying slightly in size and driven at the same angular speed. Tension rollers act on the web to restore the web to normal position when one of the printing cylinders has been automatically raised in order to free the web, the tripping of the cylinder taking place while the margins are passing through the printing devices. As shown, a web from a reel H is printed by printing rollers B, A, of which the roller A is of slightly greater diameter. The rollers B A are geared together positively. The web

passes over a pair of tension rollers C, C^1 mounted on a slide or on arms M, M^1 connected by a link N and normally held by a spring K in such a position that the arm M^1 contacts with an adjustable stop D. During the printing operation the increased tension of the web moves the rollers C, C^1 to the positions shown by dotted lines, but these rollers are returned to normal position when the impression roller E is allowed to rise under the action of a spring L. This takes place when a flat part G of a roller F, driven in unison with the rollers A, B, comes above the roller E which is normally depressed by the roller F. In a modification, the roller E is raised by a cam on the printing roller acting on a spring controlled lever in which the roller E is mounted. The arrangement may be modified when the cylinder A is the smaller by causing the roller C, C^1 to be movable in the other direction; or the roller A^1 may be automatically tripped instead of the roller G.

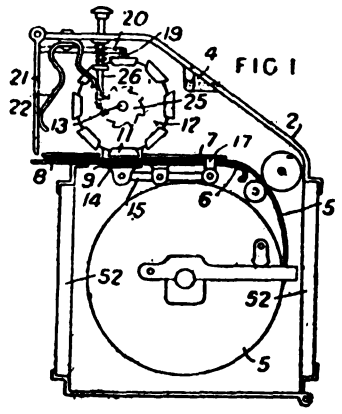
Number Printing Apparatus.



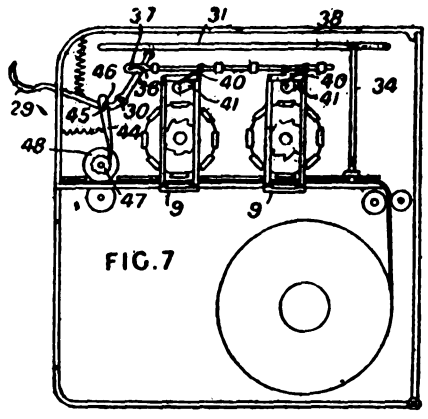
To enable small paper or textile sheets, such as labels, to be consecutively numbered with large numerals, the ten numbering devices are distributed amongst a number of printing cylinders arranged one behind the other in the direction of the running web, and so adjusted that each of the ten numbering devices, during one revolution, prints one of ten consecutive sheets. Mr. R. Gompf is the inventor, and in the arrangement shown in the diagram the ten numbering devices i^1 . . . i^{10} are mounted in pairs upon five printing cylinders *b, c, d, e, f,*

working in conjunction with three impression cylinders *k, l, m*. The working circumference of each printing cylinder is equal to the length of ten consecutive sheets, and the numbering devices on each cylinder are diametrically opposite to each other so that their numerals differ by 5 as shown. The numerals on the various printing cylinders are adjusted according to the lengths of the web between them, and these lengths may be regulated by means of adjustable stretching rollers *r, q* between the impression cylinders. To allow the web, after printing, to be re-wound on to a roll *t*, the sheets are numbered backwards. The sheets may also be consecutively numbered in small type by a numbering cylinder *a* provided with the ten numbering devices *h* and working against the impression cylender *m*.

Printing Surfaces.



By an invention by Mr. H. J. Gore, line drawings, imitation typewritten matter, etc., are produced on metal printing surfaces for offset machines by means of stencils. The surface of the plate is prepared as usual, and the stencil prepared as usual by treating paper with wax or fat is treated on one or both sides, either before or after the design is cut in it, with a coating to render it non-greasy. For this purpose, the stencil is coated



with a solution of shellac, sandarach, benzoin' or dammer in ether or methylated spirit, or in both, by wiping or brushing. The stencil is applied to the printing plate by forming apertures in a strengthened strip at one end of the stencil, as described in Specification 14,303, 1902, to engage with headed studs *f* provided on the clamping plates *d* for securing the printing plate *b* to the cylinder *a*, these clamping plates being fixed to the cylinder by studs *c* and nuts *e*.

Ticket Printing.

A machine to be used by the conductors of trams, etc., for issuing tickets on lines divided into sections, the fares being proportionate to the number of sections travelled, as patented by Mr. L. D. Blumenthal, is constructed with a number of discs carrying a series of blocks indicating journeys commencing at different sections, each disc carrying blocks corresponding to a particular fare. All the discs are carried on a shaft which is rotated partially by the conductor at the end of each section, and the apparatus is so constructed that a door, flap, or lever must be operated before the ticket strip is released from a stop which engages perforations in the web, the movement of this door, etc., also serving to actuate the printing mechanism. As shown, a number of printing discs, as 12, with printing blocks 11 are mounted on a shaft 13 operated by a ratchet 25 and spring controlled pawl 26 to change the blocks 11 at the ends of sections. The ticket strips are unwound from rolls 5, and are guided by guides 6, 7 to positions beneath a block 11, and, in the normal position of the apparatus, each strip 5 is held by stop 17 on the lever 15, the stop engaging a perforation in the strip. Access to the rolls may be obtained by opening the hinged top

2, normally closed by a lock. Access to the end of the strip is permitted by a cut-away part 8 of the guides 6, 7, but can only be obtained by moving a door or flap 21 against the action of a spring 22, and this movement through rods 20, 19 raises a plunger 9 carrying an impression pad 14 so as to produce an impression from a block 11 through an ink ribbon, and the lever 15 is moved so as to depress the stop 17 to permit the strip to be drawn out. The strip is cut off by hand against the chamfered edge of the door 21. Windows 52 are provided in the casing. A modification in which two series of printing discs for printing two different inscriptions on the tickets simultaneously is shown in Fig. 7. The apparatus is operated in this case by a lever 29 pivoted at 30, which, when depressed, first of all raises a lever 31 connected by a rod 34 to a stop which engages perforations in the strip. The lever 29 by a pin and slot connection 45, 46 actuates a pawl 44 and ratchet 47 which drives a friction roll 48 for feeding the strip, and by a pin and slot connection 36, 37, a bar 38 is moved so as to cause connecting rods 40 to rotate cams 41 which lift plungers 9 to effect the impression. Dials and pointers are provided to indicate the positions to which the printing wheels have been adjusted.

WHEN a newspaper in Ohio publishes a false statement concerning any individual or association of individuals, it must, upon demand, print in the next issue, or within forty-eight hours of its receipt, an article containing a true statement of the case. This article must be printed without any alterations whatever; must appear with headlines of equal prominence, and in the same place as the libellous article, and must be sworn to by the person offering it, and the newspapers cannot be held liable in any civil or criminal proceedings for anything contained therein. The newspaper company refusing or failing to print such an article may, upon conviction, be fined not exceeding $1,000, and the person responsible for such refusal fined not exceeding $500. A fine not exceeding $500 or workhouse sentence not exceeding six months, or both, is provided for any person who furnishes a news item to a newspaper knowing at the time that it is untrue. Curiously enough, Governor Cox, who signed the new law, is proprietor of two Ohio dailies.

The Ink-Maker's Point of View.

At a recent meeting of the Ben Franklin Club of Chicago, Mr. Cliff R. Hunn, the popular Chicago manager of the Chas. Eneu Johnson Co., gave an address on "The Mixing and Matching of Colours," in the course of which he said :—I shall endeavour to speak on the subject from three view points, namely, the necessity for matching colours, the value of matching colours to the printer, and the cost of matching to the ink-maker.

In the first place, it is perfectly safe to make this statement, that nine-tenths of the matching of colours demanded of the ink-maker are absolutely unnecessary. The printer will submit to the ink-maker a set of engraver's proofs made, perhaps, from a water-colour sketch or an oil painting, and the engraver, in his desire to faithfully reproduce the subject submitted, must of necessity mix colours from his standards and prove them after various experiments to effect as near as possible a reproduction of the original. It is a well-known fact that colour effects which are super-imposed by the artist's brush, while presenting to the eye, possibly a definite colour tone, cannot be absolutely reproduced by a printing process which is limited to either three or four distinct colours.

The effort, therefore, to faithfully reproduce the original reflects itself upon the ink-maker, and to him is submitted the proposition of making colours to match tones which have been produced by the engraver's proofer compounded of various standard colours in equally varying proportions, printed on high grade proofing paper, and then the ink maker is expected to furnish ink to match these unidentified tones, and the said ink probably be used on a six-cent coated stock or may be super-calendered; or whatever the paper may be, the ink is supposed to contain that quality of reproduction which the artist or the papermaker have not considered any part of their business. In other words, it is all up to the ink-maker. The slightest variation in the tone colour of the paper resolves itself into a problem for the ink-maker, and some of the standard colour effects of which the artist dreams and the engraver's proofer endeavours to realise, must be all demonstrated by the ink-maker. This brings us back to the question of the necessity of matching.

It is true that since the artist will dream impossible colour schemes and the engraver will insist upon furnishing to the ink maker proofs of the reproductions of the original upon paper, which is 50 per cent. better than the grade upon which the printing is accomplished, this difference must necessarily exist, but, gentlemen, you must agree that it is rather severe on the ink-maker, because, while he is the most accommodating of the supply men who are anxious to do business with the printer, yet it does seem quite appropriate to quote Shakespeare, and say, "only one poor penny worth of bread, but such an intolerable deal of sack." As a matter of fact, the value of printing ink in relation to a printing contract is one of the smallest elements entering into the manufacturing of printing, and yet it is perfectly safe to assume that the printing ink manufacturer is involved in more trouble and expense in securing his small proportion of the business than any other one source of supply of the printer.

Now, as to the value of all of this interminable matching to the printer. Among the many advances of a practical character which the printer has made in recent years, is that of established and reasonable prices, and no uncertain value for his product. But if a customer should happen to suggest that he would like to have a tone colour about one-thousandth of a shade lighter or darker, the printer immediately says, "certainly, we can give it to you," because he knows his accommodating friend the ink-maker will make it for him, and while this is no more expensive to the printer, speaking generally, yet he is imposing a task on the ink-maker which after it is accomplished, may only become a source of trouble and annoyance to himself. We have instances of printing houses who have adopted certain colour standards and they display those colours with just the same assurance that they would an impression of a fount of type or a well-known brand of paper.

In other words, they are selling printing from other manufacturers' sources complete, both as to paper, style and ink, thus reducing the nuisance of those conditions of matching colours and submitting them, and the different examples of colour schemes for one job, and believe me, gentlemen, these are the houses that are progressive and strictly up-to-date in their business methods, and the houses the ink-maker loves to do business with.

Now, a word as to the cost to the ink-maker of matching and mixing special colours. In our own factory we have a force of six men whose entire time is taken up in this class of labour. They have some of the most remarkable propositions to accomplish that the mind of man can conceive. While they are all colour experts and can tell at a glance the difference in colour tones, yet they have to accomplish some of the finest shading which to the layman looks like something absolutely unnecessary, and yet if the printer or artist should demand a certain effect, the difference is quite apparent. Our matchers are expected to be able to make a single colour which shall be in effect, what the artist has produced with five or six different colourings in the original drawing. Of course, they accomplish all of these tasks because they know how. You would be astonished to learn some of the remarkable things which the ink-maker is expected to produce. We have been asked to furnish inks for printing documents to be placed in corner stones in buildings, such ink to be guaranteed to remain permanent and legible for one hundred or perhaps one thousand years. It speaks well for the ability of the ink man who has never yet hesitated to make such a guarantee, and yet in spite of these unusual demands upon the ink man, the strange part of it all he continues to be good-natured and invariably accommodating.

Now, what would you printers think of a proposition like this? Some time ago we had a set of four colour plates sent to our factory with the proofs as they came from the photo-engraver. The proofs were on Dejonges proofing paper and a sample of stock to be printed upon, was submitted. The character of the printing stock was so different from the proofing paper that the original colours could not possibly be adapted, with the result that a second and third set of proofs were made, after which the printer sent in two other samples of stock and these were also proofed upon, with the result that the total amount of time consumed in proofing on this one job, if charged for at the rate observed by the Ben Franklin Club would cost $14.00, and when the last proof was accepted and the order for the ink received, the total amount of our invoice was exactly $3.50. Don't you think it is almost time for the printing ink-maker to join the Ben Franklin Club?

Perhaps, it might be expected of me to say something about the actual making of printing inks, but the subject itself is so large and would involve so much of a technical character that I would prefer to let the printed page speak for itself, and those of the Ben Franklin Club who desire detailed information on that question, shall receive from me upon request, an exhaustive treatise upon the subject.

I may, however, quote on this point a disquisition on the early manufacturing of printing inks written by Moxon, in 1683, and his actual words are so well worth quoting that I submit them as follows: "The providing of a good ink or rather a good varnish for ink, is one of the least incumbent cares upon our master printer though custom has almost made it so here in England; for the process of making ink being as laborious to the body, as noysom and ungrateful to the sense, and by several odd accidents, dangerous of firing in the place, it has made our English master printers, generally discharge themselves of that trouble, and instead of having good ink, content themselves that they pay an ink-maker for good ink which may be better or worse, according to the conscience of the ink-maker."

Let us consider for a moment the question of the personal relations from a business stand-point of the ink-maker and his customer the printer, and we will endeavour to be impartial and equitable. It frequently happens that the printer has, perhaps, not quite that generous feeling toward the ink man he has to himself. For instance, the printer will expect the ink-maker to make ink and match a colour to suit his special requirements and, perhaps, will not make the requisition until his form is either on the press or about ready to go to press, and then if the ink is not delivered within an hour after the order is telephoned there is frequently some language used around the press-room, and in fact, it has been known to re-echo over the 'phone into the ink factory. A little more consideration for the ink man would be a mighty good thing to promote that sentiment of good will to all men, which is supposed to foreshadow the dawn of the millennium.

Another thing which the printer might consider is, that while he has and is part of an organisation for his own betterment, the ink-maker is not so favoured. There is no organisation of any character amongst the ink men which would tend to more even commercial conditions than their knowledge does at the present time, and while the printer may justly and reasonably condemn his fellow printer, who has no cost system and consequently is willing to sell printing at the most absurd prices, yet it is a fact, sad as it is to relate, that the printer does not hesitate to buy from the ink-maker who is willing to sell at the least possible profit and most probably at a loss.

I feel sure the time will come when the printer will welcome an organisation amongst supply people which will be a guarantee to him that there is a standard of value and standard of service, and a reasonable commercial profit to be derived from his business. —*Ben Franklin Monthly.*

PRINTING LABEL FORMS.—Instead of reducing the ink when printing label forms on coated, plated or enamelled stock, have the stock cut double for two on. Use the ink straight and run the press slowly so that the sheets may be pulled by hand from the form. This plan will prevent the ink from lifting or "picking" the surface of the paper when heavy type is used, and the ink will have a much better appearance through not reducing. With a little practice, a double sheet may be printed and turned in this manner with very little trouble. On a fine label job where size and hand bronzing are used, this plan has another advantage—they being printed two on when turned, considerable time is thus saved in applying the bronze to the double sheet instead of the labels being single.

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help a..d an ornament thereunto."
FRANCIS BACON, Baron Verulam.

Just a few "Quads" upon business with the colonies and foreign countries.

o o o

It would be a very good thing, undoubtedly, to reinforce our reputation for square dealing by an enhanced reputation for alertness. One does not forget how Mr. McNally, of Sydney, belaboured us some time ago because repeated requests, and even the offer, and I rather think, the actual sending of the then heavier postage money did not bring to him priced catalogues of certain English machinery which he persistently requested. Reluctantly he placed his order with foreign, I think it was German, houses.

o o o

Lately again I heard of the remarkably enterprising printeries which are to be found n some of the islands or other regions of the Levant. I believe it was a case-making machine my informant there remembered; at any rate something very rarely to be seen in British printing offices; by my recollection it was supplied satisfactorily with adequate work. Here is another ground not so far from home which seems to be neglected.

o o o

Talking of the Levant reminds me that of course there are risks in Turkish and Egyptian trading. Messrs. A. E. Dent and Co., the engravers, have had, I remember, some amusing experiences under that head. I don't mean that they were worsted; rather I think they got a bit of fun with their Turkish money.

o o o

Another friend, speaking to me of certain Egyptian trading, said, "I thoroughly enjoy the business I am doing with certain people in those regions." (Mind, he was not applying this to Egypt as a generalisation but speaking of specific dealers.) "There is nothing doubtful at all about it. You know quite well that they are going to do you down at every chance. It's just your wits against theirs; and it is quite a fine game."

o o o

This London globe-trotter being home from Egypt consigned some goods in fulfilment of an order he took in that country. He thereupon received an effusive rhodomontade sort of letter expressing the heart grief of the recipient that their noble friend, whose qualities had so much impressed them, should have, no doubt innocently, been the means of consigning to them a parcel of goods so utterly unworthy of his honourable fame. They waited with pain any explanation and any proposal for extricating them from the calamitous position in which this failure had placed them.

o o o

My friend wrote that he could not have them embarrassed in the slightest degree, and so had instructed his agent in Cairo to take possession of the goods, although they were undoubtedly all they had been represented to be.

o o o

"I have not a doubt," he said to me, "that they had already got customers for them all before their try-on was posted."

o o o

The Egyptian buyers thereupon wrote that, grievous as was their lot in the matter, they could not bring themselves to visit so heavy a loss upon that noble gentleman who had visited them. A mere matter of 40 per cent. from the charge might in this case be deemed adequate. but for the future they hoped, etc., etc.

o o o

My friend shortly answered that during the weeks of this delaying correspondence the market had moved, and they unfortunately could only now obtain the goods from the agent at Cairo by paying an extra 5 per cent! Tableau!

o o o

The same friend, by the way, happened, three years ago, to find himself landed in Alexandria, and detained for several days. So he decided to slip over to Constantinople and try for once what he could do absolutely unheralded by any of the usual announcements. The few hundred pounds' worth of satisfactory business which he secured was doubly gratifying.

o o o

I mention it because if I can do any good at all in these notes, in which I am venturesomely approaching a special subject on which I cannot claim to be as informed as many of my readers, it will be by appeals to the spirit of rational adventure, the spirit of that romance and daring which has done so much to found English success.

o o o

We cannot have again, and ought not to want to have again, such aids to business as were secured by the Lancashire manufacturers when they got to Parliament prohibit, or virtually to prohibit the importation of Indian cotton goods, and in this artificial, and, to speak plainly, wholly unjust manner, brought about a rapid reversal of things, so that whereas £2,000,000 or £3,000,000 worth of Indian cotton goods had been lately selling in English homes, our cotton lords had very soon ended the seriousness of this opposition, and instead were bringing their own manufactured cotton to the doors of the Indian consumer.

o o o

We cannot have, and we ought not to want, such artificial help as this, but we can have the same spirit of courage which floated the argosies of old times, even before the days of mutual marine insurance.

o o o

The romance of business is not dead. The quest of new worlds to conquer may be perennial. The old world is a new world for every new firm.

o o o

Go then for Colonial and foreign trade; or "being in't, bear it that the opposer may beware of thee."

o o o

The present moment is propitious for this access of zeal in this matter. Printers at home are not buying very much just now. Cost congresses have been warning printers against over-equipment of plant. Other experience may also have carried some like warning. Anyhow, it is the case that many of the smaller supply houses have been going round with much more than the ordinary intentness to certain London export dealers, to see if they could fill them up with some orders; even though they might not be of the most profitable kind.

o o o

Printers have been busy during the summer, but they have not been buying very greatly, and they are not buying very much just now. If that is so, again I say, remember that the world is a sphere, and that any one point of a sphere must be its centre, as much as any other point. Your works, however small, must be a world centre as much as any other works. "Heaven gie us all a guid conceit o' oorsels."

o o o

Look at Seggies, at their gumming and their gumption; and how their varnishing and gumming machines got into the Government establishments of Japan.

o o o

Look at the Mark Smith Vacuum Bronzer, how its merits filled a vacuum in America, how an important vacuum-selling agency in the States was established, and how that business has been developing despite all obstacles.

o o o

Look at the Brehmer wire stitchers. Sixty thousand to seventy thousand of them sold all over the world. Look at Mann's—a strong sound business through many decades, but which is now growing younger as it is growing older. Mann's whose machinery members of the Printers' Institute visiting Germany were so pleased to encounter. For that matter the sun, I believe, never sets on their offsets.

o o o

Look at Waite and Saville's "Falcons." America, it is true, is not by any means the worst offender in the matter of artificial methods for keeping out foreign goods; all the same their tariff as variously adjusted has been a very serious difficulty. It could not, however, prevent the Fred Waite's "Falcons" from flying in and winning such favour that very soon the makers felt justified in arranging for the manufacture of their machines upon American soil.

o o o

Look at a wholesale stationery firm like Jacobsen, Welch and Co., of Hyde. They tell in their various printed announcements how pleased they would be to provide estimates for any foreign market in precisely the language, calculations and terminology which might best suit that market.

Anyone who is making a thing which might get on well in the foreign market and who feels that he has yet to learn the ropes, might, I should say, very well obtain a few interviews in London. Messrs. Gordon and Gotch, of St. Bride-street, E.C., would very probably be of considerable help to him in giving him some general information as to the Australian market. By the way, Gordon and Gotch are the sole Australian agents for Elliott and Co., printing machine makers of Otley. What they don't know in regard to the requirements of Australian newspaper works, we should think, is hardly worth anyone's troubling about knowing.

o o o

Messrs. John Dickinson and Co., Ltd., of Old-bailey, are repeatedly acting as buyers on behalf of firms abroad who choose, in effecting a deal with an English house, to adopt the safe course of passing the matter through the hands of some such eminent firm and who are sensible enough not to grudge any small handling charge.

o o o

Messrs. John Haddon and Co. do, I believe, a merchant factoring business of a scale and variety quite unsuspected by many in the printing world. By the way, they also are making appreciable inroads in American printing circles. They appear to have an energetic agent in New York, and their platens are very satisfactorily finding their way into United States printeries. They as a firm whose fingers are upon the pulse of the markets of the world, might, I should imagine, be consulted by those who are entering upon the foreign trading or who are not satisfied with their present experience of it.

o o o

Messrs. Haddon's practice is to carry very large stocks of their own types and other goods in the colonies. It will perhaps occur that other things being equal, the fact of their already being committed to considerable establishment expenses in this way might make it easier for them to quote good terms for the handling of other things with which a man might wish to challenge support at the Antipodes or elsewhere.

o o o

Messrs. Edward Lloyd, Ltd., again of the same Salisbury-square in London, E.C., with their especial knowledge of South African, South American, Indian, Chinese and Japanese markets, might very well be consulted. Messrs. Fieldhouse, Crosfield and Co., Ltd., of the Wharfedale Foundry, Otley, have made considerable avail of the services of Messrs. Lloyd's agencies.

o o o

Messrs. F. T. Wimble and Co., Ltd., of 87, Clarence-street, Sydney, have been known for now many years as an enterprising clearing house in regard to printers' requirements. Their house journal, *Wimble's Reminder*, is one of the best known publications of the craft.

o o o

The business that is to be done on the Continent was illustrated fairly well quite recently in the important litigation in which Linotype and Machinery, Ltd., and the Miehle Press Manufacturing Co., Ltd., were engaged. There is no need here to go into the question of the patent delivery apparatus which, it appeared, was mistakenly attached to certain two-revolution machines sold upon the Continent. The point is that there appeared to be a very good sale for two-revolution machines of English manufacture by whatever name known.

o o o

I suppose that in Continental connection hardly anyone would be much better informed than Mr. H. T. Johnston of the Canadian-American Machinery Co., for not only is he, as the trading style implies, exceptionally conversant with the supply and demand of the printers' market across the Atlantic, but he has a very considerable acquaintance with European countries. He seems to know the French language almost as he knows English.

o o o

As a detail it may be mentioned that the French and German foundries are woefully behind the foundries in England. *L'Illustration* in Paris, and other newspaper publishing offices on the Continent have been only too glad to call in the services of able men from the electrotyping and stereotyping workshops of our metropolis. And they want better foundry plant.

FRANK COLEBROOK.

A NEWSPAPER printed at sea is not such a new thing as many present-day people suppose. The first newspaper was printed on board the Great Britain steamship in 1852, when she was on a voyage to Australia. The *Mississipi Gazette* was also published on steamers plying between Memphis and New Orleans in the early fifties.

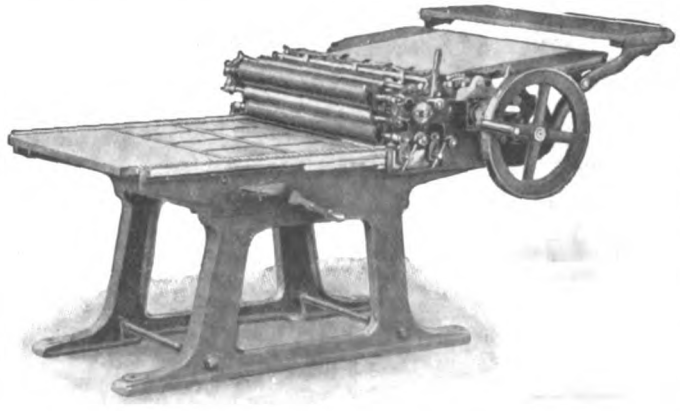
Machines for Printers.

Messrs. Soldan and Co., Ltd., have been recognised during the past decade as pioneers in introducing the latest appliances appertaining to the printing arts. It is therefore in keeping with the reputation of the firm that the latest phase of advancement in reproduction, *i.e.*, photogravure, has received careful attention, machines for this grade of work having been demonstrated in their showrooms to interested firms. Having overcome the initial difficulties progress has been phenomenally rapid, rotary photogravure machines now superseding those of the flat-bed style. To the uninitiated this may not seem eventful, but it will be better understood by the fact that rotary photogravure increases the speed from 600 on flat-bed, to 5,000 copies per hour.

Albert's Offset Machine.



The makers of this class of machine, Messrs. Albert and Co., Ltd., Frankenthal, have also built an offset machine in which is incorporated many improvements which will assist the lithographer, and tend to simplify a process which, for varied reasons, many firms have hesitated to embark upon. The Albert Offset printing machine is built in four sizes from double medium upwards. It combines all the essential qualities necessary for obtaining perfect work, and in its construction every attention has been given to obtain rigidity and the entire elimination of vibration. Each machine is a model of the highest craftsmanship and the finish of details is commensurate with the quality of work which can be produced. Being solidly built and all parts working in perfect unison, it is possible to obtain an accelerated speed of 100 per cent. above the ordinary litho machine, and absolute accuracy of register is guaranteed. The flat-bed method is to print from the negative image on the stone direct on to the stock used. The offset method is to print from a cylinder on which is attached a zinc covering with a positive image. This in turn is transferred directly to a rubber clothed cylinder and thence on to the paper or stock used. All varieties of papers, either granite or crash finish, or the usual stock lines used by lithographers, can be printed upon without presenting any difficulty. The printing cylinders automatically adapt themselves to varying thicknesses of paper. The sheets are delivered printed side up without touching tapes or sticks. The machine is easily accessible from all sides and all operations can be done with comfort.

The firm's advertisement page in this issue will convey some idea of the classes of machines built by Albert and Co., Ltd., in addition to what are here mentioned. The firm is world-famous as builders of all-size and fixed rotaries as well as ordinary and two-revolution letterpress machines.

One of Messrs. Soldan's chief successes during recent years has been the Lightning Press. This machine takes the place of the old hand-press. It is constructed with geared inkers and movable bed, which can be raised or lowered to allow for printing from galleys or forms. The impression can be altered even to the thinness of tissue, so that it is quite safe to print from script or other delicate type.

A single letter alone and unsupported can be automatically inked and printed on Soldan's Lightning Press. Firms who require a machine for clean proofs and short runs will do well to see this machine. We are informed that recent sales amount to nearly 150 machines, which is eloquent testimony to its utility.

The Typograph Composing Machine is versatility exemplified. Every class of composition is possible on this machine, and although the price is considerably less than some other makes, this need not indicate a "cheap" machine. The output of the Typograph will stand comparison with competitive machines, and the cost of upkeep is practically nil, and on this fact alone the machine should recommend itself to those contemplating the installation of typesetting machines.

Soldan's Lightning Press.

At the present time there is a movement for an improved and simplified Automatic Feeder for printing machines, and quite naturally Messrs. Soldan and Co., Ltd., are alert, and prepared with the right thing. In their showrooms they are now demonstrating the Universal Feeder, which has so far been successfully tested that in one works alone there are now 35 machines fitted with the Universal. It is operated on the suction principle, and one of the chief features is the ease and precision with which it feeds thin sheets. The sheet is not pushed into position to the side-lay, but the contrary method is adopted, the sheet being gripped by a side mechanism and drawn to the gauge, thereby avoiding any contraction of the sheet with its subsequent "cockling." There are few working parts on the Universal; the feed-board is accessible, and whilst the sheet is being fed, and additional to this, the price is considerably lower than that of many other feeders.

Messrs. Soldan and Co., Ltd., also supply the Eclipse Folding Machine for newspapers and high-class job work. The Conqueror Platen Machine is synonymous of the best in heavy platens, and is deservedly held in high esteem by the printer. A light running platen—the National—is also well worth an enquiry when a cheap machine is required.

"Everything for the Printer" is the motto of Messrs. Soldan and Co., Ltd., and a visit to their show-rooms at 8, Baldwin's-gardens, Holborn, E.C., will more effectively convey an idea of the foresight they exercise in order to keep printers in this country abreast of their calling.

CHINA.—The report for 1912 of the Commissioner of Customs at Mukden, Manchuria, recently published by the Chinese Maritime Customs, states that a most noticeable feature of the year was the increase in the number of shops selling educational books, models and instruments of every description, both Chinese and foreign. Pens, pencils and indiarubber imported are mostly of United Kingdom and American manufacture. Writing ink, in very small twin bottles (one red and one black), is almost exclusively of Japanese make. Copy books and note books are largely of Chinese make, from Shanghai, though some of the cheaper British goods find a ready market.

SPECIAL PREPAID ADVERTISEMENTS.

IT IS IMPORTANT that Advertisements under any of the Headings mentioned below should reach us by the first post on Thursday to insure insertion the following day.

SITUATIONS.—Charges for Advertisements under the headings "Situations Vacant," or "Situations Wanted," are at the rate of

ONE SHILLING FOR 24 WORDS

(3 Insertions: TWO SHILLINGS),

and Fourpence for each additional Eight Words. Minimum Charge, One Shilling.

BUSINESSES FOR SALE or WANTED, MACHINERY WANTED or FOR SALE, SALES BY AUCTION, TENDERS, PUBLIC APPOINTMENTS, MISCELLANEOUS—One Penny per Word.

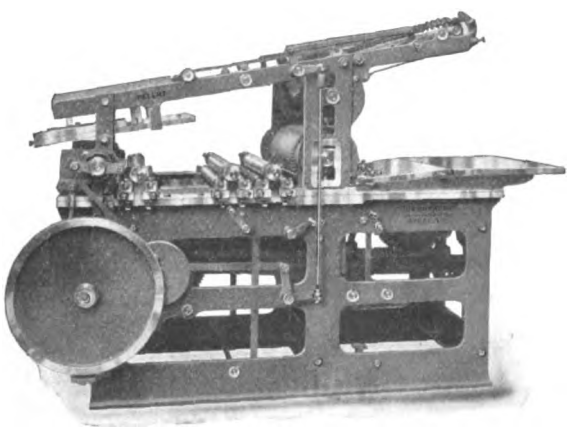
ADVERTISERS, by paying an extra fee of Sixpence, can have the replies addressed to the "British and Colonial Printer and Stationer" Office under a number, and such replies will then be forwarded post free.

PAYMENTS must be made in advance, except where the Advertiser has a running account, in which case the cost can be debited thereto.

STONHILL & GILLIS, 98, Shoe Lane, London, E.C.

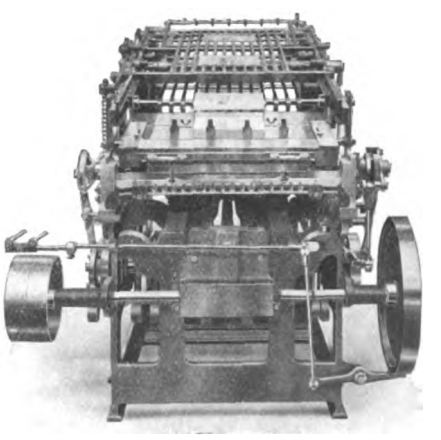
Situations Wanted.

LETTERPRESS MACHINE OVERSEER desires berth abroad; advertiser is fully and practically conversant with the most modern methods and machinery.—Address, No. 13253, Office of the BRITISH AND COLONIAL PRINTER AND STATIONER, 58, Shoe-lane, London, E.C. 13253



WORKING MACHINE OVERSEER seeks situation; Book, Half-Tone and Commercial Work; good organiser; references.—"Printer," 10, Blenheim-road, East Ham, E. 13254

Machinery and Plant for Sale.



ALL ELECTROTYPERS and STEREOTYPERS should write H. Williams and Co. for their latest catalogue of machinery, and Electroline Enamel Paste, for producing fine art stereos. —Engineers, Red Lion Works, Warner-street, Rosebery-avenue, E.C. 12343

THE "SUPREME" WHARFEDALE

WITH FRICTIONLESS DELIVERY.

SIDE VIEW.

END VIEW.

Delivers sheets over ink duct printed side up. Nothing touches the printed face. No friction on under side of sheet, a feature of vital importance when handling sheet already printed on the under side. As four sheets are travelling at the same time, interleaving is rarely necessary. The two latter are exclusive features found in no other machine delivering over the ink duct.

The Australian Market.

THE progress of Australia in the matter of printing has of late years been remarkable, and has resulted in the building up of many fine businesses with extensive premises and workshops filled with the newest and most up-to-date machinery. In Melbourne, Sydney, Brisbane, and Adelaide, there are establishments that are as well equipped for the turning out of printed work and manufactured stationery as any in the Old Country, while the newspaper offices are many and progressive. As a general rule the equipment of an Australian printing office is kept well up-to-date in the matter of appliances; the employing printer is quite alive to the fact that to make a profit his equipment must be of the best, and so he does not hesitate to scrap his obsolete machinery and lay down the very newest labour-saving appliances that he can procure. He is handicapped by the high wages that are fixed by the Wages Boards, and which he must pay, or run the risk of a heavy penalty, and therefore he adopts modern methods and the best labour-saving machinery, that his output may be increased without a corresponding increase in the wages bill. In Australia, therefore, there is a great field for the sale of printing machinery of an up-to-date character, which should be supplied by the British manufacturers, and which, if they are wise, they will cultivate even more than hitherto. As it is, many orders go to the United States, not that any better value can be got there, but because American firms, as a rule, give quicker delivery. This is a point that demands the serious consideration of British traders, as the slowness of executing orders, and the delay often in answering enquiries has told heavily against them in the past. Australia offers an excellent opportunity for the smart British trader to do business, but it must be done in a prompt manner. Our own columns have from time to time contained complaints from Australian firms as to the slowness of our home houses in filling orders. It is up to them to remedy this, and with prompt attention to even the smallest enquiry to hold the Australian market as a field for their goods, and to their own financial advantage.

Trade Notes.

PRINTERS' ink was imported into the United Kingdom during 1912 to the extent of £15,557.

DURING 1912 Ceylon imported stationery of British manufacture to the extent of £26,104, as against £26,353 in 1911 and £22,458 in 1910.

BENGAL in 1912 imported stationery from the United Kingdom to the extent of £74,686, compared with £65,203 in 1911 and £55,406 in 1908.

BURMAH in 1912 imported stationery from the United Kingdom to the value of £22,009, as against £20,492 in 1911 and £15,435 in 1908.

THE United Kingdom exported stationery of the value of £73,847 in 1912 to New Zealand, compared with £68,987 in 1911, and £58,528 in 1910.

THE Federated Malay States imported stationery of the value of £12,283 in 1912 from the United Kingdom, compared with 10,018 in 1911 and £7,574 in 1910.

IN 1912 the Straits Settlements imported from the United Kingdom stationery of the value of £33,888, compared with £28,089 in 1911 and £21,199 in 1908.

£108,943 worth of stationery was exported to Canada from the United Kingdom in 1912, compared with £88,798 in 1911, £80,677 in 1910, and £69,291 in 1909.

WILL our readers please note that the telephone number on the advertisement of Mr. Samuel Insull, sen., on page 11 of this issue should read "2,635 City," and *not* "7,355 London Wall," as printed.

FROM the report of the Government Chemist upon the work of the Government Laboratory for the year ending March 31st last, the inks, paper and gum used in the manufacture of stamps, besides samples of the finished stamps, were regularly tested at the laboratory during the year. An investigation was carried out as to the treatment of the paper used in interleaving books of stamps best suited to prevent the adhesion of the stamps to the interleaves in the event of the books becoming damp. Several questions

Digitized by Google

in connection with National Health Insurance Stamps were also referred to the laboratory. The total number of examinations conducted for this department in the course of the year was 682.

A SOUTH AFRICAN POSTER.—The Argus Printing and Publishing Co., Ltd., the proprietors of the *Cape Argus*, *Johannesburg Star* and other South African newspapers, have just produced at their Cape Town branch a splendid example of pictorial poster work in the form of an advertising bill for Cape Town's new promenade pier which is now approaching completion. The poster is 39 by 24 inches, and shows a fine representation of the pier with an approaching steamer; in the middle distance is seen a portion of Cape Town, behind which looms the giant Table Mountain. The blues of sea, mountain and sky harmonise well, and serve to throw into relief the light coloured pier with its spots of brilliant colours. The lettering, which appears on the sky and sea portions, is attractively printed in chocolate letters with white margins, the poster itself being enclosed in a border of chocolate and white. The design, workmanship and finish are of the highest order, and these combine to produce a most effective and striking piece of work that speaks well for the resources of this go-ahead Cape Town printing office.

British Stationery in South Africa.

The following were the supplies of stationery to South Africa in 1912 and 1908 from the United Kingdom :–

	1912.	1908.
Cape of Good Hope	£123,417	£82,263
Natal...	38,880	27,445
Orange Free State	5,403	5,031

Victoria	50,888	62,846
Western Australia	11,844	16,280

The Miehle
TRADE MARK

IS PRODUCING THE FINEST COLOUR, BOOK, AND JOBBING PRINTING THROUGHOUT THE UNITED KINGDOM AND COLONIES.

In half-tone work, the Miehle reproduces every gradation of tone contained in the blocks—from soft high-lights to heavy solids.

Its reputation for perfect colour printing (which includes efficient rolling power and the features which make for dead register) is embraced by the standard phrase "Miehle Quality," which means essentially Miehle printing.

The Miehle is fitted with two deliveries, which at will deliver the product printed side up or printed side down.

The inking equipment provided on this press consists of sixteen rollers and a large ink table; of these, four are forme rollers with reciprocating riders and rollers over them (nine in all, arranged in pyramid form). The other seven rollers distribute the ink on the table before it reaches the forme rollers.

This press is built in six sizes; the smallest size takes a sheet up to 26-in. by 39½-in. and the largest size 46-in. by 66-in.

Miehle presses are also supplied in tandem, so arranged that the units may be disconnected and used as single machines.

The Miehle is Manufactured and Sold by

LINOTYPE AND MACHINERY LIMITED

who have the sole and exclusive right to manufacture and sell The Miehle in the United Kingdom and Colonies (except Canada).

Head Office: 188 & 189, Fleet Street, London, E.C.

DUBLIN: 17, Crow Street. MANCHESTER: County Buildings, 4, Cannon Street. GLASGOW: 197, Howard Street.

Foreign and British Paper.

Our Foreign Trade.

Last month there was a reduction in both the imports and exports of paper, there being one working day less than in August of last year, when business was abnormally brisk on account of the settlement of the transport workers' trouble. The eight months' returns show a considerable increase. The following are the total values for August and January-August, with increases or decreases compared with the corresponding periods of last year:

AUGUST.

Imports... ...	£657,318 —	£38,586
Exports... ...	279,970 —	11,316
Re-exports ...	27,728 +	16,949

JANUARY-AUGUST.

Imports ...	£5,050,243 +	£415,694
Exports ...	2,503,231 +	250,950
Re-exports ...	185,873 +	75,204

Imports.

The only increase last month in the imports of paper, etc., into the United Kingdom was in printings or writings, the amount being £7,476, solely due to larger receipts of reel paper. In this commodity all competing countries were eclipsed by Newfoundland, whose supplies amounted to £76,193, being £52,780 above Sweden. and £39,179 over the value of the consignments received from Norway. The month's imports of packings and wrappings show a drop of £34,615, all the principal exporting countries suffering small declines. Hangings and other printed or coated paper show a decrease of £2,730, whilst boards mark a decline of £180, and unenumerated and articles of paper a falling off of £8,537. Taking the eight months' returns, as compared with the corresponding period of last year, the only weakness in imports is confined to printed paper—hangings showing a decrease of £5,400, and other printed or coated papers £11,997. Increases:—Printings or writings on reels, £65,186, and not on reels, £23,544; packings and wrappings, £182,719; strawboards, £91,242; mill and wood pulp boards, £28,328; and unenumerated, £42,072.

Exports.

The falling off in the exports of paper from the United Kingdom last month was almost general throughout the whole list, the only exceptions being an increase of £3,748 in printings and one of £761 in packings and wrappings. Printings of the value of £91,188 were shipped to British Possessions and of the value of £52,726 to Foreign Countries, increases of £1,762 and £1,986 respectively compared with August of last year. Writings exported to British Possessions were of the value of £28,051, a decrease of £365; the purchases of Foreign Countries amounted to £13,225, an increase of £171, the total decrease in respect to the month's exports of writings, therefore, being £194. The eight months' exports show an improved demand for all classes of paper, etc., with the exception of "other printed or coated papers," which show a decrease in value of £18,531. The most noteworthy increase is in printings, the shipments to British Possessions being higher by £122,011 and to Foreign Countries by £63,440, a total of £185,451. Writings were bought more largely by Foreign Countries to the extent of £3,238, but as business with British Possessions marks a reduction of £1,200, the total increase in the exports of writings amounts to only £2,038. Packings and wrappings were in better demand to the extent of £37,599, and hangings by £13,842.

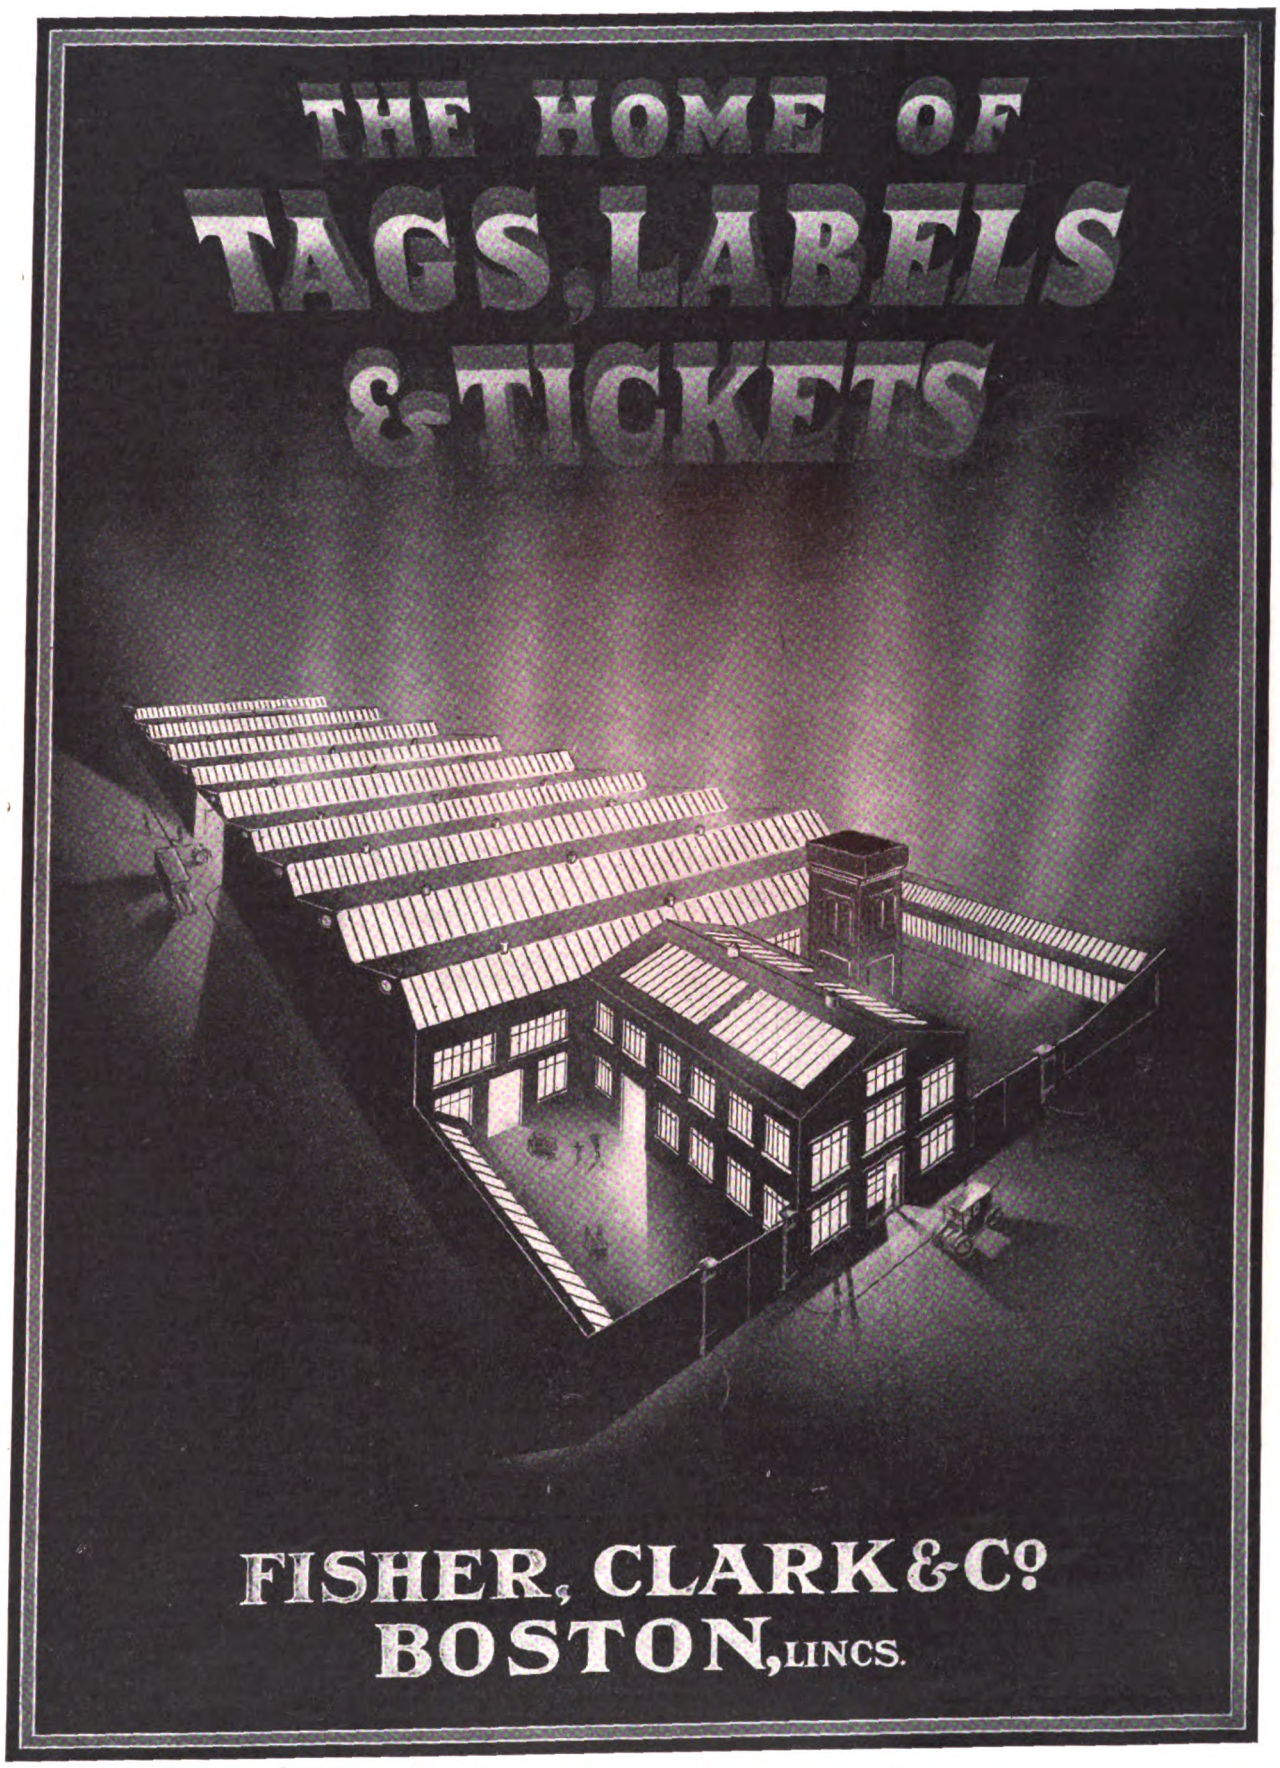
Automatic Justification.

An American invention that is intended to do away with the trouble that is connected with the justifying of large or small forms, in which there may be a number of illustration blocks or of white spaces, has been put on the market by the Automatic Justifier Co., of Marquette Building, Hammond, Ind. The invention consists of a metal table at one corner of which is a metal pot in which the metal is melted by a gas burner arrangement; and along the back there runs a rack to hold the thin pieces of metal that are required in various sizes to lay alongside the type or blocks. To justify, the form is laid on the table, and the open spaces are filled with melted metal, poured in with a ladle, and, when cold, the form is securely justified, and there are no small pieces to draw out or rise when on the machine. The melted metal takes the place of furniture, and when done with in one form may be melted again and used for the justifying of other as often as necessary. The process is applicable to all forms of display composition, and is claimed to be a great labour and money saver. Certainly it is something new, and that it is practical is evidenced by the fact that it has been adopted by many of the largest American houses.



PRINTED ADVERTISING TAPE.
MADE IN LONDON.
It advertises your goods. Looks neat. Very strong. Can be printed with any wording and in any colour. Soon repays small cost. Delivery usually in ten days. Samples and Prices Free.

PRINTERS' ENGINEERS AND PRINTING MACHINE MAKERS.

The Canadian-American Machinery Company, Limited, 8, Bouverie-street, London, E.C., are the general concessionnaires of the Walkup Rotary Press Feeder for changing the reels on a rotary press, either individually or simultaneously without stopping the press, saving time, spoils, space and power. Among the leading agencies in this firm's hands is that of the Brown and Carver (Oswego) Cutters, which are made in 90 different styles and sizes from the 16-in. bench cutter up to the 84-in. Automatic Clamp Cutter weighing nine tons. Also that of the Meisel Printing Press and Manufacturing Co., who make presses for printing, numbering, perforating and folding, counter cash sales and manifold books, Bed and Platen presses for printing tissue, gummed, waxed, and other papers from type or plates, delivering any size sheets or rewinding the printed product, ticket presses for street-car and strip tickets, trading stamps, etc. Slitters and rewinders for slitting wrapping paper and toilet requisites, and centre winding machines for tag or cardboard stock, rewinding up to 40-in. in diameter. They are manufacturers of the British Newspaper and Job Folders for folding, insetting and trimming at head 4, 6, 8, 10, 12 newspapers and upwards, turning same out with all the appearance of having been printed on a rotary press, and this at a guaranteed speed of 2,000 per hour and upwards. They manufacture Roller Washing machines for letterpress rollers, and Graining and Washing machines for lithographic and offset press rollers, and handle the Galley Cutters and Creasers of the platen type made in five sizes from 20-in. to 30-in. up to the Mammoth 30-in. by 44-in. inside chase, and have introduced a heavy Drum Cylinder Cutter and Creaser, capable of cutting and creasing boards up to 28-in. by 45-in., at a speed of 1,400 sheets per hour, with smaller sizes speedier in proportion.

Dryden and Foord, Henry-street, Gray's Inn-road, London, W.C.—This firm has now secured works at Otley, and fitted them with the most modern plant for the production of Wharfedale printing machines and guillotines. They offer the "Climax" Wharfedale in all sizes, and also the "Climax" Guillotines in both hand and self-clamp styles.

Elliott and Co. (Otley), Ltd., Steel Croft Works, Otley, Yorks. — One of the famous firms of printing machine builders of this home of British printers' engineers. Their improved make of Wharfedale is well known in the trade, and the firm is now manufacturing printing machinery with clean printed side up delivery to suit progressive ideas. Messrs. Elliott and Co. claim the honour of producing the first two-revolution machine built at Otley, and their new "Caradoc" stop cylinder, and the "Elliott" two-revolution press are their leading lines to-day. The latter machine is of high-class design and construction, and even while running at a rate of nearly 2,000 an hour, is all that can be desired. The toothed-gearing is all cut by accurate machinery, the inking is specially excellent, and many improvements have been introduced that tend to perfection of printing. As a testimony to its quality, we may note that one firm of printers have five presses in use, and have ordered others. The latest addition to Messrs. Elliott and Co.'s machines is the "Elliott Auto-Wharfe," that combines feeder and machine in one, and is the first of its class to be offered to the printer. As a labour-saver this press should prove a success. The firm also manufactures self-clamp and other guillotines, bookbinding and other appliances. The managing director is Mr. Robert Elliott, a gentleman who has had a thorough practical training in the construction of modern printing machinery.

Messrs. A. Edler and Co., Bath-place, Rivington-street, London, E.C., handle many high-class special machines for the printing and allied trades. Among their leading specialities are rotary letterpress machines for commercial work. These are suitable for practically any class and quality of paper, including tissue, and the output in many cases amounts to quite 6,000 sheets per hour. In their showrooms they have some of the most modern machinery, including the latest book sewing machines. Their "Victory" Book Sewer can be fitted with a new patented appliance for automatically folding and sewing continuous guards in one operation. They are the sole agents for the well-known litho and collotype machine works of Faber and Schleicher, Ltd., Offenbach, and also of the famous Typecasting Machine works of Messrs. Foucher, of Paris. A long illustrated notice of the firm's new premises appeared in our issue of March 21st, 1912.

The Goss Printing Press Company of England, Ltd., 53, Fleet-street, London, E.C. Works: Hayes, Middlesex.—This is the British branch of the well-known Goss Printing Press Co., of Chicago, U.S.A., whose fast newspaper presses are known throughout the world. The "Straight-Line" printing machines made by the firm can be adapted to the requirements of any newspaper office, and their Patent Straight-Line Low Down Central Folder Quadruple Machine will print in book form a 16-pp. newspaper at the rate of 40,000 per hour. A feature of the machines is the absence of angle turning bars. The Goss presses are in many British newspaper offices, and the *News of the World* has installed a 64-plate Straight-Line Goss Press to insert 16-pp. without turning bars. Other machines are turned out by the firm that are well worth the notice of the newspaper publishers who desire to improve their half-tone block printing. A notice of the firm's British works appeared in our issue of March 23rd, 1911.

R. Hoe and Co., Ltd., Mansfield-street, Borough-road, London, S.E.—The name of Hoe and Co. will always be associated with the greatest inventions in the way of typographical engineering that the world has witnessed, and their printing machines have a world-wide reputation. The firm does not confine itself to newspaper machines only, but supplies fast machines of improved design for journals having moderate circulations and limited resources. Flat-bed and two-revolution cylinder presses are also made, and stereotyping, and other appliances are constructed to meet the most exacting requirements of the newspaper or magazine printer.

Peter Hooker, Ltd., Blackhorse-lane, Walthamstow, E.—This firm have a ticket printing machine which represents a great advance upon the older Lewthwaite machines, upon whose principles it is based. The machine automatically feeds and delivers 10,000 to 12,000 tickets an hour, printed in one or more colours on both sides, and consecutively numbered.

The Lanston Monotype Corporation, Ltd., 43, Fetter-lane, London, E.C. Works at Horley.—The printing trade of Great Britain and the Colonies is showing greater appreciation than ever of the wonderfully versatile Monotype typecasting and typesetting machine. In all parts of the world—even Fiji—the Monotype is at work. The universal lay-out (like that of the typewriter) and the "D" Board enables no less than seven alphabets to be set from the keyboard. All the individuality of hand composition exists in the Monotype set matter, the only difference being that it is set quicker and the job is printed from new type *every* time. The apparent intricacies of tabular matter are just as easy to set on the Monotype machine as straightforward matter. The Monotype sets and casts type from 5 to 18-point, and casts display type for the cases from 14 to 36-point—a range of 15 sizes. Labour-saving devices increase the number of hands employed. The Harris Rotary Presses (of which there are 33 kinds—a press for every job, from an envelope to a quad-crown sheet)—both letterpress and offset—are sold by the Monotype Corporation, as well as the famous rigid and adaptable Boston Wire Stitcher, Tatum Punches, Perforators, etc. Write up, *British and Colonial Printer and Stationer* for September 26th, 1912.

The P. Lawrence Printing Machinery Co., Ltd., 57, Shoe-lane, London, E.C.—This concern has for a great many years sold the "Colt's Armory" presses, manufactured by the John Thomson Press Co. They are the sole agents for the platen presses manufactured by this company, including their Cutting and Scoring, Printing and Embossing presses, which have a world-wide reputation and are used by practically all the progressive and up-to-date printers in Great Britain, the United States and elsewhere. Various sizes and styles of these machines are kept in stock in the Shoe-lane show-room, where they may be seen in operation. They also have on exhibition their latest platen machine called the "Laureate." This is an entirely new machine with many wholly new movements, and will print with one inking forms that heretofore have required double rolling. The machine has four form rollers, operated without cams, the throw-off may be operated with one finger, and reciprocating ink cylinders act directly on form rollers. The firm are the exclusive agents for the new Hodgman Cylinder press manufactured by Huber-Hodgman Printing Press Co., the construction of which is of such an advanced character that it is practically in a class by itself. The company also represents the Thomson Typecasting machine, which excels in many ways in casting individual type. This appliance casts type in sizes from six to forty-eight points. The company also sell labour-saving metal furniture and blocks with adjustable hooks, valuable for making register easily in printing three-colour work, as also for book and general plate printing. They are agents also for the Oswego Cutting Machine.

Linotype and Machinery Ltd., 188-189, Fleet-street, London, E.C.—This firm, which is an amalgamation of the Linotype Co., Ltd., and the Machinery Trust, Ltd., are the manufacturers of the Linotype Composing Machine, now so universally used in all parts of the civilised world. The Linotype is constructed at the firm's extensive works at Broadheath, near Manchester, where also is made the celebrated "Miehle" letterpress printing machine that is so much appreciated by printers for doing the best illustrated and other work at a high speed. Another machine is the "Centurette," a small sized two-revolution press, embodying the best features of the well-known "Miehle" and "Century" presses. It is extremely popular in the printing trade, on account of its moderate price, its high speed, and efficiency. It has already been ordered by some of the leading houses at home and abroad, and may be seen in operation at the Fleet-street show-rooms. One of the introductions of the company is the "L and M" rotary press for litho printing from metal plates, a first-class, reliable, up-to-date machine that produces the finest work at a speed that is much in advance of what can be obtained on the fastest flat-bed litho press. The "Autoplate," a machine for the rapid stereotyping of newspapers, is also made by the firm, and they supply everything in the way of machinery that can be needed by the printer. A system of coupling up Miehle Presses for colour work, in tandem fashion, and an arrangement for transforming a letterpress machine into a litho machine, have been introduced. The company also manufactures the "Duplex" Tubular Plate Press, which represents the latest development in rotaries. It prints, folds, and delivers newspapers of any number of pages from two up to their maximum (by two's) from a single set of stereo plates, at the rate of 25,000 per hour. The newest appliance put on the market is the L. and M. "Renaissance" press for machine photogravure at high speed.

George Mann and Co., Ltd., Larchfield Works, Hunslet, Leeds, and **Henry-street, Gray's-inn-road, London.**—The great success attending the manufacture of the Mann type of offset machine still continues. As will be seen from their various advertisements they are now being built in sizes from demy-quarto to eight-crown, and in the Two-Colour Rotary Offset and Perfecting Machines they have been built from quad-crown to eight-crown. Firms that are interested in the very latest in lithography should not hesitate to apply to Messrs. Mann and Co. for some of their offset publications; a catalogue, calendar, show-bills, and all types of offset work have been produced throughout by this new method, and are at the disposal of printers for the asking. Repeat orders are quite a common occurrence from some of the best houses in the country and also on the Continent. The Patent Rotary Tin Printing Machine also continues to give satisfaction, and meets with a ready sale. The new offices opened by this firm recently include New York, Berlin, and Birmingham, and these centres are adding

Digitized by Google

numerous orders to the already complete list which is obtained from British users. Messrs. Dryden and Foord's business and Messrs. Geo. Newsum and Co., Ltd.'s, have both in recent years been acquired by the firm, and the usual business dealt with by these firms is receiving the attention of the expert staff of Geo. Mann and Co., Ltd.

Miehle Printing Press and Manufacturing Co., Ltd., 85, Fleet-street, London, E.C., supply the celebrated American-make of printing presses that are known by the title of "Miehle." The machines are built in various styles, as Perfectors, in two sizes; Two-Colour Presses, in three sizes; and Single Two-revolution Presses, the latter in eleven sizes, from eight-medium to double-crown. These presses are very fast running, the perfectors being speeded up to 1,900 per hour, and the two-colour and two-revolution presses to 1,700 and 2,700 per hour respectively. The firm claim to be the largest manufacturers of two-revolution presses in the world.

George Newsum and Co., Ltd., 211-213, Hunslet-road, Leeds.—This old-established firm are makers of lithographic machines, bronzing machines, hand and steam litho presses, sheet varnishing and gumming machines. Being incorporated with Messrs. Geo. Mann and Co., Ltd., they have the full advantage of the use of all the very latest machine tools and appliances which have recently been installed.

The Northern Press and Engineering Co., Ltd., South Shields; and 18 and 19, Whitefriars-street, London, E.C.—This is an entirely British firm having extensive, well organised works, equipped with the most modern labour-saving machinery, and are in a position second to none for the manufacture of printing machinery expeditiously and economically. They are makers of all kinds of high-class fast rotary machines working from one up to eight rolls of paper, either single or double width; special magazine and novelette machines; fine art all-size presses which will print sheets 60 by 40 inches down to 30 by 20 inches, and deliver them open or folded in any manner desired; the "Norpress" Flat-Bed Web Machine for printing from type forms, producing up to twelve pages at one operation, delivering the product folded and counted. Their "Multiplate" Automatic Casting, Boring, and Trimming Machine will produce finished stereo-plates at a speed of five plates in two minutes. All kinds of improved machines requisite in the stereo foundry are supplied. The finest half-tone illustrations can be produced on their machines, and they make a speciality of designing and constructing machinery to suit customers' requirements, combining with simplicity, efficiency and accessibility. A description of their various machines appeared in our issue of June 30th, 1912.

John Ratcliff and Sons, Junction Foundry, Upper Wortley, Leeds.—Makers of the "Reliable" litho machine. From the very beginning of this house the partners made solidity a feature of their machine, knowing from experience the value of apparatus capable of bearing excessively heavy strains in certain classes of colour work. With solidity they have added high speed to their machines, which are constructed with an automatic damping apparatus and flyers. The above machine has been used for embossing in oleographic work, which is ample testimony to its strength. The latest addition to the firm's lithographic presses is the "Reliable" Offset Flat-Bed Litho Machine, which has been put on the market to enable work of the highest class to be produced, either in black or colours, by the new rubber offset process, the price being low enough to place it within the reach of almost every lithographer. This machine may be used for working from either stones or metal plates. The varnishing machines, and litho and copper-plate presses turned out by the firm are well known in the trade, as are also their bronzers. They also construct collotype machines. In addition they make a strong colour grinding mill, a colour mixer, and also a litho stone grinder built upon novel principles.

A. Sauvee and Co., Ltd., 60, Park-street, Southwark, London, E.C.—Newspaper, rotary, perfecting and other printing machines are handled by this firm, whose name is well known in the trade. There is practically no requirement of the printer in the way of machinery that they cannot supply. Among their latest introductions is the "Elby" High-Speed Perfecting machine, an all-size reel or hand-feed with a guaranteed capacity of 2,000 per hour, thus giving double the production of a single cylinder machine.

J. G. Schelter and Giesecke, Leipzig, are the makers of the "Phœnix" platen press, a powerful machine that is made in several sizes, and the heavier grades of which are specially constructed for heavy process block printing, letterpress embossing, and gold blocking; the platen can be heated by either gas, steam, or electricity. These machines are also adapted for creasing and scoring cardboard boxes, for which purpose special cutters, creasers and scorers can be supplied. The British agents are Messrs. Wesselhoeft and Zimmermann, of London, Nottingham, and Glasgow. Messrs. Middows Brothers, 73, Clarence-street, Sydney, are the sole agents for Australasia and New Zealand, and Messrs. John Dickinson and Co., Ltd., for Cape Town, Johannesburg, and Durban. The firm's two-revolution and single-revolution machines are handled in London by Messrs. John Foord and Co., 39, Victoria-street, Westminster, S.W.

Soldan and Co., Ltd., 8, Baldwin's-gardens, London, E.C.—Rapidly increasing business has made it compulsory for this firm to remove to much larger premises. Always anticipating the wants of the printer, they have now become recognised as pioneers in new type faces, ornaments and borders, the latest type conceptions being the Wren series (light, bold and italic), Ensign series (light, bold and italic), and the Oxford series. A new department has recently been added, as Messrs. Albert and Co., Ltd., Frankenthal, the well-known makers of printing machinery having appointed the firm their sole agents in the United Kingdom, and in the show-rooms various patterns of Albert machines are at work. Albert and Co., Ltd., are well known amongst newspaper and periodical printers, their fixed and all-size rotaries have achieved a world-wide reputation. They also build an Offset machine, which is a model of engineering skill. The latest development in the printing world, *i.e.*, Photogravure, has been specially catered for, a flat-bed machine having been demonstrated in Messrs. Soldan and Co.'s show-room with great success. They are now demonstrating a sheet-fed Rotary Photogravure machine, and this will be followed by a reel-fed Rotary Photogravure machine. Aspiring firms and those who wish to advance in the world of print will do well to note the forward movement by this firm. The Typograph Composing machine has now firmly established itself in favour with the printer and is recognised as part of the equipment of the composing-room. A world-wide reputation has been achieved by Soldan's Lightning Press, and the Conqueror Platen machine is in great demand, as also is the National Platen. "Anticipation" is the key-word of the firm, and in their hands the interests of the printer are well looked after.

Taylor, Garnett, Evans and Co., Ltd., Reddish, near Stockport, are makers of the well-known Mark Smith Vacuum Bronzing Machines, of which a new form has recently been introduced to meet the requirements of the printer doing small bronzing work, and to enable him to comply with the new Factory Act regulations for this class of work. The new machine is also on the vacuum principle, and possesses many advantages. It is not possible for the operator's hand to get caught in the dusting rollers, no dust whatever can escape from the machine, and rough papers are easily cleaned by the special rollers. The price of this Vacuum Table Bronzing Machine is only £45.

Fredk. Ullmer, Ltd., Standard Works, Cross-street, Farringdon-road, London, E.C.—This firm is one of the oldest and best known makers of machinery for printers and bookbinders in the trade, doing a large home and export business. Among their special productions are the "Standard" cylinder and platen printing machines, cutting machines, perforators, paging machines, etc. They are also makers of most of the best quality general material used in printing and bookbinding offices. They publish periodically their "Standard Circular," which contains particulars of a large number of their specialities, and a copy of this "Circular" will be posted free to printers and bookbinders in any part of the world on receipt of business card. Their manufacturing departments are well equipped with modern plant for turning out reliable appliances quickly and well.

Waite and Saville, Ltd., Falcon Works, Otley, Yorks, make a number of patented machines for printers and stationers. Their "Falcon" Safety Platen, with gripper feed and self-delivery, has from two to three times the output of an ordinary platen, and is in use all over the world. These presses are built in five sizes:—10 inches by 7 inches, foolscap folio, crown folio, demy folio, and royal folio, and in two types—the Standard Model with plate inking, and the Art Model with cylindrical inking and numerous refinements which make it suitable for turning out the finest three-colour work at a high rate of speed. The 10 inches by 7 inches (Express Falcon) can be supplied with a detachable automatic envelope feeder, which enables it to run at 4,500 per hour. A further development is the Full Automatic Falcon, in which is embodied an efficient sheet feeder patented by the firm. Another very successful machine is the Waite Die and Plate Printing Press, of which over 600 have been sold, and for which the demand steadily increases. The makers claim that it has not only a much larger output than other machines, but is also far more economical in wiping paper. Messrs. Waite and Saville are also specialists in tag-making machinery, chief of which is the Waite Tag-making and Two-Colour Reel Printing Machines, which will automatically turn out 12,000 completed washer tags, printed in one or two colours, per hour. Other tag-making machines are the Record, the Despatch, and the Velox Washering Machine. The latter automatically glues, makes, and affixes a pair of washers on tags, envelopes, carrier bags, etc. The Waite Reel Platen, size 18 inches by 12 inches, has an output of 6,000 to 7,000, one colour, or 3,000

to 3,500 two-colour sheets per hour. Two of these machines recently supplied to a large firm are producing 60,000 two-colour soap labels per hour. The Peerless Combined Punching and Eyeletting Machine is another popular machine made by Waite and Saville. The last machine placed on the market by this enterprising firm is the "Waite" Rotary Offset Press, and its success has been most marked. Already over 40 are in use, and numerous repeat orders placed, while in one office in the Midlands seven of these presses are running side by side. The machine is of compact design, and embodies numerous patented features, which are to be found in no other offset press. The works are equipped with the most up-to-date labour-saving machine tools obtainable, and all machines are built on the interchangeable system.

PAPER MANUFACTURERS, WHOLESALE STATIONERS, ETC.

Becker and Co., Ltd., 64, Cannon-street, London, E.C., supply Austrian, Canadian, Finnish, and Swedish leatherboards, wood pulp boards, and grey boards of a high quality and at moderate prices. The firm claims to be the largest importers of wood pulp in the United Kingdom and also quotes specially low prices for large quantities and contracts. Stocks are kept at London, Liverpool, Manchester, Hull, Preston, and other places, ready for immediate delivery.

Brindle and Son, Ltd., Samlesbury Paper Mills, Hoghton, near Preston, Lancs, are makers of Kraft papers, cotton samplings, cutlery ropes, pure rope browns and casings, parchment browns, bag browns, and other papers, which are supplied either on reels or in reams, and packed for export. Samples and prices will be supplied by the firm on application. An illustrated article on the Samlesbury Mills appeared in our issue of September 26th, 1912.

Robert K. Burt, 19-21, Farringdon-street, London, E.C., is a papermakers' agent who stocks and samples "news" in reams and reels, printings, super-calendered, litho, writings, art, imitation art, blottings, browns, tissues, and other papers of excellent quality.

G. and T. Carlyle, Ltd., 116, Duke-street, Liverpool. — This firm holds an honoured pioneer position as manufacturers of manifold, tracing, carbonic, and other papers for duplicating purposes, both bound in books and in single sheets. The manifold papers are of remarkably good quality and not to be excelled by any other English makes. "T.G.M." and "S.G.M." are well known to all business men who use manifolding apparatus as the distinguishing trade marks of two of the best makes of manifold papers now on the market. Other special lines are the tracing papers, supplied in both thick and thin qualities. In carbonic papers again, this house does a very large trade, and fresh lines are constantly being introduced. One of the last is the blue-black paper, which gives a result almost exactly like that produced by ordinary ink; other stock tints are mauve, black, blue, etc. The "Oiled Royals," too (the oil sheets used in the copying press), made by Messrs. Carlyle are as good as any we have seen, and we have tested them in the only practical way, *i.e.*, by using them ourselves. Some excellent hand-made qualities are now being supplied. Messrs. Carlyle also issue a most useful series of manifold books for every conceivable commercial purpose. We are informed, and can well believe, that all these books are popular and going lines, and sell well in Australia, New Zealand, Canada, etc. The same may be said of the papers, particularly the carbons and manifolds, they being specially made to keep good and unaffected in hot climates. The firm allows exceptionally good terms.

The Culter Mills Paper Co., Ltd., Aberdeen.— This mill is known not only for the dependable qualities of its fine printings, envelope papers, writing papers, arts, and chromos, but for its capacity in turning out other high-grade specialities for papeteries, and original makes in lined, fancy, and ribbed papers. Their imitation hand-made printings, with rough deckle edges also have a large sale. The regularity of their makes of printings highly commends them for book work.

John Dickinson and Co., Ltd., 65, Old Bailey, London. Mills: Croxley, Apsley, Nash, and Home Park, Hertfordshire.— One of the most eminent firms of papermakers and wholesale and export stationers in the United Kingdom. The principal of the many specialties of this very old-established firm are superfine, fine, and every description of printing paper; map and chart papers (in which they have a new and cheaper quality) of exceptional strength; hand-made printings, glazed and rough, for *editions de luxe*, etc.; tinted writings, and coloured papers for pamphlet covers; brown and packing papers of every description; tub and engine sized writings; blotting and cartridges; envelopes; chromo enamel papers, surface and enamel papers, boxed stationery, cards and cardboards, white and tinted. Messrs. John Dickinson and Co.'s "Art Paper" meets the most exacting requirements of the art printer, and is stocked in several grades. An important point with this firm is their dependability in the preservation or matching of shades of colour, so great a factor where goodwork is done. A speciality made is an all-rag durable, three-colour illustration paper, which has been adopted by the leading colour printers of the kingdom. This paper is aptly entitled "Durochrome," quires of which are available for testing upon requisition. The paper upon which this issue is printed was manufactured by this firm.

Jacobsen, Welch and Co., Ltd., Newton Mill, Hyde, claim to be the largest makers of artistically packed stationery in the United Kingdom. They have an enormous selection of designs in boxed stationery in all grades, and make a feature of writing pads, envelopes, and note papers in all the popular qualities. The firm's London showroom is at Newton House, Paternoster-square, E.C.

Samuel Jones and Co., 56, Carter-lane, London, E.C., are manufacturers of reliable gummed papers, etc., a feature being that they can make them quite non-curling, a very important quality where printing has to be done, as every printer who has handled gummed paper knows. A wide range of colours, is offered of which prices and particulars may be had on application. The firm's factory is at Camberwell.

J. and J. Makin, Ltd., 20, Mount-street, Manchester.—A large and varied stock is kept by this firm comprising all classes of paper that are used by printers, stationers, pattern card-makers, box-makers, etc. At the Manchester premises a varied stock is kept of all classes of M.F. printing paper, super-calendered printing paper, glazed and unglazed coloured printing, white art papers, tinted and duplex art papers, tin foils, plain and embossed, goldfoils flint papers, cover papers, cartridge papers, in reels and sheets, tub-sized and engine-sized writing papers, ledger papers, copying papers, manifolds, tissues, enamel and surface papers, white and coloured pasteboards, bright and dull enamel boards, coloured enamel boards, coated boards for post cards, caps, skips, and other packing papers, strawboards, leatherboards, wood pulp boards, silk boards, folding boards, cloth-lined boards, all kinds of boards and papers for the use of box-makers, etc, etc. The firm claims to carry the largest stock in Manchester. The works are at Wallhead Mills, Rochdale, and Disley Mills, Disley. Export orders are carefully and promptly attended to.

Millington and Sons, Ltd., London.— One of the most respected names in the wholesale and manufacturing stationery trade of today, doing business in every quarter of the globe, and possessing first-rate connections, home and Colonial.

Richard Naumann, Umdruckpapierfabrik, Schumannstrasse 45, Dresden—A., Germany, manufactures transfer papers, and is prepared to quote prices and contract for supplies in quantity.

Parsons and Whittemore, Inc., 174, Fulton-street, New York, U.S.A., are exporters of papers and allied lines, including the Keith papers and papeteries, photo-mount, box boards, bristols, etc. The firm also act as agents for the American "Leader" envelope machine, the "Rosback" rotary perforating and punching machines, the "Eclipse" newspaper and job folding machines, and all varieties of steel filing cabinets, office furniture, addressing machines, etc.

A. M. Peebles and Son, Ltd., Queen Victoria-street, and 3, West Harding-street, London, E.C. Mills: Rishton and Whiteash; also Art and Chromo Works, Rishton, Lancashire. — This well-known and old-established papermaking firm has long held a leading position for the production of papers for high-class periodicals, and at present probably holds the largest contracts for English illustrated journals and magazines. A feature of their production is the special photogravure papers for intaglio printing, which, in view of the great impetus to this class of illustration by the introduction of new machinery, should have a good demand. The large and varied output of three mills, comprises super-calendered and machine-finished printings, imitation arts, and litho and varnishing papers, white and tinted writings, cartridge and featherweight book papers, pulp boards, typewriting and duplicating papers, as well as all grades of art and chromo papers and boards and tinfoil. Large stocks are carried, and they are prepared to make special orders on short notice. They will appreciate enquiries from Colonial and Continental printers, and will

put firms on their very best terms. Messrs. Peebles are represented in New Zealand, France, Holland, South American, and Japan. An illustrated notice of the firm's business appears in this issue.

R. Robinson and Co., Ltd., Newcastle.—This is a very old-established firm of wholesale stationers and paper dealers, letterpress and litho printers, paper bag makers, etc. Practically every description of work connected with printing, stationery and bookbinding is undertaken by them. They also carry on cardboard box-making in all its branches, and have a large photographic studio and process engraving department.

Strong, Hanbury and Co., Ltd., 196-7, Upper Thames-street, E.C., are considerable exporters of news, printings, coloured papers, browns, cases, tissues, writings, and blottings. They control immense stocks, and are in complete touch with all home and continental mills. To facilitate quick trading they stock very largely at their London warehouse, averaging 2,000 tons of various makes. This firm are contractors to H.M. Stationery Office, the London County Council, various railways, etc., etc. Their extensive "Colindia" series of papers and cardboards should be specially noted, as comprising an unsurpassed range of varieties of quality and price. Samples are sent free on application.

PRINTERS' and STATIONERS' APPLIANCES, &c.

The Aerograph Co., Ltd., 43, Holborn-viaduct, London, E.C., manufacture and supply the "Aerograph" spraying apparatus, an appliance that has made for itself a reputation in the trade for the excellent and artistic effects that may be produced by its use. For colouring embossed work, stencilling, shading, working-up drawings and photographs it is an immense labour saver. Twenty different types and sizes are made to meet varying requirements. A new type of apparatus, by means of which very rapid stencil work may be done, has recently been introduced.

Algraphy, Ltd., Peckham, London, S.E. — This house supplies all kinds of lithographers' requirements, including aluminium and zinc plates, offset blankets and graining materials. The correct thickness of blankets and plates are held in stock for makes of rotary and flat-bed offsets, direct and tin-printing machines, and flat-bed litho machines.

The Original Bates Manufacturing Co., U.S.A. European Agent: Samuel Insull, Son., 34, Queen-street, Cheapside, London, E.C. — The Bates Manufacturing Co. are the original makers of special automatic hand-numbering line-dating and other machines. The special feature of their hand-numbering machine is that every figure disc changes automatically in its consecutive order, from 1 to the full numerical capacity of the machine—a feature of the greatest importance It also duplicates and repeats. This is easily effected by the mere moving of the small handle of the pointer in front of the dial plate. It is almost perfectly noiseless in its operation. There are four styles of figures, and the mechanism is so arranged that machines can be supplied with 3, 4, 5, 6, 7, and 8 wheels, and to operate "Consecutive," "Duplicate," or "Repeat," "Consecutive," "Triplicate," or "Repeat," "Consecutive," "Quadruplicate" or "Repeat," "Consecutive," "Quintuplicate" or "Repeat," "Consecutive," "Sextuplicate" or "Repeat." These hand-numbering machines are also made with letter wheels to precede or follow the figure wheels. The original "Bates" line-dating machine is similar in appearance to the numbering machine, and is fitted to a gauge to enable the user to place the date exactly upon the line. These machines are beautifully made and wonderfully accurate. The figures and all wearing parts are made of steel, and are interchangeable to the smallest screw. The "Wizard" is a high-grade automatic hand-numbering machine, which is constructed in a substantial manner with a view to supplying the demand for a lower

priced hand-numbering machine where the work is not of such volume or nature as to require a stronger-built mechanism. The dial setting movement in front of the machine permits instant adjustment of three actions, viz., consecutive, duplicate and repeat. Several new machines for dating and impressing useful words on accounts, bills, and letters; also yardage measuring machines for textiles, etc., are handled.

George Bender, 3, New Union-street, Moorfields, London, E.C., specialises in bronze powders in all grades from the cheapest to the best. Among his leading lines are: "Bendalin," a bronze for embossing without heat, and for bronzing rough art paper and cover papers. It does not work into the pores, and requires only once dusting; and non-flying bronze, for hand bronzing and dusting, applicable to new bronze regulations.

David Carlaw and Son, 11, Finnieston-street, Glasgow, are makers of the "Leader" improved adjustable envelope folding and gumming machines, which may be arranged for three or more sizes and shapes of envelopes on the one machine. A die stamping attachment can also be provided. These machines will work thick or thin paper, and have a speed of 100 per minute, gummed, counted, and ready for banding; they can be operated by one girl. The firm have a number of other machines and appliances, including check book printing and numbering machines, of which they will send particulars on application.

W. J. Connell and Co., Ltd., 5, Maclean's-buildings, New-street-square, London, E.C.—Printers, machinery and materials are dealt in by this firm, who are in a position to supply anything almost wanted by the letterpress or lithographic printer, bookbinders or manufacturing stationer in the way of machines, gas engines, folders, perforators, stitchers, etc. A full stock of brass rule, furniture, reglet, and other materials is kept and orders can be supplied promptly. The firm make a special feature of machinery repairs and removals, and a staff of engineers and fitters is always available. A fully illustrated catalogue is issued giving details of machinery and materials.

J. S. Cook and Son, 17-19, Finsbury-street, London, E.C., are manufacturers of and dealers in printing materials of all kinds, and are wholesale and retail printers' furnishers.

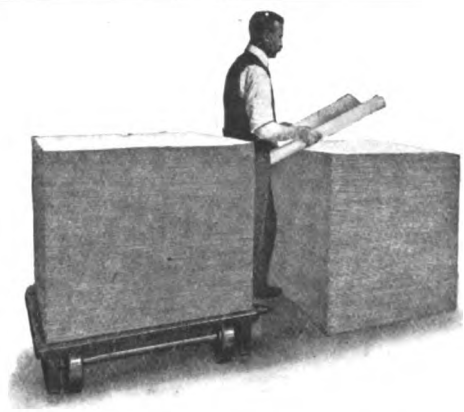
Day and Collins, King-street, Leicester.—This firm, with a well-known reputation for their specialities, have now removed from Fann-street, London, to Leicester. They make and supply all kinds of wood letter, including rotary type, borders for posters, show-cards, etc., and wood blocks, figures for almanacs and similar utilities for printers' use; all cut on hard-faced wood and machine engraved.

Robt. D. Delittle, Promenade-road, York, is a maker of a superior class of wood letter for printers that has met with much approval from the trade. He now keeps a stock of about 2,000 founts, and is in a position to execute home and Colonial orders promptly.

Oscar Friedheim, Ltd., 7, Water-lane, Ludgate-hill, London, E.C., manufactures a wide range of machines for the bookbinder, printer, box-maker, and other kindred trades, among which may be quoted rotary cutting and scoring machinery, gold blocking presses, die-stamping machines, folding machines, and machines for envelope making in a great variety of styles. The firm is noted for the high quality of the machinery and appliances that are handled.

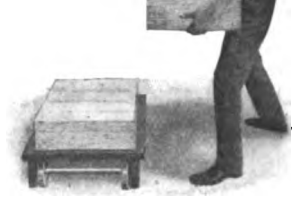
K. Gebler, Leipzig-Plagwitz, 35.—The speciality of this firm, since 1886, has been the construction of wire stitching machines of every kind, punching and eyeletting machines, folding box machines, cardboard and slitting machines. They also supply stitching wire, staples, metal strips and eyelets, and give the best discounts to trade houses.

A. Gutberlet and Co., Leipzig-Molkau, are manufacturers of folding machines to suit the requirements of printers, manufacturing stationers and bookbinders. They have achieved a high reputation for quality and usefulness, and are at work in all the civilised countries of the world to the number of over 1,000 machines.



John Haddon and Co., Salisbury-square, Fleet-street, E.C.—This firm is known throughout the trade for the many specialities offered to printers in machinery and general supplies of all kinds. They offer an excellent range of platen machines in no less than 32 different styles and sizes, including the "Caxton," the "Art Caxton," the Haddon "Safety Platen," the Improved "Gordon," the "Victoria" and the "Swift." The "Kidder" platen machines that print from the reel, and in one or more colours, are also stocked in twelve styles. They also handle the "Babcock Standard" cylinder press, and have a good range of blocking presses, and a clever Tape Printing Machine that prints tapes from 10 to 24 inches long, with an output of 3,000 tapes per hour. Printers' Woodwork is made a feature, and cases, frames, dustproof cabinets, racks, furniture holders of the most up-to-date character are manufactured at the firm's works at Market Harboro,' where also there is an extensive type foundry. Illustrated catalogues giving exhaustive details of the firm's manufactures are supplied to printers on application.

Hewitt Bros., Field-street, King's Cross, London, W.C.—This is a firm of stereotypers' and printers' engineers, who specialize in printers' chases. They are also brass rule makers. The machines they handle include a stereotyper's single saw bench and a new type of toggle press, a flat radial arm routing machine, and a combination finishing bench, circular saw, edge planer, beveller, flat router, drill and jig saw, to which a drill post can be added if desired.



O. Hoppe and Co. Nachf., Leipzig 16, Germany.—This firm handles a number of useful machines and appliances for various uses in the printing and allied trades. These include machines for the making of different classes of labels, for sewing, perforating, eyeletting, punching, a stapling maching for special large outputs, and a machine for the manufacture of loose-leaf books, calendar boards, card-index system requisites, and sample cards.

Hunters Limited, 16-18, St. Bride-street, London, E.C.—This firm has extensive show-rooms which are always equipped with a very wide range of machinery for the production of rail and tram tickets of all kinds, also machines for slitting and re-winding paper with the greatest precision. The firm represents Messrs. Klimsch and Co., of Frankfurt, whose products are well known all over the world; Messrs. Kœnig and Bauer, of Wurzburg, manufacturers of fine art and newspaper rotary presses; Hogenforst, of Leipzig, a manufacturer of specialities for photo-engravers, electrotypers, and stereotypers. Probably their greatest feature at the present time is the supply of everything for photo-engraving. One of the most notable pieces of apparatus they construct is the "Arc Gear" camera, the reputation of which is becoming world-wide. They also make a great speciality of stereotyping apparatus and materials, especially matrix papers, paste powder, and facing paste, and are the British agents for the Miller Incline Truck Company.

Samuel Insull, Sen., 34, Queen-street, Cheapside, London, E.C.—Here can be obtained hand-perforating stamps of every description for banks, trust companies, corporations, and railway companies. The "Chicago Check" Perforator is a compact, light, durable, rapid and effective machine, handsomely finished, and with the most perfect automatic paper-feeding mechanism. It is operated with one hand, and perforates any part of the cheque. Over 30,000 of these machines are in use in

the United States, Canada, and in all parts of Europe; it is recognised as the standard device of its kind, and is very cheap. Mr. Insull can also supply perforating presses for cancelling cheques in large quantities (40 or 50 at one stroke), other perforating stamps for dating and perforating useful words on bills, invoices, letters, etc. Letters only on postage stamps. Yardage measuring machines for textiles, etc., are also supplied.

Ferd Emil Jagenberg, Ltd., 157, Farringdon-road, London, E.C., have an extensive selection of machinery for the printing, paper and allied trades, including full ranges of machines for square and round cardboard box-making; folding, sliding and cigarette box-making; bookbinding and account book manufacture; and a wide range of appliances for printers, stationers, paper bag makers, and paper manufacturers. The firm specialises in the latest and most up-to-date machinery and can supply almost any want of the allied trades.

John Jardine, Deering-street, Nottingham.—This is an old-established engineering firm, well known in the lace trade. They have put upon the market several platen printing machines of high quality, and possessed of many improvements, especially in the inking apparatus, the aim being to produce a first-class article at a moderate price for cash. Paper-cutting machines are also made by the firm, as well as shafting, pulleys, belting, hangers, etc.

A. Joseph, Earl-street, Southwark, London, S.E., supplies rags of all kinds for printers' use, and holds large stocks ready for delivery. He also contracts for the purchase of all kinds of metal scrap.

Emil Kahle, Machine Factory, Leipzig-Paunsdorf, Germany.—At these works there is manufactured a number of machines for the allied trades, including platen presses, perfecting machines, and stereotyping plant of every description. As illustrating the popularity of the machines we may note that the annual yearly output of platens is over 700, perforating machines 800, and stereotyping appliances 1,800.

Kampe and Co., 2, Sandland-street, Red Lion-street, High Holborn, London, W.C., have removed from their old premises at 76, High Holborn (owing to rebuilding operations), and have an extensive show of machinery on view in their new place. They are specialists in and supply all kinds of machinery and presses for printers, bookbinders, box-makers, gold blockers, papermakers, manufacturing stationers, etc., and are sole agents for the well-known firm of Karl Krause, Leipzig, and other first-class Continental houses. The leading lines include gold blocking, embossing and inking presses, index cutting machine for power, combined rotary cutting and scoring machines, calenders, guillotines, dead square, three and four-sided cutting machines, millboard and cardboard cutters, backing and back-making machines, copperplate presses, complete plant for the production of every style of box, wire and thread sewing and stitching machines, etc.

Joseph Kaye and Sons, Ltd., Lock Works, Leeds. London Offices: 93, High Holborn, W.C.—This well-known firm holds a high position in the lock and door-furnishing trade. Patent locks, bolts, latches and handles for every kind of door, desk, or drawer, is included in their catalogue, while railway door fittings are made a speciality. The firm's "Patent Steel Seamless Oil-can," which has also a seamless spout and a new patent thumb button, is in great favour wherever machinery is used. These oil cans have been supplied to the Navy, the War Department, Home Office, Indian State Railways, and other Government Departments. The firm recently secured a further order for 3,918 oil-cans and 6,963 seamless spouts for H.M. Dreadnoughts.

James Keith and Blackman Co., Ltd., 27, Farringdon-avenue, London, E.C.—The lighting of printing offices and other workshops by the Keith Light is carried out by this firm, which has perfected a system of high-pressure incandescent gas lighting that is most economical and effective, and is of a soft and restful character when compared with electric light. The system has been extensively adopted by many leading printers, publishers and others, and the firm will be glad to give particulars and suggestions for lighting to those interested.

Kendall and Sons, Norfolk Iron Works, Shoreditch, London, are well-known makers of all kinds of cutting knives for printers and manufacturing stationers, including guillotine cutters, fancy cutters, envelope cutters, deckle knives, etc. They now manufacture the "Gough" Automatic Colour Stamping Presses, the No. 2 size of which takes a die 5 inches by 3 inches. The firm also makes envelope folding machines, punching and cutting machines, and other appliances. They have a City showroom at 17, Whitefriars-street, E.C., of which an illustrated notice appeared in our issue of June 28th last.

Karl Krause, Leipzig, is a name that is known to users of printing, bookbinding, and kindred machinery all over the world. 6,000 machines are turned out annually. Paper cutters are a speciality, and some exceptionally large and strong embossing, and embossing and gilding machines are manufactured. The 110,000th machine made at these works was lately completed. The firm employs over 1,250 workmen and 200 clerks. London Agents: Kampe and Co., 2, Sandland-street, Red Lion-street, High Holborn, W.C.

August Kraushaar, Hanau a/M., Germany, supplies a cylinder dust bellows for use by printers, typefounders, electrical engineers, and others. These bellows have no metal mountings, the nozzle as well as the body being of wood. They are very light, and are most useful for blowing type cases, etc. In London they may be obtained from Fredk. Ullmer, Ltd., Cross-street, Farringdon-road, E.C., and other houses.

C. L. Lasch and Co., Machine Works, Leipzig 86.—This firm, founded in 1882, specialise in wire stitchers and eyeletting machines. Catalogues may be obtained from Lotz, Abbott and Co., Ltd., 21, Ropemaker-street, Finsbury-pavement, London, E.C.

P. Lawrence, 103, Farringdon-road, London, E.C., for many years connected with the P. Lawrence Printing Machinery Co., Ltd., of 57, Shoe-lane, E.C., is now manufacturing cardboard cutting, creasing, and scoring rules, brass rules, and other specialities for box-makers and printers.

H. B. Legge and Co., 81, Cannon-street, London, E.C., specialise in the Ashcroft Paper Testers, useful and accurate appliances for testing the strength of paper, which are made in two styles, one to test to a bursting strain of 140 lbs. per square inch, the other to a strain of 20 lbs. Besides these the firm handles an instrument for testing the thickness of paper up to 110/1,000ths of an inch.

William J. Light, 127, Fenchurch-street, London, E.C., makes a special feature of the supply of the "Ideal" Dry Flong for stereotypers, Claus Felt Substitute, and the "Everwear" Press Rubbers, materials that ensure the best results by their use. Mr. Light will be pleased to supply full particulars to those interested, and doubtless to their great advantage in matters of time and money saving.

F. Lincke and Co., 28, Paradise-street, Virginia Buildings, Liverpool, manufacturers of "Flexityp" dry flongs for stereotypers, that save gas, time and money, and are claimed to be absolutely reliable.

Linotype and Machinery Limited, 189, Fleet-street, London, E.C.—Makers of the Linotype typesetting and casting machine, that is in use in all the largest newspaper and jobbing offices in this country, our Colonies and America, and in a very large number of Continental offices. It is not alone in the large offices that the Linotype is used—all over the kingdom it is found, and is as serviceable to the printer who can only employ one machine as to the firm that can instal a whole battery, whether for news, book, or jobbing. Many improvements have recently been made, and quite a choice of faces may be set on the same machine. The New No. 4 Model gives a range of 15 alphabets that can be set without the operator leaving his seat. The company supplies a perfect quality of metal for use with their machines, that does not clog, and gives clear, sharp casts from the matrices. The company's extensive works at Broadheath are fitted up in a magnificent manner with the finest machine tools.

The London Paste Co., Arlington-street Works, New North-road, London, N.—This firm is noted for a capital make of prepared paste for printers and stationers, that keeps well and has good adherent qualities.

Lovell's Bag and Packet Machinery, Ltd., 59/60, Gracechurch-street, London, E.C.—As the title of the firm implies, bag-making machinery is the special manufacture carried on, and a new Bag Machine has just been introduced that makes square-bottom bags, lined and unlined, for tea, flour, sugar, salt, cash-bags, etc.; and folds in either of these methods. On this machine several bags are in process of making at the same time, with the result that easy movements and plenty of pressure are combined with high output.

Marryat and Place, 28, Hatton-garden, London, E.C.—This firm manufacture the celebrated "Gough" Die Stamping Presses, as used by manufacturing stationers, envelope makers and others. They are successors to Messrs. Joseph Richmond and Co., Ltd., whose reputation for these machines was world-wide. The presses are made in a variety of styles and sizes, and are most handy and useful appliances.

Drahtheftmaschinen - Fabrik Wilhelm Mallien, Leipzig-Li. 74, Germany, is a firm which specialises in cardboard box, book or pamphlet sewing machines, and makes these machines in all sizes and for all purposes. Accurate work is a feature.

William Mayall and Co., St. Stephen-street, Salford, Manchester.—A wide range of ink powders for ruling, writing, etc.; liquid inks and gums; colours, stains, bookbinders' glues of all kinds are manufactured by this firm. Mayall's ruling ink powders are specially prepared for paper ruling, and are extensively used both at home and abroad. Enquiries are invited for samples and prices.

Edward L. Megill, 60, Duane-street, New York, U.S.A.—Mr. Megill is well known as the clever inventor of a number of useful appliances for the printer in the form of steel gauge, or laying-on pins and other fitments to aid in the correct register of the finest work. They are made in many styles and are most efficient

in their use. His signature and trade mark stand for perfection in this particular line of printers' requisites.

The J. L. Morrison Co., London, 65-69, Mountpleasant, London, W.C., handle the well-known "Perfection Wire Stitching Machines," which are known the world over as reliable appliances for printer or bookbinder. Catalogues of the many styles stocked are sent on request.

H. Nedden and Co., 11-12, Finsbury-square, London, E.C., handle rotary printing machines of all descriptions and for all classes of work. and rotary ticket printing machines for tickets in reels or blocks, and slitting and rewinding machines for paper, etc. They also supply paper and cardboard scales, paper testers and micrometers.

William Notting, Bowling Green-lane, Farringdon-road, E.C.—This firm are the most prominent makers of Albion, Columbian and Alexandra presses. They also make the numerous smaller classes of appliances necessary for the printing office—punching and cutting machines, perforators, paging machines, and galley presses. A special feature of the business is the manufacture of machine-made brass rule in all sizes and patterns; the illustrated specimen books indicate the economy and variety of their combinations in rulework for job printing.

Preusse and Co., Ltd., Leipzig, Germany, are a large and old-established firm of machine manufacturers, their leading lines being thread-sewing and wire stitching machines for books, pamphlets, blocks and cardboard boxes; paper folding machines for printers and bookbinders, some combined with thread-stitching apparatus; and machines for manufacturing cardboard boxes and folding boxes. Also cardboard shears and bending machines, scoring, fluting, cutting and punching machines.

Joseph Renger, Machine Works, Dusseldorf, Germany, offer the trade a gumming, varnishing or pasting machine, also cardboard cutters, slitting and rewinding machines, cross cutters, bookbinding machines, etc.

Mr. C. Ritchie, 107, Clifton-street, Finsbury, London, E.C.—Many and varied are the machines handled by Mr. Ritchie, among them being included rotary printing machines for special work, reel-fed and sheet-fed rotaries, slitting and re-winding machines of every description, automatic and non-automatic tube-winding machinery for making tubes up to sixty inches in length, gumming and glueing machines, and other appliances.

Richmond and Co., Sun Ironworks, Lawton-road, Bow, London, E., manufacture "Gough" die-stamping presses, machines that are well and favourably known in the trade.

L. Schmautz, 76, Rue de Seine, Paris, is noted for his rollers and roller skins for either hand or power lithographic presses. Mr. Schmautz is well known for his manufactures, and makes special rollers for zincography, photo-type, collotype, copperplate, and photogravure presses. An English price list will be sent free on application.

John Shaw and Sons, Honley, Huddersfield.—This well-known firm keeps on expanding and increasing its yearly output of Ruling Machines, in which they specialise. Their world-renowned "Striker" machines have a greater sale than ever, but this is to be expected when we know that Messrs. Shaw and Sons are continually introducing improvements that are calculated to save both time and labour. The firm has now supplied over 3,000 ruling machines, which have gone all over the world, and especially to Canada, where they seem to have got the better of the American makers. Their machines are also shipped to Australia, New Zealand, India, South Africa, and other Colonies, and they are installed in the Government Printing Offices in South Africa, New Zealand, India, and Cyprus. In Great Britain one firm alone has been supplied with considerably over 100 machines. The firm has also an excellent demand for their new "Imperial" Iron Disc Ruling Machine, with automatic feeder attached, made entirely of metal, with the exception of the lay-boys, which delivers the sheets perfectly true and accurate. Some of the largest firms in the kingdom have been supplied with the "Imperial," which the makers claim to be superior to either the French or German built machines. Messrs. Shaw and Sons are complete ruler's outfitters, and their large works at Honley are fully equipped for making any class or style of paper ruler. A descriptive catalogue will be sent on application.

T. W. and C. B. Sheridan Co., 63-69, Mount Pleasant, London, W.C.—This firm handle a large assortment of bookbinding and printing machines. These include perfect binders, wrappering machines, case makers, paper cutters, embossing presses, bundling presses, gathering machines, die cutting presses, casing-in machines, sewing machines, Dexter folding machines and automatic feeders, and in fact all styles of bookbinding, printing and lithographic machines.

Smyth-Horne, Ltd., 19, Cursitor-street, Chancery-lane, London, E.C.—This is a firm that has handsome show-rooms at the above address, where they have on view a considerable number of machines and appliances for the use of the printer, bookbinder, and manufacturing stationer. The firm has been appointed sole European and Colonial agents for the Smyth Manufacturing Co., of Hartford, Connecticut, U.S.A., whose book-sewing, case-making, cloth-cutting, casing-in, glueing, and pasting machines, will be constantly on exhibition for the inspection of those interested. A new book-sewer (No. 8) has just been added to the range of their machines. The Smyth machines are well known, and their merits are thoroughly appreciated, and users and prospective purchasers may be glad to know that Messrs. Smyth-Horne, Ltd., now stock, in London, duplicate parts of all machines, so that, in the event of breakages occurring, repairs may be executed at once, and so obviate the standing idle of machines and their operators. Thread, tape, glue and other materials are also stocked.

Hugh Stevenson and Sons, Ltd., Victoria Mills, Pollard-street, Manchester, are makers of all kinds of cardboard boxes and cardboard box-making machinery. They hold many patents for metal-edging, and also for many box-making machines and appliances. They have just introduced some special machines for covering at one operation both lids and boxes. The firm are agents for the Actien-Gesellschaft für Cartonnagen Industrie, Dresden.

T. C. Thompson and Son, Oxford Works, Great Bridgewater-street, Manchester.—This firm has been engaged in the manufacture of perforating and paging machines for over forty years. Their specialities include the Patent "Excelsior" power perforator with open ends and sliding and lifting sections, unique features which enable work to be done at one operation, which otherwise would require to be done at two. Double-headed paging machines of greatly improved design, simple and easy to work; the figure wheels move apart any required distance and also out of ine, the inking is effected by revolving drums and a distributing roller works up the ink. Treadle perforating machines are made in all sizes up to 32 inches, and are fitted with lifting sections, and 10-inch hand lever perforators are made with open ends. Messrs. Thompson and Son being the original inventors of this open end machine. The "Gem" patent platen press is made in two sizes, 11 by 7 and 8 by 5. It works at the fastest speed without noise, jerk, or vibration; this is accomplished by a patent double toggle action which slows the platen down as it approaches the impression and the feed, and gives a good dwell at both ends. The improved impression throw-off is most conveniently placed, and the largest sheets can be fed into these machines, as there is a clear course right through. The firm has also introduced a system of geared inkers for platen machines, and these are attached to the new "Triumph" platen which they have just placed on the market, together with a number of other improvements that enable them to do the best work at a high speed. For cylinder machines there is the "Sheet-Smoother," which ensures perfect register, and the "Self-Contained" geared inking apparatus with reciprocating inking apparatus for wharfedales. Guillotines are also manufactured by the firm in three sizes—24-inch, 26-inch and 32 inch- and are well built, strong, swift and silent running and easy to manipulate. Their "Rapid" Self-Feed Combined Punching and Eyeletting machine has been very ingeniously designed and its functions are performed perfectly. They are also manufacturers of numerous other machines suitable for the printing and allied trades.

Ludwig Trapp, Glashutte i. Sa., Germany, manufactures the "Chronotype" Time Stamp, an appliance that is most useful for recording the time taken on jobs, and is a valuable aid to printers who are adopting a cost system.

Vickery's Patents, Ltd., 10, Devonshire-grove, Old Kent-road, London, S.E., have a number of appliances for the printer, stationer, and papermaker, among them being their "Patent Transporter" by which one man can instantly and easily load a whole pile of paper, without touching by hand, wheel to any desired position, and unload, leaving the Transporter at liberty for other work. One of these Transporters is equal to a large number of trucks, and saves an enormous amount of time and labour, while not injuring in any way the paper handled.

The Wetter Numbering Machine Co., U.S.A. European Agent: Samuel Insull, Sen., 34, Queen-street, Cheapside, London, E.C.—The Wetter Co.'s typographic automatic numbering machines are well known, and are being used in all parts of the world. They have recently produced a new type-high "Wetter," and claim that it is the best and cheapest in the market. It can be easily operated on a cylinder or platen press. The prefix "No." can be removed and another character or blank slide inserted in its place without removing the machine from the press. This is certainly a positive advantage in a type-high machine. The side plates are knurled, the drop cypher is of new construction and cannot get low, each machine is equipped with a hold-down screw, so that any number can be printed a number of times; the plunger is lower than others, the wheels are made of hard steel, the faces of the figures are perfectly flat, and the figures are cut deep, ensuring a clear impression. All parts are interchangeable and made of the best material. The Plungerless "Betterwetter" is a successful plungerless machine that prints figures only. There is a special feature in its mechanism by which the changing of the figures brings into action bearers that automatically hold the printed sheet off the figures while they are changing. The "One-Inch Wide Wetter" machine is designed for numbering tickets (one inch wide and wider) in strips. It has six wheels with condensed gothic figures; five-wheel machines are also manufactured with title figures. The "Midget" Wetter is built like a watch, and is the smallest type-high machine in the world. It was designed to meet the demand for a small machine with figures large enough for ordinary commercial uses. The new features embodied in the "Midget" confirm this title.

A. C. Wells and Co., 105, Midland-road, St. Pancras, London.—Make a most useful appliance in the form of an oil filter, by the use of which machinery and other oils may be cleansed from impurities and used over and over again, thereby effecting a great saving to the consumer.

H. Williams and Co., Red Lion Works, Warner-street, Rosebery-avenue, London, E.C.—A firm of printers' engineers that offers a good line in their "Electroline Enamel Paste" for producing fine art stereos. A catalogue of machinery is issued that may be had on application.

TYPEFOUNDERS, Etc.

The Blackfriars Type Foundry, Ltd., Blackfriars-road, London, S.E.—This firm possesses the monopoly of the most up-to-date and rapid typecasting machines in existence, and by their use are enabled to turn out a high quality of letter at a price considerably under that of any of their competitors. They have an ex-

Digitized by Google

tensive range of faces in both body and display founts, and are prompt and accurate in getting out orders. An illustrated description of their works appeared in our issue of June 20th, 1907.

Fry's Metal Foundry, 25/30, Holland-street, Blackfriars, London, S.E.—Manufacturers of all kinds of metals for printers or typefounders' use, including stereotype (all grades), linotype, monotype, electro, typograph, etc. The firm has forty-nine years' experience in the manufacture of these metals, and their staff includes two expert metallurgists, whose knowledge and experience is always at the service of customers. They are regularly supplying the colonial markets and many of the leading printers throughout the United Kingdom. Their "Fryotype" brands of all these metals are made entirely from new tin, antimony and lead, and every pig that leaves the foundry bears the name of "Fry" and carries the fullest guarantee that it is possible to give, namely, that it is suitable in every way for its respective work. The firm also makes a specialty of reviving metal. Their plant is up-to-date, which makes for economy in production and sale.

John Haddon and Co., Caxton Type Foundry, Market Harboro', and Salisbury-square, London, E.C.—The extensive typefoundry of this firm is fitted with every modern appliance for the successful production of all classes of type, and the selection offered gives the printer an opportunity to choose faces for any job that he possibly can have, body founts are cast in all the usual sizes, and for the jobbing department excellently designed faces and borders are offered. All the types are cast on point bodies.

Hallett and Son (late **Hallett and Fry**), **202, Rotherhithe-street, London, S.E.**, are a firm of antimony refiners, established as far back as 1806. All printing metals, such as stereo (all grades), linotype, typograph, monotype and type metal, are provided to any specification.

E. J. Harrison, 523, Old Kent-road, London, S.E., is a maker and refiner of Lino., Mono., Typo., stereo and electro metals, and makes type metals to customers' sample or specification. From 30 to 40 tons of metal of all grades is stocked.

Holland and Co., Albert Works, Marlborough-road, Old Kent-road, London, S.E., manufacture all grades of metals for typefounders, and for the use of linotype, monotype, and other composing and casting machines, as well as for stereotypers and electrotypers. The firm has made a special study of customers' requirements and are prepared to supply metals with whatever qualifications may be desired, or to make them to customers' formulæ. The firm's business extends to South Africa, Chile, Copenhagen, Amsterdam, Brussels, and other places abroad.

T. G. and J. Jubb, Brandling-street, Jack-lane, Hunslet, Leeds.—This firm claims to be the largest manufacturers of metals in this country, and having now completed extensive alterations in their works are enabled to dispatch orders on the same day as receipt. They claim to be supplying at least 75 per cent. of the monotype users in Great Britain with their special metal, and have increased their customers who use lino and stereo metals, and typograph metal. The recent improvements enable them to do all the mixing with the least possible amount of expense, and they are therefore enabled to supply metal of the highest quality at the lowest possible price. Their printers' leads and clumps department is working full time, and although they do not claim to be the largest manufacturers in the world, they claim that their leads are harder, and equal to any printers' leads on the market. All printers' leads, clumps and furniture, are guaranteed to be true to standard, and the finishing of these is all that could be desired. They are regularly sending metal to all parts of the world, and have recently supplied metal for several Canadian newspapers. Any metal users who have not yet had Messrs. Jubb's booklet can have one by sending a post card. This is a very useful book and gives hints on how to keep the metal in good condition. Having supplied metal for over 50 years, the experience they have gained of the various requirements enables them to give a metal which will flow well and give solid slugs for the lino machine. Their stereo metal has printed from 150,000 to 200,000 runs for one particular firm, which is sufficient guarantee that it is of high quality. They claim that after having all these years of experience, and using only the purest materials for their work, they are in the position of being the largest suppliers of metals in the country, and always bear in mind that they are "*Still on their Metal.*"

P. M. Shanks and Sons, Ltd. (The Patent Type Foundry), Red Lion-square, London, W.C.—Newspaper founts cast from extra hard metal, for which the firm allow a good price per pound on all "letter" returned, is the specialty of this house, and Colonial newspaper proprietors have so frequently repeated their outfits that the qualities of the supply cannot be questioned. They have also gone in extensively for jobbing and advertisement type in recent years, and everything is furnished on exact American point bodies. Several new and pleasing faces have lately been added to the firm's specimen book.

Taylor and Watkinson, Belgrave Foundry, New Briggate, Leeds.—Leads cast dead true, a yard long, are produced by this firm from special machines of their own invention for casting and automatically planing leads, turning them out in an accurate style hitherto unattainable, and selling at a price much below the standing quotations of the ordinary typefounders. Their new casting machinery has been arranged in such a manner that within three minutes of starting casting the leads are finished and being packed; orders can thus be turned out to any amount on day of receipt. In addition to the usual four, six, and eight-to-pica leads, they also cast 10, 12, 18, and 24-to-pica leads and clumps in all the usual sizes, and cut and plane at ends to ems without extra charge. No one who has examined this firm's samples would hesitate to place orders with them. The capacity of the works is now over two tons per day. An illustrated article upon them appeared in our issue of July 6th, 1911.

Wood, Miles and Co., 26, King-street, Leicester.—A firm of typefounders that holds a large stock of the newest and most up-to-date faces ready for immediate delivery. All type is cast on the American point system. Improved French metal furniture is also made, and the firm manufactures the patent Locket labour-saving metal furniture. Messrs. Wood, Miles and Co. received the highest award at the London Printing Trades Exhibition, 1904.

TYPECASTING APPLIANCES.

R. P. Bannerman and Son, Northampton Works, Ringslade-road, Wood-green, London, N.—Messrs. Bannerman have now removed to large and up-to-date works specially built to their requirements at the above address. The change gives full scope to the enterprise of the firm. To their specialities already so well-known in the trade, typecasting machines, moulds and matrices, they have added as their 1912 invention a "Finished Type Mould" for use on their ordinary caster, by which type leaves the machine ready for the case. To printers this is an inestimable boon, as shown by the orders already booked. They also supply all printers' sundries of first quality and at moderate prices. Catalogues and sundries cards may be had on application.

Grant, Legros and Co., Ltd., Cumberland Park, Willesden Junction, N.W., and Avenue-chambers, Southampton-row, W.C., are manufacturers, in addition to the latest form of standard typecasting machines, which embody many improvements, of the New Pivotal Typecasting Machines, which produce finished type or type delivered on stick as required. Every appliance for typecasting and for use in connection with the production of a printing surface is made by them, including special moulds of all kinds, not only for the ordinary foundry, but for the many specialities in type and other metals which modern developments of printing and kindred trades demand. They claim to be the only firm of typefounders' engineers to patent and construct their own punch-cutting machinery and unique processes for the production of the formers or models from which the punches are cut, whose original dimensions are not settled haphazard or by simple optical means, but by the employment of the Filar microscope. They produce and strike their matrices in copper, bronze, or rolled nickel, and give facsimiles of any actual fount or any drawn or printed specimen submitted to them. They supply complete plants for the foundry, and also for the production of punches and matrices, applying in their machines the high mechanical skill and accuracy hitherto only applied to the production of matrices in the case of great corporations. A notice of the firm's works appeared in our issue of March 29th last.

W. Miles and Co., 44, Houndsgate, Nottingham, are manufacturers of typecasting machines of the most approved models, moulds, matrices, and all tools and gauges used in typefounding. They are also engravers and cutters of oriental and other matrices.

PRINTING INKS, &c.

The Ault and Wiborg Co., St. John's-square, London, E.C.—This is a well-known firm of American printing ink makers, with factories at Cincinnati, New York, Chicago, St. Louis, Toronto, and Buenos Ayres, the English warehouse and factory being at the above address. They supply every description of letterpress and litho inks in black and colours, and their manufactures have gained a world-wide reputation for their good qualities, while the prices are right.

Berger and Wirth, Vandy-street, Finsbury, London, E.C., are well known as fine dry colour and printing ink makers. Their specialties are madder lakes, tint white, permanent reds, and fine black cut inks, which latter they are supplying to some of the most prominent firms of art printers. They have also obtained a patent for supplying their well-known "Victoria" and "Bianca" (white) roller compositions, in a way as novel as it is practical. The device admits of the compo being broken up into equal parts with the minimum of time and labour, and is sure to be appreciated by the trade.

Coates Bros. and Co., Ltd., 8, Salisbury-court, Fleet-street, London, E.C., and at Manchester, are makers of letterpress and litho inks of all classes, varnishes, oils, etc., which are favourably known in the trade. They also supply bronze metal leaf, import litho stones, and do an excellent trade in colours, blacks, etc.

Culross and Co., Ltd., 18a, St. Bride-street, London, E.C., are well-known manufacturers of black and coloured printing inks in all shades, for litho, letterpress, process, three-colour, and poster work. They supply ink specially manufactured to suit all climates.

John Kidd and Co., Ltd., Wine Office-court, London, E.C.—This house was originally founded by Benjamin Smith and Co. over a century ago, and has always been to the front in the quality of its inks, which are well known to printers. The firm's works are extensive and well equipped, and every class of ink, in black and colours, is manufactured. They have recently brought out a new specimen book showing over 170 varieties of finest black and coloured letterpress and litho inks; also prices for the "J. K." rollers, which are now so well known and appreciated. Any printer at home or abroad who has not already a copy of this splendid catalogue should write for one. It will be sent post free to any part of the world.

Ch. Lorilleux and Co., 16, Rue Suger, Paris, VIe.—This is one of the oldest and largest firms of printing ink manufacturers in the world, having works at Puteaux and Nanterre, France; Bergamo, Italy; and Barcelona, Spain; with branches and depôts all over the world. The business was founded by Mr. Pierre Lorilleux in 1818, and since then the firm's record has been one of progress. All classes of printing ink are made, including special inks for three colour work, reproducing photographs, and for printing on metal, and the firm is continually seeking for methods that will tend to the improvement of their manufactures for the benefit of printers. London office: 2, Maclean's-buildings, New-street-square, E.C.

Morris and Bolton, Ltd., 17, Took's-court, Furnival-street, London, E.C., and Eclipse Works, Stratford, E., are printing ink and varnish manufacturers, who prepare all kinds of inks and dry colours for letterpress or litho printing. They also supply bronzes and other sundries, and have a long practical experience of the requirements of the trade. Their latest introduction is "Waxovania," a universal solid reducer of all inks.

Shackell, Edwards and Co., Ltd. (Established 1786), 5, Red Lion-passage, Fleet-street, London.—This is one of the most up-to-date firms in the trade, and has a connection second to none for printing inks of every description. Orders are executed with great promptitude and their inks are always reliable. As manufacturers of many of their raw materials, and having agencies in most of the Colonies, they are able to quote for export to advantage. A large number of Government Printing Offices are supplied by this house.

Digitized by Google

B. Winstone and Sons, Ltd., 100-101, Shoe-lane, London, E.C.—This is one of the best-known names amongst printing ink makers. Winstone's inks for book, magazine, and general jobbing work are recognised for their dependable quality. Their production is under the personal supervision of one of the principals, who brings to it a practical knowledge of the requirements of various machines and grades of paper. For extremes of climate their litho and letterpress inks are unsurpassed. They also rank high in the trade for the supply of lithographic requisites generally. Indents for inks or materials of any class are safe in their hands, and their advice is sought by many distant buyers; this is readily accorded and is trustworthy.

LEATHER, FANCY GOODS, STATIONERS' and STORE SUNDRIES.

L. Antoine Fils and Co., Paris, and 13, Rose-street, London, E.C.—Antoine's copying and writing inks have a world-wide celebrity, and they have received gold medals and diplomas at all principal exhibitions. The blue-blacks and scarlets are of special quality and flow freely. The firm also makes endorsing inks of all kinds, marking inks, mucilages, liquid cement, sealing waxes, and a number of other lines that may be handled with advantage by the stationer, including a new typewriter ribbon that gives particularly clear print-like impressions and copies, and is sold at popular retail prices, with a good profit to the trade. These ribbons are made in all colours, and for all machines.

Baddeley Brothers, Chapel Works, Moor-lane, London, E.C.—Publishers of a series of menu card, ball programme, and wedding card blanks of original and choice designs. Samples are sent free on application.

William Collins, Sons and Co., Ltd., Glasgow and London.—This is one of the largest wholesale and export houses in the stationery and publishing trades; their goods are known all over the world. "Collins' Bibles," gift books, pocket classics, and diaries are to be found everywhere.

Diamond Tag Co., Bermondsey-square, London, S.E.—Manufacturers and printers of tags and labels of every description, and for every purpose, of strong and excellent quality. They are also makers of gum labels, drapers' tickets, waterproof florists' labels, metal-edged labels, merchandise tickets, tack cards, invoice tag envelopes, etc., and are sole makers of the "Lightning" label fastener, an ingenious device that requires no string.

Debecy W. and M. Co., 22, Coleman-street, London, E.C., supply excellent lines in manifold books, including a line of 8vo. 100-leaf books to sell at one shilling; these are in quarter-cloth with marble sides, and are good sellers. Special prices are quoted for quantities.

Dorendorff and Co., 5 and 7, Worship-street, Finsbury, London, E.C., are well known for their fine makes of ivory boards and cut cards, of which over forty qualities and substances are kept in stock. Bevelled edge cards and other printers' fancy cards are kept in great variety. This house also publishes Christmas and New Year cards, wedding cards, menus and ball programmes, masonic cards, In Memoriam cards, etc., etc., all of which are made in the London factory. The well-known private Christmas greeting card publications, under the titles of the "Friendship" and "Britannic" series are manufactured by this firm.

Chas. Eason and Son, Ltd., Middle Abbey-street, Dublin.—A firm famous for its capital series of index and "Where is it?" books, that are used extensively by students and professional men. Their commonplace book (Index Rerum) is one of the best things of its kind ever brought out. The "Professional Note Book" is another excellent line, as is also the "S" series of Universal indexes, in seven sizes. Their "Every Hour" diary is one of the best desk books yet issued. Wholesale agents, Waterston and Son 8, St. Bride-street, London.

Fisher, Clark and Co., Boston, Lincs, are makers of tags, labels and tickets of all kinds. They have extensive works, and can execute large or small orders with despatch.

Garwood and Muddiman, Ltd., 9, Queen Victoria-street, London, E.C., manufacture leather and leatherette papers in a variety of styles and colours. The firm also makes a feature of embossing for the trade, and has works at 40, South Lambeth-road, S.W.

Higham Bros., Ltd., Cone Works, Farnworth, near Bolton, are paper bag makers and printers who, with up-to-date machinery, do a pushing business, and supply an excellent quality of goods to the trade. Those who desire a profitable line should certainly secure Messrs. Higham Bros.' samples and price list.

T. J. Hunt, 17-18, Paradise-street, 13, Garlick-Hill, E.C., and 18, Goldsmith-street, W.C., London.—Mr. Hunt works for the trade, and is an account book manufacturer, machine ruler, numerical printer, perforator and wire stitcher, etc., who makes speed in getting out orders a feature. Mr. Hunt has acquired the old-established business of Messrs. Wm. Ludbrook and Sons, of 18, Charterhouse-buildings, E.C.

Klugmann and Co., 47, Basinghall-street, London, E.C., the sole British agents of the Mech. Bindfadenfabrik - Immenstadt, Immenstadt, Bavaria, manufacturers of grey, bleached, and coloured twines, cords, shoe-threads, net-yarns, and seamings. The best Italian hemp only is used in the firm's goods.

Edward Mortimer, Regent-street, Halifax, Yorks, is a publisher and stationer who is gratefully remembered by the trade throughout Great Britain and the Colonies for his helpful "Waistcoat Pocket Reckoner" and other trade publications for stationers. The firm is almost equally well-known as the publishers of "The Court" series of scoring cards and games and dance programmes, which are noted for their originality. The following departments are at work in the factory:—Letterpress printing, lithography, binding, relief stamping, block-making, technical photography, and plan-printing. They are the only workers of the "Veratype" true-to-scale plan printing process.

Moore's Modern Methods, Ltd., 4 (Dept. 56), St. Bride-street, London, E.C., are makers of loose-leaf record books in which to keep factory and professional records of all kinds on a labour-saving and handy reference system. Catalogues and trade terms may be had on application.

McCaw, Stevenson and Orr, Ltd., Linenhall Works, Belfast. London Office: **Shoe-lane, E.C.**—This is a well-known firm of colour printers who have a world-wide reputation for their imitation stained glass decorations, which are in use almost everywhere. The firm has purchased the patents, copyrights, watermarks, etc., of Marcus Ward and Co., and now produce and supply on a larger scale, and in addition to their own extensive manufactures, the specialities for which that firm was famous, including calendars, programme, menu, and memorial cards, diaries, albums, school books, birthday books and the popular "Royal Irish Linen" note paper. The firm has introduced a new style of show card mount that is most effective in appearance, and that will not warp with heat or damp. Messrs. McCaw, Stevenson and Orr have branches at Glasgow, Manchester, Birmingham and Hamburg.

E. M. Richford, 9, Snow-hill, London, E.C.—This house occupies a premier position amongst makers of rubber stamps, daters, rubber-faced type, self-inking pads, etc. A speciality is made of rubber stamp making machines and supplies for the stamp trade, especially for India and the Colonies. Many of their productions are covered by patents. A feature is made of promptitude in filling orders.

Shaw-Walker, Ltd., 33 (Dept. 56), St. Bride-street, London, E.C., supply an extensive assortment of letter filing devices, card index systems, and similar office and factory supplies. Indexing methods are becoming most popular in business circles, and the commercial stationer will find a profitable line in handling them. The firm want agents everywhere and will send terms on application.

W. E. Smith, Ltd., Sydney, N.S.W.—This is one of the largest and best equipped printing and stationery houses in Australia, and we have several times noticed in our columns the high quality of the work done. The firm is desirous of keeping the extensive works thoroughly up-to-date, and for this purpose invites correspondence from engineers, papermakers, and the fancy trades. Catalogues, lists, etc., can be sent direct to Bridge-street, Sydney, or to the London office, College Hill Chambers, College-hill, E.C.

Raphael Tuck and Sons, Ltd., Raphael House, Moorfields, London, E.C., issue illustrated catalogues which give a vivid notion of their lines, embracing pictures and frames, books, presentation cards, chromo and oleographs, plaques, mantel ornaments, texts, valentines, Christmas, New Year, Easter, birthday and private cards, calendars, etc. Their fine art toy books are ingenious and popular, and a splendid series of illustrated post cards is issued and continually being added to.

Veda Pen Co., Veda Works, Stoke Newington, London, are the makers of the Veda pen, which sells at popular prices. The firm guarantee their pens and keep them in order for three years, free of charge.

Weise Bros., 5-7, Singer-street, Finsbury, London, E.C., manufacture all kinds of gold and silver blocked advertising tablets, embossed blanks for ticket writing, gold blocked and other varieties of embossed calendars and date cases, club fixture cases and season tickets, coat badges in leather and celluloid, gold blocked perfumery labels, embossed catalogue and brochure covers, cameo embossed show-cards, silver blocked text and verse cards, embossing and blocking on celluloid, plush advertising tablets with embossed lettering, cut out window card signs, art floral advertising novelties and wood veneer show cards. They also undertake designing, engraving, aerographing, etc.

PENMAKERS.

John Heath and Co., 70, George-street, and 31-33, Newhall-hill, Birmingham, are noted for the high quality of their steel pens. The founder of the firm, Mr. John Heath, was one of the pioneers of the penmaking industry, and his firm has ever been in the front rank. Steel pens for every purpose are made, and to suit all hands, and among them may be specially noted the "Telephone" pen (No. 0,278), the "Favourite" (No. 1,899), "Postal Telegraph" (No. 1,880), "Ledger" (No. 508), "Ye Olde Court Hand" (No. 1,874), the "Barrister," and a fine series of the popular J pens.

TRADE BOOKBINDERS.

Geo. Edwards and Co., 28, Warner-street, Mount Pleasant, London, E.C., is a letterpress and account bookbinder to the trade, and undertakes these classes of work in all styles. Enquiries for terms will be appreciated and estimates given.

Walter Newbury, East Ham Binding Works, Essex, makes a feature of public library binding and binds books in sealskin, morocco, pigskin, etc., according to the Society of Arts recommendation.

Charles J. Forward and Son, Ltd., 25-27, Sayer-street, New Kent-road, London, S.E.—A firm of wholesale bookbinders and leather case manufacturers that turns out good work by means of modern plant, skilled staff, and personal

Digitized by Google

supervision. A special feature is made of leather bindings. The firm, which was established in 1852, has been awarded several gold and silver medals and other distinctions for the excellence of its work.

BOOKBINDERS' SPECIALITIES, ETC.

Aug. Brehmer, 12, City-road, London.—We should suppose that there is hardly a good house in the trade that is not practically acquainted with the merits of Aug. Brehmer's patent automatic wire stitching machines and binders. He makes a wide range of them, from the cheapest treadle form at a few pounds to the most powerful, equal to driving a staple through an inch of the hardest paper. Mr. Brehmer supplies several high-class thread stitchers, adapted to the finest classes of work, as well as every description of bookbinders' machinery. His new folders are excellent machines. Mr. Brehmer's inventive faculties are cosmopolitan, his trade list containing perhaps a wider variety of this special class of requisites than any other upon our shelves.

British Loose Leaf Manufacturers, Ltd., 25, Finsbury-street, London, E.C., are manufacturers and patentees of all kinds of loose leaf metal parts, steel and aluminium ledger metals, transfer metals, pocket book metals, etc. They also supply complete books when desired. Catalogues may be had on application, and the firm supplies only the stationery trade.

Ibbotsons Limited, 64, Goswell-road, London, E.C., manufacture and supply a fine range of leather papers in all grains, qualities, and colours. Their sample book is indispensable to binders and fancy goods workers, showing as it does a remarkably complete and varied selection.

G. H. Maddin and Co., Ltd., 10-11, Middle-street, Long-lane, London, E.C., are makers of blocks and types for bookbinders, gold blockers, etc. They make a specialty of cutting dies for embossing.

Minton and Casey, 1, Clerkenwell-road, and 23 and 24, Charterhouse-buildings, E.C., are die-sinkers and engravers by electric power, for bookbinders, gold blockers, stationers, etc. Special machinery is used, and all work is turned out promptly.

George Morris, 291, City-road, London, E.C., stocks bookbinders' specialities in colours, varnishes, gold and silver leaf, etc., and holds a large stock of ruling ink powders, blocking powders, varnishes, gold leaf and gold leaf substitutes, marbling colours, albumen, glaire, gums, and all other requisites used in the bookbinding trade.

L. Nettleton and Sons, St. Helena-street, Farringdon-road, London, W.C., are the oldest established cast brass type founders in the United Kingdom. They manufacture superior brass type and cast handle letters of many useful designs; and also engrave handle letters, rolls, tools, pallets, etc. Type-holders to suit the requirements of bookbinders, gold-blockers, etc., are made in various styles, and all kinds of refacing and recutting are executed by the firm at very reasonable charges. Liberal terms are given to exporters and dealers.

Nickerson Bros., 99-101, Worship-street, E.C., and Alscott-road, S.E. (London), are makers of all classes of leathers for the bookbinding trades, and supply acid free moroccos and pigskins to suit the requirements of the Society of Arts specifications. Quotations for supplies can be had on application.

T. Williamson and Co., 8, Palace-square, Manchester, manufacture bookbinders' cloths, label cloths, mulls, cambrics, linen, buckrams, blue linings, lithographic cloths, calicoes, emery cloths and photographic cloths, etc., of excellent quality. Samples and prices are sent free on application.

ROLLERS AND ROLLER COMPOSITION.

"The Durable" Roller Co., Ltd. (E. T. Marler, Manager), **Charles-street, Hatton-garden, E.C.**—This company revolutionised the old formula for printers' rollers. The firm originated in 1868, and introduced the casting of rollers by machinery in 1886, from plant of their own designing, and have brought the same up-to-date. The "Durable" rollers are known everywhere, and have taken the highest awards wherever exhibited, as at the International Inventions Exhibition, 1885, and at numerous Colonial exhibitions. Great care is taken in suiting the composition to the climate in which it is to be used. The "Durable" is sent out in slabs ready for use, with a set of instructions and a little sound advice in a work called "The Right Hand of the Press," which every practical man must appreciate.* The rollers are equally adapted for fine art work, colour printing, or all-round ordinary printing; they are usable for remarkably long periods and always keep in condition. The Hoe Rotary machines for the *Daily Telegraph*, *Lloyd's News*, *Daily Chronicle*, *Daily Express*, *Standards* (day and evening), and a host of similar machines have their rollers clothed by the company; and in a finer grade of work such as in the *Queen*, the *Gentlewoman*, *Strand Magazine*, etc., and kindred highclass work, the company's rollers also come into play. Their advertisement appears regularly in this paper, and we may mention that their rollers have been used on our machines for printing this issue, we having used this make for considerably over twenty years.

*Sent free and post paid anywhere upon request.

Fredk. Heywood, junr., Inkermann Works, Honey-street, Cheetham, Manchester; Works also at 26A, Claypit-lane, Leeds, manufacturer of printers' rollers, has not only been enterprising enough to rebuild and remodel his works in Manchester into an up-to-date roller factory, but has also erected a similar plant in Leeds, and claims to be the only firm which has two installations of this kind in different parts of England. The "Inkermann Composition," which is being used in the largest newspaper offices in the world, has proved itself to be excellent for use on fast-running machines, and has obtained a great many unsolicited testimonials, whilst the "Midas Composition" has made a name for itself on cylinder machines.

J. R. Thompson and Co., Wharfedale Roller Works, Otley, Yorks, are manufacturers of printers' rollers and roller composition, the fine qualities of which have secured for them numbers of entirely unsolicited testimonials, and for fine colour work they are all that could be desired. The firm also manufactures stereo mounting boards in mahogany, canary white wood and oak, at reasonable prices. Lists will be sent on application. They inform us that they are constantly making new accounts, and number amongst their customers many of the best houses in Leeds, Bradford, Edinburgh, Glasgow, Perth, Aberdeen, Belfast, Leicester, Birmingham, Reading, and numerous other large towns throughout England and Scotland. Many of their rollers returned to be re-cast have done upwards of two years' service. They challenge comparison, and do not mind how small the order may be, which is submitted as a test, either for a dry or damp office.

PRINTERS, ETC., TO THE TRADE.

Baylis, Lewis and Co., 5, New-street, Worcester, make a special feature of their "Worcester Artistic Embossed Circulars and Cards," "In Memoriam" cards, ball programmes, etc., and samples of these may be had through the wholesale stationers, or direct from the firm.

The Bell Punch and Printing Co., Ltd., London, supply all kinds of tickets, cheques, etc., consecutively numbered in books, packets, or rolls, suitable for railways, tramways, omnibuses, steamboats, concerts, theatres, football, cricket, and other clubs, etc., at extremely low prices. Those printers, who can secure such work may profitably turn it over to the company.

T. E. Bingley, High-street, Leicester.—Trade work in lithography is done by Mr. Bingley, whose four points are strict faith with customers, perfect quality, promptitude in execution, and moderate charges.

Birdsall and Co., Electric Printeries, Stanningley, Leeds, are book and magazine printers to the trade. They do Monotype and Linotype setting, and make a special feature of half-tone and tri-colour printing.

Blades, East and Blades, 23, Abchurch-lane, Lombard-street, London, E.C.—Cheque printing under a special system known as "Protective" is done by this house. It is a chemical process, and protects against forgery. The firm executes trade orders (for quantities) by their special mechanical processes and water colour ink, doing only the best work in any colour, including black. The dependability of the house and the probity of its dealings are unquestioned.

The City Printing and Stationery Co., Bermondsey Square, London, S.E.—A firm that works for the trade in printing, binding, machine thread

BENDA'S GOLD BRONZE POWDER.

sewing and stitching, wire stitching, etc. The firm also makes a feature of manifold books for pen or pencil use, plain or with printed headings, and also of duplicate and triplicate books for all purposes.

Cooper and Budd, Ltd., McDermott-road, Peckham, London, S.E.—A well-known firm of printers, noted for their high-class work. They undertake every description of high-class letterpress printing for the trade, and execute it at moderate prices.

G. Cornwall and Sons, Aberdeen.—An established and well-known firm of general printers and lithographers. A speciality is made of all kinds of labels printed in colours from block or stone, for jam preservers, biscuit manufacturers, tinned provision manufacturers and others.

Thomas Forman and Sons, Nottingham, are litho and three-colour printers, whose work is well known all over the world. The firm's calendars for 1914 are of a very high quality, artistically and technically, and should be seen by all who can sell such things.

James Taylor Harris, Ltd., Cliftonville Studios, Redland, Bristol, are pictorial post card printers. Post cards are printed from customers' negatives at very low prices, as for example, 1,000 collotypes for 9s. Samples are sent and enquiries are solicited.

Percy Bros., Ltd., The Hotspur Press, Whitworth-street West, Manchester.—A feature of this firm's business is the setting up of heavy solid composition on the Linotype and Monotype machines, and they have a neatly got-up booklet showing all the sizes they can set up, from nonpareil to pica, with and without heavy faced type. The firm undertakes machining for the trade on rotary and two-colour machines, also folding and stitching pamphlets, etc.

Perkins, Bacon and Co., Ltd., Southwark Bridge-buildings, London, S.E.—This well-known house, founded in 1819, at Fleet-street, whose fine works were described and illustrated in our issue of March 30th, 1905, have recently relinquished letterpress printing, and now confine themselves to their original trade of the siderographic engraving and printing of bank notes, postage stamps, trading stamps, security cheques, debentures, bonds, share warrants, and certificates, and similar work, which they execute both by steel plate, litho and surface printing as required. They make a special feature of trade engraving and printing in the case of the documents above mentioned, and the good standing of the firm is a guarantee that all trade orders will be strictly and faithfully carried out. Stationers and printers doing company work who do not keep their own engravers cannot do better than entrust their engraving to this firm. Rotary offset litho work is also done.

Petty and Sons, Limited, Leeds and Reading, are printers to the trade who make a speciality of illustrated advertising for various trades. Their facilities for litho trade work are of an extensive character; they are specialists in picture poster work—and litho label work—in all grades. The firm hold a large selection of copyright designs, and execute any order, large or small, with despatch. Their facilities at Whitehall Printeries Leeds, include 100 letterpress and litho machines, rotary and two-colour for fine art printing; their Monotype installations and other labour-saving facilities, with a staff of over 500 employees at Leeds, and 250 at Reading, enable them to undertake large contracts. Features of their business are strict faith with customers, low prices, high-grade work, and speed.

D. F. Tayler and Co., Ltd., New Hall Works, Birmingham.—All kinds of fine chromo-lithographic and letterpress printing are undertaken by this firm, and whilst they do a large business in posters, showcards, manufacturers' pattern books and labels, etc., they are specially noted for being producers of chromo pictures and almanacs of a high-class character. They have a number of novelties in pictures and calendars for the coming year.

Taylor Brothers, Sovereign-street, Leeds.—Messrs. Taylor Brothers' specialities are noted for their variety, excellence of design and fine execution. Their chromo sheet calendars are issued in beautiful colourings and in monotone, and embrace a large selection. The 1914 series is now ready. In their chromo card calendars, letter racks and pocket calendars a vast business is done, new designs being constantly added. Award certificates for schools, swimming clubs, agricultural shows, and other purposes, bordered blanks on paper and card in all sizes and styles are also supplied, as well as illustrated showcards, etc. posters and window bills, advertising, football and cricket sheets, illustrated and comic handbills and puzzle cards. The production of pictorial post cards of customers' own selection, from own negatives or photos (a coloured sketch not being necessary) is a leading feature. The making of half-tone, line and tri-colour blocks as well as photo-lithography in all its branches is carried on upon an extensive scale. "In Memoriam" cards, transparencies for window decoration, and for advertising purposes are a leading line. Lithographed poster work up to 62 by 42 is a speciality, either the designing, the drawing and the printing of the job complete or any part of it, and every description of litho and letterpress printing is undertaken. Varnishing by machine, metal and wood mounting, ruling, punching, numbering, and in fact everything connected with the trade is executed in the works.

Wertheimer, Lea and Co., 46-47, London Wall, and Clifton House, Worship-street, E.C., are a firm of printers in French, German, Russian, Hebrew, and all foreign languages. They offer facilities for this class of printing which will be appreciated by the trade.

Widdowson and Co., Millstone-Lane, Leicester, are trade printers who make a speciality of monthly date blocks for calendars and lithographic colour work. Their prices are very low considering the quality of their work, and the advantage of being able to secure ready printed blocks should be appreciated by every calendar printer and stationer requiring complete calendars for customers, as they can have the whole work executed with promptness.

WOOD, PROCESS, COPPERPLATE, and STEEL PLATE ENGRAVERS, DESIGNERS, Etc.

Baddeley Brothers, Chapel-Works, Moor-lane, E.C.—This firm is a reliable one to entrust with seal engraving, die-sinking, and the supply and embossing of private and commercial stationery—they make a speciality of menu card, ball programme, and wedding card blanks for printers.

Badoureau and Jones, Ltd., Poppin's-court, Fleet-street, London, E.C.—One of the best known firms of electrotypers, stereotypers, and general engravers in the trade, whose record extends back to 1876, when wood engraving had not been supplanted by the process block. They turn out good work rapidly and are reasonable in their prices. The firm still carry on the department of boxwood block manufacturers.

W. and G. Baird, Ltd., Belfast.—The printers and publishers of the *Belfast Telegraph*.—New and specially erected premises fitted with the latest American machinery are utilised by the firm for the production of process blocks in line and half-tone, on zinc or copper. Litho or copperplate transfers are a speciality.

Century Engraving Co., 21, Cannon-street, and Greenwood-street, Manchester, is one of the best known trade firms in Manchester and "up north" of artists, designers and engravers. Their work covers a wide range of production: bonds, shares, cheques (a feature), letter and invoice headings, cards, views of works, and factories, vignettes and figures engraved on copper, steel plates, and steel dies, also reversed engraved plates for offset machines. Christmas cards in two, three and four colours, die work, menus, book labels, catalogue and booklet covers, decorative panels for posters, etc. In addition to the copper, steel and die departments, the firm have also plate printing, lithographing and die-stamping departments. Their artists are prepared to make sketches and drawings in colour, wash and line for all engraving processes and requirements. That their work is appreciated is clearly shown from its variety and the extent of the field it covers, this firm, besides doing a United Kingdom trade, are now securing enquiries and orders from various towns in India, East and South Africa, the Continent, etc. Printers and stationers who desire good work at a fair price, combined with quick delivery and immediate attention to enquiries and estimates should make a note of such a useful concern. Specimens and booklets with prices will be sent on receipt of a post card.

James Dellagana and Co., Ltd., Turnagain-lane, Farringdon-street, London, E.C., are newspaper, book and fine art stereotypers, electrotypers, and process engravers. The work done at the Viaduct Foundry is of a high quality, and speed in delivery is made a feature of the business. Electros delivered in three hours from receipt of original. The firm has no other address.

Direct Photo-Engraving Co., 38, Farringdon-street, London, E.C., is a well-known process house, turning out good work in line and half-tone, and undertaking every description of photo-process reproduction. The firm was established in 1882, so that its reputation is not a thing of yesterday. Prices and specimens are sent on application.

T. E. Downey, 63, Berners-street, Oxford-street, London, W., is a copperplate engraver and process block maker who does good work. He keeps electros in stock for various trades.

Eyre and Spottiswoode, Ltd., New-street-hill, London, E.C., the well-known firm of printers, have an Electro Department where they produce single and colour electros by the Albert-Galvano method, which ensures the duplicate being an exact duplicate, and, mounted or unmounted, is claimed to be equal in every respect to an original.

The Guild of Printers' Designers, 84, Atlantic Chambers, Brazennose-street, Manchester.—This is a firm that pays special attention to the artistic production of showcards, calendars, catalogue illustrations, circulars, commercial stationery, and illuminated manuscripts. They will illustrate every variety of article for catalogues in black and white or colours, wash or line drawings, direct or from photographs; make a speciality of old style designs, lettering, writing, etc., for circulars and such like, and they claim to stamp all their work with an individuality which raises it above the general level.

E. Hulton and Co., Ltd., Withy-grove, Manchester.—A firm of high-class photo-engravers, who include in their category the production of three and two-colour work, combined half-tone and line blocks and "Sketchlight" half-tones which give a brilliant effect, away altogether from the commonplace half-tone results. They also make a special class of block for headings of commercial stationery; the results closely resemble die-press work, the great advantage in the use of these being that art papers are not necessary, in fact, finest results are obtained on papers such as bank and antique. The blocks will work quite easy on the ordinary platen type. It would be worth while for printers to see specimens of this class of work and obtain further particulars.

London and Provincial Reproduction Co., Ltd., Thornton-road, Bradford, make illustrative blocks by all processes and for all purposes. They are also designers and experts in photo-litho.

S. W. Partridge and Co., 21-22, Old Bailey, London, E.C., the well-known publishers, supply electrotypes for illustrative purposes, from the extensive and valuable stock of engravings created in connection with their numerous illustrated publications. Messrs. Partridge and Co. are not electrotype collectors and agents, but simply offer—to Colonial houses in particular—the advantage of their great resources in artistic engravings, covering most fields of literature, and for the most part at one-tenth the cost of the original drawings. Local magazine proprietors should be quick to grasp the advantage of such a source of illustration

C. H. Read and Co., 98, Cheapside, London, E.C., are draughtsmen and engravers on wood, electrotypers, etc., and have a good selection of stock electros for trade purposes. The firm also makes a feature of touching-up half-tone and other blocks that may have been damaged in working, or otherwise.

Richardson and Co., Waterloo-street, Leeds, are electrotypers and stereotypers in all branches, and make a speciality of vignetted and three-colour electros by a special process that is guaranteed to give results equal to originals. Specimens and price list will be sent on application.

W. F. Sedgwick, Ltd., 236-7, Blackfriars-road, London, S.E., make a feature of the best half-tone, three-colour and line work. They also undertake designing and artistic work in connection with the production of high-class illustrative or advertising work.

John Swain and Son, Ltd., Columbia House, 89-90, Shoe-lane, London, E.C.—This famous firm of process engravers is well known in the printing world, its founder, the late Mr. John Swain, being a pioneer in the art of photo-mechanical engraving, and a Swain block embodies all the qualities that command the admiration of the printer. The firm recently entered on occupation of fine new premises at the above address, an illustrated description of which appeared in our issue of December 9th, 1909, and are fully equipped with the latest and most approved

Digitized by Google

appliances for turning out the highest class of work in the shortest time. They have opened a branch house at 12-14, Bath-street, Glasgow.

H. J. Sheldon, 32, Museum-street, W.C., is an engraver and electrotyper who makes a feature of electrotype reproductions from bank-notes, bond and cheque plates, etc., for printing purposes. He also makes special protective surface blocks for printing micro-cheque bands, scrolls, and other fine work. A speciality of the firm is making duplicate copper plates steel-faced, for work on the Hoe copper-plate printing machine. At the Printers' Exhibition, 1904, London, they obtained highest award and silver medal for their work then exhibited.

H. G. Walker, 65, Bayswater-road, Birmingham.—This firm specialise in stock blocks for note heads. Also dainty designs suitable for bazaars, circulars, advertisements, calendars, blotters, showcards, picture post cards, etc.

PROCESS WORK REQUISITES, Etc.

John Haddon and Co., Salisbury-square, London, E.C., are makers of zinc and copper-plates for process engravers, etc. They specialise in quick working zinc for newspapers, and finest copper for half-tones and photogravure. Samples will be sent on application.

Penrose and Co., Ltd., 109, Farringdon-road, E.C.—This firm supplies all materials, chemicals, and apparatus for photo-zinco, photo-litho, collotype, and the kindred processes. They keep everything from the commonest chemical to the most elaborate sets of photographic apparatus.

PAPER BAG-MAKING MACHINERY.

Bumsted and Chandler, Ltd., Cannock Chase Foundry, Hednesford, Staffs, make a speciality of paper bag-making machinery suitable for general printing offices, and designed to produce bags of varied sizes and weights from the web of paper. The patented machines of this firm have recently been simplified and improved, and the statements issued concerning their capacity ought to be of practical interest to printers in all countries, where it does not always pay to stock a great number of sizes and classes of bags.

PHOTOGRAPHIC, Etc., PUBLISHERS.

Valentine and Sons, Limited, Dundee.—This firm's photographic publications are widely known, both at home and abroad, comprising as they do nearly every class of photographic work. They claim to have the largest colour and collotype plant in the kingdom, and issue about 100,000,000 colour and black and white post cards a year. They employ in their different establishments about 700 workpeople.

PAPER MILL ENGINEERS.

Bentley and Jackson, Ltd., Bury, near Manchester.—"Thou hast built a paper mill"—*Shakespeare*. This quotation dates back before the business of papermakers' engineers was established, but if the firm of Bentley and Jackson had then existed, doubtless they would have pioneered the industry. This firm have built the machinery for some of the largest mills in Great Britain, Norway, Sweden, Germany, France and the United States; an acknowledgment that they are good engineers, and well know how to plan a paper mill, and to properly equip it with the latest plant. They have made a considerable success of mills designed for India, China and Japan.

AUCTIONEERS and VALUATORS.

Frank G. Bowen, 62a, Aldersgate-street, London, E.C., is well known in the trade as an experienced valuer of printing plant and machinery. He also carries on a successful business as trade auctioneer.

Frank Colebrook, 146, Fleet-street, London, E.C.—Mr. Colebrook carries on the business of valuer for the printing, paper and stationery trades. Mr. Colebrook has had over thirty years' experience in printeries, four of these in responsible positions in the block-making world. He assists manufacturing houses in any line in the compilation and display of their own advertising catalogues or booklets, they printing them where they choose. Some old-established and very important printeries and firms supplying printers are among those who have used his help in this sense.

Robert H. Ruddock, 71, Fleet-street, London, E.C., is an auctioneer, valuer, and fire loss assessor to the printing and allied trades. Mr. Ruddock has had considerable experience in these branches, and his services are at the disposal of clients.

PRESS CUTTING AGENCIES.

Durrant's Press Cutting Agency, 32-34, Holborn-viaduct, and 3, St. Andrew-street, London, E.C., supplies press cuttings for any purpose promptly, and at cheap rates.

Woolgar and Roberts, 58, Fleet-street, London, E.C.—A general press cutting agency supplying information and press cuttings upon any subject smartly, and at moderate prices.

WIPERS and DUSTERS.

Jacobs Brothers and Co., Portpool-lane, Gray's Inn-road, London, E.C., supply printers, lithographers, engineers, etc., with "wipers" of every description, guaranteed clean and free from buttons, pins, etc. Prices and particulars are sent free on application.

ADVERTISING AGENTS.

Neyroud and Son, 14-18, Queen Victoria-street, London, E.C. (same address since 1881).—A firm of advertising agents that has international connections. It is old established, the office having been opened in 1875. Sole agents for Rudolf Mosse, German advertising firm, since 1875, also sole agents for *Kolnische Zeitung*, etc.

MISCELLANEOUS.

W. R. Perry, Ltd., Bush-lane, Cannon-street, London, E.C.—This firm, one of the oldest trade protection offices in the United Kingdom, makes status inquiries as to the position and standing of traders and others, and possesses registers at the offices, containing full bankruptcy and other information for Great Britain and Ireland.

Give the Operator Readable Copy.

Ask any operator how much type he can set in eight hours. He will reply something like this: "Well, of course, it depends on the copy, but ——," etc. Whatever else he says, he is sure to mention the copy. Which indicates an important relation between copy and product.

The average operator likes his work—except, perhaps, on Monday morning. He likes to "pull out" on a good run of copy and show 'em what his machine can do. He finds pleasure in piling up column after column on the galley bank — more than he finds in putting away dollar after dollar in a savings bank. There is a fascination about operating a typesetting machine when the copy is good. It is pleasant to hear the clicking of the keys, and to watch the delicate mechanism — each part working in harmony with the others and automatically performing its appointed task. It's fun for the operator to sit at his keyboard and keep these parts of the machine going as they should. It means a good string—large output—which interests his employer.

No operator can set a good string, however, unless he has good copy—copy that can be followed readily and continuously Punctuation, capitalisation and spelling must be accurately noted. The operator can not spend many seconds puzzling over a hastily scribbled foreign word or in remembering whether Francis, as a man's name, is spelt with an "i" or an "e." He must grasp the copy at a glance, while his fingers are busy with the keybuttons.

The copy need not be typewritten or reprint. Good copy is easier to read and follow than nonpareil reprint, especially for a slightly near-sighted operator. Before copy is sent to the machines it should be carefully edited. It should be given the operator exactly as it is to appear in print, to the last comma. It is a mistake to assume that because the operator knows the style he can just as well fix up punctuation and capitalisation as he goes along. He can do it, but it will waste both his time and that of the machine. It is, however, better to leave the editing to the operator than to have it done in a careless and slipshod manner. The aim should always be to make copy readable at a glance.

Any machine owner who has managed to get this far in the present article probably is now saying to himself: "Yes, it is all very well to talk about giving the operators good copy. I'd like to give them all ten-point leaded reprint. But I don't write the copy. Outsiders do that. They send it in—good, bad, indifferent, monstrous—and that's the way I must turn it over to the machines."

A good point, well taken. In fact, that's the whole problem—reforming those who write the copy. In attempting such a reformation the machine owner should bear in mind that there is nothing to loose, and whatever he gains means a sure increase of output for his machines. The thought should prove an incentive. Of course, the thing to do is to show customers wherein *they* will gain by preparing better copy. If they pay for their work according to the time it takes to handle it, it will be easy enough to explain how they can reduce their bills in this way. They will readily understand the advantage to themselves of preparing readable copy because the advantage is real and measurable in dollars and cents. Another effective argument will be found in the fact that good copy will enable the operators to get the type set quicker, which will mean that customers will get proofs and copies that much sooner. The latter argument will interest editors and copy-writers who have nothing whatever to do with the business end of their publications.

There is another way in which proprietor or foremen can materially assist their operators and increase their output. That is by arranging new copy, first proofs, page proofs, etc., so as to give them the most possible "straight sailing," and as few changes of machine as possible. Nothing knocks the enthusiasm out of an operator quicker than a series of needless interruptions.

He comes down in the morning feeling able to lick his weight in wildcats and intending to set a big string. His heart warms as he discovers a pile of typewritten copy at his machine, and he begins work with a will. Then a make-up man comes up with a run-around. It is a six-em measure, requires careful spacing, and is a little exasperating. The run-around finished, our ambitious operator resumes his typewritten copy, hoping to get a fair string anyway. Then some one comes along with a bunch of page proofs in half-a-dozen measures and faces, followed by a table job, some first proofs, an uninterrupted fifteen minutes on his new copy, and then more run-arounds. Thus the variety continues until by noon he cares not whether he gets a good string, and at five o'clock he has very little to show for his day's work.

Of course, run-arounds, page proofs, etc., must be taken care of, and sometimes they cannot wait. But those in charge should see to it that no unnecessary changes and interruptions are allowed, and that the operators get as many "straight" runs as possible. It is particularly important to keep the operators seated at their keyboards, and not have them running about with proofs, copy, or whatnot. It is not merely a matter of saving the time spent in getting up and sitting down again—and possibly a swapping of stories and chewing tobacco. The point is to keep the machines *producing*. Some waste time is unavoidable, just as some of the copy is sure to be wretched. A little extra care in laying out work, however, will pay big dividends, just as it will pay well to induce customers to send in legible copy.

These ideas are not new. In fact, they are truisms. Probably a majority of machine owners realise the importance of good copy and proper arrangement of work, and strive for both. Some, however, might bring about reforms which would help pay for the automobile, or help meet the weekly pay-roll, as the case may be.—The *Inland Printer*.

LINOTYPE operators are sometimes, perhaps because of intentness upon their work, absent-minded, and often one has caught himself dropping a matrice into the metal pot instead of a pig of metal. But this was gone one better in a Western newspaper composing-room recently, when Slug Four, an efficient "cog-wheeler," threw a space-band into a convenient cuspidor and expectorated into the assembler box.

HARD soap has long been recommended for use on wooden case-runs. Now that steel runs are so much in use, compositors will find graphite, either powdered or in paste, an excellent substitute for the soap.

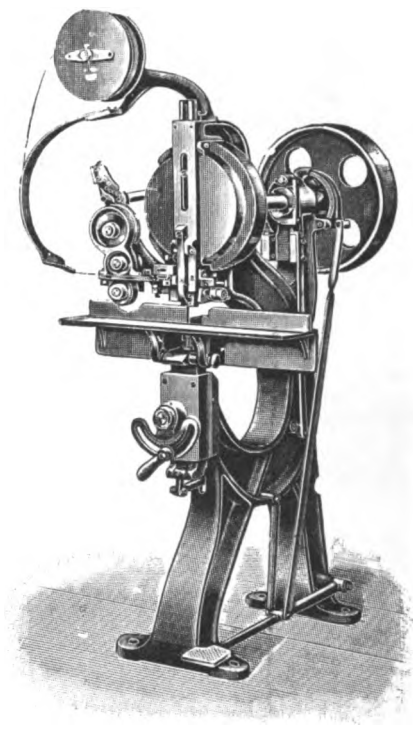
ESTABLISHED 1876. PARIS EXHIBITION, 1900, GRAND PRIX and GOLD MEDAL. BRUSSELS EXHIBITION, 1910, THREE GRAND PRIX.

WIRE STITCHING MACHINES.



Over **22,500** sold in United Kingdom; **60,000** all over the world.

Of many sizes, ranging in price from £2 12s. 6d. to to £55, stitching thicknesses up to 1⅝ inches.

The well-known **WIRE STITCHING MACHINE No. 4a,**

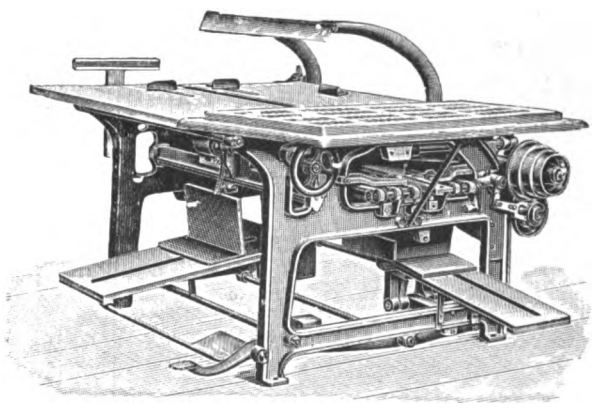
Has lately been GREATLY IMPROVED, and is now the MOST EFFICIENT, HANDY, and, in comparison with the prices of similar machines of other makers, the CHEAPEST Machine on the market.

It will stitch a GREATER THICKNESS than before, viz.: ⅞ **inch instead of** ¾ **inch.**
It is now supplied with a separate head for stitching the THINNEST work, which it will do as perfectly as the smaller machines.
It will stitch pamphlets BOTH WAYS, with the ends of the staples clenched INSIDE the fold, or at the BACK of it.
The starting clutch has been entirely reconstructed and improved, so that the machine works QUITE SILENTLY.
The price of the machine has not been increased but remains as before, *i.e.*, **£35.** Over **6,000** of this machine sold.

THE THREAD-STITCHING MACHINE, No. 37,

Is now made to produce four sizes of stitches: 2 inches, 3 inches, 4 inches, and 5 inches in length. It is a QUICK Machine (speed up to 2,400 stitches per hour) and not liable to breakdowns or expensive repairs.
Can also be used for making loops at end of books for hanging up, and for stringing showcards, calendars, &c., with thick cord. The **BEST** in the market. Testimonials of leading firms at disposal.

THE GLUEING MACHINE, No. 61,



For glueing or gumming paper or cloth book covers, &c., will save 10 per cent to 15 per cent. GLUE, and from 30 per cent. to 50 per cent. wages as compared with hand labour.

THE LEATHER PARING MACHINE, No. 30,

Has met with unrivalled success! Over **400** Machines sold! Greatest labour-saving machine in existence!
Suitable for **ALL KINDS** of leather.

THREAD BOOK SEWING MACHINES, IN 5 SIZES.

For ACCOUNT BOOKS, LETTER COPYING BOOKS, GUARD BOOKS, LETTERPRESS WORK, &c.
Over **1,500** of the various sizes sold.

WIRE BOOK SEWING MACHINES,

For GUARD BOOKS, SCRAP BOOKS, ALBUMS, &c.

FOLDING MACHINES IN 70 DIFFERENT PATTERNS.

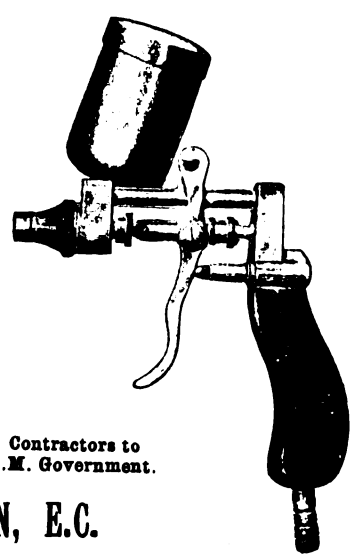
For BOOKWORK, STATIONERY WORK, and NEWSPAPERS,
OVER **1,800 MACHINES SOLD.**

DISC RULING MACHINES.

BOX-MAKING MACHINERY,

For ordinary and Folding Boxes, including Corner Staying Machines.

THE ENDSHEET PASTING MACHINE, No, 62.



This Machine will automatically paste endsheets, plates or maps, &c., on the outside of book sections, and is finding great favour with the trade. It can also be had for turning end sheet over section and pasting it on.

Many Printers!

CYLINDER DUST BELLOWS

(Invented).

No more Short Circuits in Cleaning Electrical Machinery.

NEAT, LIGHT, DURABLE

USED THE WORLD OVER.
Invented and Manufactured by
Trade Mark No. 270,725.] AUGUST KRAUSHAAR.

For sale in six different sizes by the leading electrical and technical supply houses, felt, TYPE FOUNDRIES, hardware, machine and piano supply houses in the country. These Bellows have no metal mountings, the nozzle as well as body is made of wood, precluding short circuits or injury of any kind. They are very light and almost indestructible. Produce with one stroke 1⁶ to 5⁰⁶⁵ cub.-dec. of strongly compressed air, which removes all dust particles from the most inaccessible places.

AUGUST KRAUSHAAR, Hanau a/M. (Germany), 155.

Catalogues and Samples are sent only to Agents.

In AMERICA
There is published only one weekly paper representative of the interests of employing printers. It is the most popular Printers' Paper read in that country:—
Because it is the Trade Business Journal.
Because it has a splendid news service, with twenty-two paid correspondents.
Because it deals with the practical always.
It is the only Paper which holds the attention of the man who owns the plant.
The PRINTING TRADE NEWS does not attempt to teach printers to set type, but it is the foremost authority on the latest efficiency methods, the organization activities, progress in cost system work, approved methods of printers' advertising and anything and everything that tends to make the printing business a pleasant and profitable one.
It is pre-eminently the trade journal English machine builders should use to make their product known in America.
We have good mechanics. Let us have good business men. Let the NEWS come to YOU every week. Europe $5.00 per year: Canada $3.00. 64 pages weekly.

Aldenham Institute Letterpress
PRINTING CLASSES.

An Address to Printing Students.

The opening meeting of the new Session of these classes, held at Goldington-crescent, Pancras-road, N.W., was held on Tuesday, September 23rd, when Mr. J. T. Cooper addressed the students. The chair was taken by Mr. A. Craxford (Messrs. J. Nisbet and Co.), and tea and coffee preceded the meeting. The Chairman, who is a member of the Executive Committee of the Institute, in a few brief words, introduced Mr. Cooper, who then addressed the students as follows:—

I want to say a little this evening on the demands made on students of printing, and their equipment therefor.

I was led to this on reading the syllabus of the City and Guilds of London Institute for this season. At first sight one might think the range of subjects too extensive, as tending to mere cramming to pass examinations; but I quite realise that it is no easy matter to frame a syllabus that shall give sufficient scope for the development of the brilliant student without going too far beyond the capacity of the ordinary one; and I do not see what could be well omitted. But I tell you plainly

It is no Easy Task

that is set before you. Do I say that to discourage you? Not at all. I am only too pleased in my little measure to say and to do what I can to encourage all young people in their calling—and the calling of a printer is a dignified one. That at least must have been the view of the author of the motto on our trade arms, which is, as you know, "Art preservative of all arts." Whoever he may have been it shows very clearly he had a great idea of the printers' craft. The motto may be an exaggerated expression of an enthusiast; but whether that be so or not, it is generally conceded that the craft of printing is one of enormous power. True, it is sometimes used for debasing purposes, and of this I was painfully reminded when passing through some of the by-streets of the East End recently, where poverty and dirt are rife. I noticed in the various newsagents' windows the only kind of literature offered for sale was that which appealed to the passions—indeed the rankest mental poison that could be sold. It is sad to think of the craft that boasts of such a motto as ours being used for such terrible work, merely to fill the pockets of unscrupulous men with gold.

But there are pests at times on every plant, and a watchful eye must needs be kept upon them, or the beauty and fragrance of the flower will be lost. And though there are these pests on the plant of printing (if I may use the simile), there is much that has sprung from it that has been of the greatest good, and how great has been its growth! Compare it to-day, not with what it was in Caxton's time, not even a hundred years ago, but compare it with what it was but 30 years ago. There was then no half-tone engraving (or only in an experimental stage), no Monotype, no Linotype—yet to-day they abound on every hand. These are but three of the many inventions to facilitate speed of output. They neither of them contribute much to art—though I readily admit that some excellent work is produced by the half-tone and tri-colour process. Necessarily, in the desire for speed, quality is sure to suffer. Still, in some directions there is improvement in quality, as witness the issue of the *Times* containing the printing supplement, which has since been reissued in book form. It was truly a marvellous production from whatever point of view it be regarded. But great as have been the developments of the past, we are led to expect much greater in the future, and every branch of our business must be affected, and more than ever will it be true that the weakest will go to the wall. I think the present syllabus illustrates.

The Advances that are Being Made.

It may be you have read it, but read it over again and again. Make yourselves well acquainted with it, and endeavour to follow it in a methodical way. Depend upon it those who do so will be likely to reach the goal more easily, and will not merely gain the prizes of the Guild, but will find it easier to obtain and hold a situation, such as is always open to competent men. Don't imagine that you can take all in at a glance—there is great danger in that. A lad of my acquaintance made that mistake last season. The subjects seemed so easy, and he had answered all the questions, but his answers were mostly wrong. Better to learn a few things thoroughly than to get a mere superficial knowledge of a number; I am sure they make a more lasting mpression.

The more you think over the syllabus the more familiar will you be with the demands that are made upon you. And what are they? That before you have completed your course you shall not only know your own business as a compositor (or whatever branch you may take up) but that you shall have a knowledge of type and how it is made, the methods of illustration, power, and transmission, paper and boards, and general management. In short you are to be a sort of theoretical typefounder, process blockmaker, engineer, roller-maker, papermaker, and general business manager, and after that you will be entitled to call yourself a printer—not even then an artistic printer. For that you must have a further knowledge; you must know something of that rather

Indefinable Thing Called Art.

If you go to Paris in the spring you may visit the Salon, and marvel at the exquisite sculpture, paintings, etc, there to be seen. You may then cross the road to the Exhibition by the Society of Independent Artists. The day of my visit happened to be just the time of the presidential address, and a very eloquent one it was, too, being greatly applauded by the band of canvas spoilers—the cubists, etc. Notwithstanding his eloquence, after looking at the hundreds of canvasses on view, I said to myself, if these be art, save me from art. But that motley group of men, who so lustily cheered their president, considered themselves the very best exponents of modern art.

In my early days I thought I was entitled to call myself Artistic Printer, because I flung hither and thither some base imitation of bird or beast. I soon learned my folly, and quickly dropped the term Artistic. I only wonder that we have never yet seen the sign of the cobbler something like this: "Artistic manipulator of leather"; or of the tinker, "Artistic adjuster of metals." They would be no more unreasonable than the silly claims which printers have made and are making to the title of Artistic Printers.

I think you will see how considerable is the ground you have to cover. At the same time, the more you reflect upon it the more you will be impressed with the fact that the business you have entered upon is full of educative value. But to master the subject to which I have referred, to be of any practical use, it means the taking up of a good deal of your time, and that is a very real sacrifice to young men.

But is it Worth it?

That is the question you have to answer I unhesitatingly say that it is. There are some who would make attendance at these classes compulsory, but I agree with Sir Philip Magnus, who said, "we want here willing workers, and unless a student comes to his classes of his own free will, eager to acquire knowledge, and to profit by the instruction, he is apt to keep back the whole of the class by the example of his own idleness, and to waste the time of the teacher and the public money." As I have said, the demands upon you are great, but the opportunities of acquiring knowledge that will greatly help you in your business career are, I think, a good compensation for the sacrifice you are called upon to make. But great as are the opportunities that are afforded you, they will be of no service whatever unless you are equipped to take advantage of them, and by that I do not mean equipment of material or material equipment, but to those qualifications you will need to possess in order to utilise the material equipment. That is what I want to press home upon you to-night, particularly upon those who are beginning their work here. And the equipment I refer to is this—you must be marked by perseverance, practicability and progressiveness in your work. There may be other things you need, but I am persuaded that without the three I have mentioned you will not only make no advance yourself, but you will become a dead weight to some of your companions. Therefore make up your mind steadfastly to pursue your studies.

It may be that most of you are following the calling of a printer because of circumstances over which you had no control. Some young people give early indication of the bent of their minds, and their parents may have wisdom to detect it and the power to cultivate it, but with most of us ordinary folk we give no such striking token of our ability, and then it may be a case if the blacksmith won't take us a printer will. At least it seems to be a common idea that anybody can be a printer. Mainly, no doubt, your parents, as mine, were anxious to get you something to do. For me it was singularly fortunate, for I liked it from the start and I like it still, notwithstanding the worries that are inseparable from it. The business interested me, and your attendance at these classes is some indication that it has interested you. That is

A Good Start.

And it is well to have a good start. And one of the reasons I have in coming here this evening is to encourage you to continue diligently the work of the classes. There cannot fail to be the discouragements—things will not always go as we wish—difficulties of one kind and another will confront you, but—persevere. Whatever abilities a young man

Digitized by Google

may possess, however brilliant a start he has made, he will soon be overtaken and passed if he lack perseverance. How many have attended the classes, and raised the hopes of their instructors and friends for a term or two, and then began to wane, till with an air of superiority they will tell you there is nothing more to be learned. That is no fancy picture. One such case I have particularly in mind. He was a lad who bore the same name as a gentleman well-known in the commercial world, who by dint of perseverance and ability had worked up a business from very small dimensions to one of great magnitude. The father of this lad wrote me one of the most glowing letters I have ever received of his expectations of his boy, and expressed the hope that he would acquire as much fame in the world of print as the gentleman to whom I have alluded had done in another sphere. It looked as though I had secured a genius. At my request he attended some classes under Mr. Amery's tuition. For a term or two all seemed well, but alas! what a bitter disappointment—he soon showed an indifference to his work in the office, and likewise turned his back upon the opportunities in the classes. I counselled him, I warned him that if he did not wake up he would help to fill the ranks of the workless and unworkable—and so it was. He left me at the expiration of his term, and though he got a job to start with he failed to hold it, and in the main through lack of perseverance. I take it there are few, if any, businesses in which there is not found the thorny side, and oftentimes it is the little things that disturb. I know you will find it increasingly so as you go on, for the demands upon you will increase and not diminish. But there are few businesses, I judge, in which there is

So Much to Interest.

Every tradesman employs the printer, and he expects him to know something about the business for which he prints—which means all. It is surprising what an encyclopædia people expect the printer to be, and how small one is made to feel at times through not understanding some technical terms of a business far remote from those of a printer. If you do things merely mechanically it will be a poor affair indeed. On the other hand, if you are interested in your work it will minimise the difficulties, and it may be they will be but the occasion of developing your resourcefulness, and turning into account the knowledge you have acquired in the classes.

The next item in my equipment is practicability. And you are greatly favoured in coming under the guidance of Mr Amery. I know how strong he is on the practical side. His work shows that he gives much more attention to that than do many teachers. There is still too much rule work, time-consuming, money-wasting work, though not nearly so much as was prevalent a few years ago, such as the example of which a copy has been given you this evening. It is but a fair sample of much that was in vogue from 25 to 30 years ago. I thought some of you might be interested in it. This particular specimen won a prize in a competition, and the promoters stated that their object was "to show what can be done by the simplest means and without any waste of time with

Brass Rule and a Pair of Shears."

And in commenting upon it the editor of the journal which promoted it said, "the job is well executed, ingeniously designed, and carefully finished, and it stamps Mr. ——— as being something more than an ordinary printer." Now the ingenuity is unquestionable, and the perseverance it required one may admire, but whatever practical value could attach to such a piece of printing? So I counsel you to add to your perseverance practicability. The worthy printer of this specimen was as much at sea as were the vessels he has indicated, made of shilling marks, full points, and rule. Those shears! those mischevious shears! which would not only cut the rule, but would cut the profit too. Then look at the resourcefulness; not only are letters turned head to head, and foot to foot, but more appalling than all, you will notice the heavy border is composed of type standing on its head. And all that is called "simplicity."

In this institute, as in most of the excellent places under the supervision of the County Council, are a capital supply of labour-saving devices—all with the view of enabling you to do work of the most practical kind. Even that is not without its drawback, and the drawback may be that having the good things to handle here you may become dissatisfied with your daily fare. But try and reflect on the different conditions under which your employer labours. However well-intentioned he may be, and desirous of using up-to-date material, he cannot have everything to hand in times of rush, which are common to us all. I know full well there are badly-equipped offices, and I do not excuse it, but

Make the Best of Your Surroundings

for the time being, and doubtless an opportunity will later open out to you more congenial to your modern ideas. Don't sigh unduly after the latest types and borders; it may be a blessing in disguise that you are limited. I speak more particularly to those just beginning their career. Study the examples of work that come before you. I have found it deeply interesting during the whole of my printing experience. There will be much to inspire you, and to convince you what a variety of effect can be gained by simple means. Last year's book of specimens produced here pleased me greatly, and I went through it a number of times. I would not confine you to one style; some would almost expel everything but Caslon Old Face and Black Letter. Even the popular Cheltenham is disapproved of by the ultra-Caslon school of printers. That the Caslon wants a lot of beating I readily grant you, but in these days of gigantic advertising, the advertiser will have variety, and there are some who will not admit of Caslon Old Face at all. I had such a case quite recently—the customer refusing to take the work, because, as he put it, the letters were not all level! On the other hand do not indulge in the flighty style of fancy printing, with lots of meaningless pieces dropped in here and there just to fill up space; it is dangerous both to the pocket and reputation. I am free to press this practical side, inasmuch, as in my wildest notions of what was artistic in my youth, I nearly always built up on the square, and in the competitions for which I entered I each time got full marks for practicability. It is over 40 years ago since my first competition, and you will be interested to know that I then came top but one. The reason I occupied such a distinguished position was probably owing to the fact that there was only one other competitor. However, my effort was considered so good that I got a consolation prize. There is less need than ever to-day to resort to the rule and lead-cutter. The typefounder has every facility for doing the work so much better than the printer can possibly have. I, therefore, wish you to see that your work is marked by practicability. The point system is a great advantage in that direction.

Now as to Progressiveness.

It might be thought that if a man were both persevering and practical in his work he would of necessity be progressive. That is not so. And many an example could I give to prove it. By progressiveness I mean the facility of readily imbibing new ideas and seeking opportunities for testing them. Not that everything new is good, any more than everything ancient is bad. But the man who is content to do things the old way merely because he has always done it so—and there are many such—is the man that is lacking in progressiveness, and however persevering he may be, he will find himself left behind.

When I commenced business, the first member of our staff I engaged was an errand boy—for some days I could comfortably do all the rest. Those were the early days of the School Board, when inspectors, if there were any, were not very numerous, and attendance at school was not difficult to avoid. I found my new assistant could neither read nor write—he having been brought up on a barge. His father had recently died, and the mother was left to bring up her family as best she could. The boy took things seriously, and made up his mind to learn to read and write, and attended a night school for the purpose. This effort was rewarded with success. A few months later we put in a platen machine, which was then just coming into general use This afforded an opportunity that the boy greatly desired. He showed great aptitude for the work, and as our business grew he grew with it, till in due course he became the foreman of our machine-room, remaining with us for a period of 25 years, when he left to go into business for himself. He was the best all-round machinist I have ever met—being persevering, practical and progressive. He was never too conceited to receive a suggestion of a better way, and he was delighted with anything he could come across in trade literature, and to put things to a practical test. That's what I want you all to do. There is

Room for You All

in some of the higher departments of the business, I am persuaded. Of course there will be what one may term the rank and file, who will be quite content to jog along without any regard for the continual changes that are taking place. But because they may have an apparently simple and see-saw kind of work to-day, it is no guarantee that they will hold it continuously. No. It is a dangerous position that is occupied by a man who is not progressive. And the same naturally holds good for every one of us. We must all be prepared to adapt ourselves to new circumstances. And there is one thing that pleases me much, and that is that you are to receive a different tuition from the past in general management, which involves instruction in proper costing. If I have deplored one thing more than another in regard to the technical classes, it has been the lack of uniformity in framing estimates. Some of the books which have been used are worse than useless—they are positively misleading. But at last the employers have been awakened to the need of progressiveness. A great many have come to realise that the demands upon *them* are quite different from those made upon their forefathers, and it is encouraging to hear of the large number of printers who are paying more attention to real costs. Hitherto it has been chaotic, now it is to be more scientific. Not that any system can be evolved that will give exactly the actual cost of every job, but that which has been formulated by the Costing Committee of the Master Printers' Association gives

A Solid Basis to Build Upon.

There are some, I regret to say, who treat the question with indifference, and who appear to look upon those who are leaders in the campaign as mere faddists. But it is not the work of faddists, I assure you, but the result of much thought on the part of men who know so well the evil of reckless cutting. And to none is gratitude more due than to Mr. W. W. Fox, who some ten years ago set the ball rolling. It is well the employers should show by example to you younger men that the methods of the past will not suit the present—there must be continual advance. It is so not only in our own business, but in every business, though the changes are not so great and so rapid in

every business as in ours; it therefore calls for the greater diligence.

In closing I would appeal to you—to the youngest as well as to the oldest, who have commenced so well, and in view of the demands that will be made upon you in the future—be persevering in your studies, be practical in your work, and be progressive in your ideas, and I have no doubt that a recompense will be yours.

The Chairman emphasised the excellent advice laid down by Mr. Cooper, and very briefly and to the point pleaded for a sustained attendance at the classes, pointing out the advantages of continued effort.

Mr. W. H. Amery, the responsible instructor, then dealt with class matters, and also referred to the early days of Mr. Cooper, how to a large extent he could appreciate and feel for all anxious to succeed, as so many of the difficulties that confronted them had been also met by him and overcome.

Perhaps the most longed for part of the programme was the announcement by Mr. Cooper of the prize winner in a competition in which he had been requested to act as judge. The admirable manner in which Mr. Cooper gave the reasons for his award, and the skill with which he criticised the specimens, giving sound helpful reasons why this was in advance of the other, called for loud and continued cheering.

The reputation of Mr. Cooper as a printer and judge in competitions of this nature is well known, and in this case the students fully recognised the decision as coming from one who in every way knew all the points shown in each job. In deciding the first place Mr. Cooper stated that after he had made up his own mind he called his overseer to have his opinion, the result being a slightly different decision. Appreciating the merits of this second decision, he finally decided to fine himself half-a-guinea, and award same to the one selected by his overseer. Mr. Cooper manfully stuck to his own selected first prize, a decision which had been anticipated by the teaching staff.

A hearty vote of thanks to the lecturer and the chairman brought the meeting to a close.

In connection with the meeting, and to fill the gap between the tea and coffee and the address, a small exhibition was held. The following firms kindly helped in supplying valuable information to the students: Messrs. John Kidd and Co., who sent a fine collection of dry colours and oils to illustrate ink making, also a representative to explain; Messrs. Dixon and Co., and Messrs. John Dickinson and Co., for samples, etc., showing a stage in paper-making; Messrs. J. Haddon and Co., who also sent a representative to explain type-founding; and the Principal of the L.C.C. School of Photography, who sent blocks, etc., to illustrate the processes in line, half-tone, and photogravure.

Diaries for the Office and the HOME.

Interesting Specialties for 1914.

Every conceivable purpose for which a diary or pocket book could be used seems to have been thought of, and cleverly provided for, in the splendid series of these publications now issued by the old-established firm of Charles Letts and Co., 3, Royal Exchange and Southwark-bridge-buildings, London, S.E. These publications are steadily growing in popularity year by year, the diary circulation having now reached the high figure of 1,090,182. A characteristic and much appreciated feature of these diaries is the Self-Opening Memo. Tablet, a simple contrivance by which the diary always opens at the place in use, whilst memoranda written on the tablet are brought prominently under the eye, and as soon as attended to may easily be removed by a moistened rag or sponge. Another prominent feature is the Accident Insurance Coupon, first introduced in 1895, 200,000 registrations being effected in connection with these publications annually, and over £20,000 having now been paid in claims. The compilation of Charles Letts's diaries is under the immediate supervision of Mr. Letts, than whom, it is safe to say, no one has had greater experience, and to each and every detail of manufacture the greatest care is given. We notice in the catalogue of the diaries all the old and well-known editions are retained, with various improvements as experience has suggested embodied in them. Messrs. Charles Letts and Co. have again made arrangements whereby the trade are enabled to accept registration fees from customers wishing to insure under the coupon given with their diaries. This convenience, while appreciated by the public, is of little trouble to the stationer, and materially increases his profits on the sale of the diaries.

The Office and Scribbling diaries possess many commendable features; the information they contain is strictly accurate, the paper really good, the blotting thoroughly absorbent and of good substance, and the binding of great strength. They are in folio, quarto, large 8vo., post 8vo., and crown 12mo. sizes, and range in price from 6d. to 5s. each, or bound in cloth and interleaved with blotting, up to 7s. 6d. and 8s. 6d. each. No. 8¼ is a handy little 1s. octavo book with three days on a page, containing 28 pages of calendar, postal and other useful information, with the diary pages ruled for cash columns, and at the end a monthly cash account with one page to each month and annual cash summary. The Special Popular editions are very serviceable lines. No. 64B is a shilling folio diary (12⅞ by 8 inches) with three days on a page, interleaved with blotting, and several pages of useful information, including a trades and professional directory. No. 67B is another folio diary with seven days on a page, interleaved with blotting, to sell at 8d. No. 91 is a royal upright 8vo. diary (12¼ by 4¾ inches) having one day on a page, and retails at 1s. 6d. No. 273B is a quarto diary (10 by 8⅛ inches) showing three days on a page, interleaved with blotting, and sells at 1s. 6d. Nos. 481 and 483B are large 8vo. editions, known as the "Cheapest on Earth Diary." The former has one day to the page, and the latter three days on a page and interleaved with blotting. Both are cloth bound, and are certainly good value for 1s.

Charles Letts's pocket diaries are in great variety. They are arranged with one, two or three days on a page, or a week in an opening. No. 21 and 22 measure 5⅛ by 3¾ inches, the former with one day on a page to sell at half-a-crown, and the latter with two days on a page, to sell at 2s. Both are handsomely bound in leather, with round corners and gilt edges. No. 25 is a neat little waistcoat pocket diary, measuring 3 by 2⅛ inches, with three days on a page, and bound in leather with round corners and gilt edges is a cheap little diary for 1s. Nos. 26 and 27 are two 1s. diaries with a week in an opening, measuring 4⅛ by 2¾ and 4⅛ by 3⅛ respectively, bound in leather in similar style to the foregoing. The end-papers to these are unusually attractive, being sepia collotype prints of Moore's famous classical figure studies. The Peerless pocket diaries are beautifully finished and fitted with back loop pencil. No. 500F is a three days on a page diary measuring 3 by 2⅛ inches, and bound in leather with gilt title and gilt edges, it is good value at 1s. Some diaries bound in Pluviusin, the new art leather cloth, look very nice, and are said to wear excellently. No. 26T is a week in an opening tuck diary measuring 4⅛ by 2¾, and is priced at 1s.

The "Specialised" diaries are a fine line, appealing to a great many interests. There is a shilling Season Ticket Case and Diary or Note Book, composed of solid leather card and stamp pockets, an oval on the front with transparent celluloid cover showing the season ticket through. The Quarterly Concise Diaries are very thin and portable. There are also Lock-up diaries, Thumb diaries, School-boy's diaries (containing information and tables helpful for a schoolboy's work and games), a School-girl's diary, the Boy Scout's Notebook and Diary issued under the direction of Lieut.-General Sir Robert Baden-Powell, K.C.B. (the official handbook of the Boy Scouts, and containing a mass of useful information), the Girl Guide's diary, the Scoutmaster's Pocket Book, the Scientist's Reference Book and Diary, the School Teacher's, the Gardener's, the Poultry Keeper's, and the Nature Lover's diaries, etc. The great success of the "Gardener's," "Schoolboy's," "Scout's," and similar diaries show how popular and useful these "specialised" editions are.

The firm also issue an artistic little tablet diary, containing a week on a page, with Sunday Lessons and monthly almanac down margin, printed in antique style. On the front is a nice reproduction of a favourite picture. The size is 8 by 6⅝ inches, and it is catalogued at 1s. Blotting pad diaries, daily memo. calendars, perennial and biennial calendars, loose-leaf note-books, etc., are among other of the many similar lines shown in Messrs. Charles Letts's illustrated catalogue.

The late Mr. James Stephen Jeans, editor and principal proprietor of the *Iron and Coal Trades Review* and the *Foundry Trade Journal*, has left estate of the value of £43,213.

Printers' Managers and Overseers ASSOCIATION.

BIRMINGHAM AND DISTRICT CENTRE.

The Winter Session opened on Saturday, September 20th, with a lecture on "Esperanto, its Aims and Ambitions," by Mr. J. T. Taylor, one of the members of this Centre, and it proved a very successful evening. The following is a summary of Mr. Taylor's interesting paper:—

Mr. TAYLOR, in introducing his subject, said his endeavour was to tell his listeners, in as interesting a manner as possible, what Esperanto was, and to give them some little idea of the progress it had made during its 26 years of existence. He did not agree with the answer to a correspondent in a newspaper, "No; Esperanto is *not* a patent medicine"; he thought it an excellent medicine, and taken in large doses the mixture not only cleared from our brain many erroneous ideas about foreigners, enabling us to see them from the standpoint rather of fellow creatures, but it cleared our vision somewhat in regard to a few of the glaring inconsistencies of the English language. It was a neutral auxiliary language for the use of the whole world, a simple and logical means of international inter-communication.

Having spoken of the need and value of an international language for those who travel in different foreign countries, and the unsuitability of English or any other modern national language for that purpose, the lecturer said that the only possible solution of the problem was the adoption of a language that was neutral, simple, logical, flexible, and expressive, and one that could be spoken with facility and accuracy by the natives of every civilised country. He claimed that Esperanto combined all these varied advantages. In explanation of the apparently slow forward movement of Esperanto, Mr Taylor reminded his hearers that an artificial language, the result of human theory and ingenuity, must necessarily have a slow growth. He then gave a brief account of the foundation of Esperanto, as representing the life work of its founder, Dr. Louis Lazare Zamenhof, a Russian oculist. He traced the birth of the idea in the mind of the young Russian, the great difficulties he had to surmount, his early struggles and failures, and ultimate success as the result of his determination and perseverance. A National Association for Promoting Esperanto was formed in France in 1898. In 1902 the United Kingdom took it up seriously, and in 1904 the British Esperanto Association was formed, Spain forming their Association the same year. The first International Esperantist Congress was held in Boulogne in 1905, and was an enormous success, these congresses now forming a hardy annual, a different country being chosen each year as the scene of operations. England held its Congress in 1907 at Cambridge, 30 nationalities being represented.

Mr. Taylor then proceeded to explain why Esperanto was so much easier to learn than other languages, in the course of his remarks stating that a complete grammar of Esperanto, a list of prefixes and suffixes, and a vocabulary of 1,891 root words could be bought for a halfpenny, and this little book was published, he believed, in sixteen different languages. The Grammar of Esperanto was so short that it could be written on a post card; it was so simple it could be memorised in two or three hours. It was governed by 16 short rules, which never varied. The alphabet consisted of 28 letters, each letter having one sound, and one sound only. The language was phonetic, every word being pronounced exactly as it was written. There were no silent letters. There was no indefinite article, and only one definite article, la (the), identical for all genders, cases, and numbers. All nouns ended in *o*, all adjectives in *a*, and all adverbs in *e*. There are only 12 different forms of verbs, and their past, present and future tense are formed by the simple alteration of one letter. The accented syllable is always the last but one, and there is very little syntax to be learned. The number of root words to be learned are, comparatively speaking, very small, all other words being formed by the use of prefixes and suffixes, of which there are only 31. There are no idioms in Esperanto.

Speaking of the real utility of Esperanto, Mr. Taylor specially referred to the essential need of a common language at international scientific congresses, and enlarged on the value of Esperanto in this connection, drawing a parallel between the conditions prevailing at the International Peace Congress, in London recently, where speeches were delivered in several languages and were translated in a "more or less accurate summary," and the International Esperanto Congress in Berne, where over 30 nationalities were represented and only one language was used, with no difficulties, no waste of time, and no translators. Having drawn attention to the increasing number of large commercial houses who regularly use Esperanto, and the ever-increasing number of magazines being published in the language, the lecturer showed how extensively it was being taught, both in this country and on the Continent, and pointed out its educational advantages to children.

At the close of the lecture a hearty vote of thanks was accorded Mr. Taylor for his instructive address.

Costing Campaign.

Progress in Peterborough and Wisbech.

The conditions in the printing trade in Peterborough were very similar a few months ago to what they are in several other districts; many engaged in the industry were not acquainted with their neighbours, and jealousy and suspicion was the outcome of this lack of knowledge. A successful attempt to form an association of master printers was made in May last, and in June a Costs Conference was held and since that date fifteen meetings have been held, and the other day, on the occasion of a visit from Mr. Goodwin, the Secretary of the Costing Committee, ten out of eleven of the printers of the city assembled and discussed intimate business matters in a most frank and friendly spirit. Mr. J. Cooke, the President, has taken great interest in the new Association, and Mr. J. Wood has displayed such energy and enthusiasm in the work that he has earned the reputation of the "Printer's Friend" of the district.

It was reported at this last meeting that several printers had installed the system, and were deriving considerable benefit from it, whilst others were collecting information preparatory to working on the lines suggested by the Costing Committee. Those who had not worked out their own figures had accepted the findings of some of their neighbours and were basing all estimates on uniform rates for composition and machining. As a result it had been found necessary in many instances to increase prices at least 25 per cent. to cover actual costs. Thanks to the loyalty of the members, this had been done without the loss of a single customer. One instance was quoted where one job which had been done at a loss for years at £30 was this year being charged at £60, which only barely covered actual cost.

Mr. Goodwin congratulated the members on the progress made and urged them to help in organising the printers in the surrounding district.

A visit was subsequently made to Stamford, and encouraging results are anticipated there.

A meeting was also held on Tuesday last at Wisbech, when Mr. Hearn, of Messrs. Baldwin and Mansells, presided.

Mr. J. S. Stephenson read letters expressing sympathy with the movement from several who were unable to be present, and also delivered a most interesting address giving the history of the costing campaign and quoting the example of Peterborough as one they should follow.

Mr. A. E. Goodwin gave a carefully arranged address in which he outlined the Cost-Finding System and showed how it could be applied to businesses varying in size and character.

Mr. J. Wood spoke of the practical results he had seen obtained from costing and co-operation.

Mr. Burrell expressed his interest in the proceedings and promised to support the movement, and Mr. Poyser and Mr. Collingwood also supported a resolution approving the system and appointing a sub-committee to take further steps to organise in the district.

Institute of Printers and Kindred TRADES.

The Printers' Cost-Finding System Explained.

Having begun with the master printers, at the Kingsway Congress, the Federation of Master Printers' Costing Committee have vigorously prosecuted their costing campaign up and down the country, and in London have given special expositions of the Cost-Finding System for the small printer, the Printers' Managers and Overseers Association, and the instructors of printing classes. Last Wednesday evening members of the Committee attended a meeting of the Institute of Printers and Kindred Trades of the British Empire, at the St. Bride Foundation, and "The Printers' Cost-Finding System" was fully explained by Mr. W. Howard Hazell, and Mr. C. Herman Lea and Mr. A. E. Goodwin also addressed the meeting. Mr. H. J. Goss (Chairman of Council) was in the chair, supported on the platform by Mr. W. Howard Hazell, Mr. C. Herman Lea, Mr. C. J. Drummond, and Mr. A. E. Goodwin (organiser and secretary to the Costing Committee), and there was a good attendance, many men well-known in the printing and allied trades being seated amongst the audience.

The Chairman, having apologised for the absence of the President of the Institute, Sir George Riddell, said they were there to listen to the exposition of a system of cost-finding that had long been wanted in the printing trade. He doubted whether the members of the Institute had ever met to listen to and discuss any question that was fraught with more momentousness, because the accuracy of their costing and estimating must be the basis on which the ultimate success of the printing world depended. It was his privilege to attend the first costing congress in Kingsway in the early part of the present year and no one who was present could fail to appreciate the enthusiasm evoked at that meeting. It was doubtful whether any question had ever stirred the printers of this country so much. Since that memorable meeting, in every part of the kingdom—north, south, east, west, Scotland and Ireland—the same degree of interest had been aroused, and he was pleased to add the same degree of enthusiasm. Thousands of master printers throughout the country had met together to discuss this vital question. He would say at once that upon the question of costing he was himself

A "Whole-Hogger."

It had been practically the same burning question throughout the whole of the printing world. In America, where competition was just as silly as it had been here, they had had some five years of this costing question, and he believed they had gripped the matter with the usual Yankee thoroughness. Next month they would hold what he believed was their fifth congress, with the result that there was hardly a printer over there that was not better and richer for it. It was an equally burning question in our colonies, especially so in Australia, where our young colonists were tackling it in the way one expected from the vigour of youth. In commercial Germany they had also thought it necessary to go in for a costing question. Going one step further north they saw that only as recently as last month Sweden had gone in for a costing congress, with the idea of bringing forward a costing system if not exactly on our own lines, on one which they hoped would be satisfactory to themselves. He had heard it said that a costing system

Would not Kill Competition.

He had never heard anyone yet have the temerity to say that it would. For his own part he would be sorry if it did, because he considered competition was the salt of business. There was a competition in equality, a competition in service; there was also a competition in ideas—all of them legitimate. What the costing system would do was to go a long way towards preventing competition killing you; it would help to stop that constant striving to get more work, always more work, whether it paid or whether it did not. He knew perfectly well that figures would not get them any business, but they should prove to them whether it was remunerative. When they got such a system as this into general use they could not fail to get a greater uniformity in prices, and there would be fewer estimates asked for. In that way they would kill not competition, but price-cutting, to the mutual advantage of themselves and their employees. Having expressed his strong belief that the printer deserved a higher remuneration for his labour than at present prevailed, Mr. Goss remarked that the

Regeneration of the Printing World

could only come about by a combination of two factors: a knowledge of costs and co-operation amongst employing printers. That was what had saved America, and he thought that was what would save British printers. Mr. Hazell would demonstrate to them the former, and the latter rested with themselves. If these cost congresses achieved nothing more than to cause the printers of this country to get together, compare notes and combine, they had justified their existence, but he had no doubt in his own mind that the ultimate result would be to elevate the whole industry on to a higher plane. Concluding, Mr. Goss called attention to the St. Bride Institute Printing Classes, to the curriculum of which cost-finding would form a regular feature in the examinations of the future. It was a subject on which too much light could not be thrown, and it was just as well to train the young mind in the way it should go. (Applause.)

The Costing Committee.

Mr. C. Herman Lea then addressed the meeting on the subject of the formation of the Costing Committee. The Master Printers' Association, he said, decided to appoint a committee to consider the question of costs. They knew there was a number of printers who were enthusiasts on the subject, and had taken it up in their own offices with considerable advantage. A committee was chosen entirely of men of this character, who it was thought would be able to formulate a system which might be of very great general benefit. With regard to his own firm, it was nearly ten years since they came to the conclusion that it was absolutely necessary that they should reorganise their method of costing, and put in a sound costing system. It meant, as the installing of a costing system will mean to any firm, a considerable amount of thought and work. However enthusiastic and good the men might be who surrounded one in an office, there was always a certain amount of—passive resistance he was going to say, but resistance to new ideas; there was always some difficulty in getting up any enthusiasm for a new system—and costing systems ten years ago were not thought so much about as they had been in the last year or two. Although it took him two years to study the various systems in England and America and get a new system put into their own place, it was an immense benefit. He did not know of any two years' work he had ever done that had been of greater benefit either to himself or his firm, not only from a financial point of view but through the very great ease and comfort which it instilled into the whole system of one's business. For that reason he thought those who had not a sound costing system need not be afraid of the work entailed in putting one in, for they would be amply rewarded. In pointing out some of the benefits of a costing system, Mr. Lea mentioned the jobs that did not pay which, through an accurate costing system, came home to one very definitely, and when they came up to be priced, they kept them in mind and turned them over and over in their minds until they found very often there was some way of saving on them. The decided benefit of a sound costing system was not only his own experience but that of every one of the members of the Costing Committee, and what had proved a benefit to them must prove a benefit to other printers.

The System and its Benefits.

Mr. W. Howard Hazell then gave his lecture explaining the Federation of Master Printers' Cost-Keeping System, which he has delivered at so many meetings now all over the country. On this occasion, in addition to diagrams on the walls, the audience had the further advantage of a batch of printed forms in their hands adapted to suit the requirements of a small business. Incidentally, Mr. Hazell explained that the Costing Committee did not know what the individual printer's costs were, but they were giving him a skeleton by which he could instal the system and find out what his own costs were. He explained how essential it was that the printing trade should have a uniform standard hourly rate, and among the benefits the system brought about, he said it aided efficiency, it checked mistakes, it conduced to greater uniformity in their prices, and as a result printers would be able to make reasonable profits, their worries would be lessened, and the trade as a whole would be in a much more healthy state than in the past. Having described the dockets and work sheets, questions were invited and Mr. Hazell was plied with these in plenty, and he always had a ready and complete answer. He then concluded his address by describing the hourly units in the machine-room and in the binding-room.

Progress of the Costing Compaign.

Mr. Goodwin then gave an account of the Costing Campaign throughout the country. He spoke of the remarkable stillness and intent way in which printers throughout the country had listened to the explanation of the System. He had found unanimity on one point, and that was that there was something wrong in the printing world; there was great dissatisfaction with the conditions everywhere. But he also found that printers throughout the country were coming to see there was a way of uplifting the whole trade, and he believed there was good ground for this optimism. Progressive printers were thinking out this cost problem and were working at it. Every day he got letters asking questions on various subjects connected with it. They had circulated 5,000 copies of Mr. Hazell's booklet explaining the System. He appealed, in conclusion, for assistance from those printers who had realised the value of the System, in securing its general adoption.

Mr. Geo. Eaton Hart moved a hearty vote of thanks to Mr. Hazell and Mr. Lea for their addresses on the important question of costing. Most of them, he said, had had costing systems of their own, and he had been vain enough himself in years past to think his own costing system was the most perfect they could have, and generally, like others, he had been able to find whether they were making a profit or a loss. This was his first attendance at a costing meeting, although he had been watching the papers acutely to see the movement's progress, and he had certainly been struck with

The Simplicity of the Methods

recommended to them. The one great thing about it all was the fact that it promised to bring uniformity of prices as well as enabling them to find out what was the cost of the goods they were selling. The uniformity of charging amongst printers was of greater concern probably than the cost, but if it secured both, then he thought they ought to be doubly grateful to Mr. Hazell who had taken such wonderful pains over this matter, and to Mr. Lea, both of whom had so lucidly explained the whole system to them that night.

Mr. A. Langley said, as a member of the Master Printers' Federation and of the Institute of Printers, he seconded the vote of thanks with much pleasure. He thought the best thanks they could show to the two gentlemen would be to go to their respective works and instal the cost system forthwith. Referring to Mr. Hazell's visit to the United States shortly, he said he deserved a good holiday after his arduous work, and they wished him a safe and speedy return to be amongst them once again.

The motion was cordially carried, and Mr. Hazell briefly replied, remarking that he was going to the birthplace of the cost-finding movement to let them know how we were following in their footsteps, and hoped soon to beat them.

Messrs. J. G. Schelter and Giesecke, the well-known typefounders of Leipzig, are continually issuing fresh specimen books of their extensive range of types for printers, and the latest is a volume of 150 pages showing a remarkably varied selection to select from. There is a fine range of German texts, romans, italics, scripts, and display types, together with a selection of borders, ornaments, initials, etc., some of which are adapted for colour work. The book is neatly bound in a limp green cloth, with gilt title, and it is a volume that should be in the possession of every printer who desires to know where to procure good type faces.

During 1912 the United Kingdom exported to Japan stationery of the value of £33,516, compared with £26,417 in 1911, £26,398 in 1910, £22,697 in 1909, and £22,347 in 1908.

Trade Notes.

THE death is announced of Mr. James Edward Stewart, the golfing representative of the *Scotsman* for the past 15 years.

SIR THOMAS VANSITTART BOWATER, a partner in the well-known firm of paper-makers bearing his name, was on Monday formally elected Lord Mayor of London in succession to Sir David Burnett.

ON Saturday the *Freeman's Journal* published its third Jubilee number, having been founded in 1763. The issue of Saturday consisted of 40 large pages, comprising 320 columns, and is 132 times the size of its first issue.

IN response to a demand for an increase of wages by the compositors of Wrexham, the master printers have decided to pay an additional 2s. per week, with an advance of 2d. per hour for overtime. The new rates are to begin on January 1st next.

A MEETING of the committee of the North-Eastern District of the Institute of Journalists was held at Sunderland, on Saturday night, when a motion was adopted expressing the district's appreciation of the action of the Institute's Council in protesting against Lord Wolmer's unfounded accusation against certain reporters of having misrepresented him.

MESSRS. GEORGE MANN AND CO., LTD., are offering for sale a large number of up-to-date lithographic and letterpress machines, including an eight-crown rotary litho press, by L. and M., a quad-demy flat-bed, by Furnival, quad-crowns, by Mann, Furnival, and Ratcliffe, and a number of machines of various sizes by other well-known makers. Most of these may be seen in Messrs. Mann's London show-rooms, Henry-street, Gray's-inn-road, W.C.

LORD NORTHCLIFFE spoke at a Canadian Club luncheon in Toronto last week, and in the course of his remarks, speaking of newspapers generally, defended them from the sweeping charges of sensationalism, as, for example, the statement that newspapers fomented war. This was untrue. Newspapers lost too heavily by wars to desire them, and they were, in fact, a great aid to peace. Had newspapers been able to give publicity to what was now known of the plans and preparations for the Balkan war, this would not have taken place.

MESSRS. GRANT, LEGROS AND CO., LTD., makers of the Davis Typecaster, have made arrangements with Fry's Metal Foundry, 25-30, Holland-street, Blackfriars, S.E., to supply their customers with two standard quality metals at a moderate price based on the current market price of metals. After systematic and exhaustive experiments made by the firm, these two metals have been found to give the very best results over the whole range of type cast on the Davis Typecaster. Fry's Metal Foundry guarantee these metals to be of standard quality and in accordance with Messrs. Grant, Legros and Co.'s formulæ, and hold large stocks of both metals ready for immediate despatch to customers.

TENDERS ACCEPTED.—For printing and stationery for the Epsom Union, W. Pile, Ltd., Sutton. For printing for three years for the Liverpool Corporation (recommended for acceptance): Contracts 1, 2, 3, 4, 6, 7, 8, and 9, C. Tinling and Co., Ltd., Victoria-street; 5, W. B. Jones and Co., Ltd., 20, South Castle-street; 10, Liverpool Printing and Stationery Co., Ltd., Mercer-court, Redcross-street. For printing and binding 2,000 copies of a handbook to the British bird gallery in the museum, for the Liverpool Corporation, C. Tinling and Co., Ltd., Victoria-street, Liverpool. For printing the burgess roll and parliamentary and parochial registers of Rochdale for the Corporation, W. Scott, *Observer* Office, Rochdale.

SPECIAL EXHIBIT OF L. AND M. MACHINERY.—For the convenience of printers in the West of England and South Wales, Messrs. Linotype and Machinery, Ltd., have opened show-rooms at 2, Star Assurance-buildings, Tramway-centre, Bristol, and are showing there the latest models of Linotype machines and the Miehle and Centurette printing presses. A staff of expert operators are in attendance daily from 10 a.m. to 6 p.m. and on Saturdays 10 a.m. to 1 p.m. The show-rooms will remain open until November 21st. The District Representatives, Mr. H. Burtles (for Linotype) and Mr. S. J. Vezey (for printing machinery) will be pleased to meet any of our readers, and to give all particulars desired concerning the Autoplate, Junior Autoplate, Metropolitan Rotary Press, Duplex Tubular-Plate Press, L. and M. Litho Rotary for direct printing, L. and M. Offset Litho Rotary, L. and M. Die Press, L. and M. Automatic Metal Furnace, and any of the other machines manufactured by the company.

THE death is announced of Mr. William Spooner, head of the machine department of the *Glasgow Evening News*.

THE late Mr. David Hills, of Messrs. Hills and Co., Ltd., fine art publishers, has left estate of the value of £35,437.

WE understand that Messrs. McCorquodale have secured the goodwill of the printing department of the Army and Navy Stores. This department of the stores has for many years employed a staff of about 200 workers.

THE United Kingdom imported stationery to the value of £2,493 in 1912 from the Netherlands as against £9,032 in 1911, £6,082 in 1910 and £6,230 in 1909. The exports of British stationery to the Netherlands were as follows:—1912, £25,513; 1911, 30,370; 1910, £27,302; 1909, £26,133; 1908, £27,577.

MESSRS. E. S. AND A. ROBINSON, printers, Bristol, who employ two thousand workers, have given notice to their hands that they will be paid, as the result of a profit-sharing scheme, sums about equal to two-and-a-half weeks' wages. The payments will be made at the end of this month.

DISSOLUTION OF JOINT STOCK COMPANIES.—A notice appears in the *London Gazette* for the 23rd inst., to the effect that at the expiration of three months from that date, the following companies will, unless cause is shown to the contrary, be struck off the Register of Joint Stock Companies, and thereby dissolved:—

Burlington Advertising Agency, Ltd.
Colonial Press Agency, Ltd.
Engineering Digest Publishing Syndicate, Ltd.
Middlesbrough and District Bill Posting Co., Limited.
Universal Press, Ltd.
Yachting Publications, Ltd.

TENDERS WANTED.—For executing printing and supplying stationery, books, etc., for three years for the Corporation of Sunderland; particulars from the Borough Treasurer, Town Hall, Sunderland. For the whole or portions of the printing and stationery required by the Corporation of Oldham; also for printing the annual abstract of accounts for the Finance and General Purposes Committee; details may be obtained from Mr. J. F. Lees, borough treasurer, Greaves-street, Oldham. The Corporation of Southend-on-Sea invites tenders from printers (other than printers of local newspapers) for the printing of the minutes and reports of the Council; particulars from the office of the Borough Accountant, Clarence-road, Southend-on-Sea.

THE death took place, last week, at New York, of Patrick Ford, a well-known Irish Nationalist, who spent a portion of his career in journalism. He began life as a printer, and while still in his teens he started an anti-slavery paper called the *Boston Sunday Tribune*. When the American Civil War broke out Ford enlisted in the Northern Army. The war over, he returned to journalism, and founded in New York the *Irish World*, which he conducted with success for forty-five years as a wild and energetic opponent of the English Government of Ireland, and took a leading part in all organisations for the "freedom" of Ireland. When the Land League of America was founded, and a fund started (1880) for the support of the movement in Ireland, the *Irish World* became the principal channel for the passage of money and $342,000 were remitted through the paper to Ireland during the years 1880-82. For some years his paper advocated the dynamite propaganda, the blowing up of London, and so forth. He praised the Phœnix Park assassinations, and started a fund to procure the escape of O'Donnell, who shot Carey, the Phœnix Park informer. When the project of a rescue proved impracticable, the money went to the erection of a fine monument to O'Donnell in Glasnevin Cemetery. Ford was a modest-looking little man with a quiet unobtrusive manner. "He was probably the only man," said Mr. William O'Brien, "who ever exercised any considerable influence over the Irish race, who never made a public speech, and shrank from the platform as from a pillory."

The Bookbinders' Strike.

Although it is now the seventh week of the strike of Messrs. J. Burn and Co.'s employees there is, as yet, no prospect of a settlement. Since our last issue several more publishing houses in the metropolis have agreed to the conditions of the National Union of Bookbinders and Machine Rulers not to send any more of their work to Messrs. Burn and Co. until the strike is ended or a settlement arrived at.

We understand that last week the representatives of the Master Printers' Association, at the request of the Printing and Kindred Trades Federation, had an interview with Messrs. J. Burn and Co., who are members of the Association. The situation was discussed at length, and it was suggested that there might be a common ground for a meeting between the organisations concerned. Eventually it was arranged that Mr. Bowerman, M.P., the president of the men's federation, should confer with Messrs. J. Burn and Co., but as that gentleman is absent from England for a few days Mr. A. E. Holmes, secretary of the National Printing and Kindred Trades Federation, called upon the firm in connection with the dispute on Thursday last and had an interview with Mr. Mercer, of Messrs. J. Burn and Co. The situation was discussed at some length, and, though no definite result was arrived at, it is hoped that a conference may yet be arranged between Mr. Mercer, Mr. Holmes, and representatives of the federated committee of the men's unions.

On Saturday a demonstration organised by the National Union of Bookbinders marched through Esher to Hersham-green, where a meeting was held. Here speeches were made to the following resolution: "That this demonstration, composed of members of the National Union of Bookbinders, Machine Rulers, and of the Printing and Allied Trades, calls upon the workers employed at Messrs. J. Burn and Co.'s, Royal Mills, Esher, to join hands with their craftsmen, both men and women, by joining the National Union of Bookbinders and the women's branch of the Printers' and Warehousemen's Union, which will speedily crown our efforts with success, to establish fair conditions of employment for all engaged in the bookbinding industry."

The strikers are still holding daily meetings in Kirby-street, and the men are receiving strike pay at the rate of 25s. per week. The members of the trade who are in work paying a levy of 1s. 6d. per week per man. An incident of the strike is that the union binders in a small "open" shop had to be discharged for refusing to do work sent in by a customer of Messrs. Burn, and have consequently joined the strikers. The total number of men, women and apprentices at present involved in the dispute now reaches about 800.

L.C.C. Camberwell School

OF

ARTS AND CRAFTS.

Artistic Typography Class.

The new session of these classes was inaugurated on Wednesday, 24th ult., when Mr. R. A. Peddie delivered his popular lecture on "The History and Progress of the Art of Printing and Bookbinding." The chair was taken by Mr. Cooper, jun. (son of Mr. A. J. Cooper, of Messrs. Cooper and Budd).

Mr. COOPER having, in a few brief remarks, introduced the lecturer,

The story of printing in the fifteenth century was then unfolded to the students in a learned and interesting manner, and proved, with the aid of a fine series of lantern slides, that historical lectures on printing, given by a really competent man, can hold, interest, and instruct even the young members of the craft. That there is nothing new under the sun was clearly seen, for the lines and methods of working of the early printers still hold good so far as correct taste between block and type are concerned. Many a point was gleaned from this interesting lecture.

The CHAIRMAN cordially testified to the admirable manner in which the lecture had been delivered, and in the course of his remarks urged the students to stick to what they had undertaken, and to attend and learn all they possibly could, for difficulties had to be faced to-day in the modern printing office as well as in the past, although perhaps of a different nature, and it was only the seeker for information that was best prepared to meet and overcome such difficulties. He also reviewed the limited means of the early printers, and stated that in spite of the lack of fine Wickersham quoins, point type, steel chases, and the many improvements of modern times, they managed to produce specimens of work that are even to-day regarded as beautiful examples of what skill and hard work will do, even when poor material has to be encountered. Moreover, he reviewed the style of these early printers as to the clearness of the type and the proportion of type to paper, urging that while all these points should be kept in mind it was not intended to slavishly imitate these men, but rather to profit by what had been done before.

Mr. W. H. Amery, the responsible instructor, while fully endorsing all that Mr. Cooper had said in reference to the lecture, then gave a brief outline of the work of the past session, and the plans for the one now coming.

A very cordial vote of thanks to lecturer and chairman brought an instructive and interesting meeting to a close.

Printers' Managers and Overseers ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

There was held at the Victoria Hotel, Deansgate, Manchester, on Saturday last, a special meeting for employers, managers and overseers connected with the printing and allied trades. About 70 gentlemen were present, and amongst these we noted Messrs. R. A. Austen-Leigh (Messrs. Spottiswoode and Co., Ltd.), J. E. T. Allen, chairman, Federation of Master Printers and Allied Trades' Costing Committee (Messrs. Taylor, Garnett, Evans and Co., Ltd., Manchester), A. E. Goodwin, organising secretary, Federation Costing Committee, J. C. B. Percy, president, and F. Bird, secretary, Manchester and district Masters' Association, R. B. Fishenden (Municipal School of Technology), Thos. Kirkwood (president), F. Burnett (vice-president), Jas. E. Mayo (treasurer), Edward McVay (trustee), and F. J. Hughes (hon. secretary) of the Manchester Printers' Managers and Overseers Association.

Mr. Thos. Kirkwood (chairman), in his opening remarks, said: Fellow members,—I am pleased to find that so many of you deem the "Printers' Cost-Finding System" to be of so vital importance to your interests as to give up some of your leisure time to be here to-night. In the first place, on behalf of the Manchester and District Centre of the P. M. and O. A., I extend a hearty welcome to the representatives of the Federation of Master Printers and Allied Trades of the United Kingdom of Great Britain and Ireland, who have so kindly come forward to explain their well thought-out Costing System for Printers; and as it is the first occasion that we have met the Employers' Association in Manchester, I know you will carefully weigh up the utterances of the various speakers in order that you may help the printing trade as a whole to lessen some of the price-cutting and profitless employment that keeps the poor printer down in the world of commerce. The first printers in whom we are interested are Gutenberg and Senefelder. They were poor mortals who gave their labours to the public, and ever since those days the average printer has been a philanthropist, because he would not meet and consult with his fellow craftsman. To-night, we have thrown off the cloak of isolation and are met together to help one another. I trust that as this is our first meeting together here in Manchester, it will be profitable and cause us to come together more often. Since the formation of the Manchester Centre of the P. M. and O. A. we have, by joining together, found out that the manager or overseer across the way was not such a sinner as we, in our ignorance, thought he was There are some gentlemen in the room who are not members of our Association or the Masters' Federation, and I ask them to join in the discussion so that we may get all the healthy criticism we possibly can to make the Costing System a huge financial success.

Mr. R. A. Austen-Leigh gave the History of the Printers' Cost Finding System, and said that it was the duty of everyone in the trade to see that the printer was paid for his work. In the past many jobs in the printing trade had been done at a loss, chiefly owing to the want of a good cost finding system. If a printer knew his cost he would not be prepared to go below that cost, although at times he might be inclined to sacrifice some of his profits. At the present time prices had been cut so low that profit was not what it should be. Overseers might know in their several departments what was the cost of labour, but they did not know the standing charges connected with their particular house. It might be news to many to know that standing charges were equal to the cost of labour, and for a printer to be on the safe side he had to place 100 per cent. on his labour cost. The Costing System tried to allocate the cost to each department, and there were various ways of doing it, so that estimates would not vary to any great extent, and the Costing Committee were trying to bring forward a system of costing that would be universally adopted. Estimates could be based on the knowledge of what jobs had cost in the past, and anyone who wished to go carefully into the costs of printing in different parts of the country would find that there was very little difference between one town and another, as the office in the country which might pay a trifle less in wages and taxes might find that railway carriage, etc., brought them nearly into line with the big centres of industry Overseers could help the movement forward by giving instruction and helping the men under their charge. Under the old costing systems the printer took his previous year's accounts and added, say, 60 per cent. to labour and materials. That method had been found unsatisfactory in these days of close estimating. Some four years ago trade in the United States of America was found to be in a very bad position, and the employers set to work to better it. A Cost Congress was held, when about 1,000 masters put in their attendance, and decided to form a small committee. They first of all believed in a Costing System themselves, instilled it into the superintendents and foremen, and they in turn got those under them to fill in daily dockets on the understanding that the dockets were not to be used as a weapon against the men. By filling in the dockets the employers were able to find their costs, and so raise the status of the printing trade.

Mr. J. E. T. Allen said the Printers' Cost-Finding System was not a local movement or fad of a particular set of master printers. There were two main items in the running of a printing business, the first being labour and the second material, the latter being measured or figured. Very few masters who purchased material at 20s. would be inclined to dispose of it for 15s., but in the case of labour it was not so easy to arrive at the total cost, and in a printing business the three chief departments were composing, printing, and bookbinding. When the printer knew his labour cost of those departments he was able to figure more accurately in his estimates, and should there be efficient management and a full equipment there would not be such discrepancies between the estimates of various printers. It had been said that Gutenburg died in debt, and he was afraid that many printers had since died in debt.

Mr. A. E. Goodwin, in a lucid and clear delivery, kept his audience all attention whilst he explained the Printer's Cost-Finding System. He gave instances where the campaign had benefitted the whole craft, and said the Committee believed that printer's managers and overseers could either advance or retard the system. What was wanted was the cost per hour or per quantity of each process; the cost of every job; and to be able to check work at regular intervals.

DISCUSSION.

Mr. F. J. Hughes set the ball rolling with a sheave of questions, and Mr. Goodwin had to call a halt whilst he dealt with a few of them. "Was a daily docket system preferable to a weekly time book method?"

Mr. A. E. Goodwin said it was immaterial so long as the weekly books went in to the office each morning and a record taken from them for the value of production statement and the job cost sheets, but he thought it had been found in actual practice that time was saved by the daily docket method.

Another questioner asked if the custom of the job docket being marked into the time was not a sound one.

It was pointed out that it was difficult with such a method to ensure all the time being accounted for, and that to arrive at the number of chargeable hours in a week, it would be necessary to collect the job tickets each week and take off the time from them.

The Docket Question was thoroughly discussed, and Mr. Jas. E. Mayo handed up a set of model dockets which he had prepared. Mr. A. E. Goodwin commended these, and said he was very pleased to add some to his collection, and also remarked that in the new edition of the booklet written by Mr. Hazell a complete set of carefully revised dockets had been issued.

Mr. J. C. B. Percy was very emphatic in insisting that daily dockets were essential, and that after being examined by the overseer they should be sent in to the office and time extracted by the cost clerk, and not by the overseers.

Mr. F. J. Hughes expressed agreement with the Costing Committee in their decision that it was better not to attempt to keep account of dissing on each job, but to arrive at the rate which would cover composing and distribution.

Mr. Thos. L. Whitehead, of Bury, who has done such valuable pioneer work in the costing movement, said that there had been no difficulty with regard to getting dockets made out in this district, but he thought in some works it was still not the custom to write down actual time spent in distribution and clearing. It was assumed that any time not accounted for in composition was spent in that way. Was there any pronouncement on the question?

Mr. J. C. B. Percy said for years they had been able to get all time accounted for on dockets without any difficulty.

Mr. W. R. Cannell stated that to his personal knowledge it had been the custom for the past sixteen years in Manchester to make up the full working day, including non-chargeable hours, and that the understood attitude of the Typographical Association on that question was that so long as time sheets were used for costing purposes only, no fault would be found. As a matter of interest, in their establishment a system of issuing a job card with each order, on which each man filled in the time of starting and finishing each operation, had worked harmoniously for four years in all departments. No man had as yet made any complaint about the system.

The problem of depreciation aroused considerable discussion, and Mr. R. B. Fishenden asked if a higher rate than 10 per cent. was not desirable for type.

Mr. J. E. T. Allen, in replying, explained that whilst the Committee recommended 10 per cent. in diminishing value of plant, they meant this to be regarded as a minimum. One should keep in mind that whilst type and certain machinery should bear a much higher rate of depreciation, yet some of the plant, shafting, and fixed machinery, might not require as much.

Mr. W. R. Cannell, in answer to one of the questions raised by Mr. F. J. Hughes, as to the amount of time and labour spent in entering up the daily dockets, stated that an average of 150 time cards (including all departments) were entered in 45 minutes by a clerk of 17 years of age. The overseers being relieved from the work, which is absolutely office work, they were thus given more time in which to do their proper work, namely, overlooking the production of jobs in their several departments to the best advantage.

Mr. T. A. Dibblee asked: Should not the method of obtaining the "Binding Machine Cost" be used in preference to the machine unit system, as it was more scientifically accurate?

Mr. A. E. Goodwin answered that the machine unit system was easier to manage and in effect the result was practically the same.

Mr. F. Burnett moved a hearty vote of thanks to the various speakers; Mr. Edward McVay seconded, and

Mr. J. E. T. Allen, in replying, gave some interesting particnlars about German printers and their employees.

A vote of thanks to the chairman was moved by Mr. A. E. Goodwin and carried with *éclat.*

Wee Macgregor.

According to *Kemp's Mercantile Gazette* there were three failures in the printing and stationery trades of England and Wales for the week ending Friday, September 26th, the corresponding week in 1912 showed five.

ESSEX COUNTY COUNCIL.

TO PRINTERS.

Tenders for General Printing.

PRINTERS willing to TENDER FOR PRINTING the required number of the several Articles, specified in a list prepared by me, for the alternative terms for One or Three Years, from the 1st November, 1913, are requested to send in Tenders, sealed and endorsed "Tenders for General Printing, to my Office at Chelmsford, on or before the 11th day of OCTOBER NEXT.

Particulars relating to the work can be obtained at my office. The work to be done from time to time during the before-mentioned period as and when required by me.

Portions of the work will sometimes be required to be completed on the day the order for the same is given.

The tenders are to include all proofs and revised proofs which may be required by me in the course of the printing, and all expenses incurred in forwarding the proofs to me and in returning the same to the Printer, should his printing works not be situate in Chelmsford, are to be borne by him, and no charges for extras are to be claimed or allowed.

The Finance Committee of the County Council will not engage to accept the lowest or any Tender.

JOHN H. GOOLD,
Clerk of the Council.

Shire Hall, Chelmsford,
20th September, 1913.

Cost Finding Progress.

OUR columns this week bear further testimony to the virility of the printers' cost-finding movement. Not only is the campaign programme of the Federation Costing Committee continuing to expand, and embrace additional towns and districts under its enlightening influence, but its doctrines are penetrating into all manner of bye-paths of industrial life. The Fen district is the latest to be visited by the organiser of the Costing Committee, though in the case of Peterborough, as will be seen in our report, it was not an initial cost meeting, several having already been held; it was rather a meeting to take stock of the progress made and have a friendly consultation as to the future. Then London has once again been favoured with an exposition of the System by that doughty champion of the movement, Mr. W. Howard Hazell, who, with others, has just addressed the members of the Institute of Printers and Kindred Trades of the British Empire. An interesting discussion was evoked, as has been the case at all of the meetings, and Mr. Hazell responded to the insistent calls for information on special points of detail with remarkable vivacity, considering the many times he must have had to repeat himself. A point that is often raised, and was on the present occasion, was in regard to the percentage to charge when customers supply their own paper—a sore point with many a printer. Mr. Hazell was at pains to point out that fewer expenses are incurred by the printer who simply buys in the paper, or envelopes, as the case may be, and sells to the customer. Whereas when the customer supplies the paper there has to be reckoned the rent of the room where the printer stores it for him, and then he has to insure it against risk of loss by fire. All these extra expenses should be covered, and a charge of 15 per cent. is recommended by the Costing Committee. Another sectional meeting, this time before the Manchester Centre of the Printers' Managers and Overseers Association, has been held to discuss the Cost Finding System, and the important subject is also to find a place in the curriculum of some of the technical schools. Mr. J. T. Cooper, of Messrs. Cooper and Budd, saw fit to mention the matter in his address to the students of the Aldenham Institute Printing Classes the other night, when he characterised the change that the Cost Finding System would bring about as from a chaotic condition to one that will be more scientific. That is the trend everywhere nowadays—to be more exact, more efficient, more scientific, and the printing trade cannot afford to be out of the running.

* * *

The New Government Contracts.

LONDON printers should be interested in the important contracts that are to be given out by H.M. Stationery Office for work amounting in all to some £40,000. The tenders required are for book-work for several Government Departments, and are divided into about twenty separate groups. The forms of tender give most clearly the details of the work and the manner in which it is to be charged, and taking the "Series A," which comprises groups numbered from one to six we find it provides for the miscellaneous book-work printing required by various Government Departments which are specifically mentioned in the tender forms. Some alterations have been made in the conditions of the contracts that make a considerable difference when compared with those of the corresponding contract in the 1909-13 series. Among these we note that the period of the contracts has been extended from five to seven years. One of the conditions contains an allowance at the rate of 2d. per cwt. for cost of packing and carriage of paper, etc., to all contractors situate outside the radius of four miles from Charing-cross. This allowance represents the average cost to the Stationery Office for delivery within the radius. The basis upon which type rent is calculated has been altered from a percentage upon composition (or labour) value to a definite rate per page calculated upon the average value of the material kept standing, and has been amended to give the Controller a freer use of standing type. The period after which advance payments will be made in respect of work standing in proof has been reduced from six months to one month, and the approximate annual value of the Contract is stated, and space is provided in the tender form wherein a printer submitting several tenders at one time may intimate the maximum amount of work he is prepared to accept. The provisions for the payment of nightwork and waiting charges have been remodelled, and the contractor is required to keep and permit the inspection of workmen's dockets and time sheets to substantiate his charges. The composition prices are exclusive of any allowance for author's corrections, and are based upon the piece-work rates of the London Society of Compositors, with an addition of 15 per cent. for reading, and allowance is also made for the shortening of hours granted in 1911. Author's corrections are provided for as a separate charge upon all composition whether corrected or not, with provision for an additional allowance if the corrections are judged to exceed a certain percentage of the composition. The payment for blank pages has been revised, and no deduction is to be made from cancelled matter in respect of blanks appearing in the work, while the minimum of one page has been reduced. Im-

Digitized by Google

posing is now to be paid as a separate charge. Type rent charges are inserted for various sizes of pages. A re-imposing charge has been provided for all reprints, and there are amended definitions of tabular and table matter. The press-work charges are based upon the number of pulls instead of upon perfect working, and all warehouse work has been eliminated from this scale. The Contract provides for the use of double and quadruple paper whenever there is a sufficient number of pages to cover those sizes, and whenever possible quadruple sheets are to be perfected to form sections of 16-pages. There is also an extended list of charges for miscellaneous (or warehouse) work, many of which were formerly included in the press-work charges There are other alterations in the details that seem to be to the benefit of the printer, although the definition of what is tabular matter and what is not is likely we think to lead to trouble between the employer and his workmen, as some of what is defined as plain matter in the schedule comes under the L.S.C.'s definition of tabular matter, such as the two and three column work, and matter that really requires four justifications. In the trade union scale of charges these all figure for extra payment, but of course it may be taken into consideration that the matter can be set as narrow single columns and then imposed side by side. The conditions of tender will require careful study before filling in the forms, and will give an opportunity to the costing experts to exercise their talents.

A Lead and Rule Caster

A new appliance, that will be of the greatest service in the printing office for the production of rules and leads has been introduced by Messrs. Linotype and Machinery, Ltd., 188, Fleet-street, E.C. The machine consists of the casting mechanism of the Standard Linotype. It casts automatically, requires practically no attention after being started, and can be handled by anyone familiar with the Linotype. As an auxiliary machine in any fair-sized office its value cannot be over-estimated.

It is equipped with two water-cooled moulds, and the large hub of the mould wheel is hollow, and water circulating through it, thus keeping the wheel itself, as well as the moulds, quite cool. Two moulds are used alternately, thus allowing one to cool while the other is in operation, so that a boy can give all the attention required to feed the metal and carry away the galleys.

It is claimed that the machine will cast accurate leads, slugs and rules without ribs, the equal in every way to typefounders' product, and make at least six 30-em casts per minute. This nets fourteen pounds of 2-point leads per hour, or the same quantity of 2-point rule, and brass rule costs about five shillings per pound.

The regular matrix rule blocks can be used in this machine for casting rules, dashes and borders, and with the machine is furnished a cabinet for holding tools, sorts, matrices, liners. ejector blades, etc. Particulars of what the Lead and Rule Caster can do may be had on application at the address given above.

THE LINOTYPE FOR BOOK WORK.

Faces of Type, etc.	Linotype Users have the choice of over 400 faces of type; new faces are being added continually. Many of these faces have been specially cut for Book Houses. (Every Linotype User has also the choice of 84 complete borders, 73 varieties of rules, dashes, etc., and over 600 figure faces.)
Alignment.	Face alignment on the Linotype is quite automatic; no adjustment whatever is necessary. Type matter set twenty years ago would align with that set to-day on any Linotype machine.
Justification.	Line justification on the Linotype is perfect; this applies to corrected lines as well as the initial product.
Quality of Product.	The Linotype line is cast in one complete piece. This permits of slow and deliberate movement in alignment and casting, which obviously is the best way of obtaining a perfect printing surface. Incidentally it may be mentioned here that, owing to the comparatively slow movements made by the machine, the cost of upkeep is only a few pence per week.
Ease of Make-up.	The superiority of the Linotype unit of composed matter is apparent immediately the operator empties his machine galley; whether the slugs are put on a random or on a galley there is no danger of pie. Linotype matter is so easily handled that a saving of fifty per cent. is effected in makeup alone.
Electrotypes and Stereotypes.	The Linotype shoulder height and depth of strike are ideal for wax, lead, or flong moulding, with the result that the finest possible plates are made from Linotype-set matter.

A Booklet containing specimens of Linotype Faces specially suitable for Book work will be sent to anybody interested in the production of high-class printing.

Financial.

Offices of the *British and Colonial Printer and Stationer*,
58, SHOE LANE, LONDON, E.C.
WEDNESDAY, Oct. 1st, 1913.

A CHANGE came over the money market last week, a keen demand arising for money, and a fair amount was borrowed from the Bank of England. Since then the demand has quietened down somewhat, and the supply is now sufficient to meet all requirements. Discounts also were harder on gold withdrawals. Bullion movements this week have resulted in a net efflux to date of £890,000, mostly in withdrawals for Egypt. Germany took the bulk of the £650,000 that came up for settlement in the open market yesterday. Stock markets have not been very satisfactory this week, and business is very dull. Consols have weakened during the last few days, the quotations now being 73 5/8 to 73 7/8 for money and 73 9/8 to 73 11/8 fo the account.

The miscellaneous industrial market continues in an idle condition, and prices have moved within narrow limits. In the section relating to paper and print our list shows a number of small upward movements. Amalgamated Press Ord. are up 1/8 to 7 1/4—7 1/2; Associated Newspapers have gained 3d. to 23s. 9d.—24s. 9d.; Ilford Ord. have risen 1/32 to 1 1/8—1 3/8; Waterlow Bros. and Layton are up 1/4 to 5 3/4—6 3/4; and Wyman and Sons have put on 1/32 to 3/32—3/16. Business has been done during the past seven days in Amalgamated Press Pref. at acc.21s. 3d. and 21s.; in Associated Newspapers Pref. at 20s. 7½d. and 19s. 9d.; in Cassell and Co. at 95s.; in *Financial News* Pref. at 15s. 6d.; in Ilford Ord. at 14s. 6d. and 15s., and in the Pref. at 17s. 9d.; in *Illustrated London News* and *Sketch* Pref. at acc. 13s. 6d., 13s. and 13s. 3d., in the Ord. at 3s., and in the Deb. at acc. 63; in Lanston Monotype Corporation at 8s. 9d.; in Linotype and Machinery B Deb. at acc. 36; in C. Arthur Pearson Pref. at acc. 73s. 9d. and 76s. 3d.; in Raphael Tuck and Sons Pref. at acc. 98s. 9d., 95s., 96s. 3d., and 100s., and in the Ord. at 18s., 18s. 3d., 18s. 9d., and 18s. 6d.; in Waterlow and Sons Pref. Ord. at acc. 12 and 11 9/16 xd.; in Waterlow Bros. and Layton Ord. at 6 7/16; and in Weldons Ord. at 31s. 3d., and in the Pref. at 19s. 9d.

DIVIDENDS AND REPORTS.

PICTORIAL NEWSPAPERS (1910).—Interim dividend of 7 per cent. per annum on the ordinary shares for the half-year.

D. F. TAYLER AND CO., BIRMINGHAM.—Interim dividend of 2s. 6d. per £5 share, free of income-tax, on the ordinary shares for the half-year. Last year also 2½ per cent. was paid.

NEW COMPANIES.

JOHNSTON ENGRAVING CO., LTD.—Registered on September 17th, with a capital of £2,000, in £1 shares, to take over the business of process and general engravers, artists, photo-etchers and designers carried on by J. A. Johnston at 41, Snow-hill, E.C., as the Johnston Engraving Co. The subscribers are J. A. Johnston and E. C. Finlason. Private company. The number of directors is not to be less than two nor more than four; the first are J. A Johnston and E. C. Finlason.

ELLERBECK BROTHERS, LTD.—Registered on September 24th, with a capital of £3,000, in £1 shares (4,000 preference), to carry on the business of stationers, printers, lithographers, etc., and to adopt an agreement with R. Crowe, J. M. Miller and A. J. Glover. The subscribers are J. M. Miller and A. K. Glover. Private company. The number of directors is not to be less than two nor more than five; the first are J. M. Miller and A. K. Glover. Qualification, £100.

PRYCE AND SON, LTD.—Registered on September 25th, with a capital of £10,000, in £1 shares (3,000 preference, 500 management and 6,500 ordinary), to take over the business carried on by W. H. Pryce, as "H. Pryce and Son," at 31-5, Powis-street, Woolwich, and to carry on the business of printers, lithographers, relief stampers, block makers, etc. The subscribers are W. H. Pryce and G. E. McCanlis. Private company. W. H. Pryce is the first managing director. Registered office, 31, Powis-street, Woolwich, S.E.

"MONEY TIMES," LTD.—Registered on September 22nd, with a capital of £4,000, in 3,500 ordinary shares of £1 each, and 10,000 deferred shares of 1s. each, to acquire the newspaper called the *Money Times*, to carry on the business of proprietors and publishers of newspapers, journals, magazines, books, and other literary work, etc., and to adopt an agreement with F. Urgos. The subscribers are J. E. Punchard and H. C. Pewsey. Private company. The number of directors is not to be less than two nor more than seven. The subscribers are to appoint the first. Registered office, 26-30, Salisbury House, London-wall, E.C.

LANCASTER AND CO., PEN-MAKERS, LTD.—Registered on September 24th, with a capital of £1,000, in £1 shares, to take over the business carried on at 56, Myddelton-street, Clerkenwell, as "Lancaster and Co.," to carry on the business of manufacturers of and dealers in all kinds of fountain, stylographic and other pens, and accessories, gold and other pen nibs, etc., and to adopt an agreement with T. Laing and H. S. Lee. The subscribers are W. E. Rooke and W. J. Haslett. Private company. The number of directors is not to be less than two nor more than five. The first are T. H. Mason, J. A. Morton, H. S. Lee and T. Laing (all permanent, subject to holding five shares each). Registered office, Ludgate-chambers, 30-32, Ludgate-hill, E.C.

CLARKE, SOMERVILLE AND CO., LTD.—Registered on September 25th, with a capital of £1,000, in £1 shares, to carry on the business of printers, engravers, stationers, lithographers, typefounders, etc. The subscribers are J. H. King and A. W. George. Private company. The number of directors is not to be less than two nor more than five. The first are to be appointed at the first meeting of the company. Qualification, 20 shares. Registered office, 1, Fazeley-street, Birmingham.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

ROBERT MCGEE AND CO., LTD.—Debenture dated September 15th, 1913, to secure £600, charged on the company's undertaking and property, present and future, including uncalled capital. Holders—Quadrant Insurance Co., Ltd., 19, Castle-street, Liverpool. A memorandum of satisfaction in full on September 9th, 1913, of mortgage or charge, dated September 9th, 1903, securing not more than £700, has also been notified.

U. K. PRESS, LTD.—Debenture dated September 17th, 1913, to secure £2,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder—W. G. Mills, 3, Frognal-mansions, Hampstead, N.W.

"GROCERS' GAZETTE," LTD.—Particulars of £1,500 debentures, created September 16th, 1913, filed pursuant to Section 93 (3) of the Companies (Consolidation) Act, 1908, the whole amount being now issued. Property charged—the company's undertaking and property, present and future. No trustees.

VARIETY PUBLISHING CO., Ltd.

Notice is given, that a meeting of the company will be held at London, on October 31st, for the purpose of having an account laid before them, showing the manner in which the winding-up has been conducted and the property of the company been disposed of, and of hearing any explanation that may be given by the liquidator.

LONDON PERIODICAL CO., Ltd.

Notice is given that the creditors of the company are required, on or before October 22nd, to send the particulars of their debts or claims to Mr. Vernon S. Alabone, the liquidator of the company, 12, Highbury-quadrant, N.

COMMERCIAL INTELLIGENCE.

"DAILY HERALD" PRINTING SOCIETY.

A meeting of the creditors and shareholders of the *Daily Herald* Printing and Publishing Society, Ltd., 21, Tudor-street, E.C., was held last week, at the Carey-street offices of the Board of Trade, Lincoln's-inn, W.C., Mr. H. E. Burgess, official receiver, presiding. The accounts showed liabilities £10,063, assets valued at £1,659 and a deficiency of £24,532 with regard to contributories. The company was registered in September, 1912, with a nominal capital of £50,000 to take over and publish the *Daily Herald* newspaper. It was in an insolvent state when incorporated and has traded at a loss throughout. The failure is attributed by the directors and secretary to want of capital. A resolution was passed for Mr. H. W. Head, L.A.A., Queen Anne-chambers, Tothill-street, Westminster, to act as liquidator with the following committee of inspection, viz., Mr. S. G. Drew (Victoria House Printing Co., Ltd.); Mr. W. J. Lomax (W. V. Bowater and Sons, Ltd.); and Mr. Geo. Lansbury.

Re CHAS. J. FORWARD and SON, Ltd., Wholesale Bookbinders, etc.

Under a compulsory winding-up order made against this company, which carried on business at 27, Sayer-street, New Kent-road, S.E., accounts have been lodged showing total liabilities, £8,635 14s. 6d.; assets valued at £4,886 5s. 5d.; a deficiency of £2,938 14s. 11d. in assets to meet the liabilities; and a total deficiency of £18,195 14s. 11d. with regard to contributories. According to the report of Mr. W. J. Warley, official receiver, the company was incorporated on May 9th, 1898, with a nominal capital of £12,000, increased in August, 1903, to £16,000, divided into 6,000 5 per cent. cumulative preference and 10,000 ordinary shares of £1 each, to acquire and carry on the wholesale bookbinders and fancy leather case makers' business of a company of the same name, registered in June, 1893, to take over the business established by Charles John Forward, the father of C. W. Forward, in 1852, and then carried on at 6, Blackfriars-road, S.E. The purchase price was agreed at £10,000 payable as to £5,000 in fully-paid ordinary shares, and the balance in

Digitized by Google

cash or debentures. In September, 1903, the bookbinding business of Frederick Charles Forward (C. W. Forward's cousin) was purchased for £8,400, which was satisfied by the allotment of 4,500 ordinary and 3,900 preference fully-paid shares The purchase price included £6,929 for goodwill. In November, 1904, the company's business was transferred to new premises at Hatfield-street, E.C. F. C. Forward acted as managing director from August, 1903, to December, 1907, at a salary of £105 a year, but as additional remuneration he was allotted 1,000 fully-paid preference shares, and also received £2 a week as wages and £2 a week for travelling expenses. It was arranged that he should bring in the same amount of stock as the company had at that time, viz., £856 1s., but according to the accounts only £396 15s. 6d. worth of stock was brought in by him: the difference was adjusted by the transference upon certain terms to C. W. Forward of a number of F. C. Forward's shares, but the adjustment should have been made with the company. The company's trading from its incorporation to June 30th, 1907, resulted in yearly profits being shown. with the exception of a small loss in 1904, and the preference dividends were paid up to that date. Dividends on the ordinary shares were also declared as follows:—3s. per share in 1903, 10 per cent. and about 1s. 1d. per share in 1904, 5 per cent. in 1905 and 1906. From June, 1907, the profits declined, and the books show the following trading results:—

Year ended June 30th,	1908 ...	Loss ...	£1,150	9 8
" " " "	1909 ...	" ...	328	19 4
" " " "	1910 ...	Profit...	408	11 3
" " " "	1911 ...	Loss ...	537	3 8
" " " "	1912 ...	" ...	1,849	8 9

The loss for 1908 appears to have been caused by the severance of F. C. Forward's connection with the company, the expenses being nearly as large as formerly, whilst the turnover had fallen considerably. The losses for 1911 and 1912 are attributed to increased cost of labour and materials, and to trade competition. An interim preference dividend of 2½ per cent., amounting to £150, was paid on account of the year ending June 30th, 1908, but no profits were earned in that year. For the purpose of purchasing better machinery in 1905, the company obtained a loan from C. W. Forward at 6¼ per cent. interest, and to enable it to continue business during the last few years he lent it sums of money from time to time; these loans, he states, were obtained from his bankers on his personal guarantee and on the security of part of his debentures in the company. The amount owing to him at the date of the winding-up order is returned in the statement of affairs as £2,780 3s., making with the debenture liability a total capital sum claimed by him of £5,980 3s. On May 22nd, 1913, C. W. Forward appointed C. H. Dommes, incorporated accountant, 85, Fleet-street, E.C., to act as receiver on his behalf on the grounds that the debenture interest was in arrear, and that the assets were not equal to the value provided for in the debentures, viz., £5,000; the actual value being about £120 less. Mr. Dommes is at present carrying on the business with the view of selling it as a going concern, but as a loss is being made, he contemplates closing it shortly unless a purchaser can be obtained. The failure of the company is attributed by C. W. Forward to loss in trading chiefly owing to the heavy establishment charges at the Hatfield-street premises (which the company vacated in October, 1912), to the increased cost of labour and materials, and to the reduced prices charged by the company through competition.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

CHADWICK, M., High-street, Tring, Herts., stationer, etc. Date of order, September 23rd, made on a creditor's petition.

ADJUDICATION.

WARLAND, C. F., 115, Fleet-street, London, E.C., advertising specialist. Date of order, September 25th.

NOTICES OF DIVIDENDS.

BIDDULPH, L. S, The Toines, 10, Hampton-court-road, Hampton Wick, Middlesex, journalist. First and final dividend of 2s. 5½d., October 10th, at the official receiver's offices, 132, York-road, Westminster-bridge-road, London, S.E.

DEAN, R. S., 78, Gillygate, York, stationer, newsagent, etc. First and final dividend of 2s. 7½d., October 6th, at the official receiver's office, Duncombe-place, York.

APPLICATION FOR DEBTOR'S DISCHARGE.

STREET, H., 70, Beulah-road, Thornton Heath, Surrey, newsagent, etc. To be heard October 23rd, 10.30 a.m., at the County Court, Scarbrook-road, Croydon.

NOTICE OF RELEASE OF TRUSTEE.

HARTLEY, A. M., trading as A. M. Hartley and Co., Heron House, Hockley Brook, Birmingham, bookseller, etc. Trustee, C. T. Appleby, A.C., 26, Corporation-street, Birmingham. Released September 16th.

Printers' Managers and Overseers ASSOCIATION.

NORTH MIDLANDS CENTRE.

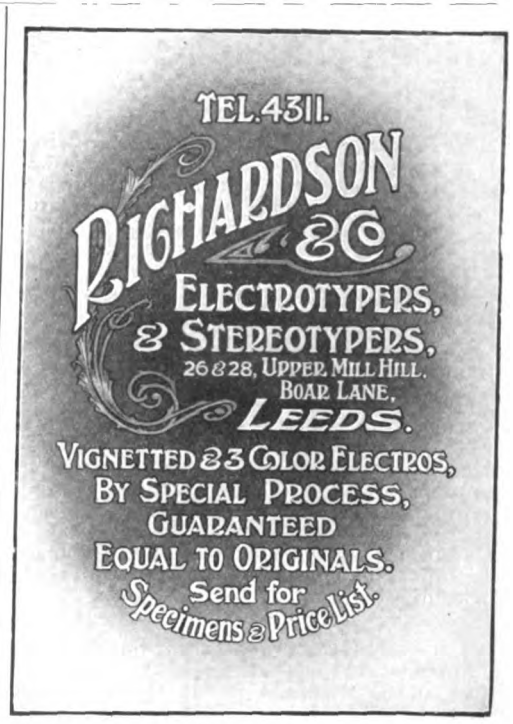
Bohemian Concert.

If one may judge the prospects of the winter session of this go-head Centre by the success which attended the splendid concert given in the ball-room of the Albert Hotel, Nottingham, on Saturday last, its success is an assured fact. We have always understood that Nottingham was known far and wide as a musical city, and certainly the fare served up on Saturday evening went far to substantiate the assertion, for it was good to be there.

The whole of the programme was arranged by this Centre's genial and highly-esteemed president, Mr. C. G. Budden, to whom a great debt is due for his efforts in starting the coming session's work so successfully, again evincing his keen interest in the Association, and adding fresh laurels to his reputation. The following artistes took part:—

PART I

Song ... ... The Windmill ... ... Nelson
Mr. J. T. Elliott.
Duet... ... Flow Gently, Deva... ... Parry
Messrs. Joseph and Edwin Waring.
Song ... Angels Guard Thee ... Godard
Mr. Franklin Pearson.
Song... ... The Valley of Laughter Sanderson
Miss Eva Cook.
Song ... Where my Caravan has rested ... Lohr
Mr. Joseph Turner.
Duet... ... ... The Battle Eve ... Bonheur
Messrs. Franklin Pearson and J. T. Elliott.
Song ... .. A Summer Night Goring Thomas
Miss Eva Cook.
Humorous Sketch—
The Street Watchman's Story ... Winter
Mr. Arthur Beardsley.



PART II.

Song ... ... Father O'Flynn ... Stanford
Mr. Edwin Waring.
Song ... An Evening Song ... Blumenthal
Mr. Joseph Turner.
Song ... The songs my Mother sang Grimshaw
Miss Eva Cook.
Humorous Song—
A Fishy Fishing Story ... Hanray
Mr. Arthur Beardsley.
Song ... ... A Soldier's Song ... Mascheroni
Mr. J. T. Elliott.
Duet .. .. The Singing Lesson ... Barnett
Miss Eva Cook and Mr. Edwin Waring.
Song ... ... Come sing to me ... Thompson
Mr. Franklin Pearson.
Humorous Song ... On Strike ... ... Bond
Mr. Arthur Beardsley.

Amongst those present we noticed members of the craft from London, Derby, Lincoln and Mansfield, together with a fine muster of Nottingham members, and their lady friends, altogether some 200 being present.

We understand this Centre is undertaking propaganda work in the neighbouring towns shortly, and if the officials can induce those outside the fold to attend at least one of the projected lectures there is no doubt additions will be made to their existing list of members.

At the close of the concert a very hearty vote of thanks was accorded the artistes and the president for their splendid efforts in providing such a musical treat, to which Mr. Budden and Mr. Waring briefly responded. Messrs. Boots, Ltd., as usual, very generously provided the programmes and invitation tickets.

SPECIAL PREPAID ADVERTISEMENTS.

SITUATIONS.—Charges for Advertisements under the headings "Situations Vacant," or "Situations Wanted," are at the rate of

ONE SHILLING FOR 24 WORDS
(3 Insertions: TWO SHILLINGS),

QUADS.

[We do not necessarily identify ourselves with any opinions of our contributor. At the same time, readers will not need to be assured that he always endeavours to communicate something worthy of attention.]

"I hold every man a debtor to his profession, from the which, as men do of course seek to receive countenance and profit, so ought they of duty to endeavour themselves by way of amends to be a help a-d an ornament thereunto."
FRANCIS BACON, Baron Verulam.

The Lord Mayoroyalty of London, as a "comp" styled it in one of my proofs—Heaven bless him for it—is to be filled by another of "our men," Tom Bowater to his intimates; Sir Vansittart Bowater as he is to the public; Fancy Tart Bowater as he has told us he was to his school mates. I remember this frankness as occuring in an interview with him which a City paper secured.

o o o

Certainly the Bowater family have filled a large place in social life for many generations. One of them fought as an Admiral with Nelson at Trafalgar. One was a general officer under Wellington at Waterloo.

o o o

When I was going over the Duke of Argyle's old house with its secret chambers and its fine ceilings and stairways at Caroline Park, near Edinboro', someone suggested what a shame it was that it was now the office of the Fleming ink factory.

o o o

Nary a bit of it. I felt and retorted that the lordly spirit of the house was instinct in the business. I had in mind some things that were being done at that time by the managing director, my friend David Harris.

o o o

Whatever spirit of *noblesse oblige* animated the Bowater admiral at Trafalgar or the Bowater general at Waterloo is, it seems to me, judging from various things within my personal knowledge, instinct in the Bowater firm in the paper world.

o o o

Here's to the Lord Mayor elect. He will play the part well I am very sure. And as a singularly fine figure of a man, he certainly will look the part.

o o o

There is a lull in the Burn dispute. Meantime I invite attention to one thing alleged by the binders' union—perhaps not specifically in the course of negotiations, but certainly in the ordinary course of conversational exchanges. And that is that there is a serious amount of "blind alley" occupation in provincial bookbinding.

o o o

No doubt there may be difficulties in this connection.

o o o

It may be thought to be a bad thing to refuse work to a lad, simply because you may not be proposing to keep him on at work in a few years time. You may feel too that what he does in the future is not your concern so much as it is the concern of his parents or other kin.

o o o

Your enterprise has helped him over and incidentally has helped his parents over a few years of his life; and sufficient unto the day must be the good and even the possible evil thereof.

o o o

You may argue that there is great danger of losing substance for shadow—of letting the better be the enemy of the good as the French phrase has it.

o o o

In such matters I fall back gratefully upon a conviction, strengthening with the years, that there is a vast amount of saving commonsense in the average man. And that as the printer Benjamin Franklin serenely reflected in his old age, "The world is growing wiser and wiser."

o o o

No one now for instance would tolerate the arguments that used to be put forward by some cotton spinners whom Lord Ashley (afterwards the Earl of Shaftesbury) trounced so heavily—that it was well for children to be put to work in their factories from six or seven years old because their fingers became then so peculiarly deft, so supple, and so exactly suitable for the work.

o o o

I've read a quite exuberant description by some learned doctor—surely not a doctor of medicine—who visited such a factory ninety or so years ago. He talked about the "sprightly elves" as he called these children, and how they seemed to regard their work as a pastime. Whereas Wordsworth at about the same time wrote of them as children

"In whom a premature necessity,
Blocks out the forms of nature; preconsumes
The reason; famishes the heart; and makes
Life's very spring, a season of decay."

o o o

Well, we have advanced since that time, and Wordsworth has our ear now, and not that egregious doctor. None the less we have not abolished tragedy.

o o o

Lord Morley long ago declared that he knew of nothing more tragic than the sight of a man wandering abroad for work, honestly seeking it, and willing to give his best service, and unable to find employ.

o o o

Possibly having to finish up perforce by . . . going into the army.

o o o

"He wandereth abroad for bread, crying, 'Where is it.' . . . He is waited for of the sword."

o o o

If he has children the case is worse. The sharpest sting is that he is like to be bringing upon them as hapless a life as his own, if indeed they reach adult years at all. Almost certainly they will not all grow up. "His branch shall not be green. He shall shake off his unripe grape as the vine, and cast off his flower as the olive."

o o o

We want clearer and franker thinking all round. Our wage-workers may do well to remember that the purse is not the whole of personality; that we all have much the same besetments of body and mind; disease and death and troubles manifold attend us all; we all have more in common than in difference.

o o o

And employers will do well to realise more of what this tragedy of unemployment means, and that under employment and even over employment are also evils which also sweep away their victims. It must be realised all round that the trade unions' solicitude in regard to blind alley employment is a solicitude which deserves always to be treated with respect.

o o o

If there is a good answer to any who avow that fear, then let the answer be given.

o o o

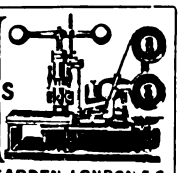
This solicitude, I say, is at the root of the present bookbinding trouble.

FRANK COLEBROOK.

TECHNICAL
Instruction in the Printing Trade.

Aldenham Institute.

The new session of the letterpress printing classes at this north London institution commenced on the 23rd ult. They include printing and theoretical classes for letterpress printers, which are under the guidance of Mr. W. H. Amery, who has now had many years' experience in teaching typography, and is ably assisted by Mr. S. Martin (medallist), Mr. J. Cochrane, and Mr. J. Acton. Under the re-organisation scheme of evening classes the Institute becomes a Senior Technical Institute, and the "Medburn" Junior Technical Institute is affiliated for trade classes.



The classes have fully-equipped composing and machine-rooms, the machine section being fitted with one of Messrs. Furnival and Co.'s improved Wharfedale machines, with geared reciprocating riders on inkers and distributors, driven by electric power, in addition to a Golding Jobber platen machine, and installations of the Mechanical Chalk Relief Overlay, Mole's Patent Mechanical Underlay, and Baker's Tint Block processes.

The classes meet on Mondays, Tuesdays, Thursdays, and Fridays, and the fees for the complete Session are 3s. 6d. for members of the Institute, 5s. for non-members, and 2s. 6d. for apprentices under 19 years of age.

Reviewing the past session, the report of the Education Committee on the work of the letterpress printing classes states that they have again enjoyed a very large measure of success, the total number of students being about the same as during the previous session. A larger number of students than ever before were enrolled in the "Whole Afternoon" classes, held two days a week, and the "Part Afternoon" classes, held on three days in the week, also again proved satisfactory. A start was also made with a "Part Afternoon" machine class, on two days a week. Over eighty students of these classes have been awarded London County Council Evening Art and Science Exhibitions.

L.C.C. Camberwell School of Arts and Crafts.

Artistic Typography Classes are held at this school, evening classes on three nights a week, and an afternoon class for apprentices on three afternoons each week. There is also a special drawing class for compositors on Wednesday evenings. The classes held in the afternoon are for persons under 21 years of age, *bona fide* engaged in the trade only, and the curriculum embraces the practical and the theoretical sides of the subject, together with the scholastic work of typography. Employers are asked to look upon these classes as supplementary to the shop, and they are invited to give their apprentices facilities for attending them. Monthly attendance reports will be made to employers sending their employees as students, and progress will be reported every three months. The evening classes are for the study of the theory and practice of typography in composing, press, and machine work, and will deal with the artistic arrangement of type in both general and bookwork. Further tuition will be given to those desiring it in the essentials of a perfectly printed book. During the session special lectures will be given by experts in their respective branches of work relating to typography. The instructors are Messrs. W. H. Amery, H. G. Wicks, and F. A. Gomm, M.A. The fees are 4s. 6d. a session for persons earning 30s. a week and under, and 10s. a session for persons earning over that amount. The session commenced on the 22nd ult.

Three recent Letters following VALUATIONS of Printing Plant by FRANK COLEBROOK, Printers', Newspapers' and Plate Makers' Valuer, 146, Fleet Street, E.C. (Phone Holborn 2288).

An important northern provincial firm writes: Herewith cheque with compliments and thanks; it only remains for us to add how thoroughly satisfied we are with the way you have completed the work.

An Irish printer writes: I was greatly struck with the very thorough and business-like way in which you went about the work; giving my staff so little trouble and not interfering with the routine of the office. Had I anticipated that the valuation could have been made with such expedition and exactness and under such pleasant conditions I would have availed myself of your services long ago. (August, 1913.)

A South of England printer writes: Enclosed is cheque. We have pleasure in testifying to the promptitude and care with which you carried out our valuation of plant and to thank you for doing so without cessation of work. (August, 1913)

And this *re* a fire settlement from a London firm: Now that the Fire Office has settled my claim I have to thank you for your prompt and untiring attention, which has secured such a satisfactory result.

TO TRADE BOOKBINDERS, BOOKBINDERS' PLANT AND MATERIAL MANUFACTURERS AND DEALERS, PUBLISHERS, LIBRARIANS, AND OTHERS INTERESTED IN THE BOOKBINDING INDUSTRY.

THE Publishers of the *BRITISH AND COLONIAL PRINTER AND STATIONER* have pleasure in announcing that an ILLUSTRATED MONTHLY SECTION of that journal is now devoted to matter concerning the BOOKBINDING TRADES.

All branches of bookbinding are dealt with, from practical and technical standpoints, and the historical and artistic aspects of the industry also receive attention. Illustrations of hand-tooled bookbindings and publishers' cases which are remarkable for their artistic design, their historic interest, or their novel character are presented from time to time.

The BOOKBINDING SECTION appeals to all those who are interested in bookbinding, whether as a trade or as an art, as all phases of the subject receive their due share of attention in its columns.

The Editor will welcome any news of trade interest that may be sent him, and is prepared to consider original articles of a technical and practical character, with a view to their publication. Information concerning the working of the technical classes in bookbinding, and notices of meetings of trade unions and other bodies associated with the bookbinding industry, are also invited; arrangements can usually be made, if desired, to report the latter, as well as lectures, etc., for the BOOKBINDING SECTION. Illustrations and particulars of new machinery and appliances, and information concerning new materials and methods for use in the trade, are likewise of interest. The publishers having no end to serve save the presentation of matter of value to the various branches of the trade, the pages of the BOOKBINDING SECTION are open to all, employers and employed, unionists and non-unionists, for the free discussion of trade matters.

As far as READERS are concerned, copies of those issues of the *British and Colonial Printer and Stationer* that contain the BOOKBINDING SECTION will be sent regularly on application, at special rates.

With regard to ADVERTISEMENTS, the bookbinding trade announcements are placed in a POSITION NEXT TO OR FACING READING MATTER in the BOOKBINDING SECTION. ADVERTISING RATES sent on application. Arrangements have been made to circulate the journal in quarters likely to be most productive to advertisers of a return for their outlay, and no effort is spared to study the interests of advertisers and readers alike.

Orders for advertisements in and subscriptions to the BOOKBINDING NUMBERS of the *British and Colonial Printer and Stationer* should be addressed to the publishers:—

The Japanese Paper Trade.

Expansion of Paper Mills Projected.

Manufacturers in Conference over their Future Policy.

The adoption of careless measures for the expansion of mills has often been the cause of bitter experience of overproduction for the paper manufacturers in Japan, says the *Japan Trade Review*. The temptation of this sort was particularly manifest in its stimulating effect after the two great wars with China and Russia, when the interior paper market showed extraordinary activity. The fact that the demand for paper in Japan as well as in Chosen and China has been making an enormous rise in the last few years now proves, as usual, a powerful incentive to the paper producers to increase the capacity of their mills, and all the principal manufacturers are united in planning the enlargement of their equipments. Still, the painful impressions in the past have made them serious enough to approach the question with due consideration, and this led to the conference of the representatives of the Oji, Fuji, Mitsubishi, and other nine leading companies. They met together several times to determine the scope of expansion, in order that undue measures might be avoided. As the result, the programmes of the individual mills were shown, and it was found that in case the original plans were carried out fully, an increase of 50 per cent. in the annual outputs would have been inevitable, which would end in destructive competition among themselves. The general programme as to the policy to be adopted will be formed shortly, and the full materialisation of the plan will require three or four years.

Despite the high price of paper pulp and the increase in producing expenses, which tendency will continue to exercise some checking influence upon the paper industry in the interior till the next year, the astonishing increase in demand in the Japanese market is causing the utmost activity, though the exports to China are being somewhat affected. The imports of European papers are increasing remarkably, all the descriptions being enlarged more or less in the returns for the first six months of the present year as compared with those for the corresponding period last year, except drawings, match paper, simili lines, imitation Japanese parchments, and tissue paper. Printings and writings are making healthy strides, but most remarkable is the growth of packings and wrappings, which have doubled in value.

Messrs. Kyoshinsha and Co., of Tokyo, reported in July :—" The prevailing dullness at large influences our paper market. Still, the home printing and simili parchment lines are now more in demand than ever; and as long as the present import tariff is left unchanged, our imports in the above will be decreased year after year. Yet, as regards ivory card boards, pergamyn and writing papers, our industrial achievements are not competent enough to put on the market qualities to match those imported. Owing to the sudden raising of quotations of pergamyn paper by the German Union of Manufacturers, our dealers are at a drawback in arranging purchase contracts with import houses. Unless the former standard price is not restored, such a policy will afford ground for home makers to start working also in this line. The coloured glazed flint paper is overstocked at present, the market price coming below the net import cost on the basis of some six marks per ream c.i.f. The case is the same with the foolscap writing and art printing papers, some importers disposing of their stocks at a loss of some twenty per cent. Ivory card boards, however, assume a firm footing, goods in stock being not in abundance. One may observe some briskness in the packing and other sulphite papers coming from Scandinavia. The satisfactory tenacity of the Swedish and Norwegian papers prevents home makers attempting any production in this line."

Subscribers desiring information as to the taking out of Patents are invited to write. Letters to be endorsed "PATENT DEPARTMENT," Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C. Telegrams: Stonhill, Fleet, London.

Applications.

20,748 LANGSETH, R., process and apparatus for justifying printing forms with hot metal.
20,757 COVERDALE, A., SOTHERAN, A., and WOOD, E. M., binding machines for books, pamphlets, and the like.
20,772 HARCOURT, F., and IMPERIAL LOOSE LEAF CO., LTD., guillotines or like cutting or stamping machines.
20,780 ZETZSCHE, A., machines for cutting, bending and slotting pasteboards.
20,803 BRITTAIN, F., envelopes.
20,810 MERKHAM TRADING CO., LTD., FREEMAN, W. F., and PLEDGER, H., stamp and the like affixing machines.
20,952 DWORAK, A., apparatus for applying glue to the backs of books and the like.
20,963 RIGNALL, M. F., letter-files and the like.
20,982 RANGER, A. W., machines for composing and distributing type.
20,996 IMPEY, P. L., treatment of leaves for books.
21,043 HILL, J. S., an improvement in fountain and stylographic pens for preventing the imprisonment of bubbles of air in the ink contained in the reservoir of said pens.
21,046 GILBERT, J., self-feeding pens and the like.
21,059 O'HARA, J., pocket cheque book.
21,065 ELLIS, W. H., post card and like display stands.
21,128 WALKER, A. H., receptacle for matrices or type dies accidentally separated from a typographical machine through which they circulate.
21,221 LESEURRE, A. A. and A., device for printing or curved surfaces.
21,255 J. FRAY, LTD., and FRAY, B. G., perpetual calendars.
21,274 RAVINET, H., and HEDEMANN, machines for affixing postage and other stamps, labels, and the like.
21,294 MIERSCH, P., quoins for use in printers' chases.
21,303 WIDMER, H. A., nibs for fountain pens.
21,304 HOWARD, D., music portfolios and the like.
21,315 LAMSON PARAGON SUPPLY CO., leaves or books for use in connection with book-keeping systems and for like purposes.

Scandinavian Paper
IN THE
UNITED KINGDOM.

Imports from Norway and Sweden.

In 1912 the joint imports of paper, etc., from Norway and Sweden reached the high value of £2,648,451, an increase of £455,585 compared with 1908.

NORWEGIAN SUPPLIES.

The five years' imports from Norway show the following values :—

	Total Imports.	Retained in U.K.
1912	£1,238,405	£1,205,402
1911	1,067,306	1,025,432
1910	1,216,559	1,155,801
1909	1,135,293	1,088,299
1908	1,089,685	1,079,073

The official classification is as under, the figures relating to Norwegian paper, etc., retained in the United Kingdom :—

PRINTINGS AND WRITINGS.

On Reels.

RECEIPTS FROM SWEDEN.

Sweden, it will be seen, again increased her trade with the United Kingdom last year. The small return for 1909 was due to labour troubles. The five years' imports were as under :—

	Total Imports.	Retained in U.K.
1912	£1,410,046	£1,383,002
1911	1,225,959	1,188,790
1910	1,153,483	1,119,294
1909	893,926	870,261
1908	1,103,181	1,069,409

The following figures show the goods received from Sweden retained in the United Kingdom :—

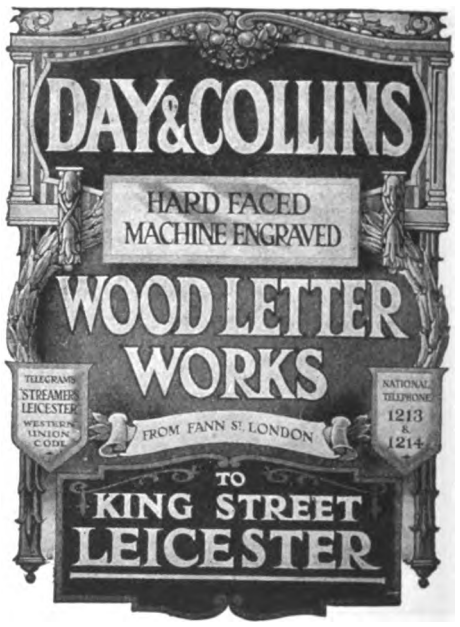
THE late Dr. Jose Clements, of Buenos Ayres, newspaper proprietor, has left personal estate in the United Kingdom of the value of £261,800.



Light Action on Paper.

The *Amateur Photographer* draws attention to the contribution of a writer in *La Papeterie*, whose experiments on the action of light on paper are quoted at length in one of the French photographic journals. He states that the effect of light (without air) upon paper is not only to vary its shade, but to modify its constitution. The substance most intimately concerned in the composition of paper is cellulose, which is a chemical body perfectly well determined, and into the formula of which carbon, oxygen, and hydrogen enter. May not the ultra-violet rays, which, among other effects, modify the salts of silver and bring about the phosphorescence of certain substances, have an action upon cellulose, and not cellulose only, but other materials in the paper structure? The observer bases his statement upon an experiment with four groups of samples of the same paper, so arranged that one group was exposed to the action both of air and light, a second to the action of air alone, a third neither to light nor air, and a fourth only to light.

At the end of one year this French worker examined his four samples of paper, and found that in each case there had been a modification of the paper fibre, and very markedly so in the fourth group of papers which had been kept in a vacuum, and exposed to full light while the action of air was eliminated. At the beginning of the experiment the strain which the paper would support was 11 kilos., and its elongation under strain was 3 per cent. At the end of the experiment the following was the result :—

Paper exposed to	Breaking Strain.	Elasticity.	Tint.
Air and light ...	8 kilos.	1·6 per cent.	Very reddish yellow
Air without light	10 ,,	2 ,, ,,	Yellow
Neither light nor air ...	10½ ,,	2·9 ,, ,,	Faintly yellow
Light without air	9 ,,	1 ,, ,,	Yellow with reddish tint

Without in any way considering the scientific side of the question, the writer has used ordinary printing paper made from wood pulp for the purpose of printing from negatives, and found that with a strong negative—one that would be suitable for carbon printing—an exposure to light in a printing frame of from one to four weeks yielded a very passable photographic print that required no fixing, but only to be kept from the light, as if exposed to light action the paper ultimately darkened all over. It is surprising how sensitive to light some grades of paper are, as may be seen by placing a sample near a window and laying a coin or other small flat article on it. In some cases an image is found after only a day's exposure.

ILLUSTRATION BLOCKS
OUR SPECIALITY.

TO TRADE BOOKBINDERS, BOOKBINDERS' PLANT AND MATERIAL MANUFACTURERS AND DEALERS, PUBLISHERS, LIBRARIANS, AND OTHERS INTERESTED IN THE BOOKBINDING INDUSTRY.

THE Publishers of the *BRITISH AND COLONIAL PRINTER AND STATIONER* have pleasure in announcing that an ILLUSTRATED MONTHLY SECTION of that journal is now devoted to matter concerning the BOOKBINDING TRADES.

All branches of bookbinding are dealt with, from practical and technical standpoints, and the historical and artistic aspects of the industry also receive attention. Illustrations of hand-tooled bookbindings and publishers' cases which are remarkable for their artistic design, their historic interest, or their novel character are presented from time to time.

The BOOKBINDING SECTION appeals to all those who are interested in bookbinding, whether as a trade or as an art, as all phases of the subject receive their due share of attention in its columns.

The Editor will welcome any news of trade interest that may be sent him, and is prepared to consider original articles of a technical and practical character, with a view to their publication. Information concerning the working of the technical classes in bookbinding, and notices of meetings of trade unions and other bodies associated with the bookbinding industry, are also invited; arrangements can usually be made, if desired, to report the latter, as well as lectures, etc., for the BOOKBINDING SECTION. Illustrations and particulars of new machinery and appliances, and information concerning new materials and methods for use in the trade, are likewise of interest. The publishers having no end to serve save the presentation of matter of value to the various branches of the trade, the pages of the BOOKBINDING SECTION are open to all, employers and employed, unionists and non-unionists, for the free discussion of trade matters.

As far as READERS are concerned, copies of those issues of the *British and Colonial Printer and Stationer* that contain the BOOKBINDING SECTION will be sent regularly on application, at special rates.

With regard to ADVERTISEMENTS, the bookbinding trade announcements are placed in a POSITION NEXT TO OR FACING READING MATTER in the BOOKBINDING SECTION. ADVERTISING RATES sent on application. Arrangements have been made to circulate the journal in quarters likely to be most productive to advertisers of a return for their outlay, and no effort is spared to study the interests of advertisers and readers alike.

Orders for advertisements in and subscriptions to the BOOKBINDING NUMBERS of the *British and Colonial Printer and Stationer* should be addressed to the publishers:—

An Exhibition of Lettering.

An Instructive Display of Writing, Illumination and Printed Books.

An excellent opportunity is provided for printers, or anyone interested in the art preservative, to see for themselves some of the highest achievements in the modern printed book, based on the best productions of the old masters of printing, as well as some very instructive examples of good lettering rightly used. This is all arranged with studied taste and effect in the South London Art Gallery, Peckham-road, Camberwell, S.E., where an exhibition—the first devoted to lettering held in Great Britain, it is claimed—which will well repay a visit, was formally opened by the Mayor of Camberwell (Alderman W. L. Dowton, J.P.), on Thursday evening, 2nd inst., and will remain open until Saturday, November 8th.

The exhibition is arranged in three main divisions, *i.e.*, formal writing, printing and inscriptions. A large proportion of space is given to early and modern printed books and general printing, because that is the form in which letters are most used to-day. Though there may be omissions in the collection, it is one that is full of instructive interest, whether viewed from the historical or artistic points of view, or the practical needs of the present day. The promoters of the exhibition have wisely aimed at avoiding an archaic detachment from life, and this should be an additional attraction to the practical minded printer who wishes to raise the standard of his workmanship, and of much service to the student of printing seeking to deepen his sense of beauty.

Taking the exhibit of early printed books first, these are mostly lent by the Governors of the St. Bride Foundation Institute, and their chronological arrangement and description in the catalogue (in the compilation of which Mr. Peddie, the librarian, assisted) is a valuable feature. Starting with a book printed at Nuremberg in 1478 by Anton Koberger, there is to be seen a copy of the first edition of the famous "Nuremberg Chronicle"; a copy of probably the first book printed at Rome; books printed by Nicolas Jensen and Johann Mentelin; the first Dutch illustrated book; Caxton's Chaucer; books printed at Venice, by Ratdolt, who is noted as the first to use a decorated title page, and by Aldus Manutius, the first to use italic type; a book containing the first Arabic ever printed, and many other typographical treasures. Then there is a series of early printed title pages, including borders to titles and initial letters by Geoffrey Tory.

Coming to the modern printed books, there is a beautiful Kelmscott Press book, the Morris Chaucer, and side by side in the case with this is a similar large sized volume on Domestic Architecture, full of beautiful plates, and a good specimen of the Chiswick Press printing. It contains a finely executed dedicatory inscription, and a title-page cut on wood by Mr. Percy J. Smith, lecturer on lettering and allied subjects at the Camberwell School of Arts and Crafts. Mr. B. T. Batsford, High Holborn, is the publisher of this book, and there is also shown a very pleasing example of Mr. Batsford's efforts in cheap editions—one of the "Fellowship" books, designed by Percy J. Smith and James Guthrie. There are other Morris books, as well as examples of the Ashenden Press, Chiswick Press, etc.

There is a case of books in various types printed at differents dates from the sixteenth century down, at such places as Venice, Rome, London, Florence, Cologne, Paris, Frankfort, Glasgow, Birmingham, Parma, etc. Following these we come upon specimens of type letters, drawn greatly enlarged, to show the variations from the gauge in order that they may appear even in size. These are from "Typecasting and Composing Machinery," by L. A. Legros and J. C. Grant; examples of display printing by the students of the Leicester Art School; examples of lettering and engraving from the Northampton Polytechnic Institute; specimen pages from the Camberwell School of Arts and Crafts.

There are several examples of German printing, and in addition to those referred to in the catalogue issued on the opening day, a lot of interesting specimens of German work, comprising some very fine bits of printing, posters and illumination as well as books, and mostly commercial work, arrived too late for inclusion in the catalogue (though it is intended to issue a revised catalogue shortly), but they are deservedly given a prominent display in the Art Gallery. A notice was posted up to the effect that the reason that the German exhibits did not arrive in time to be included in the first issue of the catalogue was possibly because of the congestion of traffic owing to the carriers' strike.

A miscellaneous collection is exhibited in the First Gallery, including some very skilful work in lettering and inscriptions, initial letters, title-page and cover designs, lettering in brass, designs for type, designs for book decoration, display printing, book pages and titles by students of Aldenham Institute, display printing by students of the Paris Municipal School of Printing, and some historical exhibits include early printed books (Lyons, 1556 and 1570); a reproduction of the sonnet which was printed by Plantin, the Amsterdam printer, and hung up in his workshop; a reproduction of the first printed poster (1462); the first specimen page of Caslon type (1734); Riccardi Press books; early proofs of Vale Press work, and various rubbings of inscriptions.

At the opening ceremony, Mr. W. B. Dalton, Principal, presided, and in asking the Mayor of Camberwell (Alderman W. L. Dowton, J.P.) to declare the Exhibition open, remarked that in these days of hustle and bustle and where everything was done by machinery it was a treat to see, as they could at this Exhibition, that there was something that demanded the steady hand and the clear eye.

The MAYOR, in declaring the Exhibition open, spoke regretfully of the small number present, and expressed the hope that it would be well attended during the succeeding days. Referring to trade schools, he said there was one thing wanted: The education authorities did all they possibly could, they had a splendid lot of teachers, they gave the pupils a good sound education, and they left the elementary schools sharp, intelligent lads; unfortunately those lads were too often found at the street corners selling newspapers or engaged in some such occupation. A great alteration was wanted there, and the sooner the better. He would like to see every boy become the master of a trade before he left off attending school. From a lad of 13 he had worked in the retail business, and he attributed his success in working his way up in London to the fact that he had to master a trade. It was a pity the old apprenticeship system had died out, but they must push this question of trade schools forward. Objection was sometimes taken to the expense, but large sums of money were spent to-day in teaching trades to the mentally weak, and surely if they could afford that they ought to be able to afford to teach the other lads and fit them also for the battle of life. The struggle promised to be far harder in the future than now. He did not know much about the work of that institution, but he knew they had an excellent Principal, and they were to be congratulated on the excellent staff they possessed. His worship then declared the exhibition open; it was a fine one and he hoped it would prove beneficial in every possible way.

Councillor F. T. PEXTON (chairman of the School Sub-Committee) moved a vote of thanks to the Mayor for his address, and Alderman BLENCHLEY, in seconding, remarked that better use might be made of the printing schools we had than was the case at the present time. There was too much attention to ease to-day, things must be made as pleasant as possible and children were to do as they please. He asked whether that was likely to turn out good workmen. Good hand-writing, he claimed, was absolutely discouraged in the schools nowadays, in support of which he quoted one of H.M. Inspectors as saying that he did not agree that good hand-writing was essential, as writing was mainly a vehicle for the conveyance of thought. He did not agree with that.

The motion having been carried, a vote of thanks was also passed to the Chairman, Mr. Dalton, on the motion of the MAYOR, seconded by Mr. A. H. WILLIAMS, and Mr. DALTON briefly replied.

The Necessity of a Cost System.

The following paper, by Mr. Walt. Parmenter, of the Franklin Type and Printing Co., appeared in a recent issue of the *Pacific Printer*:—

Printing is a business, and not a pastime From the standpoint of business, pure and simple, there is but one goal, and that is the goal of all businesses—Profit.

Many business enterprises have for an object the benefit of mankind at large, or of a particular class or a particular field, and it may be truthfully said of the average newspaper proposition that its real purpose is the instruction, entertainment or other benefit of its readers; yet few of us are philanthropic enough (or financially able, if we were) to spend our lives in our respective vocations and reap no other reward than the satisfaction and glory that come from rendering service to men. Don't understand me that I consider that the policy of a publication should be batted from pillar to post, this way and that, for profit, without regard for principle or policy; but on the contrary, I believe the established policy should be rigidly adhered to. What I mean to declare is that while there should be such a policy and principle in every fairly handled publication, yet the furthering of that policy should be so conducted that a monetary profit results to those who devote their efforts to furthering

Digitized by Google

it; and those benefited should pay the bill. Look at any of the really beneficial institutions of the country, large or small; their real purpose may be the betterment of society, but those who conduct them see to it that they receive proper compensation for their efforts; in fact, it is hardly possible to point to any institution that does not clearly recognise the business side of the proposition.

Mankind is so constituted that if you give him something for nothing, or for less than its true value, he will accept it with no more feeling of debt to you than though its true value had been paid; and even then a strain of suspicion will attach to you. Likewise, if you charge him its true value and insist upon it, and are able to demonstrate to him if need be, that the price demanded is its true value, he will give it to you as willingly, and with more respect for you, than the lesser price. Now, I don't want to be understood as advocating that he will stand for any old price, that all you need do is to ask and receive, but I do maintain that he will stand for the proper price, even though larger than he has been paying.

Then the important question is: "What is the proper price?" The proper price is the total cost of production, plus a profit. It is necessary, therefore, before price can be named, that we should know the exact and total cost.

Most printers, in estimating on a job of printing, proceed about this way; "Sam will set that up in six hours, and I pay him thirty cents an hour, composition $1.80; a ream of 16-pound bond, at 10 cents, $1.60; that 10 by 15 platen is speeded at 1,800, so Bill will run it in an hour and a-half, and I pay him 25 cents an hour, feeding 38 cents, total cost $3.78; the cost commission advises to add 25 per cent. for profit, 92 cents; selling price $4.70; shucks! call it even $5." The customer says the price is too high, and a deal is on. Work is not over brisk, so even a less profit than you feel you should have seems more desirable than to lose that job, and the job is finally landed at something between $3.78 and $5.

Now if you know by records that you cannot dispute that your hour cost of composition was $1 instead of 30 cents, that it actually cost you 50 per cent. to handle your stock, and that your platen press costs you 50, cents an hour and runs only about 1,100 an hour instead of 1,800, how would you look at the prospect of this job at a price anywhere near $5? Composition $6, stock $1.75, presswork $1.10, total $7.85, and nothing to cover the cost of cutting the stock, the locking of the form, make-ready on the press, delivery or profit. If you have no cost system, you don't know, and won't believe, that these are nearly your actual figures; but I have yet to meet the man who has a complete cost system, who has found his costs to be materially under these figures. Now how much emphasis should be put on business in calling such a man a "business man" when he sells an article for $5.00 or less that actually costs him $7.85 or more to produce? And the worst of it all is, he doesn't deliberately steal this $2.85 out of his family's mouth; he does it merely because he is not enough of a business man to know what he is doing.

I make the assertion without fear of contradiction that there is not one of you, unless you operate a cost system, who has not done this same thing more than once.

You may argue that if the jobs for which you have been getting $5.00 are to be raised to $8.50 or $9.00, you can't get the business—it will be taken somewhere else. Let it go! If somebody must lose money on it, wouldn't it be better be the other fellow? If he can do it cheaper than you, and can make a profit at a price at which you would lose money, let it go, anyway, and find out what is the matter with you or your equipment that he can do work so much cheaper than you; but above all things, if you can't make profit on it, don't do it. Yes, I know your competitor will do it at that price, and maybe for less, but what is that to you, if you can't make a profit at the price? For the love of Mary and the kids, have some backbone; if you are going to be a business man, be one. Put in a cost system and find out absolutely what the different classes of operations in your plant cost you; then, when you name a price on a job, add your profit to the cost, and stick to it, and don't let a shopper budge you from it. A cost system will give you the backbone to stick to it, because you will know what you are talking about—you won't be guessing.

Speaking of shoppers! Do you wonder that printing goes shopping, probably more than any other line with which men deal? I know, and you know of instances of prices made by competitors, about equally efficient for the work, where the highest price for the work was 100 per cent. more than the lowest. Recently I knew a job on which an expert estimator estimated the proper selling price at $700 to be let for $245. Another job let for $82, on which figures ranged from that up to $176. I also recall a case where a printer quoted $63 on a job but the customer had taken other figures, and said he could get it for $35, but wanted this particular printer to do it, was willing to pay more, etc., but of course he couldn't stand that much; he would stand for a loss of $2 or $3, though; and the contract was closed at $38. It used to puff me up a little to think that I was so much more of a printer than my competitors, that I could have more for the work than they could. Now, it happened that the printer who got the job and the one who was supposed to have bid the $35 got together shortly afterwards and compared notes. The supposed-to-be $35 man happens to keep a file of all estimates submitted and was able to show that his estimate on that job was really $70. I merely review a few instances of this kind of "business" to ask you if you wonder that most printing buyers "shop." If you had a few experiences like these in buying a commodity, when you wanted to buy, would you not shop, too? Of course you would, so would I, and so would any prudent man.

Now, whose fault is it that the condition is as it is? Is it all the other fellow? No sir; it is you, Mr. Printerman, who don't absolutely know your costs, and hence don't know your proper selling price; and it's up to you to remove this condition from the printing business by becoming a business man. Many printers don't know what the cost of a job is even after the work is done, let alone being able to even approximately estimate the cost. Learn the business side of your vocation as you have learned the mechanical side, and I venture there are few men in the business who lack the backbone to get what they know the job is worth when they know—not think—what the cost actually is.

This, primarily of the job side of the business, but the same lamentable instability in price, growing out of lack of information and inaccurate records, exists in the news side as well as in the job side.

I want to say, at this point, however, don't monkey with a home-made cost system; at least, don't do it to start with; after you have operated a standard approved system for a year and thoroughly understand what it is intended to do, and how it does it, if you can improve it, all right, but don't try it to start with. I started with a home-made system, the best home-made system that ever was made, because I made it myself. The wonder to me now is that it didn't "bust" me. When I reflect on the inaccurate would-be information it gave me I wonder that I kept out of the bankruptcy courts.

But there are other reasons than the selling side for the installation of a cost system. It shows you so many things you didn't know, and at first you wouldn't believe. About the first time you make up your mind that the information is accurate, you will feel like firing everybody around the shop—they are all soldiering on you. Don't be rash, however. You are just beginning to see things from a new angle, so don't get excited. You probably will discover that in the composing-room you are paying for 150 hours a week and are only selling from 60 to 90; if the former, you can better it by careful management, but if the latter, you are doing pretty well; you are just beginning to get a ray of light on why thirty cents an hour does not much more than pay for half of just the labour cost in the composing-room, let alone taking care of the other items of cost there. You will be surprised to learn that that blank for the township, which you estimated could be set in four hours, could have been set in four-and-a-half hours all right, and the composition was really done in that time, but five-and-a-quarter hours were charged to it because the 12 and 14-point Old English to be used in the caption and running heads was all up in that church programme which was waiting for O.K. of proof, and the form had to be unlocked and the characters pulled out to sort up. Then that letter-head job for the business men's club, with the directors, officers and committees in nice groups, on which you figured an hour for composition, you find that the names alone took an hour-and-a-half, and it was necessary to throw in the Y.M.C.A. heading that you have been keeping standing because they used it every two or three weeks, that you could get enough type to set this heading that took 20 minutes and lost you this standing form. Probably by this time you may have observed a dozen losses of this kind, and realised what they are costing you in money as you never realised before, and you decide to spend a few dollars to enlarge some of these founts and series most used and stop these leaks.

You will notice that the ticket shows an hour for locking up that township job. Why, you never figured on the look-up at all. Surely that could have been done in ten minutes, anyway; but you watch this operation on various jobs and finally put the item of lock-up in your estimates thereafter; possibly you have discovered that it will be real economy to double the quantity of furniture and maybe add a dozen or so more pairs of quoins.

I hear someone say: "Same old story: buy, buy, buy. I can't more than make ends meet as it is, let alone buying anything new." With the record you will have of the cost of being without these items, if you've half the business acumen I think you have you'll see that being without them has a very great deal to do with your being hard up and finding the business unprofitable.

Probably you will notice that on that stock catalogue where you figured 40 hours for composition, the composition took really 50 hours, and, Holy Smoke! there is a charge of 25 hours for making up the pages! Never figured the make-up at all—that was considered a part of the composition. Thereafter you will probably note more carefully the character of the composition in estimating the time, and what it means in labour cost to work with several faces and measures in a page, and will have a place in your estimate blank for make-up, especially in book work.

And so it will go in all departments. When you have these wastes, leaks, oversights, etc., presented to you from day to day, you just can't refrain from remedying them. When once remedied they become money makers instead of money losers. Then it may be that you will discover that one or more of your employees, whom you have always supposed to be loyal and profitable, does not prove to be so.

You know what will happen then. In other words, with the records and costs before you day in and day out, if you love your business and will study it, you will be able to weed out unprofitable material and help intelligently, and replace it with new.

There will gradually dawn on you the comparative insignificance of the wage rate as it affects the hour cost, and you will soon realise that a high priced man who can deliver the goods and can and will work in the interest of the office is one of the best assets the office can have. The department and overhead cost of a cheap and only partially competent man is just as much as for the more competent.

Let us presume now that you have your records before you for a period of time sufficient to give you a grasp of your business as it really is—not as you thought it was—and you have stopped the worst leaks and overcome the most expensive mechanical shortages. You discover that there are certain classes of work for which you are better qualified than others; consequently you make a special effort along those lines and build up the profitable line. You also discover that there are certain lines of work that you can handle only at a disadvantage—may be none of your competitors is better equipped for it than you are; a few dollars added to your equipment here and there may put you in shape to take care of this work more profitably, and make really a profitable line for you.

May be your competitor is equipped to handle this work more profitably than you, and there is not sufficient of that class to make it profitable for both of you to make it profitable, in that case let him have it, and confine yourself to what you can handle profitably—the more he does of what you don't want, the less he will be in competition with you on what you do want.

Along this line of closing leaks, showing lines for scientific management, and the general intelligent grasp of your business in detail, lie the really most fruitful results of the instalment of a cost system. You will be able to get profits in many places you did not get them before, to eliminate losses heretofore unknown, reduce expenses, increase efficiency, and be, in its broadest sense, a business man.

Don't be afraid of your competitor. He hasn't horns half so long as you think he has, or as he thinks you have. He mistrusts you because he doesn't know you, and you mistrust him for the same reason. He probably has a grievance against you for getting that job he figured very low, and he says you lost money on it just to keep him from having it, and you have a similar grievance against him. Probably the fact is that both he and you are trying to be fair and the differences between you result from the mistaken ideas on the part of each of you as to real costs. The very fact that you two cannot agree on prices is a pretty good evidence that each of you could learn something about costs, and could probably get along much more agreeably if you met as man and man more frequently and compared notes. Get together, compare results and figures, put in a cost system—you will be surprised at the results. My experience in mingling with printers throughout the country is that there is not a more honourable lot of men anywhere than those engaged in the printing business.

Messrs. F. W. S. Clarke and Co., Ltd., of the Citizen Press, London and Leicester, issue a very finely got-up booklet, entitled "The Illustration," in which examples are given of the firm's half-tone work. Three blocks made from the same photograph, one untouched, one worked up a little, and one worked up by a specialist in machine illustration show well the advantage to be gained by entrusting orders to a suitable firm. From the same source comes "Printers' Trade Terms," a card of a humorous character suitable for hanging up in the office. Some of the definitions given are very funny, such as "Competitor.—A dunderheaded, dishonest fool. Said to have horns, cloven hoof, and a tail. Generally perniciously active between the hours of 8 a.m. and 8 p.m." Another is "Customer.—A remarkably gentle being of very retiring habits. Usually distinguishable from others by his superior knowledge of the printing business."

The printer or lithographer who only handles an occasional bronze job, and does not have a bronzing machine, often wants to improve the looks of the job and does not know how to go about it. The appearance of bronze work, whether in gold or aluminum, can be greatly improved by running the job through the press again after the bronze has dried. This has almost the same effect as a burnishing machine. It is only necessary to remove all the rollers from the press and clean the form or plate thoroughly. The guides and grippers are not changed. Try this on the next bronze job you have and see how fine an effect you will get.

British Imports and Exports of STATIONERY.

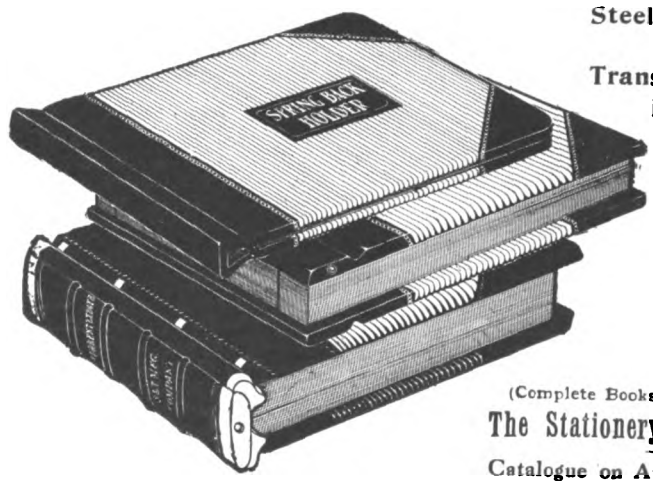
Five Years' Trade with France.

The following figures show the values of the imports of stationery from France, and the exports of British stationery to France during the periods mentioned:—

Imports.

	Total Imports.	Retained in U.K.
1912	£39,555	£35,403
1911	31,551	27,421
1910	26,840	23,892
1909	23,966	19,036
1908	20,989	17,736

Exports.



1912	£52,139
1911	55,919
1910	58,807
1909	51,891
1908	53,498

Struck by Lightning.—Jake, the transferrer in the litho department, has trouble with his feet and therefore, when he starts to work, he puts on a pair of old-fashioned roomy slippers. He keeps these slippers alongside his bench and has a habit of stepping into them without any assistance from his hands—they are plenty big enough. One day there was a terrific thunderstorm just at the end of the lunch hour. Jake had been out for his lunch and during his absence one of the boys had nailed his slippers to the floor. He came back a few minutes late and taking off his street shoes slipped his feet into his big slippers. Just at that moment, a bright flash of lightning accompanied by a terrible roar of thunder, occurred, he put his hands over his eyes and let out a yell. Then he tried to run and found that he couldn't take a step. That settled it. With an ashen face he cried: "Boys, I'm struck by lightning and paralysed. I can't walk a step. Break it gently to my wife." And he slowly sank down to the floor. As he did so his feet came out of the nailed slippers and the roar of laughter brought him to his senses. Jake is still trying to find out who nailed the slippers to the floor, and when he does he promises the remains a first-class funeral.

ESTABLISHED 1840.
Jacobs Brothers & Co.

The Strength of Paper.

Testing Two Pieces at Once.

By SINDALL AND BACON.

The object of the further experiments presently to be described was to ascertain whether the relation of the machine and cross directions had any influence on the recorded strength of a paper when two or more sheets were tested simultaneously in the Mullen testing machine. We have already shown that the testing of two sheets at once gave a fictitious value to the reading, and that within certain limits the greater the number of sheets tested at once the higher was the apparent strength of the paper.

The point that has now to be settled is whether any difference in the reading on the pressure gauge of the instrument is caused by taking account of the "machine" direction of the paper. In other words, if two pieces of a paper are put in the Mullen with their machine directions parallel, will the reading differ from that obtained when the two pieces are tested with their machines directions at right angles to one another.

Three papers were selected for the test as follows:—

(1) Common news, 16 lbs. demy.

(2) Thin typing paper, 12 lbs. demy.

(3) Super-calendered esparto writing, 25 lbs. demy.

(1) The strength of the papers was first found in the ordinary way, *single sheets* being used. Four tests were made in each case so as to obtain a good average result:

	News.	Typing.	Writing.
Strength,	5·0	9·0	17·4 lbs. per sq. in.

(2) *Two sheets* were then inserted in the tester with the machine directions parallel to one another. The readings so obtained were:

	News.	Typing.	Writing.
Strength,	12·9	21·8	40·3 lbs. per sq. in.

(3) The *two sheets* on being put in position with the machine directions at right angles to one another gave lower readings:

	News.	Typing.	Writing.
Strength,	12·9	19·3	36·5 lbs. per sq. in.

(4) *Three sheets* with machine directions all parallel gave:

	News.	Typing.	Writing.
Strength,	23·0	33·5	64·9 lbs. per sq. in.

(5) *Three sheets* again inserted but with the two outer ones having their machine directions parallel and the inner sheet at right angles:

	News.	Typing.	Writing.
Strength,	20·6	31·9	62·8 lbs. per sq. in.

(6) *Four sheets* all parallel in respect of the machine direction gave:

	News.	Typing.	Writing.
Strength,	28·0	45·2	87·5 lbs. per sq. in.

(7) *Four sheets*, three parallel, and one at right angles gave:

	News.	Typing.	Writing.
Strength,	26·2	42·0	82·0 lbs. per sq. in.

(8) *Four sheets*, two parallel, and two at right angles showed:

	News.	Typing.	Writing.
Strength,	26·4	42·2	77·3 lbs. per sq. in.

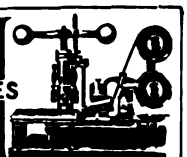
With one or two exceptions these figures support the suggestion made in the previous chapter, that the value of the bursting strain reading is increased by taking more than the single sheet. This can be more readily demonstrated by reducing the figures to the common standard of ONE sheet. This is done by dividing the several readings by the number of sheets tested at the one operation.

TABLE OF READINGS CALCULATED FOR ONE SHEET.

Strength in terms of lbs. per square inch.

	Method of Test.	News.	Typing.	Writing.
1	One sheet only	5·0	9·0	17·4
2	Two sheets parallel ...	6·4	10·9	20·2
3	Two sheets right angles	6·4	9·7	18·2
4	Three sheets parallel ...	7·6	11·2	21·6
5	Three sheets, 2 parallel	6·8	10·6	20·9
6	Four sheets parallel ...	7·0	11·3	21·9
7	Four sheets, 3 parallel	6·5	10·5	20·5
8	Four Sheets, 2 parallel, 2 at right angles ...	6·6	10·5	20·4

This table shows that not only is the strength reading affected by the number of sheets inserted for the test, but that the amount of increase is influenced by the manner in which the sheets are put in position. If the sheets are inserted with the machine direction parallel, the result is higher. The crossing of the sheets reduces the reading that would otherwise have been obtained. Only one of the tests fails to show this peculiar result, the news in numbers 2 and 3.



There can be little doubt that the stretch of the paper plays an important part in this behaviour of the sheets. If two strips of equal length and width are inserted in the Leunig machine, one being taken from the machine direction of the paper and the second from the cross direction, it is clear that when the tension is gradually applied to both the machine direction strip though stronger will break first, because it stretches less than the other. The weight necessary to break the former is largely used in merely stretching the cross direction strip. Some action of a similar kind takes place in the Mullen tester when the two sheets are inserted at right angles to one another, though it would be practically impossible to ascertain which strip broke first by actual observation.

He Done the Customer.

That there are tricks in all trades is a saying of which the truth often becomes apparent, and even printers have been known to hoodwink their customers in an unscrupulous manner, as is illustrated by a story told by a San Francisco member of the trade. A printer in that city received an order for a large number of dodgers, which he printed several thousand short. The customer became suspicious that he was not getting full measure, so he counted out a thousand and weighed them, then weighing the whole lot, found that the weights did not tally. Accordingly he entered a complaint. "How do you know the order was short?" inquired the printer. "I weighed a thousand and then weighed the whole bunch, and the weights did not agree," responded the customer. "Don't you know you can prove nothing by the weight of paper? It varies in weight. Let me show you," replied the quick-witted printer. Leading the way to the stock-room he selected an unopened ream of 20-pound bond and threw it on the scales. "There, you see 500 sheets of that paper weigh twenty pounds," he said. Then taking another unopened ream of the same stock in 16-pound weight, he threw that on the scales and exclaimed, "There is another package of the same paper and same number of sheets, that weighs only sixteen pounds. You see, you can prove nothing by the weight of paper." The customer, who knew nothing of the weights of paper, was convinced, so he paid the bill in full without further complaint, and went away believing that he had received a square deal.
